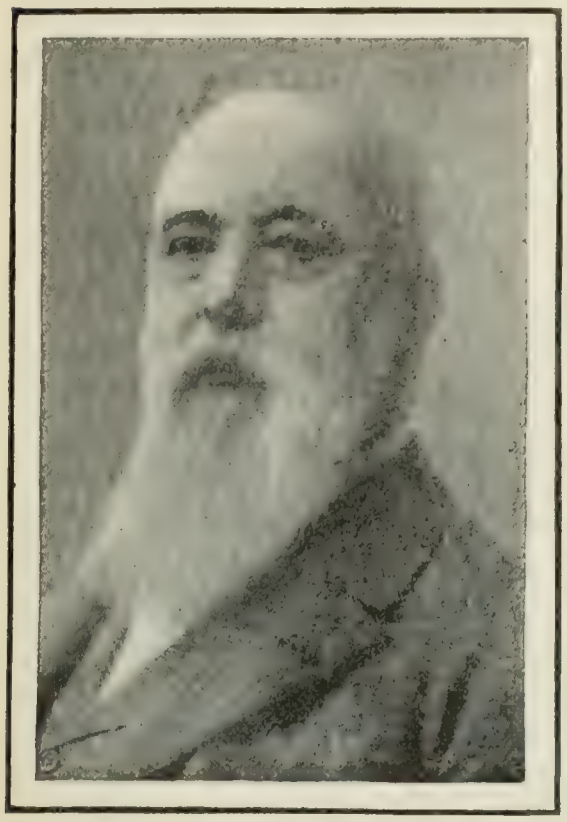
THIS question has not by any means ceased to interest and occupy physiologists. It will be remembered that Professor Atwater, from the experiments that have made such a stir, concluded that alcohol is a food in the sense that it may be the source of bodily energy by transformation, altho not in the sense that it may form tissue. By a recent series of experiments reported to the Paris Academy of Sciences, a French physiologist, M. Chauveau, believes that he has established that very little energy, if any, can be derived from ingested alcohol, and that this is as true of the automatic processes which go on when the body is at rest as it is of the more active processes of physical exercise. If this is true, the value of alcohol as a strength-producer is almost, if not quite, as illusive as its ability to build up bodily tissue. We translate from a brief report in the *Revue Scientifique* (Paris, January 12). Says the writer:

"M. Chauveau has attempted to discover whether, in the production of muscular work, the body can make use, for part of its energy, of alcohol substituted for a portion of the daily ration. In these experiments the investigator's aim was to ascertain, not whether the ingestion of alcohol is, in some vague and general way, of profit, but whether a person at work, whose blood is saturated with this substance, causes his muscles to contract by deriving the energy necessary to such contraction from the combustion of the alcohol. The result of these experiments was to show that ingested alcohol, with which the organism becomes rapidly impregnated, can participate only in a feeble degree, if it participates at all, in the combustions whence the muscular system derives the energy necessary to the performance of its work. This substance is not a food, so far as the production of force is concerned, and its introduction into the ration of a worker is a physiological contradiction. Even outside of the time devoted to muscular work, the influence of alcoholic combustion does not show up well in the respiratory quotient. The sum of the results of all experiments show this, and the enormous deficit revealed by the figures under all circumstances, so far as the combustion of ingested alcohol is concerned, is in accord with what we know of its elimination in nature . . . especially through the lungs. These figures also prove that, even when it is saturated with alcohol, the organism seems not more apt to utilize this substance for the execution of the physiological work necessary in a state of repose than for the execution of muscular work during exercise."—*Translation made for* THE LITERARY DIGEST.

## A FRENCH ELECTRICIAN DEAD.

THE noted English physicist, Clerk Maxwell, on being asked what he regarded as the greatest scientific discovery of the age, replied: "That the Gramme machine is reversible." The Gramme machine was the precursor of the modern dynamo, and the discovery that it is reversible (that is, that it can be run as a rotary electric motor) opened the way to the trolley roads, and to all the modern developments of electric power-transmission. The only electric motors before this had been rude reciprocating contrivances worth nothing except as toys. The Gramme machine thus plays a very important part in the history of electro-technics. Its inventor, Zénobe Théophile Gramme, died at his country residence in Bois Colombes, near Paris, on January 20. We quote from *The Electrical Review* the following account of his life:



THE LATE ZÉNOBE THÉOPHILE GRAMME.
Courtesy of the *Electrical Review*.

"M. Gramme was born in Belgium in 1826, and brought up to the trade of a carpenter. His early predilections were for scientific subjects and machinery, and he attended a course of lectures at Liège, Belgium. This, however, had little practical influence upon his career, and when he was upward of thirty years of age he was still working in Paris as a carpenter and stair-maker.

"Working as a pattern-maker in the Alliance factory, in Paris, and later in the workshops of Ruhmkorff, he learned the details of electrical construction and insulation as they were then known, and became still more deeply interested in the mysterious work upon which he was engaged. It was during the sixties that Professor Pacinotti, then a student in the University of Pisa, where he is still professor, described the toothed-ring armature magneto-electric machine, which has since been recognized to have been the forerunner of the modern dynamo. This really brilliant invention met with no success and was never developed, and it remained for Gramme, in 1870, to devise the uniformly wound-ring armature machine, with which his name has ever since been associated. From the very beginning of the success of this apparatus, Gramme sought publicity in international expositions. The dynamo was shown at the Centennial Exposition, in Philadelphia, in 1876, and attracted the deepest attention from electricians in this country. In 1878 the electric lighting of the Paris Exposition by the Jablochkoff candle was really made possible by the cooperation of Gramme and his associates.

"M. Gramme was never a learned man in the sense in which we employ that term of engineers to-day. His knowledge was instinctive and almost prophetic. He could not calculate parts or sizes for his machines, but he felt that certain proportions were right, and was undoubtedly a remarkable intuitive engineer."

**Tesla and Wireless Telegraphy.**—Announcement has been made in the daily papers, apparently by Mr. Tesla's request, or at any rate with his sanction, that he is prepared to telegraph across the Atlantic without wires. Assertions regarding remarkable discoveries by Mr. Tesla have been so numerous of late and so lacking in material confirmation that the scientific press has come to allow them to pass unnoticed, save by a word, here and there, of sarcastic comment. The daily papers treat the various pronunciamentos each after its kind, the yellow journals with weird pictures and big headlines, the more serious ones with skeptical paragraphs. Exactly what the inventor believes that he is prepared to do may be learned from the following, which *The Sun* (New York) publishes as a leading editorial (February 14):

"*The Sun* is authorized to state that the plans for the machinery of wireless telegraphy to signal across the ocean have been completed and a site for the plant selected by Nikola Tesla, and that the project will at once be actively begun. It is estimated that the time required to perfect the apparatus will be about eight months. We have received inquiries of late as to Mr. Tesla's place among inventors, and as to his credentials to fame. We don't know fully about those things, but we do know that it is Tesla who has given the world what is perhaps the most precious invention of the time, the electrical transmission of power, and we have seen the letter in which Professor Slaby, of Berlin, calls him the 'father of wireless telegraphy.' Will his gorgeous vision, described above, be realized? We don't know. So we must let doubt and incredulity gnaw upon the bare statement."

The attitude of the technical press is generally that of the electrical paper which recently remarked editorially that scientific men must be excused from giving opinions regarding announcements made through the medium of the daily press, and that when Mr. Tesla reads a paper on his alleged discoveries before some scientific body, it will be time enough to consider them seriously.

---

## SCIENCE BREVITIES.

A FAST trolley-car is being tested in Philadelphia, we are told by *The Scientific American*. "It takes newspapers in the early morning to Chestnut Hill, 14¾ miles away. It runs at a rate of 35 miles an hour, including a stop at least every three quarters of a mile. Occasionally it has run a mile in a minute and an eighth, and it has made the entire distance in twenty-five minutes, including stops, which is the same time as the express trains made for the same distance."

"IN Stockholm, Sweden," says *The Railroad Gazette*, "the recent Christmas festivities of some of the people appear to have been unusually 'strenuous,' for we read that the conductors of some of the suburban night trains have been complained of for ejecting inebriated passengers at roadside stations, leaving them helpless in the snow with the thermometer 12 degrees below zero. In consequence of the agitation of the matter the State Railroad Administration has ordered that every suburban train at night must be provided with a separate car for intoxicated persons only.

WHY AND WHEN WE FEEL HUNGRY.—Doctors have long disagreed about the direct cause of the feeling of hunger, but a German physician, according to the *Staats-Zeitung* (New York), has at last given a plausible explanation. He says we feel hungry when the blood-vessels of the stomach are comparatively empty. When food is taken and digestion begins there is a rush of blood to the stomach and the hunger is appeased. Many anemic patients have no appetite even when the stomach is empty; but the blood-vessels of the stomach are not empty in such cases, but rather congested. In healthy people lack of blood in the stomach acts upon a special nerve and all the characteristic symptoms of hunger follow. Now this hunger nerve and the nerves of the mouth and tongue are branches of the same nerve-trunk. Hence a stimulus applied to the tongue, by a spice for example, creates or increases appetite. On the other hand, when the nerves of the tongue are affected by a diseased condition of the mucous membrane of the mouth, the patient has no appetite, tho his stomach may be empty and he may be in actual need of food.

A REMARKABLE series of prizes is to be awarded in February by the Paris Academy of Medicine, says the *Staats-Zeitung* (New York, January 27). The essays submitted must be written in French and Latin, and some of the prizes are of great money value. The Audiffret prize is an annuity of 24,000 francs [$4,800], and will be awarded to the discoverer of a practical and effective remedy or preventive for tuberculosis. The Barbier prize, worth 2,000 francs [$400] yearly, goes to the discoverer of a cure for any one of certain diseases hitherto considered incurable, such as rabies, cancer, epilepsy, typhus, and others. Similar conditions are attached to the Buisson prize of 10,500 francs [$2,100]. The Chevillon prize of 1,500 francs [$300] will be given to the writer of the best essay on the treatment of cancerous affections; the Herpin prize of 3,000 francs [$600] is for the best essay on epilepsy and nervous diseases; the Laborie prize of 5,000 francs [$1,000] for an important improvement in surgery, the Meynot prize of 2,600 francs [$520] for the best essay on diseases of the eye. The Academy has also at its disposal 1,500 francs [$300] annually for the maintenance of medical expeditions.

# THE RELIGIOUS WORLD.

## WILL ASIA ACCEPT A WESTERN RELIGION?

THE immense antipathy of Asiatics to Occidental customs and ideas, particularly the Western religious systems, has been emphasized by recent events in China, where the attempt to impose these has occasioned an outbreak hardly surpassed in history. Some travelers who know Asia assert that there is too deepseated and fundamental a difference between the Oriental and the Western mind ever to be bridged. This appears to be the view of Mr. Meredith Townsend, editor and proprietor of the London *Spectator*, and for twelve years a resident of Calcutta and editor of the well-known *Friend of India*. Mr. Townsend, who writes in *The Contemporary Review* (February), finds one chief psychological quality that differentiates Asiatics from Europeans in "that habitual and willing submission to the supernatural, even when the decrees of the supernatural are not utilitarian." The European, even when Roman Catholic, "frets under the priestly domination, and passes laws like the law of divorce, which are direct denials of the claim of the caste to divine authority." On the other hand, the single Asiatic tribe (the Jews) which does not live in Asia thinks so little of mere individual preferences that it "has borne for seventeen centuries, under horrible persecution, often involving death by torture, the burden of an inconvenient and hampering law, because its members hold it to be divine." The same willing subservience to authority and tradition extends also into the temporal realm, where the Asiatic is governed by an absolute will, and has no thirst, like his European brother, for popular government. Mr. Townsend continues:

"As a consequence, throughout history the Asiatic, tho frequently exempted from military pressure, as, for example, the Chinese have been for ages, invariably sets up a despotism, and when, as rarely happens, the despot strikes him down, bows to the decree as we bow to the sentence of a surgeon who prescribes a painful operation. We do not quarrel with Providence because we are ill or liable to immediate death, nor does the Asiatic under oppression or unjust sentence quarrel with God's representative on earth. And lastly, the Asiatic, believing, as he invariably does, that his social system is divine, is content with it, clings to it, and resents interference with it with a passion that leads to bloodshed whenever bloodshed is possible. . . . . .

"But I shall be told that the spread of Christianity, which is inevitable, will extinguish, probably very speedily, the separateness of Asia, and with it all its consequences. Will it? Let us look at that belief a little closely, and without preconceived ideas. I do not find in history that a common Christianity in any degree removes hatreds of race or nationality, or prevents continuous outbreaks of bitter hostility; but we may let that pass. What is the real ground for believing that Asia will accept Christianity? Certainly there is no historic ground. No Asiatic nation of any importance can be said to have accepted it in the last seventeen hundred years. The Asiatic race which knows the creed best, and has had the strongest reasons for accepting it, reasons which prevailed with the Germans and the Slavs when pagan, still rejects it with a certain silent but very perceptible scorn. What has changed in Asia that the future should be so unlike the past? There are more teachers, no doubt, but there are not one tenth or one hundredth so many as have endeavored through the ages in vain to convert the Jews. It is said that Christ gave an order to His disciples to teach all nations; that is true, and I for one believe the order to be binding, and that the Christian church which sends out no missionaries is a dead church; but where in the record has Christ promised to those missionaries universal success? Is it not at least possible that the missionaries carry in their hands the offer of eternal life, which a few accept, while the rest 'perish everlastingly,' that is, die like the flowers or the dumb creatures of God? This much, at least, is certain, that for eighteen hundred years it has been no part of the policy of heaven—I write with reverence, tho I use non-religious terminology—to convert Asiatics *en masse*, and there is no proof that this absence of divine assistance to the teachers may not continue for an equal period in the future. The truth is that the Asiatics, like the Jews, dislike Christianity, see in it an ideal they do not love, a promise they do not desire, and a pulverizing force which must shatter their civilizations. Eternal consciousness! That to the majority of Asiatics is not a promise but a threat. The wish to be rid of consciousness, either by annihilation or by absorption in the divine, is the strongest impulse they can feel. Tho Asiatic in origin, Christianity is the least Asiatic of the creeds. Its acceptance would revolutionize the position of woman, which is the same throughout Asia, would profoundly modify all social life, and would place by the side of the spiritual dogma 'Thou shalt love the Lord thy God,' which every Asiatic accepts in theory, the far-reaching ethical dogma, 'and thy neighbor as thyself,' which he regards as an intolerable burden. I doubt, too, as I once before said in this review, whether the beauty of the character of Christ appeals to the brown races as it does to the white, whether they feel His self-suppression for others, as Clovis and his warriors felt it, as something altogether more beautiful and ideal than their own range of conception. However that may be, it is clear that while the Asiatic can be wooed to a change of creed, as witness the success of both Buddhism and Mohammedanism, whose teachings are radically opposed to each other, they have not been and are not equally moved to embrace Christianity. If they ever take to it, it will be from some internal and self-generated movement of thought, and not from any influence of Europe."

## PROTESTANTISM IN THE PHILIPPINES.

RECENT reports from Manila indicate that a Protestant movement of some force—how great, it is as yet too early to estimate—is beginning to manifest itself throughout the island of Luzon. Among the leaders of the new federal party—which is rapidly growing, and whose aim is a recognition of American authority in conjunction with certain concessions upon both sides—some half-dozen men are reported to be converts to Protestant principles, chief among them the well-known Buencamino. Roman Catholic authorities, however, apparently do not thus far view the movement with any considerable apprehension, so far at any rate as it is reflected in the Roman Catholic press, which has largely ignored the subject. *The Catholic Mirror* (Baltimore, February 16), one of the few Roman Catholic papers which have touched on the topic, says:

"There is little cause for fear that the movement started by Buencamino in Manila will have serious effect upon the faith of the natives. Indeed, the movement, if the spasm or excitement which caused the name of the reputed leader to get into the cable despatches—a poor sort of notoriety—can be so dignified, will scarcely have the political effect for which it is obviously intended. . . . The movement of which he is the originator in the Philippines, and about which they seem to have become very enthusiastic, is politico-religious at best, and while the purity of motive of those concerned in it is thus under a cloud, the ministers who are so eager to enter the field will do well to abstain for the sake of the praiseworthy object they wish to advance, the conversion of the natives from the 'darkness of Romanism' to 'the pure and undefiled light of evangelical Protestantism.' . . . Past experience corroborates the assertion—which reasoning from sane principles alone justifies—that those who adopt a creed from political motives will never be good examplars of the faith. It is evident to us that Buencamino and his followers—who, however, represent but a small fractional part of the population of the islands—assume the American nation to be Protestant. It will be well for missionaries of the denominations to avoid confirming this erroneous impression; and motives of patriotism, no less than regard for truth, should deter them from actions which might serve to convince the Filipinos that Protestantism is the creed of the United States."

A Protestant view of the mission work now being established in the Philippines by various denominations is given by *The Outlook* (February 9):

"At Manila the Young Men's Christian Association has estab-

lished comfortable quarters, and has instituted a series of evangelistic services which have been of benefit among our soldiers. The United States army chaplains come into close contact with the men; this is true especially of hospital work; but from all accounts, the chaplains in our army are too few in number. The Brotherhood of St. Andrew [Prot. Episc.] and the Society of Christian Endeavor have shown marked energy in establishing meetings, and regular church services are held by Episcopalians, Presbyterians, and Methodists. The work at the last named was started by four Methodist army chaplains, who, however, attempted nothing denominational. At the close of 1898 Mr. Krautch arrived at Manila, and the following March came Bishop Thoburn of India. This prelate and Mr. Krautch rented the Teatro Filipino, and Bishop Thoburn began services there; they were the first distinctly Methodist services held in Manila. Their beneficial effect has been noted far and wide. *El Comercio*, one of the Manila newspapers, announced the first service, but in the next issue a letter was printed from the head of the Jesuits taking the editor to task for noticing any Protestant endeavors. This acted as an excellent advertisement among the Filipinos, and led to the beginning of Spanish services. In August, 1899, Nicholas Zamora, a native Filipino (whose work has already been noted in *The Outlook*), began to preach, and has preached ever since, being ordained to the ministry about a year ago. As soon as possible the Methodists secured a building in which they established a Soldiers' Institute. This endeavor has been of great good, whether one considers its physical benefit from baths and gymnasium, or its mental benefit from the reading-rooms, to which many magazines and newspapers were donated, or the religious stimulus from the meetings, at which there has been a large and regular attendance from the volunteer regiments. It was at this institute that steps were taken for the first celebration of Memorial Day in the Philippine Islands; between three and four thousand people attended the subsequent services at Battery Knoll Cemetery. The first Fourth-of-July celebration was also held in the Soldiers' Institute. Last August Bishop Warne [Warren?] reached Manila to take episcopal charge of the islands. An American writes that he found at Malabai, three miles from Manila, sixty women and one hundred and fifty men present at a Protestant meeting which was being held in the Roman Catholic parish church."

---

## THE POPE'S ENCYCLICAL ON SOCIALISM.

FOR several reasons the Pope's late encyclical upon Socialism and Christian democracy is regarded as a more than ordinarily important papal document. It is upon a subject that is becoming yearly of more serious import to the church as well as the state; and it is believed by many to be probably Leo's last word to the world, for it is currently reported that the Pontiff does not expect that he will outlive the present year. The following text is from a translation furnished to the New York *Journal* by the Rev. Henry Wynne, S.J., of St. Francis Xavier's College, New York. Like all encyclicals, it is addressed primarily to the patriarchs, metropolitans, archbishops, and bishops of the Roman Catholic Church throughout the world. After referring to his previous encyclicals on "the errors of Socialism," of December 28, 1878, and of May 15, 1891, the Pope says:

"What does social democracy mean? What Christian democracy means there can be no doubt. But social democracy is so freely and recklessly interpreted that many come to the dangerous opinion that as there is nothing beyond bodily health and riches, human happiness consists in seeking and enjoying these; hence they would attribute all authority to the people, level away all civic distinctions, and establish an equality of fortune. Hence all right of property must be done away with, and all that individuals possess must be regarded as common property. But Christian democracy, as taught by Christianity, based, as it is, on the principle of divine faith, and studying the advantage of all, seeks to perfect human souls for everlasting joys, and therefore solemnly insists on the right of acquiring and of possessing and maintaining a proper distinction of degrees in every well-constituted society, and of impressing upon human society the stamp and character which God has given to it. . . . . .

"I have mentioned the duties of virtue and religion, tho some whose opinion prevails with the masses think the social question to be purely an economic one, when, on the contrary, it is most surely, above all others, a moral and religious one, and therefore dependent on the moral law and the tribunal of religion. The tendency of Catholics to work for the masses is all the more praiseworthy, because it is manifested in the same sphere in which steadily and successfully, under the benign influence of the church, the zealous enterprise of charity strives to accommodate itself to the times. The law of charity, reinforcing the law of justice, sees to it that each one gets his own and that no one is cut off from his right. Let it be clear, therefore, that the zeal of Catholics for relieving and elevating the people is in strict accordance with the spirit of the church and with her timeworn example.

"What means may be adopted for this Christian movement will not matter so much if the principle laid down by us be observed. But what matters most of all in an affair of such vast importance is that Catholics should act with one mind and will and with one effort, and what is quite as important is that their action should multiply itself by every human and worldly resource and go on increasing and expanding. Those especially are exhorted to take part in this movement whose station, means, mental and moral endowments give them some influence in the commonwealth. If these be wanting, scarce anything can be done that will avail for advancing the condition of the people; while, on the other hand, this advancement is all the more sure and speedy when a number of leading citizens combine together for it. We would have them consider that they are not free to mind or to neglect the lot of the poor, but that they are bound to this by their very duty, that no man dwells in a community for his own benefit simply, but for the good of all; so that what some can not contribute to the common weal others who can should contribute abundantly, and the extent of the obligation in this matter is to be measured by the abundance of their possessions, for which they must make a strict account to God, the Giver. Let them take heed also of the plague of evils which, if no remedy be applied, must some day result in the destruction of all classes in society; so that he who neglects the cause of an afflicted people is breeding trouble for himself and for the state. We would also counsel seriously that whatever individuals or societies may undertake for this purpose be done under the authority of the bishops, and let them not be deceived by any impulse of charity which might lead them to disregard obedience, as nothing either useful for the people or pleasing to God could come of it. God is always pleased with him whose views are submissive to the authorities of the church and who hears their voice and who is always ready to undertake arduous tasks with their sanction. It will help very much to the end we have in view if men show by their lives examples of virtue which will prove that they despise idleness and the pleasures of wealth, and that they devote it to the good of others. Such examples are powerful to excite in the people a spirit of self-help and have a greater force when they appear in the lives of leading citizens.

"We exhort you, my venerable brethren, in your prudence and zeal, to consult among yourselves according to the need of the people and places where you are, and let your authority avail to moderate, repress, and resist, so that the vigor of holy discipline be not relaxed under any pretext whatever. Let the proper distinction of degrees which Christ ordained for His church appear so clearly in the united and progressive work of all Catholics, and let tranquillity of order and true prosperity flourish, especially among the people, under the guidance and teaching of the church whose most holy mission it is to keep Christians in mind of their duty, to unite rich and poor in brotherly love, and to support and strengthen souls in adversity."

Roman Catholic comment is represented by the following from *The Ave Maria* (February 23):

"The economists, of course, have always considered religion a useful conservative force and a powerful ally, but there was need of just such a forcible declaration as the Father of the Faithful has made. . . . There are, of course, forms of so-called 'socialism' that do not conflict with Catholic morals; but the question

is a much-muddled one, and the Holy Father's letter will help to clarify it."

Comment by the Protestant press is largely commendatory. The Boston *Congregationalist* says:

"The encyclical, like others of the Pope's on the social question, reveals his breadth of information and sympathy and his conservatively progressive spirit, it being a new phenomenon in the history of the papacy to see the word 'democracy' so boldly championed. However, it is a dangerous word for the Pope to put in the minds of his followers. Carried to its logical conclusion, it undermines the Roman Church, the least democratic of institutions."

A curious feature of the case is that many secular papers which, like the Rochester *Post and Express* and the New York *Press*, ordinarily never have a good word for Socialism, find their Protestant antipathy to the Pope stronger than their capitalistic sympathies. *The Press* (February 17), for instance, says of Leo XIII.:

"He confuses certain issues which are clear to all trained students of economic problems. We are not advocating socialism as a panacea for industrial ills. But to group all classes of socialists and all schools of socialistic thought under the general summary of 'wicked' and 'demagogical' pleas is to misread the significance of current movements. The burden of Pope Leo's animadversions might well apply to anarchism and to certain openly revolutionary projects of a branch of the socialistic propaganda. All good men will applaud his utterances here. Yet, apparently, His Holiness does scant justice to the very many distinguished and scholarly men like Bishop Ketteler and Canon Moufang [both Roman Catholics], like Maurice, Kingsley [both clergymen of the Church of England], Ruskin, Morris, and others, whose study of the scheme of socialism upon its ethical side would seem to be far deeper than that of the Pope, however untenable the relief measures proposed."

The Socialistic press naturally does not like many of the Pope's words. *The Worker's Call* (Chicago, February 9) says:

"Like every other reactionary document that has ever appeared, the encyclical carefully 'defines' what it intends to demolish, and its definition of socialism is purposely contrived to render the demolition easy. The object of attack is described as something 'which concerns itself solely with material possessions' and which is 'always seeking to establish perfect equality and a common holding of goods.' Now, whatever this thing may be—that is, if it has any real existence—it is certainly not socialism, and the warning given to good Catholics to avoid it is, to say the least superfluous. Such a bogey as this has no existence; socialism does not concern itself solely with material possessions. Such a definition would fit capitalism with infinitely more truth. Socialism deals with material possessions as a means to an end—capitalism makes them the end.

"Socialism does not seek to establish equality, in the sense that the readers of the encyclical are left purposely to infer. It cares nothing for equality in material possessions, and recognizes to the full the mental and physical inequalities of individuals. What it does insist upon, however, is equality of opportunity, the right of the producer to produce and enjoy the full product, be that product great or small, and this the Socialists will have in spite of every so-called 'religious' institution on the face of the earth. Socialism cares nothing for holding 'goods' in common. It declares that the machinery for the production of these 'goods' shall be collectively owned by those who collectively operate them—which is an entirely different matter.

"What, then, has the encyclical to offer? Schemes for the 'amelioration of the lot of the working classes.' Why should the lot of the working classes require 'amelioration' unless robbery is being committed upon them? Does not their labor produce all wealth? Why, then, should they not have it? But these 'amelioration' schemes are now in full blast under the direction of the robber class, and for no other reason than that the system of robbery may be preserved.

"'Almsgiving,' 'charity'—never a word of 'justice.' 'Charity does not degrade,' says the encyclical. No, it only transforms men and women into liars, crawlers, and hypocrites who 'concern themselves solely with material possessions' which are modestly limited to a crust of bread, a rag of clothing, and a filthy hovel—but it does not 'degrade.' 'Justice' will breed men—'charity' can only produce slaves who will be 'respectful to their masters,' as the encyclical says."

## IS ROMAN CATHOLIC SCHOLARSHIP NECESSARILY INFERIOR?

IN THE LITERARY DIGEST of December 22 (page 777) we quoted from an article by Prof. George H. Schodde asserting that the spirit of the Roman Catholic Church is not favorable to the development of the highest scholarship. The writer based his opinion upon an examination of Roman Catholic and Protestant scholarship in Germany, where education in all branches has reached its highest development. In *The Messenger of the Sacred Heart* (New York, February), a Jesuit priest, the Rev. Benedict Guldner, replies to Professor Schodde's article, at the same time apparently holding THE LITERARY DIGEST responsible for the views expressed by Mr. Schodde. His main contention is that the Roman Catholics of Germany have not had fair opportunities. He writes:

"Up to the end of the eighteenth century the Catholics had their own universities, and these were equal, if not in many cases superior, to their Protestant sisters. Then came the French revolution, the Napoleonic wars, the break-up of the German empire, the iniquitous secularization of the vast territories of the church in Germany which were absorbed by the state; and the Catholics of the countries that now constitute the German empire with the exception of Bavaria, all found themselves under Protestant rulers. Even Bavaria had for its ruler from 1848, Max II., who at one time was on the point of turning Protestant, but was dissuaded by a Protestant adviser, and after his death he was succeeded by his son, Louis II., who died by his own hand, a madman, having allowed his minister Lutz, an apostate Catholic, to carry on a bitter warfare against the church.

"The destruction of the Catholic universities, carrying with it the loss of endowments and of scholarships for indigent students, the simultaneous disappearance of the schools of the religious orders with the calm leisure so conducive to science, struck a deadly blow at Catholic science and learning. The spoils fell into the hands of Protestant governments, and the Catholics experienced the feelings of a conquered people."

Under these circumstances, is it astonishing, asks Father Guldner, that Roman Catholics could not at once adjust themselves to the changed conditions and did not at once flock to the universities where they were made to feel that they were unwelcome? Yet it was impossible for them to keep permanently aloof, and they have later attended the universities in great numbers. The writer denies, however, that Roman Catholics even yet have a fair chance to become university professors, or that, as Professor Schodde claims, "admittance to membership in a university faculty is secured solely and alone through scientific competence and scholarly attainments." He instances many savants of high attainments, some of whom, like Theodore Schwann, author of the cell theory, attained world-wide renown, who were compelled, he says, by Protestant prejudice to resign their chairs or were overlooked by the Government instead of being promoted. This system of "overlooking" has, he adds, been reduced to a fine art by the German Government. Baron von Hertling, for instance, a leader of the Center Party and one of the most distinguished savants in Germany, was for ten years kept in the position of a privat-docent (the lowest academic rank, somewhat similar to our "tutors"). He continues:

"All the world has heard of Johannes Janssen, the creator of a new method of studying and writing history, the founder of a school of historians, and a German of Germans. Was he ever invited to accept a chair in a German university? Probably he was not 'competent.' The fact is that he never rose higher than to the position of instructor in history to the boys of the Gymnasium of Frankfort; and his famous pupil, the continuator of his

great work, Ludwig Pastor, like Janssen himself a son of the Rhineland, had to seek a university position in far-away Innsbruck, at the foot of the Alps. We could mention other names. We could mention the names of more than two-score German Jesuits who would be an ornament of any university in the Fatherland, not only in the sacred but also in the secular sciences, but they are banished from the empire, and not only they themselves, but also those that have studied under them, are excluded by law, at least in the kingdom of Prussia, from holding university professorships. But enough has been said, we think, on a subject which, in Germany, is quite notorious. Our critic, then, has not enumerated all the factors controlling university opportunities, and he has not given the true explanation 'of the relative inferiority of the scholarship of the Catholic Church.' Over the gates of the university the bright and ambitious young Catholic reads these words: 'No Ultramontane need apply!' In presence of such unjust and humiliating ostracism, he would be cast in heroic mold who, while remaining a stanch Catholic, would undertake to fit himself for a university career. It is all very well to talk of 'perfect "Lehrfreiheit," the most precious possession of the university,' but you must first secure your chair before you can exercise this 'freedom of teaching.' To sneer, under such circumstances, at the relative inferiority of the Catholics is very much like throttling or gagging a man and then upbraiding him for not having delivered a speech."

## THE ENCYCLICALS OF THE ENGLISH BISHOPS.

THE past month has been a month of encyclicals. Besides the Pope's important pronouncement upon Socialism, closely following his encyclical on the Redeemer, the Roman Catholic bishops of England and the whole hierarchy of the Established Church have put forth circular letters to their several flocks upon questions which are agitating religious people in England. The encyclical of Cardinal Vaughan and the Roman bishops does not deal with such burning issues as does the Anglican circular, and has therefore attracted less attention. It is directed against "Liberal Catholicism," or the attitude represented by the late Professor Mivart, which appears to be gaining enough headway in the Roman Catholic communion in England to cause the Roman prelates some anxiety. The encyclical points out the dangers of free speculation on doctrines already defined by the church, and urges Roman Catholics to think only in harmony with "the mind of the church."

Within certain safe and clearly marked bounds, it says, there is sufficient liberty for all Roman Catholics. It also cautions priests against receiving Protestant converts into the church unless the latter evince unmistakable acceptance of the church as an infallible authority on all matters of faith and morals. Roman Catholic papers receive the letter as timely in view of recent developments. The Anglican *Church Review*, too, thinks that Cardinal Vaughan and his "schismatic hierarchy of anti-bishops" did "excellently well in their recent pastoral," and that their words could be read with profit by all Catholics, whether Roman or Anglican. Other journals allude to the letter as a cry of alarm, and assert that it exhibits a hopeless immobility on the part of the Roman Catholic Church before modern progress.

The Church of England, also, continues to have her family quarrels. The "ritual crisis," quiescent since the Fulham Conference, has again been rendered somewhat acute by the encyclical letter, signed by the archbishops of Canterbury and York and the whole bench of bishops except Dr. Creighton, the late Bishop of London, and by two less well-known prelates. The bishops, for what is perhaps the fiftieth time, state what they regard as their rights to the obedience of the clergy in certain disputed questions of ritual. The encyclical runs in part:

"Circumstances have given special prominence to certain points in the present condition of our church which cause very grave anxiety to those to whom, by God's appointment, the government of it is entrusted. We inherit the form of government which has come down to us from apostolic times. The duty of guiding the church is entrusted to the bishops, and we can not escape the responsibility. All antiquity is united in teaching that this burden is laid upon them, and if any doctrine can be called Catholic it is that the bishops have a right to call on all clergy to follow the godly admonitions and submit themselves to the godly judgments of those who are set over them in the Lord. Those who refuse such obedience are practically setting up a form of government which is distinctly not episcopal, and they can not claim that they are guided by Catholic principles or treading in Catholic paths. In matters of ritual, the regulation of which is expressly committed to the bishop by the Book of Common Prayer, the refusal of a clergyman to obey the solemn admonition of his bishop is a grave offense, still more grave when his refusal sets aside the judgment of the bishops as a body. We, therefore, put before you that we as a body uphold the duty of submitting to the decisions of the archbishops, lately given on questions referred to them, in accordance with the direction in the Book of Common Prayer. We acknowledge thankfully the very general recognition of this duty which has been conscientiously given by the clergy at large. But this has unfortunately not been universal. Brethren, you are well aware of the mischief that must necessarily follow on disregard of the essential principles of all true government.

"The great work which our Lord has committed to the whole church, and especially to our own branch of it, the preaching of the Gospel to the world, demands all our energy, and is seriously imperiled if we can not give to it our united force. We entreat you to use all your influence to persuade those—we are thankful to know that they are few in number—who are regardless of our authority, to return to that obedience which alone can expect the blessing of God."

*The Christian Commonwealth* (January 24), an organ of English Free-churchmen, comments as follows:

"Only occasionally do the English prelates unite to issue a manifesto for the special benefit of their clergy. Their new appeal is a dignified and serious document, simply calling attention to the duty of obedience to themselves as ecclesiastical superiors. Altho it will not lower the bishops in public esteem on account of its proper tone, it will unfortunately be unlikely to command the implicit allegiance which is insisted on. For there is no known method that can be resorted to of enforcing the assent of recalcitrant clericals to any authority so long as the church is not self-governing. . . . Even if the clergy all round conform to the demand addressed to them to respect the Canterbury decision respecting lights and incense, we must not hope that any lasting peace will be enjoyed."

The London *Church Review* (High Church) criticizes the bishops' claim that the recent opinions of the Metropolitans on incense and moving lights were "judgments," or in any proper sense authoritative, and gives the following very clear indication of the spirit of Anglican Catholics in disputes of this sort:

"We are afraid we must say that their lordships the bishops of the provinces of Canterbury and York, in issuing their joint letter, have done another very unwise thing. It is very wonderful that they can not lay to heart the sage counsel of Gamaliel to his colleagues: 'If this thing be of men, it will come to naught; but if it be of God, ye can not overthrow it.' If, instead of looking at one or two details of ceremonial, they would seriously set themselves to inquire the real meaning and gist of the Catholic movement, they would perceive that they can no more stop that movement by prohibiting those details than Mrs. Partington could sop up the Atlantic with her mop. But the bishops do not understand in the least that the Catholic movement is the flowing of an irresistible tide induced by the action of spiritual forces that can not be resisted. . . . . .

"It is most difficult to imagine that their lordships can suppose that it can have the smallest effect. Is it likely that men like Mr. Wilson or Mr. Ommanney, who have thoroughly counted the cost, who know far better than the bishops the principles on which they are acting and for which they are contending—is it likely they will be influenced by such a document as this, or by appeals from their Protestant brother clergy? To suppose so is to suppose them to be either wholly wanting in intelligence or in the faintest sense of responsibility. To suppose this is to insult clergy who have a claim to their lordship's respect and admiration."

# FOREIGN TOPICS.

## CANADIAN FEAR OF AMERICAN "RAILROAD KINGS."

BETWEEN actual domination by the Canadian Pacific Railroad and threatened invasion of Canada by the railway kings of the United States, the papers of the Dominion are having a hard time.

The first count against the Canadian Pacific is its attempt to evade the provision of its charter by which, as soon as it earns ten per cent. on the capital invested, "the Government shall have the right to regulate its passenger and freight rates." We quote from *Events* (Ottawa) on this point:

"This seems to be a very fair arrangement and a sufficient check on the company. Considering the great risk taken by the company in investing in the road at a time when fully half our public men declared it would not earn enough to buy grease for its axles, a limit of ten per cent. was not too wide a margin to allow on so great a risk. No one would seriously object to the company clearing ten per cent. on its actual capital; but the company is not willing to be bound by that clause, and it gets over it by claiming that the $130,000,000 of cash or lands or other valuable concessions which it secured as a present from the people should be counted as a part of the capital on which the ten per cent. has to be earned before its rates are interfered with. In other words the C. P. R. wants the people of Canada to pay interest on the enormous subsidy they have given the railway. Imagine a friend presenting you with a fortune and then your demanding that he pay you interest on it for all time, and you have a case exactly like that of the C. P. R. The company is not satisfied to get interest on its own investments, but it wants to draw interest on the investment of the Canadian people as well."

The second count is, that, by reserving from settlement the immense land grants made to it by the Canadian Government, the company has worked great injury to the entire country, but chiefly to the farming element. As these grants are exempt from taxation, the railroad can afford to let them remain idle and unimproved. Says *The Daily Tribune* (Winnipeg):

"It [the reservation policy] keeps out of cultivation for years immense tracts of land, and when this land is finally bought, the settler has to pay to the railway company capital that, if put into his farm, would make his annual output much larger—settlers' operations during their first five or ten years being often much restricted for want of that very capital. Then, in turn, the restriction on the growth of railway traffic due to land being held vacant, or being brought under cultivation slowly on account of lack of capital on the part of the occupier, means higher freight rates and more burdensome municipal taxes."

The vast consolidation of railroad interests in the United States which has been brought about during the past few months (see THE LITERARY DIGEST for January 19) has caused no little apprehension among Canadians, involving, as it does, in the opinion of railroad authorities, the ultimate acquirement and control of the Canadian Pacific and the Grand Trunk railroads. It is rumored in Canada that the American "railroad kings," meaning, specifically, J. Pierpont Morgan and J. J. Hill, are already quietly buying up, in New York, London, Montreal, and on the Paris, Berlin and other European exchanges, the stock of these railroads, in order to control their policy. Representative Maclean, of the Canadian House of Commons, recently made an impassioned speech in Parliament pointing out the danger of "Yankee capitalism." This danger, he declared, is a real one, and he sees but one remedy: the Canadian Government must obtain control of a majority of the stock of these roads, just as Lord Beaconsfield obtained possession of the majority of the shares of the Suez Canal, in order to prevent control from falling into hostile hands. President and General Manager Shaughnessy, of the Canadian Pacific road, in a recent newspaper interview, confirmed the fears of Mr. Maclean, and advocated as a remedy a "gradual policy of government control." The Dominion should, he declared, begin by buying out the Canadian Pacific and Grand Trunk lines. *The Globe* (Toronto) points out that while "the danger lies in the absence of any defense against discriminations injurious to Canada, whether by foreigners or selfish native cliques, the defect should be remedied, as far as possible, by the creation of machinery for controlling services and regulating rates." It does not advocate the Government's buying out the roads. The proximity of the Hill system, the Great Northern, to the Canadian boundary, and the persistent attempts of this railroad to enter British Columbia for the purpose, as is supposed, of tapping the coal-fields there controlled by Mr. Hill, is regarded by the Canadian journals as a constant menace to the Dominion. *The Gazette* (St. John, N. B.) fears that the "Yankee syndicate" may finally succeed in getting a charter to enter British Columbia. It says:

"Perhaps the best way to meet the combination is by the construction of a government line of railway from Montreal to Parry Sound and another from Montreal to the Detroit River. This would prevent railroad combinations from charging excessive rates of freight in the most populous sections of Canada, and would furnish means of transportation independent of company railroads to the great West. *The Gazette* is strongly in favor of fast transcontinental railroads owned and operated by the Government of Canada."

The French journals of the Dominion regard the danger of American domination as very serious. Says the *Patrie* (Montreal):

"The situation in not yet desperate. But it is very grave. The agitation should open the eyes of those who refuse to see. It certainly demands serious attention from all who fully appreciate the necessity of protecting our great national interests."

## ARE ENGLAND AND GERMANY IN ALLIANCE?

WHILE British newspapers comment favorably and even cordially on the German Kaiser's presence at the funeral of Queen Victoria, and regard his visit to England as "the natural action of a warm-hearted, chivalrous grandson on the death of his respected grandmother" (to quote the London *Times*), the journals of the Fatherland, for the most part, touch the political chord in their comment on the same event, and in general repudiate the idea that Anglo-German relations have been much benefited thereby. The appreciative tone of the British press is well represented by the statement of *The Times*, that the first impression of real liking and respect made by the Kaiser "has been deepened day by day by the tact, the unselfish thoughtfulness for others, the noble dignity, and, above all, by the manly simplicity of his bearing." We knew already, says *The Standard* (London), in the same vein, "that the Emperor was a prince of extraordinary ability, of exceptional capacity, and of masculine

ADSUM.
—*Courrier Français, Paris.*

energy of character. To all these high gifts we have now seen that he unites a nobility of temper and a warmth of feeling which are equally rare and no less attractive. There is no foreign ruler who has done more to earn our respectful gratitude, or to whom we can offer our acknowledgments with more sincerity."

"Good-by, sir, and God bless you," is the farewell word of *The St. James's Gazette* (London), which adds: "You take with you the earnest good will and affection of every man and woman in this country."

THE KAISER'S HELMET.

KRUGER: "I thought there was an eagle on that hat." —*Le Rire, Paris.*

The appointment of Emperor William as a field-marshal in the British army, the investiture of the German crown prince with the Order of the Garter, and the appointment of King Edward to succeed Queen Victoria as chief of the First Dragoon Regiment of the Prussian Imperial Guard, have been the subject of extended comment. British journals refer approvingly to King Edward's closing remarks in his address to the crown prince. He hoped, he said, that his conferring the most prized of English orders "will yet further cement and strengthen the good feeling which exists between the two countries, and that we may go forward hand-in-hand, with the high object of insuring peace and promoting the advance of civilization."

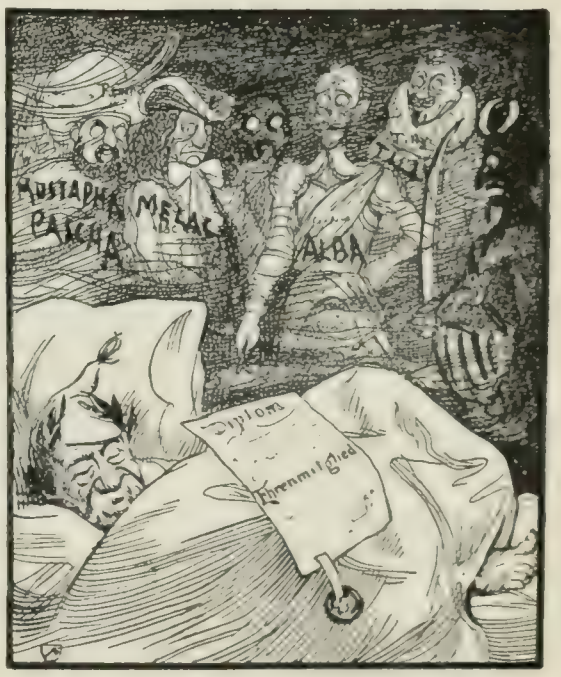
There is no need to speak of alliances, says *The Standard*, no excuse for boasting of arrangements which might give offense to other powers; "but we are, at least, entitled to assume that the relations of mutual regard will endure between the English and the German sovereigns."

*The Guardian* (Manchester) hopes that the new tie "will lead men in both countries to dwell more on the essential identity of purpose which animates the two great Teutonic powers, and less on accidental differences of opinion and passing conflicts of interests." The Dutch in South Africa, says *The Daily Post* (Liverpool) "must now perceive more clearly than ever that any hope of German intervention, founded upon either the Kaiser's sympathies or policy, must be abandoned." *The Daily News* (London), however, points out that it would be "entirely to misconstrue the King's gracious phrases if we took them as implying any kind of formal alliance."

German newspaper comment brings out prominently two facts: the still strong anti-English feeling in Germany, arising principally from German sympathy with the Boers, and uncertainty as to how an Anglo-German *rapprochement* would affect the relations of Berlin to St. Petersburg. Those of the Berlin journals which are more or less officially inspired speak approvingly of the Kaiser's visit and its results. The Emperor's appointment, says the *Boersen Gazette*, "is a fresh stage on the road which is leading Germany into England's arms, which have long been opened to her." The journey undoubtedly possesses political significance, declares the *National Zeitung*, but it warns the leaders of German policy that "the German frontier marches with both Russia and France." The Berlin correspondent of *The Daily News* (London) says that a number of Berlin journals have received "hundreds of letters," asking the editors to "stop filling the papers with these things"—accounts of the death of the Queen. "It isn't our Queen," say the writers; "we want to read about the Boers." The pro-Boer attitude of the German press is represented by the opinion of the *Kreuz-Zeitung* (Berlin), which says: "We are not called upon to police the world morally; but if England does not recognize the independence of the two republics, in however limited a degree, we would rejoice to see any combination bringing about such a solution. England is now morally isolated, in spite of sympathetic funeral demonstrations." "So long as the godless and unjust Boer war continues," says the *Neueste Nachrichten* (Berlin), "the wall of division remains between German and British public opinion, a wall which England alone can remove."

The *Vossische Zeitung* (Berlin) says that, altho the German Emperor has become a British field-marshal, he will pursue none but a German policy and will serve German interests and no other. "An offensive and defensive alliance between the two empires," it says, "continues to belong to the realms of the imagination. There is no occasion for any such alliance. Neither Germans nor Englishmen desire it. Each state has too many interests which are peculiar to itself and which can not and will not be espoused by the other. But their conflicting interests are not of a character to prevent Germany and England from maintaining the most harmonious relations." There are, nevertheless, some people in Germany who regard the Kaiser's apparent friendliness to England as misleading. In Thiel's pamphlet "Rache für Transvaal," it is asserted that the English have carefully avoided for years everything that could make the Germans like them, and that their treatment of the Kaiser personally has been such that every man of spirit must resent it. The writer adds:

"To deceive England, to lull her suspicions, is at present the duty of the imperial Government. Those who are too German in their honesty and simplicity to realize this should attend to their cabbage-growing, for God has not given them wisdom enough to understand matters of state. The present German Government fulfils the same duty with regard to the fleet which the Prussian Government fulfilled before 1866 with regard to the army. Army reform was then directed against Austria, and time was needed to carry it through. The increase of the fleet to-day is directed against England."



THE HERO OF THE SOUTH AFRICAN WAR.

Lord Roberts receives a deputation bringing him his nomination as an honorary member of the "Association of Assassin-Incendiaries." —*Wahre Jacob, Stuttgart.*

It was the fundamental maxim of Bismarck's diplomacy to avoid any breach with Russia. This has been generally interpreted in Berlin as precluding any Anglo-German *entente cordiale*, on the assumption that England and Russia are, of necessity, mutually antagonistic. The *Neueste Nachrichten* (Berlin)—semi-official and, generally, very anti-English—elaborates this point. It says, in part:

"In complete contradiction to the experience of the past two

or three decades, certain politicians still adhere to the view that the opposition of English and Russian interests is always operative, and that, therefore, every approach made by Germany either toward Russia or England is equivalent to an unfriendly attitude toward the other power. This premise, which has not been in accord with the facts for a long time, leads to the false inference that German statesmanship must abstain from any close connection with England in questions of common interest, in order not to endanger German relations with Russia. How remote this is from the actual state of affairs is clearly proved by the fact that the Russian papers have repeatedly advocated friendly relations with England."

The same journal points out, in conclusion, that the significance to Germany of Russia's efforts to be on good terms with England is "clearly illustrated by a recent article in the *Viedomosti* [St. Petersburg], in which that newspaper endeavored to convince the English that all their interests are at complete variance with Germany's."

The *Sviet* (St. Petersburg) sees in the friendly intercourse between King Edward and the Kaiser an evidence of the "defensive and offensive character of the Anglo-German alliance." It is now clear, asserts this Russian journal, that "Mr. Kruger was not received in Berlin because Germany stood in need of an alliance with Great Britain in order to assume a predominating position in the Balkans, in Asia Minor, and in the far East." "We wish Germany nothing but what is to her advantage," it concludes, "yet only so long as her advantage involves no loss for us. The question whether the Anglo-German *rapprochement* threatens injury to Russia can, however, be answered only in the affirmative."

French papers, of course, take a lively interest in the drawing together of France's two rivals. The London correspondent of the *Liberté* (Paris) declares that the investiture of the crown prince with the Order of the Garter was followed by "the definitive ratification of the Anglo-German accord which was concluded last year during the short stay made by William II. in England, and of which the ratification has been delayed till now by the indiscretions of Mr. Chamberlain." It is not generally believed, however, that an actual alliance has been accomplished. Commenting on this report, the *Liberté* remarks: "William II. is and will remain England's friend so long as he has not a fleet strong enough to enable him to 'cut' her. . . . The powerful right hand of the Germanic Cæsar is of the greatest advantage to England for avoiding stumbles in her general policy. Having lost all military prestige, and being weakened by a year of fruitless and costly conflict in South Africa; she would be greatly embarrassed if she had to-morrow to face single-handed a war with a great European nation or with the United States."

The *Temps* points out that "dynastic relations have never overridden state interests." "If Edward VII.," it says, "is the very fond uncle of Emperor William II., he is, by his wife, the very well-disposed uncle of the Czar Nicholas, and the very tender uncle of the Czaritza."

The Austrian papers rejoice over the assumed alliance, as, if a fact, it would greatly increase the influence and power of the Dreibund, from which Austria undoubtedly derives more advantage than either of her partners. The *Neues Tageblatt* (Vienna) assumes the fact of an alliance, and says:

"The English have not liked alliances with continental powers, and they have found it difficult to admit any continental nation to anything approaching an equal position with their own in the dominion of the waves. But the conviction seems to have forced itself upon England that the mightiest can not stand alone, and that the best means of meeting German competition would be cooperation with an active and energetic rival."

*The Daily News* (London) maintains that Mr. Chamberlain is very anxious for a definite, permanent understanding with Germany, and reproaches him for pushing this idea, at the expense of "extreme discourtesy" to France. Says this paper, referring to a recent speech of the Colonial Secretary at Leicester:

"His language toward France was indecently menacing, but that is neither here nor there. To Germany he was effusive, eulogistic, almost gushing. The two nations were made to cooperate in friendly union. Their ideas, principles, and sentiments were the same. It was difficult to imagine any legitimate cause of difference between Englishmen and Germans. Mr. Chamberlain must thus be peculiarly interested in German opinion upon his war, and upon the annexation of the Dutch republics. He can not lightly set it aside. It comes, on his own showing, from a sympathetic and understanding people, prejudiced in favor of England, and singularly capable of appreciating the English point of view. To say that this opinion was unfavorable to Mr. Chamberlain's policy would be saying too little. It is vehemently, and even violently, hostile."—*Translations made for* THE LITERARY DIGEST.

## LIBERALISM AT THE OPENING OF THE TWENTIETH CENTURY.

THE glory of the nineteenth century, declares M. Roland de Marès, in a review which has the editorial indorsement of the *Independance Belge* (Brussels), is the triumph of liberalism. It has sustained a constant and heroic struggle for knowledge and justice, permitted right to triumph over might, and free thought over religious fanaticism. For ancient prejudices, it has substituted the human conscience and has given supreme authority to the will of the people. It has made education accessible to practically all classes and created an emulation of intellect that has brought about so enormous an advancement of science and art that, in these one hundred years, the world has transformed itself more radically than it could possibly have done during the eighteen centuries preceding. Of the problems which face the forces of liberalism at the opening of the new era, M. de Marès says:

"The liberals of the twentieth century must overcome the last shred of resistance of reactionary old Europe; they must make all people to know that all war, of whatever kind, is hateful, and is the ruin of the conqueror even more than of the conquered; they must give profounder and more unmistakable significance to the idea of internationalism, which should dominate all our political considerations, and tend each day to hasten the glad hour of commercial liberty foretold and extolled by the Manchester School of Economists. This is the first step on that glorious road leading to the complete realization of humanity's best dream, that all men of good will, in all the earth, may work without restraint for the happiness and well-being of the human race."

In treating of the development of the United States M. de Marès shows discrimination and a judicial mind; but when he reaches the Spanish-American war he becomes a little mixed in his facts and somewhat heated in his comments. After declaring that before hostilities had broken out, the "Washington Government promised absolute independence to the Cubans and the Filipinos," he sketches the history of the war, concluding with the statement: "Spain lost all her colonies, which she had to surrender to the United States, and the latter, despite their promise of independence to the Cubans and Filipinos, at once annexed both Cuba and the Philippines." Commenting on "these facts," M. de Marès observes:

"The United States has shown an entirely new spirit, quite contrary to the precepts of the Monroe doctrine, which it invoked to excuse the war against Spain. This new spirit, like the imperialism of England, aims at colonial expansion and at opening by force of arms new avenues for American commerce, avenues which it could have entered without difficulty by peaceful means if it had remained faithful, on the other side of the Atlantic, to the principles of absolute commercial liberty. But the United States will no doubt in the future become a military power, like the great European nations."

The United States will become, he continues, a second England, "which gave to the era such a splendid example of liberalism, and then destroyed all the moral grandeur of her work for civilization by her scandalous course in South Africa."—*Translations made for* THE LITERARY DIGEST.

# Literary Digest Party European Tour 1901

The request for another personally conducted European Party to be organized exclusively from among the readers and friends of the LITERARY DIGEST has come from several directions. As announced on this page last week, such a party is now being organized. A splendid tour is announced (see last week's announcement). The party is limited to LITERARY DIGEST readers and their friends. The utmost congeniality is thus assured. Hundreds of the readers of this paper who wished to join the party which went last year were prevented from doing so by business engagements, illness, etc. The present opportunity is one which will compensate for the disappointment then experienced. Sign and send us the inquiry blank below, and receive full particulars and descriptive matter.

## Everything Included—Everything High Class

**VISITING**

**Italy**

**France**

**Switzerland**

**Germany**

**Austria**

**Holland**

**Belgium**

**England**

ARRANGEMENTS have been made on entirely inclusive lines. There will be no extra charges for meals, traveling fees, or fees for visiting sights mentioned; no fees at hotels, no fees for porters, no tips, no transfer expenses. Carriage rides are included in the various cities wherever mentioned in the program, and the numerous incidental expenses which are constantly occurring are foreseen and included in the program. The services of experienced conductors and business managers are also included. Every important detail will be carried out in a liberal and high-class manner, and all things necessary to the comfort of the party are anticipated, provided for, and included.

**This Same Tour was Taken Last Summer by a Party of 115 Persons Read What Members of That Party Say of Their Experience:**

**MR. GEORGE ALLEN,** of Philadelphia, who has crossed the Atlantic thirty times, and who, **with eight members of his family and friends,** accompanied the party of 115 persons last year on the same tour as announced above, says: "I look back upon the trip with the greatest of pleasure, and when I think how carefully and minutely every little detail was carried out, from our start at the Reading Terminal Station until we returned to New York, the handling of the baggage, the conveyances between trains, the leaving of the hotels for the different stations, the carriages reserved for our party on crowded trains, all was done with tact and precision, and without any care, responsibility or anxiety to any of the party, and this to an ordinary traveler is a joy and delight. It has been my lot to cross the Atlantic Ocean many times, but in all my experience, my trip with Henry Gaze & Sons' party was the most enjoyable, and I would like to repeat it every summer. Every member of my large family party enjoyed it heartily, and any friends of mine who should ever wish to travel abroad, I shall advise to take one of Henry Gaze & Sons' tours, for it is my opinion that we received much more than we ever expected to receive as every day brought some new pleasure and delight."

**MR. LAWRENCE S. HOLT,** Burlington, N. C., who had **a party of nine,** says: "I cannot let another day pass without writing you in behalf of myself and family. We all agree that the trip was most delightfully planned and every detail of the itinerary was carried out to our entire satisfaction, and we hope that it will again be our good fortune to accompany you on another tour as charming and as well arranged."

**MR. W. J SMITH,** of Hammonton, N. J., on behalf of **himself and eight other members of his family and friends,** says: "I feel it a duty as well as a pleasure to write a few lines expressing the gratification received in our European trip last Summer. The well-planned route and the carrying out of every detail was more than satisfactory, and the more I think of it, the more I appreciate the foresight in arranging the tour, and hope we shall have the pleasure of enjoying another at some future time."

# New Suits and Skirts for Spring.

EXCLUSIVENESS appeals to the woman of good taste. All our styles are *individual*, from the satisfactory $8 suit for ordinary wear to the $50 silk-lined gown of elegant material and finish.

Every garment is perfect in cut, careful in workmanship, smart in finish, novel and exclusive. *Every garment is made to order*—order it as you wish from the Catalogue and Samples we send *free* at your request. Ample choice there—a hundred styles, all fashionable enough to please the most fastidious—three hundred different materials to select from. The Catalogue illustrates:

**New Suits,** For Spring, the fashionable kind—with a touch of Paris about them, **$8 up.**

**Silk Lined Suits,** Made of excellent materials and lined throughout with taffeta, - - **$15 up.**

**New Skirts,** Pleasing in appearance—comfortable because they are light weight, - - - - - - **$4 up.**

**Rainy-Day Skirts,** Every woman should have one—made of plaid back or plain materials, **$5 up.**

**Wash Skirts,** You'll need one surely when the warm weather comes, - - - - - - - - - - - - **$3 up.**

**Wash Dresses,** Cool and pleasant for Summer days, **$4 up.**

***We pay express charges everywhere.***

The Catalogue and Samples will be sent FREE by return mail. The garment which we make to order for you ought to please. If it should not—send it back. *We will refund your money.* A sale means nothing without satisfaction.

**THE NATIONAL CLOAK COMPANY,**
**119 and 121 West 23d St., New York.**

**Put Them in Your Cozy Corner.**

These Papier Mache art reproductions are not made by any other firm in the United States, yet they are remarkably low in price, light in weight and more durable than similar pieces made of plaster or iron. Papier Mache takes a more natural finish, and unlike plaster or iron does not peel, chip or break. A pin or tack will hold them in place. For Dens, Cozy Corners, Libraries, Halls, Lodge Rooms, and Reception Rooms they are just what you want. Booklet shows Indian Statuary.

**Armor** 806 is 32x30 in., finish antique or bright iron. Weight, 4 lbs. Express prepaid. **$5.00**

**Oriental Heads** 852, 853, 854 & 856 are life size, in colors. Wgt. 6 oz. Ex. pd. ea. **$2.00**

If your dealer has none in stock send us his name and we will see that you are supplied. Write for "Art Decorations," a booklet sent free. Agents wanted. Exclusive, Last Call Basis. Mail orders.

National Papier Mache Works, 400 E. Water St., Milwaukee, Wis.

## BOOKS RECEIVED.

THE LITERARY DIGEST is in receipt of the following books:

"Heroes of the Reformation."—Huldreich Zwingli. (G. P. Putnam's Sons, $2.00.)

"The Modern American Speaker."—Edwin Du Bois Shurter, Ph.B. (Gammel Book Company.)

"Teacher's Commentary on the Gospel according to St. Matthew."—F. N. Peloubet, D.D. (Oxford University Press.)

"Peter Cooper" [Riverside Biographical Series].—R. W. Raymond. (Houghton, Mifflin & Co., $0.75.)

## CURRENT POETRY.

A sonnet by Dr. W. Alexander, Primate of All Ireland, was quoted in a recent number of *Literature* as illustrating what careful finish will do for a poem. The following is the sonnet:

I never yet heard music, howe'er sweet,
  Never saw flower or light, ocean or hill,
  But a quick thrill of something finer still
Filled me with sadness. Never did I meet
Any completeness but was incomplete;
  Never found shapes half fair enough to fill
  The royal galleries of my boundless will;
Never wrote I one line that I could greet
  A twelvemonth after with a brow of fire.
Thus then I walk my way and find no rest
  Only the beauty unattained, the cry
After the inexpressible unexpressed,
  The unsatiated insatiable desire
Which at once mocks and makes all poesy.

George Cabot Lodge is the author of a rather unique poem called "The Greek Galley," published in the February *Scribner's*. From it, we quote the following passages:

. . . . . .

The scarlet stars swing low to the ocean's floor
  Made silver and pearl by the slow resurgent sun,
    And the waters break
    To a leprous wake,
    As over the sea the ripples shake
    Between dawn and dark, as for life's sweet sake
  The battle of life is fought and won.
      And evermore,
To the sound of sea and the sway of song and the swing of oar,
      We sever the sentient silences
      With our wind and way, where over the seas
The surf booms steady and strong on the scented shore.

Over the sea's unfurrowed fields
The miracle spreads and the darkness yields.

**Satisfied Customers.**

For many years past the same patrons have dealt with S. Y. Haines & Co., 105 Boston Block, Minneapolis, Minn., for their flower seeds. This means entire satisfaction on the part of the customers both with the seeds and the prices. Their goods are all reliable and of new crop, and they solicit correspondence with all who love flowers.

## RACINE HOSIERY.

## At "The Linen Store."

This well known and most popular of wash fabrics is shown in nearly 500 different designs and colorings—a large number of them wholly new this season. The staple colors, pinks, blues, helio, etc., predominate.

Medium in weight, stylish and durable, it is one of the very best materials for waists, shirtings and gowns.

Price 35 to 50c. a yard.

Our display of wash fabrics, light and heavy weight, white and colored, is larger than ever before.

We have just opened a new stock of Embroideries and Laces, including Edgings, Insertions, Beadings, and All-overs.

*Mail orders will have prompt attention.*

## *Boys' Clothing.*

*The man's tailor who attempts to make Boys' Clothing produces garments that are unfitted to the age of the wearer. Our designers, who originate boys' clothing, devote their entire efforts toward having the style, cut and materials suitable to the age for which the garments are intended. All our goods are carefully tested before making up, both as to color and wearing qualities.*

**60-62 West 23d St.**

O heart that breaks to the strain and stress
Of sinews bent to the tempered oak,
The golden gates of the dawn express,
Sudden and soft as a girl's caress,
A glimmer of glass and a flash of wing,
An echo of prayer to the censer's swing,
And the altar's pillar of purple smoke.
And over the spray that the rowers fling,
Wide over the tide where the foam-drifts cling,
As the rhythm of muscle and music swing
To the sound of the sea, the sway of the song, the sweep of the oar,
To the crash and cream of waves on the bountiful shore,
The spring breaks scented over the sea!
With a leap of sunlight under the lee,
As she dips her side
To the masterful tide
And lists till the bilge distils through the cypress floor.

. . . . . .

We have fought in the noon for breath—
To the sound of sea and the sway of song and the sweep of oar.
Our bodies would swing at the oars in death,
Nor the rhythm of muscle and music cease,
Nor the weariness end, nor the sad surcease
Of sorrow absolve us: but evermore
Our bodies would swing to the pitiless oar
Till the goal was reached,
Till the galley was beached,
Till we tasted the spring in the forests that pleached
Gardens and vineyards of Greece on the plentiful shore.

## PERSONALS.

**Clara Morris in a Dilemma.**—The reminiscences of Clara Morris, which are now appearing in *McClure's Magazine*, and her "Stage Notes" which have appeared from time to time in *The Critic* are full of bright anecdotes and stories of dramatic situations that sometimes occur unexpectedly while the main drama is in progress. In *The Critic* (January) she tells an amusing story of how, during the run of "Alixe," she was forced to go upon the stage while her chest, which had been blistered during a recent illness, was still thoroughly anointed with goose-grease. She realized the offensiveness of the odor, but, in spite of it, prepared to go upon the stage.

Her maid, on entering the dressing-room, exclaimed: "I'd like to know what's the matter with this room. It never smelled like this before; just as soon as you go out, Miss Morris, I'll hunt it over and see what the trouble is."

The actress remained silent; the time came for her to appear. She writes:

"In the charming little love scene, as 'Henri' and I sat close—oh! so very close—together on the garden-seat, and I had to look up at him with wide-eyed admiration, I saw him turn his face aside—wrinkling up his nose—and heard him whisper: 'What an infernal smell! What is it?' I shook my head in seeming ignorance, and wondered what was ahead if this was the beginning. It was a harrowing experience. By the time the second act was on the whole company was aroused—they were like an angry swarm of bees."

Visible discomfort on the part of the actors added to Miss Morris's annoyance. She continues:

"In that act I had to spend much of my time at the piano, with the result that when the curtain fell the people excitedly declared that awful smell was worst right there; and I had the misery of

seeing the prompter carefully looking into the piano and applying his very sharp nose to its upright interior. There had been a moment in that act when I thought Louis suspected me. I had just taken my seat opposite him at the chess-table when he gave a little jerk at his chair, exclaiming under his breath: 'Blast that smell!—there it is again!'

"I remained silent. I was wrong, for Louis, knowing me well, knew my habit of extravagant speech, and instantly his blue pop-eyes were upon my miserable face, with suspicion sticking straight out of them. With trembling hand I made my move, saying: 'Queen to Queen's rook—four!' and he added in an aside: 'Seems to me, you're mighty quiet about this scent—I hope you ain't going to tell me you can't smell it?'

"But the assurance that 'I did—oh, I did indeed smell it! a most outrageous odor!' came so swiftly, so convincingly from my lips that his suspicions were lulled to rest."

In the last act, Miss Morris had to be carried on the stage and laid upon a couch where the death scene was to occur. Louis James was at her shoulders, and George Clark at her feet. Suddenly Clark exclaimed "Phew" and sniffed the air violently. But still Miss Morris was silent, and not until she was dead to the audience and the mother falling across the body laid her head upon the goose-greased breast, that every one was startled, as, with a gasping snort, the actress-mother sprang up, exclaiming, "It's you!"

Since this incident, Miss Morris says goose-grease has never figured in her list of "household remedies."

dent?" "Yes. I was sitting on Tommy Scanlan, and I forgot to hold his feet."—*Tit-Bits.*

**Had an Attachment.**—An Irish sheriff got a writ to serve on a young widow, and on coming into her presence said: "Madam, I have an attachment for you." "My dear sir," she said, blushing, "your attachment is reciprocated." "You don't understand me. You must proceed to court," said the sheriff. "Well, I know 'tis leap year, but I prefer to let you do the courting yourself. Men are much better at that than women." "Mrs. P—, this is no time for fooling. The justice is waiting." "The justice waiting! Well, I suppose I must go, but the thing is so sudden, and besides I'd prefer a priest to do it."—*Pilot.*

**His Fear.**—"An old South Lanarkshire farmer, who had led a very wild and dissipated life, was lying on his deathbed, and the parish minister was called in to see him. 'Your career has been a very ungodly one,' remarked the clergyman, as he observed the anxious and perturbed look on the face of the dying man; 'but do not give way to despair, my friend; there is hope for you yet, as I perceive that you are sensible of your offenses against your Maker, and are afraid to meet Him.' 'Na, na,' returned the old sinner, solemnly shaking his head; 'it's no Him I'm feared for; it's the ither birkie.'"—*Chilian Times.*

## Current Events.

### Foreign.

CHINA.

February 18.—The United States Government decides that American soldiers shall not be permitted to take part in Count von Waldersee's proposed offensive campaign.

February 19.—Telegrams received by Prince Ching and Earl Li at Peking indicate that the Chinese court will comply with all the demands of the Powers.

February 21.—Fresh troubles are reported in Manchuria, where the Chinese have attacked the Russians, who are unable to subdue them.

February 22.—The Chinese authorities accede to the principal demands of the Powers, and the von Waldersee expedition is abandoned.

February 23.—Sir Robert Hart, at Peking, protests against the seizure of his property by foreign Powers in order to enlarge their legation grounds; Minister Conger makes preparations to return to the United States.

OTHER FOREIGN NEWS.

February 18.—Wholesale arrests are made among the Moscow students suspected of being in sympathy with radical ideas.

February 20.—The Madrid papers publish a rumor that Don Carlos, the Spanish pretender, has decided to abdicate in favor of his son.

February 22.—An authoritative exposition of Russia's retaliatory tariff policy on American goods is made public in St. Petersburg; an amicable settlement is looked for.

In the English House of Lords, Lord Salisbury makes a statement regarding the anti-Popery oath taken by the new King.

PAINTED BY JAMES WALKER. **BATTLE OF GETTYSBURG.** ENGRAVED BY H. B. HALL, JR.

**IT COST $50,000.00** and took **12** years to make Bachelder's famous **steel** engraving, "Battle of Gettysburg." It was begun within 48 hours after the Battle, by Col. Bachelder, the historian and military topographer of the United States Government for this Battlefield, to whom was voted **$50,000** by Congress for his services. **1,000** officers, including **47** generals, who were in this Battle, met the **Artist** on the Battlefield and arranged the details of this picture, thus insuring absolute accuracy. The whole Battlefield, **5** miles long and **5** miles wide, is shown in complete detail in the original. The figures of the men and horses and other details in our original **steel** are **50** times as large as shown in the above reproduction, which gives only a faint idea of the beauty and grandeur of the original. **175,000** men were engaged in this Battle, and are located in this picture. **Generals Meade, Hancock** and **Longstreet** said; "It is correct in landscape and the position of troops." Captain Long and Luther Minnigh, the official guides for the **Battlefield,** say; "It is historically correct in all its features, and is the most **beautiful, interesting** and **accurate** war picture in the world." With each engraving we send an outline Key giving 200 references, showing locations of the **Generals, Corps, Divisions, Regiments, Companies, Cavalry, Infantry** and **Artillery** at the time of Pickett's charge. On heavy Steel Plate Paper—size 24 x 43 inches.

**Rheumatism Cured by a Simple Remedy that you may Try without spending a cent. Cured many cases of 30 and 40 years standing.**

If any reader suffering from rheumatism will write to me I will send him free of cost, a trial package of a simple and harmless remedy which cured me and thousands of others, among them cases of over 40 years standing. This is a grand remedy, and want every afflicted reader to learn by actual test, what marvelous power it has, and therefore will gladly send a sample free, even if more than 15,000 invalids should apply. Distressing cases of rheumatism, among them bedridden and crippled persons, were completely cured, of which I mention a few : A lady in Denham, Ind., writes that this remedy cured her, and she then cured 15 of her neighbors. In Lyon, Mo., it cured an old gentleman at the age of 82, who had been a sufferer for 40 years. In Seguin, Tex., it cured a case of 41 years standing. Hon. Jacob Sexauer of Fountain City, Wis., was cured after suffering for 33 years and after having employed 7 physicians. Miss Emma Callender at 130 Oak St., Vincennes, Ind., was cured after she was given up to die. Rev. S. Sund of Harrisville, Wis., writes that the remedy has cured two members of his congregation, one who had suffered 15, the other 25 years. Thousands of similar instances could be mentioned, showing that here is a remedy that can be relied upon. Write at once for a trial package, for it is an honest remedy which you can test before spending a cent. Address

# MODENE

IN COMPOUNDING, an incomplete mixture was accidentally spilled on the back of the hand, and on washing afterward it was discovered that the hair was completely removed. We named the new discovery MODENE. It is absolutely harmless, but works sure results. Apply for a few minutes and the hair disappears as if by magic. **It Cannot Fail.** If the growth be light, one application will remove it; the heavy growth, such as the beard or growth on moles, may require two or more applications, and without slightest injury or unpleasant feeling when applied or ever afterward.

*Modene supersedes electrolysis.*

**Used by people of refinement, and recommended by all who have tested its merits**

Modene sent by mail, in safety mailing-cases (securely sealed), on receipt of **$1.00** per bottle. Send money by letter, with your full address written plainly. Postage-stamps taken.

# Stranger Than Fiction

**A Remedy Which has Revolutionized the Treatment of Stomach Troubles.**

The remedy is not heralded as a wonderful discovery nor yet a secret patent medicine, neither is it claimed to cure anything except dyspepsia, indigestion and stomach troubles with which nine out of ten suffer.

The remedy is in the form of pleasant tasting tablets or lozenges, containing vegetable and fruit essences, pure aseptic pepsin (government test), solden seal aud diastase. The tablets are sold by druggists under the name of Stuart's Dyspepsia Tablets. Many interesting experiments to test the digestive power of Stuart's Tablets show that one grain of the active principle contained in them is sufficient to thoroughly digest 3,000 grains of raw meat, eggs and other wholesome food.

Stuart's Tablets do not act upon the bowels like after-dinner pills and cheap cathartics, which simply irritate and inflame the intestines without having any effect whatever in digesting food or curing indigestion.

If the stomach can be rested and assisted in the work of digestion it will very soon recover its normal vigor, as no organ is so much abused and overworked as the stomach.

This is the secret, if there is any secret, of the remarkable success of Stuart's Dyspepsia Tablets, a remedy practically unknown a few years ago and now the most widely known of any treatment for stomach weakness.

This success has been secured entirely upon its merits as a digestive pure and simple because there can be no stomach trouble if the food is promptly digested.

Stuart's Dyspepsia Tablets act entirely on the food eaten, digesting it completely, so that it can be assimilated into blood, nerve and tissue. They cure dyspepsia, water brash, sour stomach, gas and bloating after meals, because they furnish the digestive power which weak stomachs lack, and unless that lack is supplied it is useless to attempt to cure by the use of "tonics," "pills" and cathartics which have absolutely no digestive power.

Stuart's Dyspepsia Tablets can be found at all drug stores and the regular use of one or two of them after meals will demonstrate their merit better than any other argument.

# It Will Keep You Looking Young

If your hair is turning gray, fading, or falling, your friends are quick to notice it and tell each other you are growing old.

**HAY'S HAIR HEALTH**

will positively restore gray, faded or falling hair to its former color and beauty, will prevent dandruff and keep the scalp clean and healthy. It is not a dye nor a stain, but a natural restorer to beautiful hair growth. Equally good for men and women.

Ask for **Hay's Hair-Health and refuse all substitutes. Large 50c. Bottles. At Leading Druggists.**

**FREE BOTTLE OFFER:**

**H. H. H** is so remarkably satisfactory that arrangement has been made by which all readers of *The Literary Digest*, who have not tried it, may have a sample bottle sent FREE, by mail, also a book that tells how to have beautiful hair and complexion, and contains testimonials of many of the thousands who have regained beauty and youthful appearance by using **Hay's Hair-Health** and **Harfina Soap.** Cut out and send this special offer with your name and address and 4 cents to cover postage to **Dr. Philo Hay,** 229 Lafayette St., Newark, N. J., and he will mail you, prepaid, a free sample bottle of **Hair-Health.** Druggists cannot supply it free.

If you are already satisfied that **Hair-Health** is just what you need for your hair, you can purchase the regular 50-cent bottles at leading drug stores everywhere.

**DEAFNESS & HEAD NOISES CURED** by my invisible **Tubular Ear-Phone.** Whispers heard. Warranted to help more cases than all other similar devices combined. Helps ears as glasses help eyes. Sold by F. HISCOX only, **281** Lafayette St., Newark, N. J. Send or call for book of proofs **FREE**

# The Literary Digest

VOL. XXII., NO. 10 NEW YORK, MARCH 9, 1901. WHOLE NUMBER, 568

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### OUR DEMANDS ON CUBA.

THE adjournment of Congress seems to leave the question of the future relations of Cuba and the United States in a deadlock that can be broken only by an acquiescence in the American demands, which the Cubans do not seem ready to grant, or by an extra session of Congress, which the President does not seem likely to convene. In an amendment to the army bill Congress has authorized the President "to leave the government and control of the island of Cuba to its people" as soon as they incorporate in their constitution, or append to it, certain provisions that would safeguard the independence of the island from foreign aggression and, among other things, permit the United States to "exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States, now to be assumed and undertaken by the Government of Cuba." Further, the Cubans must agree "that the Isle of Pines shall be omitted from the proposed constitutional boundaries of Cuba, the title thereto left to future adjustment by treaty"; and "that to enable the United States to maintain the independence of Cuba, and to protect the people thereof, as well as for its own defense, the Government of Cuba will sell or lease to the United States lands necessary for coaling or naval stations at certain specified points, to be agreed upon with the President of the United States."

The Cuban reply has the appearance of an unequivocal refusal of these demands. The Constitutional Convention has adopted a declaration that "the Government will not permit its territory to be used as a base of operations for war against the United States or against any foreign nation"; but also declares that "the Government of Cuba will not make a treaty or agreement with any foreign power which may compromise or limit the independence of Cuba, or which may permit or authorize any power to obtain, by means of colonization or for military or naval purposes, or in any other manner, any foothold or authority or right over any portion of Cuba." As Congress has adjourned, and as the Cuban Constitutional Convention shows little or no sign of receding from its position, the developments of the next few months promise to be uncommonly interesting. In the mean time it is important to see what the American newspapers think about the matter.

#### North Atlantic States.

The Boston *Herald* (Ind.) declares that "Congress evidently does not propose to keep its word, as this was pledged three years ago, and in thus breaking faith it is inviting an armed uprising of the Cuban people. The way in which we have bungled affairs in the Philippine Islands is bad enough in all conscience, leading, as it has, to enormous sacrifices in life and treasure, and in discredit to our national reputation, both at home and abroad. But to have our holy war of liberation end in the slaughter of those whom we started out to liberate will be one of the worst instances of a betrayal of exalted sentiment that the history of the world has ever known." The Boston *Transcript* (Rep.), however, thinks that "for Cuba to expect that the United States would let her go on her way of naturality, uncurbed or unguarded, would be for her to expect the impossible. Save for the requirement of naval stations, which we regard as necessary, the yoke is easy and it will be for the interest of both to see that her burden is light. We hope Cuba will cordially agree to the proposal; it will be best for her to do so, and to do so quickly." The Springfield *Republican* (Ind.) calls our demands "a protectorate boldly outlined and insisted upon," and it thinks that "if the Cubans should decline to grant each of these demands, they could whistle for their island."

In New York, *The Sun* (Rep.) declares that our claim is only "a logical outcome of the Monroe doctrine, a doctrine that Cuba, which, so far as her native resources are concerned, will be one of the least defensible of the Latin-American commonwealths, can not afford to repudiate"; *The Tribune* (Rep.) finds nothing in our demand "that denies to the Cuban people the rights and functions of self-government on the island"; *The Journal of Commerce* declares that "the universal belief among the Cubans that we are acting in bad faith is without a particle of excuse; it is unprovoked by our dealings with Cuba or anything in our history." *The Herald* (Ind.) also says that "the United States has a sincere regard for the welfare of that island, and no ulterior purpose." *The Evening Post* (Ind.), on the contrary, charges that "the annexation of Cuba is the goal to which the Administration is definitely and consciously marching," and *The World* (Ind. Dem.) calls our demand "a direct repudiation of the nation's pledge." The Brooklyn *Eagle* (Ind.) admits that our plan "is in fact a protectorate," but declares that "it is as necessary as it is considerate"; while the Buffalo *Express* (Ind. Rep.) thinks it is a breach of faith, and says that our demands "are such as might properly follow a successful war waged against the Cubans," and that "they are the demands of a conquering, not of a liberating nation."

In Philadelphia *The Press* (Rep.) believes that in our plan "the maximum of independence possible with safety is given to the island and the minimum of interference necessary for safety to the United States"; and *The Inquirer* (Rep.) takes a like view; but *The North American* (Ind. Rep.) thinks that "the apparent policy of this Administration and of its leading supporters in Congress is to make demands which will lead to revolt, and from revolt, it is presumed, to war and forcible annexation." *The Times* (Dem.) coincides with this last view, and declares that the Administration program is "imperialism full-blown." The Pittsburg *Dispatch* (Ind. Rep.) believes that "it is impor-

tant to this country to gain the good will of the Cuban people," and it thinks that "the best way to do that is to carry out in good faith the pledge of this Government made two years ago."

### Chicago and the Middle West.

In Chicago *The Inter Ocean* (Rep.) counts up forty-five revolts and revolutions in Guatemala and San Domingo in the last thirty-five years, and predicts a similar state of things in Cuba unless we annex the island. *The Record* (Ind.), while believing that the Cuban spirit of independence is "thoroughly commendable," adds that "if they can not in gratitude recognize this country's right to be considered a preferred friend among the powers, they at least should be made to understand the practical considerations which require it to assume authority to regulate international movements in its own waters." *The Times-Herald* (Rep.) declares, on the other hand, that our claim "embodies the principles of perfidy and bad faith," and *The Evening Post* (Rep.) says: "The islanders have justified our confidence in them. It is we who have repented and recanted. Are we too greedy, too selfish, to fulfil a promise made deliberately to the whole civilized world?" *The Journal* (Ind.) remarks, in a similar vein: "This is the sum of the exactions demanded by the United States Senate, which was the first to declare that 'Cuba is and of right ought to be a free and independent state.' How free and independent can it be, with fortifications looking down upon it from the Isle of Pines, and with United States naval stations at the four corners of the island?" The Cleveland *Plain Dealer* (Ind. Dem.) remarks hopefully that "the United States has made so great sacrifices in aiding Cuba to its independence that its interests should be favorably considered by the newborn republic, and undoubtedly will be if the negotiations are carried on in a friendly and not in a domineering spirit"; but the Detroit *News* (Ind.) declares that "our demands include a surrender by Cuba of substantially all that constitutes national independence, and reduce the island to a mere subject province in fact if not in name"; and, adds the same paper, "if this is the secret design of Washington, it would be more manly and more American to declare it openly, and reduce Cuba to a dependency at once." The Detroit *Free Press* (Ind. Dem.) takes a similar view, and remarks that "it would be interesting to know when

UNCLE SAM: "Son, it'll hurt me a heap more'n it will you ef I hev to lick you."
CUBA: "That's no dream, if it is a chestnut."
—*The Minneapolis Times.*

the idea of strangling the republic that this Government had been fostering first developed in the minds of the President and his advisers."

### The South.

The Washington *Post* (Ind.) declares that "to withdraw from Cuba before its enlightened government is assured would be far more dishonorable than to seize it outright and finally remove the problem from the arena of discussion"; and the Washington *Times* (Dem.) would go even farther than Congress has gone, and would insert in our claim "a plain declaration that Cuba is not to assume or exercise any war-making power without the consent of this country." The Columbia (S. C.) *State* (Dem.) calls the Administration program "a policy of infamy," and the Macon (Ga.) *Telegraph* (Dem.) observes that "it is not easy to see what right the President has to object to or Congress to debate the Cuban constitution." The New Orleans *Times-Democrat* (Dem.), on the other hand, thinks that "no serious objection" can be urged against any of our demands, and that "if they appear to interfere with the right of self-government the answer is that they are simply precautionary measures, which will be to the benefit of the Cubans and can not possibly injure them." The Houston *Post* (Dem.) believes that "we had a right to expect gratitude, of course, from the Cubans," but also thinks that "it would be wolfish and, indeed, infamous, to now turn upon the little island and insist upon a blanket mortgage to cover our account."

### West of the Mississippi.

The St. Louis *Globe-Democrat* (Rep.) remarks that if the United States had not intervened to save Cuba from Spain, "the very men who are now breathing threats against the United States, and boasting of an intention to fire on the American troops if American abandonment of the island does not take place soon, would have been garroted by Weyler before the end of 1898"; and it adds that the only purpose of the United States now is to prevent more bloodshed from internal and external broils, and "to protect the rights, the safety, and the interests of the American people." The St. Louis *Republic* (Dem.), too, thinks that "the people of Cuba should not now allow their ungrounded prejudices against their savior to make them turn, snarling and snapping at the hand which saved them from a tyrant's rod of oppression." The Kansas City *Journal* (Rep.) believes that the Administration fully intends to keep our pledge of independence to Cuba, and it declares that "to abrogate that pledge would not only betray the Cubans, but it would vindicate the low suspicions and derisive prophecies of the jealous countries abroad—prophecies which were vigorously resented in this country at the time they were made." The Topeka *Capital* (Rep.) considers our claims eminently just, and declares that the Cuban Constitutional Convention "has given an illustration of ignorance, ingratitude, and positive effrontery, in refusing all the requests of this country, that has no parallel in human history." The Salt Lake *Tribune* (Ind. Rep.) is hopeful that "the Cubans themselves will see that nothing has been intended for them except what was for their own good." The Salt Lake *Herald* (Dem.), on the other hand, remarks that "if it is the intention of the Administration to provoke the Cubans into hostilities so we may have a plausible reason for 'assimilating' some more friendly territory, Mr. McKinley has taken exactly the right tack, but when trouble comes and another costly conquest is on his hands, he needn't explain that the Almighty got him into it or that destiny drove him to it." "It is a bad mess," the Portland *Oregonian* (Rep.) says, and adds: "Mr. Morgan is right when he says we need coaling and naval stations and forts along the southern coast of Cuba, but he is wrong in supposing that we can in common honesty proceed to demand them. Whatever exigency we are in, bad faith is no way out of it." "To take the island," declares the Tacoma *Ledger* (Rep.), "would be to perform an act of theft, and to stand before all the world as a hypocrite stripped of mask."

---

**The "Ripper" Bill a Law.**—Now that the Pennsylvania "ripper" bill, discussed in these columns last week, has passed the legislature, its operations will be watched with interest. Senator Quay's paper, the Philadelphia *Inquirer*, declares that "the passage of the bill is a great victory for the people. Hereafter they will have everything in their own hands. *The Inquirer* congratulates them upon their triumph, and it is a satisfaction to it to know that its efforts in behalf of good government have been indorsed by the legislature." A somewhat different view is found in the Philadelphia *Press* (Rep.), which says that the people of Pittsburg, Allegheny, and Scranton, whose city gov-

ernments are overturned by this measure, "are deprived of self-government," that their "home rule is wiped out and a precedent made which, if it can be sustained in the courts, must prove destructive of popular rights." It is announced that the constitutionality of the law will be tested in the courts.

## A RETROSPECT OF PRESIDENT McKINLEY'S FIRST TERM.

THE second inauguration of William McKinley as President of the United States gives special interest at this time to the record of his first term. "He is already become one of our historic Presidents," declares *The World's Work* (March, New York); "he has held the executive office at the most important time since 1868—a time of high value in the life of the republic; and he enters on his second period of service with a distinctly firmer grasp and with a heartier support of the people—in short, a greater man than he was four years ago, at the helm of a greater nation." The same magazine presents the following brief summary of the most important events occurring during his term of office:

"The President had not been in office two months before he felt called on to ask Congress for $50,000 for the relief of suffering Americans in Cuba; and other events followed swiftly. In February, 1898, the Spanish minister at Washington, De Lome, wrote home a letter disrespectful to the President; he was obliged to resign, and almost immediately (February 15) the battle-ship *Maine* was blown up in the harbor of Havana. The people and our Government were patient and refused to become excited, but their sullen silence was ominous, and far-sighted men foresaw war, and far-sighted officials began to prepare for it. In March Congress appropriated $50,000,000 to be used by the President in national defense, which meant preparation at his discretion; a report of the condition of affairs in Cuba was made in the Senate by Senator Proctor; the naval board of investigation reported its conclusion that the *Maine* was destroyed by an external explosion; on April 11 the President sent a message to Congress recommending intervention in Cuba; and on April 19 Congress called on Spain to withdraw and authorized the President to use force; and in the same month passed the war-revenue bill. Dewey's victory of Manila Bay was won May 1; Sampson's victory off Santiago on July 3; Hawaii was annexed July 7; the peace protocol was signed August 12; Spain agreed to our terms of peace on November 28; and on February 6, 1899, the Senate ratified the treaty of peace. In the mean time (February 4, 1899) hostilities had begun at Manila between the Filipinos and the United States troops. We found ourselves bound to keep order in Cuba till the island should become self-governing; and we came into the possession of Porto Rico and the Philippine archipelago. Events had brought a new era in our national life. . . . . .

"Following fast on our troubles in the Philippine Islands came the grave situation in China, throughout which the conduct of our State Department has been not only creditable but commanding; and we have gained in international standing, by a series of events now too recent to need recalling."

There have been many other important public events, continues *The World's Work*, during this "swiftly eventful" period. The Supreme Court declared railroad pools illegal; the Senate rejected the American-British arbitration treaty; the Dingley tariff law was enacted; and the Disarmament Conference was held at The Hague. In 1898 South Carolina and Louisiana, and in 1900 North Carolina, following the example of Mississippi, disfranchized the mass of the blacks by constitutional amendment. President McKinley's term of office saw the election of Mr. Hanna to the Senate; the death of John Sherman and of Vice-President Hobart; the retirement of Speaker Thomas B. Reed; and the rise of Theodore Roosevelt from Assistant Secretary of the Navy to Vice-President. It saw also the definite committal of the Government to the gold basis of value.

Of the President's personal character *The World's Work* says that he has not proved himself to be a man either of imagination or of great constructive mind. "Mr. McKinley has rather lagged behind events," it says, "than seemed to lead them." It continues:

"The President has shown his independence of judgment, but too often too late to get the credit for it; and he has had as large

WHAT'S IN THE NEW BOOK?
—*The Cleveland Plain Dealer.*

a degree of independence of mind perhaps as prudent men generally have: but his habit of feeling about in the vacancies of his will for a clear purpose, and of doing a thing a day late, has sometimes left the suggestion of the party machine. The public is often unfair in its judgments, but it does like a man of decision. The public approval which the President undoubtedly enjoys has, therefore, often halted just before it has reached the point of spontaneous enthusiasm."

A much more flattering estimate of Mr. McKinley's personality is that which appears in the current issue of *The Atlantic Monthly* (Boston) from the pen of Henry B. F. Macfarland. "Even after taking from President McKinley all the achievements of his administration that can possibly be credited to others," declares this writer, "it must be admitted that he has accomplished more than any of his predecessors, with possibly one or two exceptions." He continues:

"Nothing illustrates the popular misunderstanding of Mr. McKinley more than the astounding delusion, entertained by some Republicans as well as by many Democrats who do not know him, that he is, and has been ever since 1895, more or less under the influence of Senator Hanna. This sums up, in a way that is as unjust as is picturesque, all the notions to the effect that Mr. McKinley is a yielding and unstable person, without convictions or even opinions, that can not be changed at the command of a stronger man. Newspaper cartoons, which now have more influence than newspaper editorials, are largely responsible for these strange beliefs, but they have been fostered by uninformed editors and politicians misled by deceptive appearances and by malice. . . . . .

"In point of efficiency President McKinley has no superior in his predecessors, and this is largely because he has treated Congress as he wanted Congress to treat him. It is also, however, because Congress believed in him. The personal equation was as important in this case as in any other. His career has kept him under public observation from the day when, as a boy, he left his simple but comfortable home in the Western Reserve to go to the Civil War. As he rose from private to major, and as, after the war, he rose from country lawyer to Representative in Congress, he was constantly watched, and men recorded that he was honest, candid, courageous, clean in speech and behavior, a model son and an ideal husband. This record, with his intelli-

gence and industry and his felicitous manner, has given him his place among public men. It is impossible to describe either President McKinley or his reputation without dwelling upon the fact that he has lived a life as nearly blameless as that of any public man of our history. . . . . .

"Without undertaking to anticipate the judgment of posterity, it seems safe to say that President McKinley has had a great part to play, and has played it well, and that it was fortunate for the republic that he was at its head in the closing years of the nineteenth century."

## FREEDOM OF TEACHING, AGAIN.

SOME new light is thrown upon the case of Professor Ross, of Stanford University, which has been fully treated in our pages (see THE LITERARY DIGEST for December 1 and January 26) by the recent report of a committee of investigation appointed at an informal meeting held in connection with the last annual session of the American Economic Association at Detroit. The committee consists of Prof. E. R. A. Seligman, of Columbia University; Prof. H. W. Farnham, of Yale University; and Prof. H. B. Gardner, of Brown University; and their report is indorsed by the following: Horace White, editor of the New York *Evening Post;* John B. Clark, Columbia University; Henry C. Adams, University of Michigan; Frank W. Taussig, Harvard University; Richard T. Ely, University of Wisconsin; Simon N. Patten, University of Pennsylvania; Richmond Mayo-Smith, Columbia University; John C. Schwab, Yale University; Sidney Sherwood, Johns Hopkins University; Franklin H. Giddings, Columbia University; William J. Ashley, Harvard University; Charles H. Hull, Cornell University; Davis R. Dewey, Massachusetts Institute of Technology; Henry C. Emery, Yale University, and Henry R. Seager, University of Pennsylvania.

"This document will undoubtedly carry weight," remarks the Chicago *Evening Post*, for "the impartiality of the committee is beyond question." The committee finds: (1) There is no evidence to show that Professor Ross gave occasion for his dismissal by any defect in moral character. (2) There is no evidence to show that he gave occasion for his dismissal by incompetence. (3) There is no evidence to show that he gave occasion by any unfaithfulness in the discharge of his duties. (4) There is no evidence to show that in his public statement of November 14, 1900, he violated any confidence reposed in him. On all these points the written testimony of President Jordan leaves no room for doubt. Concerning the charge (5) that Professor Ross gave occasion for his dismissal by remarks derogatory to Senator Stanford, the professor unequivocally denies that he was ever guilty of such impropriety. Moreover, President Jordan, in a letter dated November 16, himself declared, in reference to these charges, that he "had never heard anything of the sort before." President Jordan also stated in May, 1900, that Professor Ross "never stepped outside of the recognized rights of a professor" in making public his views on social and political questions. The committee comes to the conclusion that Mrs. Stanford forced Professor Ross's resignation on account of her personal antipathy to his views; and a quotation from a letter written by President Jordan to Professor Ross in June, 1900, leaves the reader to infer that her hostility was based "on chance matters and *obiter dicta*," not upon the Professor's serious work.

In an editorial on the Ross case, the New York *Evening Post* condemns the "various pretexts, evasions, and equivocations of President Jordan" in most scathing terms. It declares:

"Mrs. Stanford may, once for all, be left out of the consideration. She is doubtless a woman of excellent intentions, but obviously she is inaccessible to new ideas. Not so, however, with President Jordan; he has sinned against the light. Instead of adhering to the principles of justice and liberty which he had so solemnly urged upon Mrs. Stanford, instead of offering his own resignation in defense of what he knew was the right, he gave way. Whether he was actuated by fear of losing his own position or by fear that further dispute between him and Mrs. Stanford would hurt or even destroy the university, the result is much the same. For the sake of a possible contingent good, he committed a deliberate wrong. He had had delivered into his keeping a great trust; but, forgetting that a success won through the violation of fundamental principles of morality is inevitably a disastrous failure, he was recreant to his trust. Whatever may have been his past services to the cause of education, whatever he may do in the future, the fact remains that in the crucial test he has flinched."

When addressed by the committee, President Jordan refused to "enter into any circumstantial description of events leading to or following from Professor Ross's dismissal." He made the following statement:

"First: Professor Ross was not dismissed on account of his views on Oriental immigration, nor on account of his opinions on any economic question.

"Second: Professor Ross was dismissed because, in the judgment of the university authorities, he was not the proper man for the place he held. The responsibility for the correctness of this judgment belongs to the university authorities and to them alone.

"Third: No ground exists for any interpretation of his dismissal reflecting on his private character, of which your letter seems to imply a fear.

"Fourth: The judgment that Professor Ross was not the proper man for the place he held is not incompatible with my appreciation of many good qualities he possesses, nor with my wishes or efforts at any time to further his prospects. I have been neither ignorant of his professional shortcomings nor inappreciative of his good qualities. Of such appreciation Professor Ross has himself adduced several expressions from my letters."

One of the stanchest supporters of the course pursued by President Jordan and the university authorities is the New York *Tribune*. It says:

"Suppose that a professor in the Princeton Theological Seminary should see fit to instruct his classes that God is a mere 'stream of tendency'; that there is no assurance of a future life, and that in any case the theory of a divine atonement for human faults is absurd. Would the professor asserting such propositions and urging his pupils to accept them be dismissed, with or without the formality of a forced resignation? . . . Imagine the case of a professor of physiology at Princeton who should endeavor to convince his classes, and through them the world, that Harvey did not make a great discovery, but a gross blunder; that the blood does not circulate, but remains stationary in the body. Would he be secured in the possession of his chair as long as he desired to keep it, or would he be discharged? And if he were discharged, would he be a martyr? Or what would occur if an instructor at Princeton should teach that the so-called law of gravitation is not a law at all, but a false assumption which has been carelessly accepted by a great majority of intelligent persons while natural events were all the while conclusively refuting it? Which would have to go in such a case—the bold teacher or freedom of teaching? Again, would a protest be proper and valid if a surgical instructor and demonstrator should advise his pupils to reject the germ theory, discard disinfectants and antiseptic processes, and occasionally, by way of proving their faith, smear their instruments with gangrenous matter?"

"In the discussion arising out of recent occurrences at Stanford University," concludes *The Tribune*, "some jealous defenders of intellectual liberty have been betrayed into an assertion of views which they do not really hold. Freedom of teaching, truly discerned, is an indispensable condition of educational development. We believe that it is safe everywhere in the United States, tho the attempt to foist a caricature into its place may involve dangerous possibilities."

In rebuttal of this argument *The Evening Post* replies that Mrs. Stanford's defenders place Stanford University in the same

category as denominational or proprietary schools, and that by so doing they "practically admit the whole argument against her management."

## MINISTER CONGER'S HOME-COMING.

MOST of the newspapers decline to believe that Minister Conger's reported "leave of absence" from Peking for sixty days is merely a vacation. The Washington correspondent of the Philadelphia *Ledger* (Rep.), for example, says that it "is not to be disguised as a voluntary rest from the arduous labors of his position," and that "there can be no question that he has been recalled." The Philadelphia *Evening Bulletin* (Rep.) gives the generally accepted explanation of this view as follows:

W. W. ROCKHILL,
Acting American Minister in Peking.

"It has been evident for many months that the suffering and danger to which he, with the members of his family, was exposed during the siege of the legations by the Boxer mobs had rendered him incapable of judging the situation fairly and without prejudice. It remained for a blunt soldier like Chaffee to utter an emphatic protest against the excesses of the invaders. No report of any remonstrance from Conger has reached the outer world. Unless the despatches from Peking have been consistently misleading, his voice has been in accord with those of his diplomatic colleagues in urging that drastic measures of repression should be carried out. This attitude is not inexplicable in a man who has passed through Conger's trying experience. But it unfits him plainly for the task of representing the United States in insisting upon a policy of humanity and justice."

"What he wants," says the Washington *Post* (Ind.), "is a protracted period of rest in the bosom of far-off Iowa, and what we want is a clear-headed representative in China, a man who has no resentments to exploit, and who understands the Chinese point of view as well as he does the language and the customs of the country." Such a man, *The Post* thinks, is found in W. W. Rockhill, who is to be acting minister during Mr. Conger's absence. It says:

"Mr. Rockhill knows China. He is familiar with not only the official language, but with many of the dialects and all of the ideas and standards of the Chinese people. He has spent many years in the kingdom, traveling through its remotest parts and acquiring an intimate knowledge of the country and its inhabitants. Moreover, he is a man of high intelligence, of long public service abroad and at home, and of the temperament required for such duty as he will now be called upon to undertake. The proposed arrangement strikes us as one of the very happiest yet conceived by our Government in dealing with its foreign complications."

To quote an opinion on the other side of the case, the Kansas City *Journal* (Rep.) declares:

"The reports circulated from time to time that the Administration was anxious to rid itself of Minister Conger have never been traced to any reliable source. Immediately after the suppression of the Boxer uprising Mr. Conger was in favor of taking extreme measures with the leaders of that movement, and it was necessary for Secretary Hay to caution him against too much zeal in that direction; but there is no substantial basis for the statements that the Administration desired to 'unburden' itself of Conger. He has made a creditable representative and has presented the position and the demands of the State Department in a manner that in no way detracted from their force and effectiveness. It was through him that Mr. Hay did the diplomatic work that has received so much praise, and so far as anything is known to the contrary he stands well at Washington."

The Iowa papers give credence to a report that Mr. Conger will enter the race for the Iowa governorship, and they predict that, if he does, he is likely to win. The Burlington *Hawk-Eye* (Rep.) says, for example:

"Conger is too big and strong a man for Iowa to turn aside from. His name in public affairs accords most harmoniously with those of Allison, Shaw, Dolliver, and the like. He has many friendships and wide influence, and can command the support of all parts of the State. The First district glories in his record abroad and in his statesmanship on all occasions. As governor of Iowa he would carry the State on in the glorious course that its other great sons have marked out for it and guided it in so far. There is no positive assurance that he can be the nominee if he wants it, but it is unquestionably true that he would make the strongest kind of a candidate in the now troubled gubernatorial campaign in Iowa."

## THE PRESIDENT'S POWER IN THE PHILIPPINES.

THE passage of the Spooner amendment to the army bill, giving to the President "all military and civil powers necessary to govern the Philippine Islands" and "for the establishment of civil government and for maintaining and protecting the inhabitants of said islands in the free enjoyment of their liberty, property, and religion," calls out characteristic comment in the expansionist and anti-expansionist press. The measure is tempered by Senator Hoar's amendment forbidding the sale and leasing of public lands, timber, and mining rights, and providing that the President shall have power to grant franchises only

YOU ARE TOO ENGROSSED WITH FOREIGN AFFAIRS, UNCLE SAM. TAKE A LOOK AROUND YOUR OWN COUNTRY!
—*The Philadelphia North American.*

when they are indispensable, and only for one year after the establishment of civil government.

The New York *Press* (Rep) says:

"It is impossible for Congress to legislate in detail for the

islands, and would be even after an investigation into their governmental needs by a joint committee. A single power like that of the Taft commission must both construct and erect. A single hand must saw out the timbers for the new structure and set them up. The workman who cuts the garment must fit it. Otherwise the myriad modifications necessary will be impossible of accomplishment. All that Congress can do intelligently in the matter is to grant the powers requisite to the work upon which the Taft commission is already so successfully employed and then pass upon the fruits of the exercise of these powers. . . .

"It transmits no powers to the Executive. It delegates to the Executive a task devolved upon it by the Treaty of Paris which it can not itself perform, but whose performance it can undo if accomplished in a manner at variance with its will. This guaranty of final control is assured by the clause 'until otherwise provided by Congress.' There can be no pretense, therefore, that the resolution grants 'imperial' powers to the President."

The Springfield *Republican* (Ind.), on the anti-expansionist side, declares:

"We have no hesitation in saying that this step, which, of course, the tractable House will indorse, marks the abdication by the American Congress of vast civil powers which the Executive takes up, and will for many years, perhaps permanently, enjoy over 8,000,000 of people on the other side of the earth, provided our flag continues to wave over them. For not in our time, at least, will any American Congress be found capable of intelligently legislating first hand for the distant, alien Philippine archipelago. The very force of circumstances will necessitate the continuance of a special government of more or less absolutist powers by the Executive at Washington.

"And this is imperialism."

## REFLECTIONS ON THE FIFTY-SIXTH CONGRESS.

JUDGING from the newspaper comment, the Congress which has just adjourned succeeded in escaping fame and notoriety by about equal margins. It has gratified its friends by the enactment of the gold-standard law, the reorganization of the army, and the reduction of the war taxes; and it has disappointed its enemies by its failure to pass the shipping subsidy bill. It has disappointed its friends by its large appropriations (nearly $1,500,000,000), and has brought down the criticism of its foes by its enactment of a tariff between the United States and Porto Rico, by its failure to legislate against trusts, its failure to provide for a Pacific cable, its refusal to ratify the reciprocity treaties, and by its Philippine and Cuban legislation (discussed in other articles in this department). The congressional reapportionment, the action on the isthmian canal treaty, and its minor acts have also brought out much comment of varying tenor and strenuousness. The Congress was in session 197 days (a shorter session than that of any other Congress for years), and it considered 14,336 bills and 3,000 reports. It passed 345 public and 1,250 private acts (most of the latter being private pension bills), and passed 395 joint resolutions.

The Minneapolis *Times* (Dem.) calls its short session "a session of gabble, obstruction, and confusion," and the Chicago *Times-Herald* (Rep.) agrees that its record "is not one that is calculated to impress the effete legislatures of the old world with the expeditious, businesslike manner in which republics transact the business of the nation." The Boston *Transcript* (Rep.) says on this point:

"The delay of the work of Congress has been almost wholly traceable to the Senate. The House, tho so much larger a body, is not so unwieldy as the Senate, whose latitude of discussion encourages talking against time. Nor is this the sole reason for the slowness of the Senate. The Senate has on more than one occasion, but most notably in the matter of the tax reduction bill, acted as if it regarded itself as a court of revision, with full powers on the work sent up to it by the House. The House under pressure yielded the constitutional question involved, and sent to a conference a bill utterly different in spirit and intention from that it originated; but the close observer of the trend of the relations of the two bodies can not but regard the controversy as put aside rather than settled.

"The Senate by its power of patronage, by its power of confirmation of nominations and of ratifications of treaties, has drawn to itself an influence in the affairs of the country which does not escape occasional bitter comment in the House, but which is little realized by the country at large. If in the not far distant future the curtailment of the powers of the Senate should become the issue of a campaign for constitutional amendment, many Senators now living will have done a great deal to bring such a contest into being."

The New York *Sun* (Rep.) criticizes Congress severely for its extravagance in appropriations; but the Baltimore *Herald* (Ind.) says:

"Still, large appropriations are not necessarily to be classed as extravagance. If the money be wisely used, and if the returns are commensurate with the outlay, there will be no real cause for complaint. The nation is going ahead with rapid strides. A recent compilation prepared by Mr. Carroll D. Wright, chief of the bureau of statistics, shows that the national wealth has increased more rapidly than have the per capita disbursements. The plain figures may appear disconcerting, when in reality government is more economically conducted than in the days of small allowances. The war in the Philippines and other extraordinary developments entail unusual burdens, but these conditions are only temporary, and retrenchment or largely augmented receipts, or both, must be classed as among the possibilities of the near future."

The influence of the President over Congress is the subject of considerable discussion. "No executive in the history of the country," declares the Washington correspondent of the Philadelphia *Press* (Rep.), "has given a greater exhibition of his influence over Congress than President McKinley," and altho the correspondent makes this assertion in reference to the Cuban and Philippine legislation, other papers consider it true of the entire session. Says the Springfield *Republican* (Ind.):

"Congress is but as putty in the hands of the President. This is true not only of the Republican majority in Congress, but in a measure true of the Democratic minority. The President's personality may be a weak one, but it is strong enough and clever enough to overshadow and control the legislative branch of the Government. . . . And while Congress is thus made to do the will of the President, the latter compels Congress to assume responsibility for any untoward consequences of the imperial policy. The President drives through a treaty of Philippine annexation, and then, in prosecuting the war of subjugation, unfortunately brought upon himself, he turns about and assumes the character of one forced to execute the laws and the policy of the nation, for which he is in no wise responsible. And now, in breaking the pledge with Cuba through resolutions passed by Congress under the executive influence, should the game proceed unhappily, the President can point to the commands of Congress and plead the character of an unwilling agent set to execute its will. Very clever, at least, is this President McKinley; and masterful beyond all question over the legislative power of the nation."

## COTTON-MILLS MOVING SOUTH.

IN a country which produces five sixths of the world's cotton crop, the manufacture of the raw material into cloth must be an industry of the first importance, and the migration of that industry from one part of the country to another will be a movement of great economic and industrial consequence. The beginnings of a migration of the cotton-mills from New England to the Southern States, therefore, continue to attract wide attention. Miss Sarah Scovill Whittelsey (in an interesting supplement to the current issue of *The Annals* of the American Academy of Political and Social Science, of Philadelphia) notes

several instances where New England manufacturers have established mills in the South. She says:

"The Massachusetts Mills of Lowell have a plant in Alabama; the Dwight Company of Chicopee has also a branch there; the Lindale Mills in Georgia are owned in Massachusetts; the Spartan Mills, Spartenburg, were originally settled at Newburyport, Mass. Another Massachusetts mill-owner with important cotton interests told me that he was carrying on active negotiations with a view of actually moving a large concern, bag and baggage, to the South. He gave it as his opinion that many other Massachusetts treasurers were investigating in the same field, and that no new cotton-mill would now locate in Massachusetts, or a large mill burned be rebuilt there. It seems the very general opinion among these men, that the life of the cheap-grade cotton-mill of Massachusetts is rapidly ebbing, and that the industry must inevitably confine itself chiefly to the production of high-grade goods."

The Northern manufacturer has the advantage of less cost for shipping and marketing of goods, he pays less for machinery and for interest on borrowed capital, and has the benefit of the invigorating Northern climate and the invigorated, active, and intelligent Northern labor. The South, on the other hand, has cheap fuel, and abundant water power and produces the cotton almost at the mill door. Then, too, it "leads in cost of labor, estimated at from thirty to forty per cent. less than Northern, or at about two cents per pound of goods. It holds also an indefinite advantage in total freedom in hours. Against the Massachusetts mills, limited to a fifty-eight-hour week, the Southerner may run seventy-two hours at will. The lighter taxation in the South, even in many cases amounting to no taxation at all, is another evident advantage." The balance of these two composite forces of advantage results in favor of the Southern manufacturer by at least one fourth of a cent a yard, enough in dull times to make one mill an asset and the other a liability. To quote again:

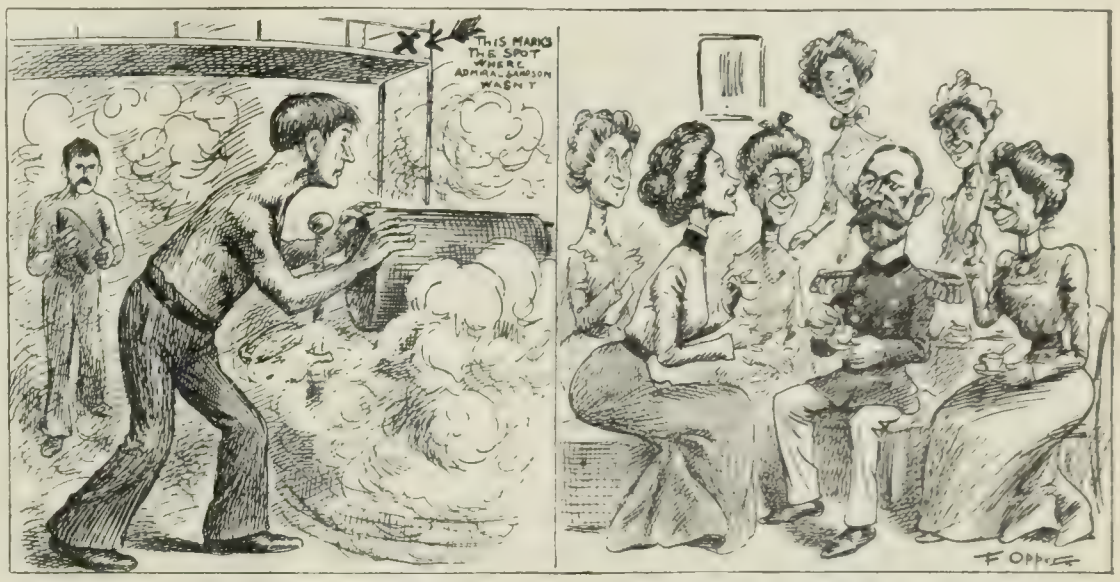
"While the Northern mills complained of overproduction, Southern mills were working day and night to fill their orders. The market continued perfectly good at the lower selling prices. In the South the mills manufactured at such price and with a profit. Cases are adduced in which the Northern mills relied upon their Southern branches to make good their loss. As an example, the Massachusetts Mills of Lowell have such a branch in Georgia. They went there in order to save their trade with China, when they found it impossible to continue the competition from Massachusetts because the Southern mills were underselling them in the New York market. Built in 1895, this mill has been 'unable to keep up with orders' and has 'made a profit from the start.' Mr. Southworth continues: 'We are able to sell, at a profit, goods made in that mill which we could not sell at all if they were produced in Lowell, owing to the difference in cost. Operations in the South have been so successful that we are now considering the increase of our plant there.' The Spartanburg mills tell the same tale. They had languished long at Newburyport, but they have built two new mills out of their Southern profits. The Arkwright Club, reporting upon its investigations concerning this Southern competition, stated its belief in the 'hopelessness' of continuing so one-sided a struggle as that in coarse-grade cottons.

"As yet, Southern mills have not attempted to make the finer grades. There seems no adequate reason why they should not in time, but advantages would at first weigh less strongly on their side. There is, therefore, prospect that the cotton industry of Massachusetts will tend to develop upon these lines. 'It will abandon certain kinds of goods which can not be profitably made; it will extend the output of others and cheapen production by improvements in machinery and processes; the industry in each section will take the form to which it is best adapted.'"

Altho the United States produces five sixths of the world's raw cotton, less than one fifth of the world's cotton spindles are turning in this country. Great Britain has 45,400,000 spindles in operation, the continent of Europe 33,000,000, the United States 18,590,000, and the East Indies 4,800,000. It is interesting to note, in this connection, the failure of a negro labor experiment in the Vesta cotton-mills at Charleston, S. C. The negro operatives were found to be unreliable and irregular in their work, and the mill is to be closed and the machinery moved to another part of the State, where white labor will be employed.

## THE SAMPSON-MORGAN INCIDENT.

THE only one injuriously affected by Rear-Admiral Sampson's letter opposing the advancement of warrant officers in the navy seems to be the admiral himself, whose prospect of promotion to the grade of vice-admiral has apparently met shipwreck in the storm of criticism that his letter has brought down upon him. The cause of the admiral's present troubles is to be found in a Senate amendment to the naval appropriation bill providing that upon proper recommendation and examination the President may appoint to the grade of ensign "from among the boatswains, gunners, or warrant machinists, not exceeding six in any one calendar year." This provision, it will be seen, opens the way for enlisted men who have not had the Naval Academy training at Annapolis, to become not only ensigns, but to rise, perhaps, to be captains, commodores, and admirals. In the expectation that this provision would become law, Gunner Charles Morgan, who had served on Admiral Sampson's flagship *New York*, wrote to him asking for the required recommendation. The admiral indorsed the application favorably and forwarded it to the Navy Department, but added:



THE MAN BEHIND THE GUN. THE MAN BEHIND THE TEA-CUP.
—*The New York Journal.*

"It is earnestly to be hoped, however, that the Secretary of the Navy will not find it necessary to take advantage of the authority which I understand is to be granted him to appoint a certain number of warrant officers to the grade of ensigns.

"While it is true that these men are selected from a large class of men of very unusual ability, which distinguishes them as perhaps the professional equals of their officers, as far as their technical education stands, it is also true that they are recruited from a class of men who have not had the social advantages that are a requisite for a commissioned officer.

"It is submitted that in time of peace the navy's function consists, to a certain extent, of representing the country abroad, and it is important that the navy's representatives should be men of at least refinement. While there are perhaps a certain few among the warrant officers who could fulfil this requirement, I am of the opinion that the vast majority of them could not.

"Once they are commissioned they will have the same social

standing as other officers, and no distinction properly could be made in extending general invitations. The consequences that would arise from their acceptance might not redound to the credit of the navy or the country which the navy represents.

"I do not mean to detract from the sterling worth of the warrant officers of the navy; I merely mean to suggest to the department that, unfortunately for them, they have been deprived of certain natural advantages, and in consequence their proper place is that of leading men among the crew, and not as representatives of the country in the wardroom and steerage."

In some unknown way a Washington reporter secured a copy of this letter, and another illustration of how great a matter a little fire kindleth was soon afforded. Secretary Long, Admiral Dewey, and many other prominent naval and government officials were interviewed, all promptly disclaiming any sympathy with Admiral Sampson's view. Secretary Long pointed out that he drew the amendment in favor of the promotion of warrant officers, and that the naval board, of which Admiral Dewey is the head, approved the amendment with certain unimportant changes. The history of our navy was ransacked to show that Paul Jones, Decatur, Hull, Stewart, Barron, Stockton, Porter, Farragut, Admiral O'Neill, Captain Dyer, who commanded the *Baltimore* in Manila Bay, Admiral Hichborn, and Admiral Melville all lacked the advantages of an education at Annapolis; and the history of the army was found to produce a similar list of commanders who were not educated at West Point.

The great majority of the newspapers, without regard to politics, disagree with the admiral and consider his proposal a bad blunder. The Philadelphia *Press* (Rep.) thinks that "Admiral Sampson has made a blunder of tact and a blunder of fact," and the Philadelphia *Ledger* (Rep.) thinks that his contention "scarcely admits of any serious defense." The Philadelphia *Times* (Dem.) calls it "the worst exhibition of snobbery that has ever been publicly presented in official life under our Government," and the Chicago *Record* (Ind.) says that his position is "distinctly offensive to American ideas." Indeed, remarks the Chicago *Journal* (Ind.), "our navy will be all the better for the infusion of blood that has not had so many 'social advantages.'" The "tea-cup admiral" is the term the New York *Journal* (Dem.) applies to Admiral Sampson, and the Washington *Times* (Dem.) refers to him as "the Man behind the Horizon," while the Philadelphia *North American* (Rep.) speaks of him as a "gent." "Sampson Shorn of His Strength" is the more or less pungent caption of the Brooklyn *Eagle's* (Ind.) remarks on the topic. The Washington *Post* (Ind.) says:

"It seems to us that Sampson confutes himself. He seeks to erect a standard of eligibility which would have closed every avenue of opportunity to him when he stood at the threshold of his career. Could he, when he knocked at the gates of the Naval Academy, thirty or more years ago, have claimed 'the social advantages that are a requisite for a commissioned officer'? We understand that he was the son of a gardener and that he himself had been a day laborer, a tiller of the soil. That being the case, has he not in his own person illustrated the possibilities of the American youth? We honor him for having broken through the limitations of his birth and breeding and, along with thousands of others, proved that under our institutions the plebeian may take precedence of the patrician if he have within him the elements of worth. It is late in the day and of very questionable taste for Admiral Sampson to raise this issue."

The New York *Sun* (Rep.), which has devoted many columns since Santiago to brightening the luster of Admiral Sampson's fame, and performing the opposite service for Admiral Schley, comes back at Admiral Sampson's critics with a quotation from John Paul Jones, whom they have paraded with great delight as a redoubtable naval commander who had no special education like that given at Annapolis. In a letter to the marine committee, of which Robert Morris was chairman, Jones wrote:

"It is by no means enough that an officer of the navy should be a capable mariner. He should be as well a gentleman of liberal education, refined manners, punctilious courtesy, and the nicest sense of personal honor.

"The naval officer should be familiar with the principles of international law, and the general practise of admiralty jurisprudence, because such knowledge may often, when cruising at a distance from home, be necessary to protect his flag from insult or his crew from imposition or injury in foreign ports.

"He should also be cognizant with the usages of diplomacy and capable of maintaining, if called upon, a dignified and judicious diplomatic correspondence; because it often happens that sudden emergencies in foreign waters make him the diplomatic as well as the military representative of his country.

"In his intercourse with subordinates he should ever maintain the attitude of the commander.

"His authority when off shore being necessarily absolute, the crew should be as one man impressed that the captain, like the sovereign, can do no wrong.

"But part, and often an important part, of his career must be in port or on duty ashore. Here he must be of affable temper and be master of civilities.

"In old-established navies, like, for example, those of Britain and France, generations are bred and specially educated to the duties and responsibilities of officers. In the land forces generals may and sometimes do rise from the ranks; but I have not yet heard of an admiral coming aft from the forecastle.

"In all my wide acquaintance with the merchant service I can now think of but three competent master mariners who made their first appearance on board ship 'through the hawse-hole,' as the saying is.

"The navy is essentially and necessarily aristocratic. True as may be the political principles for which we are now contending, they can never be practically applied or even admitted on board ship."

The New York *Times* (Ind.) says:

"The papers and politicians that aim at popularity with the unthinking and unintelligent are indulging in frenzied denunciation of the officer who dared to speak of refinement and social graces as necessary qualifications for the holding of naval commissions, while calmer critics admit the general truth of what the admiral said, and object chiefly to his failure to recognize the fact that there are exceptions to every rule and that the innovation he opposes was designed to turn one class of exceptions to good account."

## LETTERS AND ART.

### "ELECTRA," AND THE RECENT DISTURBANCES IN SPAIN.

THE appearance of "Electra," a new drama by the celebrated playwright Perez Galdós, coming as it did close upon the widespread agitation throughout Spain produced by the marriage of Prince Charles of Bourbon to the Princess of Asturias, has been an event of far more than ordinary significance. The play, voicing the suppressed discontent of a large part of the people, has fanned into flame the smouldering elements of anti-Bourbon feeling, and has thus attained a celebrity and popularity beyond the wildest dreams of its author and his friends. It concentrates, so to speak, in a tremendous outburst of passion, the protest of the Spanish people against existing abuses and oppression, typified in the popular belief by the reactionary and clerical leader, the Count of Caserta, father of the bridegroom and formerly one of the Carlist chiefs.

The plot of "Electra" is given in an extensive review by Señor Zeda, the critic of *La Época*, and is in substance as follows:

A young girl loses her mother, who had not led a conventionally correct life. She is cared for and educated by her father, a narrow, old man, and by her aunt, a very pious woman. The father, in his fanatical zeal, wants the poor child to expiate, in a convent, the sins of those who brought her into the world. In this manner the bodies of father, mother, and daughter will rest some day together in the land of the grave and enjoy in common celestial happiness. The daughter, consecrated to God, will be like the Host, offered on the altar of sacrifice, in expiation of the crimes of her parents. Electra is, however, in love with an electrical engineer, a man of liberal, modern thought, wise, good, noble, and generous; the type of the legendary hero, the troubadour, who, with the lapse of time, has laid aside the sword to manipulate the alembic and the retort. Pantoja, the father of Electra, may be considered as the personification of religious fanaticism, the engineer as the emblem of progress, and Electra as the symbol of the young life of Spain. The young girl desires to enjoy life and the legitimate charms it offers; but the history of her mother, the ascetic and mystic ideas of her father, and the practical application of the axiom, "The end justifies the means," employed by Pantoja, compel the poor child to bury herself in the cloister. At length, after a fierce struggle, the progressive principle overcomes the reactionary. In other words, Electra, escaping from the convent, thanks to her mother's advice, who rises from the grave to give it to her, throws herself into the arms of the young engineer.

In "Electra," Señor Zeda continues, the contrast between two worlds which repel each other, between the conventional house of old Spain and the workshop which represents industry—the ideal of modern Spain—brings before us the sociological problem conceived by Galdós. Electra, yearning for the life of the world, of humanity, flees, at the first opportunity, from the gloomy palace, with vistas of mysticism, to the workshop, throbbing with life, and in which the evolution of progress is elaborated.

In this drama there are three stages of ascent before the climax is reached. The procedure employed by Galdós is more in the nature of a novel than a drama. The playwright inclines to analysis, he spends time on side-lights, and is slow in unfolding his plot, all of which fatigues the public, accustomed to authors attacking immediately the core of the subject.

Speaking of the approach to the climax of the play, Señor Zeda says:

"Whatever judgment may be formed concerning the first three acts, in the fourth the soul of the spectator feels as if bathed in light and purity. The dramatic crisis of the situation, the delirious joy of that poor child wounded in her two great loves, that of her mother and her lover, the efforts of the tools of the convent to prevent her escape and bury that young life in sterility, while in the background, in the leafy remote portions of the garden, sounds the monotonous chant of the choir of children—all that is so beautiful, so grand, of such deep human significance, that, in seeing it, the heart throbs, tears gush to the eyes, and the cry of admiration rises to the lips. That is art, sublime art. Only a privileged intellect, as great as the greatest of the world, could attain those sacred heights, which men of genius alone tread upon."

Señor Zeda condemns Galdós for marring his play by the irrelevant introduction of scenes and situations bearing on the present political conditions of Spain, and thus needlessly inflaming the passions of the multitude. Some of the characters introduced by Galdós are, according to the critic, monstrosities and wholly false to nature. Thus, Pantoja, the father of Electra, is painted in the darkest colors. It is not out of regard for the spiritual welfare of his innocent daughter that he consigns her to the living tomb of a convent, but to save his own soul from future wrath and destruction; he is a coward, traitor, slanderer, egoist, and misanthrope, the very incarnation of medieval Spain. In striking contrast to him is Maximo, the soul of honor, good, generous, noble, and dignified; the angelic spirit of his country, regenerated, enlightened, and free. These two opposites are mere animated machines, automatons constructed for a preconceived purpose, not two real beings produced by the genius of the dramatist. The two figures recall those groups of Satan and St. Michael frequently to be found in Spanish churches—Satan with all the ugliness the sculptor can bestow upon him, and the angel beautiful, with childlike countenance, plumed helmet, and conquering sword. Señor Zeda continues:

"Unfortunately, men are neither good nor bad angels. So many components entered into the formation of each individual that he can not be represented by the method employed by Galdós. Pantoja is not the true representation of religious fanaticism, which, like Jacobin fanaticism, can be, and usually is, honest. It is a monster on whom Galdós has heaped evil qualities. It is not for the good of his daughter that he wishes her to enter a convent. He knows, or ought to know, because he has preached it, and the Catholic Church preaches it, that marriage is not an obstacle against entering heaven. St. Bridget is on the altars, and, if I am not mistaken, had ten or twelve children. Pantoja wants to sacrifice Electra to redeem himself from his crimes."

The director of the Teatro Español, Señor Balart, has given his impressions of the play in one of the Madrid journals. Like many other critics, he laments the alleged exaggerations of the playwright, feeling that the latter has been animated by other than purely literary aims. *La Época* (January 31) takes a similar view. In reality, it says, "Electra" is only a pretext for adding fuel to popular discontent and for stimulating anti-clerical feeling. But the people have more to fear from an attempt to revise the "ephemeral republic, more grotesque than tragic," of the early seventies, than from a supposed clerical ascendancy; for the Spanish people are above all Catholic, it says, and the legitimate monarchy—by which it means the present monarchy—is the truest custodian of public order and national life.—*Translations made for* THE LITERARY DIGEST.

---

**Silver Jubilee of Henryk Sienkiewicz.**—Some new incidents relating to the silver jubilee of Henryk Sienkiewicz, which the Poles have recently celebrated, and to which we have already briefly alluded, are given by a writer in the *Magasin Pittoresque* (January 1 and 15). It will be remembered that upon that occasion the author of "Quo Vadis" was presented with a château and an estate. Says the writer:

"The ceremony took place in Warsaw. Delegates from all the Slav countries took part in the fête, which was a sort of official consecration of the celebrated novelist. The day began with a religious service in the church of St. Croix. When Sienkiewicz entered, all those present arose as tho a hero had come to be crowned with the laurel wreath. After the service was ended, the delegates and a crowd of admirers assembled in the great

hall of the *hôtel de ville* for the formal presentation of the deeds of the property. As Sienkiewicz entered, he was received with loud applause, while the ladies from the galleries let fall a shower of flowers upon the hero of the day. The Bishop of the diocese made a short speech, to which Sienkiewicz replied in a few words full of emotion. 'May it always live,' he said, 'this great heart of the Polish nation, which beats so warmly and recompenses a man in such manner for his persevering work.'

"This imposing manifestation was in fact of a national character and was addressed to the national spirit. The jubilee was the silver wedding of Sienkiewicz to the heart of his country. In fact the author of 'With Sword and Fire,' 'The Deluge,' and of 'Pan Michael' revives again the heroic days of Poland in a series of superb masterpieces written in the most dispassionate spirit, exposing at the same time the qualities and defects of his countrymen, and causing the Poles of to-day to understand why it is that their unhappy country has witnessed so many sad and disastrous events. He exalts the hearts of his countrymen, and, above all, he gives voice to the sentiment of patriotism in a country which from a political point of view no longer exists except as it continues to live through literature and art."—*Translation made for* THE LITERARY DIGEST.

## THE FRENCH NOVEL OF TO-DAY.

NO one can examine the field of current French literature, observes Mr. Edmund Gosse, without perceiving that the novel is passing through a period which must prove highly perilous to its future. It is at once a period of transition and of experiment. "The school of realism or naturalism," he writes, "which was founded upon the practise of Balzac in direct opposition to the practises of George Sand and of Dumas *père*, achieved about twenty years ago, are of those violent victories which are more dangerous to a cause than defeat itself." In 1880, M. Zola published his volume of polemical criticism, "Le Roman Expérimental," that "plausible, audacious, magnificently casuistical plea, not merely for the acceptance of the realistic method, but for the exclusion of every other method from the processes of fiction." Its tremendous effect is well known. For many years Zola and the naturalists had things all their own way in France, and won many of the chief writers of other countries. But even tho, later, the naturalistic formula began to be discredited, and a whole group of disciples announced their defection, the old forms of fiction, represented by Cherbuliez and Octave Feuillet, had lost their savor. At present, says Mr. Gosse, there is a certain depression in French literature. Paul Bourget is perhaps the writer who has escaped least battered from the naturalistic fray, and he is becoming less and less a novelist and more a writer of *nouvelles* or short stories. He, like a large school of French writers of the day, has turned from his former themes to the analysis of life, and "is more than ever isolated in his exquisite attenuation of the enigmas of the human heart." Mr. Gosse continues (in *The Contemporary Review*, February):

"Elsewhere, in the French fiction with which the century is closing, we see little but experiment, and that experiment largely takes the form of *pastiche*. One thing has certainly been learned by the brief tyranny of realism, namely, that the mere exterior phenomena of experience, briefly observed, do not exhaust the significance of life. It is not to be denied that a worthy intellectual effort, a desire to make thought take its place again in esthetic literature, marks the tentatives, often very unsatisfactory in themselves and unrelated to one another, which are produced by the younger novelists in France. The books address, it must never be forgotten, an audience far more cultivated, far less hidebound in its prejudices, than does the output of the popular English novelist. It is difficult to conceive of a British Huysmans translating, with the utmost disregard for plot, the voluptuous languors of religion; it is even more difficult to conceive of a British Maurice Barrés engaged, in the form of fiction, in the glorification of a theory of individualism. It is proper that we should do honor to the man who writes and to the public that reads, with zeal and curiosity, these attempts to deal with spiritual problems in the form of fiction. But it is surely not unfair to ask whether the experiment so courageously attempted is perfectly successful?"

Among the most interesting of the younger French writers, says Mr. Gosse, is M. René Bazin, an author who is apparently destined to take a prominent place in French literature:

"Little seems to have been told about the very quiet career of M. René Bazin, who is evidently an enemy to self-advertisement. Of his purely literary career all that is known appears to be that in 1886 he published a romance, 'Ma Tante Giron,' to which I shall presently return, which fell almost unnoticed from the press. It found its way, however, to one highly appropriate reader, M. Ludovic Halévy, to whom its author was entirely unknown. M. Halévy was so much struck with the cleanliness and the freshness of this new writer that he recommended the editor of the *Journal des Débats* to secure him as a contributor. To the amazement of M. Bazin, he was invited, by a total stranger, to join the staff of the *Débats*. He did so, fourteen years ago, and for that newspaper he has written almost exclusively ever since, and there his successive novels and books of travel have first appeared."

Of M. Bazin's latest and most successful book, Mr. Gosse writes:

"When 'La Terre qui Meurt' ['The Dying Land'] was published in 1899, there were not a few critics who said that here at last was a really great novel. . . . He takes, in 'La Terre qui Meurt,' the agricultural class, and shows how the towns, with their offices, cafés, railway-stations, and shops, are tempting it away from the farms, and how, under the pressure of imported produce, the land itself, the ancient, free prerogative of France, the inalienable and faithful soil, is dying of a slow disease. To illustrate this theme, M. Bazin takes the history of a farm in the Vendée."

## "MICHAEL KRAMER," HAUPTMANN'S LATEST DRAMA.

WHEN, several years ago, Gerhart Hauptmann turned from the uncompromising realism of his earlier works, and in "Hannele," and still more in "The Sunken Bell," revealed a rare strain of poetic idealism, it was widely believed that the leading playwright of Germany had permanently forsaken the school of the realists. Within a year or so, however, in his "Fuhrmann Henschel," he evinced an inclination to return to his former manner. His latest play, "Michael Kramer," is accepted as unmistakably of a piece with his earlier revolutionary and realistic dramas, "Before Sunrise," and "The Weavers." It is a delineation—and in a certain sense an arraignment—of present-day capitalistic society; a picture of atrocious vulgarity, foulness, and vice, such as Hauptmann conceives a large part of German society to be.

Dr. Kuno Francke, professor of German literature in Harvard University, writes as follows (in the New York *Evening Post*, February 23) of the play and its plot:

"One might say, there is no action at all; there is only a situation, a calamitous family situation. The father, old Kramer himself, is a painter, a man of ardent convictions, but apparently mediocre talent. His convictions have been inherited by his daughter, who, however, is a singularly ungraceful person. His talents have been transmitted to his son, who, however, is a moral wretch. Add to this that Kramer has no inner relation whatever with his wife, a hopelessly humdrum and unintelligent person—and the necessary ingredients for family misery are at hand. The father, with stubborn tenacity, devotes himself to his art—so much so that he lives almost exclusively in his studio, apart from the family; the son, with equal consistency, wastes his vitality by lounging about in doubtful resorts, and his brain substance in intercourse with waitresses and chorus girls. The mother limits her activity to taking the son's part whenever the father's indignation at his conduct becomes particularly violent. The daughter bears the burden of the whole family. The end,

of course, is the son's suicide, borne by the father with the exaltation of a man brought face to face with eternity.

"No one would deny, I suppose, that a theme like this might form a proper subject for dramatic art. A number of conflicts arising from it may be imagined which would be genuinely tragic. . . . It would be preposterous to assume for a moment that a master like Hauptmann should not have thought of these various conflicts. Indeed, he has indicated traces of them himself throughout his drama; but he has only indicated them. With full deliberation, he pushes all these tragic conflicts into the background, and concentrates our attention upon the unqualifiedly painful, the loathsome spectacle of the moral wretchedness into which the son has at length sunk. In reading these scenes we feel as tho we were observing a case of progressive paralysis of the brain. Hardly a symptom of this most hideous of mental diseases are we spared. All the profane language, all the sexual excitement, all the vile hallucinations characteristic of this wretched state, are brought before us; and, in addition to this, there is forced upon us with awful distinctness a sight of those unspeakably vulgar surroundings, the bawling and carousing restaurant-life of 'respectable' society, in which this particular victim of modern city profligacy has lost his soul. In all this there is no false touch, there is no exaggeration, there is nothing but truth to life; there is consequently, technically speaking, perfect art. But I must confess, if this is art, I, for one, prefer a life in the desert, where there is no art, but plenty of air and plenty of sky."

Is this, then, really the life led by the typical German of to-day? asks Professor Franke:

"These unhappy and unintelligent marriages, these capricious and masterful parents, these rebellious and disloyal children, these swaggering men and these graceless women, this stupidly arrogant cavalierdom, this petty and self-seeking bureaucracy, this universal indecency, lust, and debauchery—that is Germany, that is what we were fond of calling the land of idealism, the land of intellectual aristocracy, the land of pure and loving family life? If it is, we can only pray that the sins of the present generation may not be visited upon our children and our children's children; for if they were, the future could bring nothing but national disintegration and degeneracy. However this may be, we can not but deplore the fact that a genius like Hauptmann's should have been condemned to live in surroundings which have imparted even to his noblest creations a fatal germ of morbidness and gloom. . . . Hauptmann's art seems to me like a wondrous flower, blossoming in lonely beauty upon a hideous, pestilential pool. Would not this flower blossom all the more beautifully if it were transplanted to a healthy soil? Would not, in other words, the poet Hauptmann appeal all the more strongly to our esthetic instinct if, instead of the abnormal and the diseased, he offered us types of the universally and harmoniously human?"

Another severe criticism of the play appears in the Berlin *Gegenwart*, which likes Hauptmann as a realist and painter of every-day life, with all its prosaic details, but which considers his efforts at poetic tragedy and subtle psychological analysis vain and painful. It recognizes a powerful dramatic germ in the play, and a well-conceived contrast in the two leading characters; but in the development and elaboration of the design it finds little to praise. The construction is defective; too many colorless minor characters appear and disappear, having nothing to do with the plot apart from telling each other and the spectators what they think about Kramer and his son; there is endless talk; and even the noble and poetic passages sound strange and out of place. Hauptmann's reconciliation with death, the critic says, does him honor, and his philosophy would have made fascinating material for a melancholy reflective lyrical volume, but in a drama it is inappropriate. The audience is not moved, but in the end bored. It comes to see a section taken from life as seen by Hauptmann, not to hear a solemn and awe-inspired disquisition on death. The critic confesses that he is not sure whether Hauptmann will ever surpass his best work of the period preceding the production of his last three plays.—*Translation made for* THE LITERARY DIGEST.

## THE NEXT STAGE IN MUSICAL EVOLUTION.

IN forecasting the character and direction of the "music of the future," leading critics and conductors admit that the persistent influence of Wagner will for some time prevent the development of a new form or tendency, but take for granted that some change is highly probable. Wagner's triumph all along the line has lasted since the late seventies, and the world is believed to be ready for another great stride in advance. But what elements will the new school bring to the art of musical expression? Mr. Emil Paur, the eminent New York conductor, believes that the Russian composers will hold the stage in the early years of this century, displacing the Germans just as the latter had displaced the Italians. But the Russian writers on music do not seem to have formed similar expectations. They claim power and originality and expressiveness for their composers, but nothing is said about the prospects of a new world-school being started by them. In point of fact, one of the best-equipped critics, M. Ivanov, in reviewing the musical progress of the nineteenth century and comparing it with the history of music in the preceding century, formulates a theory of "cyclical" change and predicts a reversion to simplicity, "pure music" and melody. He begins by thus describing the past century's predominant note in opera:

"It may be affirmed that the fundamental idea in the musical art of the nineteenth century was *realism*, or, more correctly, 'veritism,' the aim to be truthful and sincere in sound. From Weber, the follower and successor of Mozart and Beethoven, through Meyerbeer, Wagner, Glinka, Rubinstein, etc., we hear constantly the appeal to 'truth' in music. Of course, each had a somewhat distinct conception of truth, dependent upon his individual artistic nature; but the demand for it was all-important. Wagner and his adherents censured Meyerbeer for alleged concessions to the mob, but the latter's greater works, in their time, in the thirties, fully expressed that truth which the most intelligent section of European society was capable of receiving."

"Les Huguenots" and other historico-social operas enjoyed a universal and genuine success because of their true dramatic situations, their significance, and relative depth. They were original, progressive for their time; but Meyerbeer degenerated under Parisian influences and lapsed from truth. The scepter then passed to Wagner, who once more raised the standard "veritism" and sincerity. But already there are critics even in Germany who charge him with inconsistencies, with compromise, and who believe that the principle of truth demands less "romanticism" and lyricism than Wagner put into his music dramas. In Russia certain veritists who out-Wagnered Wagner appeared, but they had a brief vogue and are already forgotten. M. Ivanov continues:

"Side by side with the school of veritism and the music drama throughout the whole century there has existed another school which has cared very little for truth and put external beauty above all else. This school, Italian, had at the beginning of the century Rossini for its chief exponent or exemplar. So powerful and numerous was it at one time that its supremacy seemed assured. But it has not held its own, and its last giant, Verdi, deserted its principles and late in life wrote operas radically different from his earlier ones. Now the Italian composers have wholly walked over into the opposite camp of the veritists and, for the sake of truth, are ready to perpetrate all sorts of folly."

This struggle was not the first of its kind in the history of music. It had its exact counterpart in the struggle in the eighteenth century between the realists and the romanticists or worshipers of beauty. Gluck, when fifty-four years of age, assumed the rôle of reformer and declared war on the Italian school of melodious and tuneful opera. At the head of the latter was Piccini, and he had many gifted followers and coworkers who wrote melody for melody's sake. The battle between these two leaders raged especially in Paris. Philosophical, religious, and

political disputes were forgotten in the salons and in cultivated circles. People asked each other: "Are you a Gluckist or a Piccinist?" After a long conflict, the Gluck school triumphed, but not until such masters as Mozart and Beethoven had appeared and combined the Gluck principle with the plastic beauty of Italian melody. And yet this triumph did not prevent the resurrection and prosperity and wide influence of the Italian school in the nineteenth century. What do these facts teach us? Ivanov writes:

"We have a right to think that in the near future a reaction will occur in music toward greater simplicity in operatic forms and the means of musical expression generally, and this in spite of the universal supremacy of Wagner. Notwithstanding Richard Strauss and his neo-Wagner school, we already observe symptoms of a new tendency in the direction indicated. In Russia there are composers who decline to adapt Wagnerian forms and regard them as unsuitable to musical art. In this departure from the recognized embodiment of 'truth' there will, however, be no violation of the higher truth to which all aspire. Truth is one, but the forms of expressing it may differ from one another. The natural, simple expression of a healthy, real sentiment can not fail to prevail over other and more complex musical manifestations of the human soul."

Instead, therefore, of looking forward to greater complexity, splendor, and massive effects, the new school may teach us to look for truth and sincerity and significance in simpler forms and expressive melodies. And the new school may find its first exponents in circles where Wagner is most worshiped, and without disloyalty to his basic principles. Music simply obeys a law of change, of cyclical development, an apparent reaction following each great advance.—*Translation made for* THE LITERARY DIGEST.

## MOST POPULAR BOOKS OF THE MONTH.

REPORTS from leading bookdealers and librarians in the chief cities of the United States give the two following composite lists, representing the most widely read books of the past month (we quote from the last monthly statement—March—in *The World's Work*):

BOOK-DEALERS' REPORTS.

1. Eben Holden—Bacheller.
2. Eleanor—Ward.
3. Alice of Old Vincennes—Thompson.
4. In the Palace of the King—Crawford.
5. Monsieur Beaucaire—Tarkington.
6. The Life and Death of Richard Yea-and-Nay—Hewlett.
7. Napoleon, the Last Phase—Rosebery.
8. Master Christian—Corelli.
9. The Cardinal's Snuff-Box—Harland.
10. Literary Friends and Acquaintance—Howells.
11. Stringtown on the Pike—Lloyd.
12. The Mantle of Elijah—Zangwill.
13. Rostand's L'Aiglon—Parker.
14. Tommy and Grizel—Barrie.
15. An Englishwoman's Love Letters—Anon.
16. More Fables in Slang—Ade.
17. Elizabeth and her German Garden—Anon.
18. The Old Gentleman of the Black Stock—Page.
19. Bob, Son of Battle—Ollivant.
20. Crittendon—Fox.
21. L'Aiglon, par Rostand.
22. The Life of Phillips Brooks—Allen.
23. Home Folks—Riley.
24. Wanted, a Matchmaker—Ford.
25. The Lane that Had no Turning—Parker.
26. The Solitary Summer—Anon.
27. The Redemption of David Corson—Goss.
28. When Knighthood Was in Flower—Major.
29. Herod—Phillips.
30. The Reign of Law—Allen.

LIBRARIANS' REPORTS.

1. Eben Holden—Bacheller.
2. Alice of Old Vincennes—Thompson.
3. Eleanor—Ward.
4. In the Palace of a King—Crawford.
5. Master Christian—Corelli.
6. Elizabeth and her German Garden—Anon.
7. The Reign of Law—Allen.
8. The Redemption of David Corson—Goss.
9. The Cardinal's Snuff-Box—Harland.
10. Tommy and Grizel—Barrie.
11. Rostand's L'Aiglon—Parker.
24. David Harum—Wescott.
12. The Gentleman from Indiana—Tarkington.
13. When Knighthood Was in Flower—Major.
14. Unleavened Bread—Grant.
15. The Life and Death of Richard Yea-and-Nay—Hewlett.
16. Stringtown on the Pike—Lloyd.
17. To Have and to Hold—Johnston.
18. Quisanté—Hawkins.
19. Sky Pilot—Connor.
20. A Woman Tenderfoot—Mrs. Seton-Thompson.
21. The Maid of Maiden Lane—Barr.
22. Wanted, a Matchmaker—Ford.
23. Janice Meredith—Ford.
28. Fisherman's Luck—Van Dyke.
25. Richard Carvel—Churchill.
26. Prisoners of Hope—Johnston.
27. Stage-coach and Tavern Days—Earle.
29. The Solitary Summer—Anon.
30. From India to the Planet Mars—Flournoy.

Upon these lists *The World's Work* makes the following comment:

"Sixteen books are mentioned in both lists. Six of these, 'Eben Holden,' 'Alice of Old Vincennes,' 'Eleanor,' 'In the Palace of the King,' 'Master Christian,' and 'The Cardinal's Snuff-Box,' are among the first twelve in both lists. The four first named are the leading four books in both sets of reports—a remarkable coincidence. These are undoubtedly the most popular books of the month. And 'Eben Holden,' which last month led the dealers' list and was second in rank in the librarians' list, is *the* popular book, for in each list it is greatly in advance of any other book. There are seven volumes, not fiction, in the librarians' list, and eleven in the dealers' list. . . . . .

"In connection with the talk about the commercial value of the dramatized novel, it is interesting to notice that of the nineteen books of fiction in the dealers' list only two are on the stage, 'In the Palace of the King' and 'When Knighthood Was in Flower,' and of the twenty-three in the librarians' list only six, 'In the Palace of the King,' 'When Knighthood Was in Flower,' 'Unleavened Bread,' 'Janice Meredith,' 'David Harum,' and 'Richard Carvel.'"

Subjoined is a list (from the New York *Bookman*, March) of the most popular books in England:

The Master Christian—Marie Corelli.
Rue with a Difference—Rosa N. Carey.
In the Palace of the King—F. M. Crawford.
An Englishwoman's Love-Letters.
Richard Yea-and-Nay—Maurice Hewlett.
Isle of Unrest—H. S. Merriman.
Emma Marshall—Beatrice Marshall.
Irene Petrie—Mrs. Carus Wilson.
Eleanor—Mrs H. Ward.
Herod—Stephen Phillips.

## NOTES.

THE success of the late Maurice Thompson's "Alice of Old Vincennes" has resulted in its being dramatized. When it is presented, Virginia Harned (Mrs. E. H. Sothern) will appear in the title-rôle.

*The Courrier des États-Unis* (New York) relates a little incident showing Verdi's wit. When Victor Emmanuel, King of Piedmont, became king of all Italy, the composer sent the monarch his card, but with periods after each of the letters, thus: V. E. R. D. I. The quick-witted King at once saw the point and replied: "V. E. R. D. I.—Victor-Emmanuel, Roi d'Italie,—presents his thanks and compliments to Verdi, the great composer."

THE late Queen of England was one of the few people living in this decade who could remember Scott. The author of Waverley saw the little Princess Victoria when he was on a visit to her mother, the Duchess of Kent, four years before his death. The Manchester *Guardian* quotes this passage from his diary in Lockhart's "Life of Scott":

"May 19, 1828.—Dined by command with the Duchess of Kent. I was very kindly recognized by Prince Leopold, and presented to the little Princess Victoria—I hope they will change her name—the heir-apparent to the crown, as things now stand. How strange that so large and fine a family as that of his late Majesty should have died off, or decayed into old age, with so few descendants. Prince George of Cumberland is, they say, a fine boy about nine years old—a bit of a Pickle. This little lady is educating with much care, and watched so closely that no busy maid has a moment to whisper, 'You are heir to England.' I suspect if we could dissect the little heart we should find that some pigeon or other bird of the air had carried the matter. She is fair, like the royal family—the Duchess herself very pleasing and affable in her manners."

Lockhart prudently withheld the additional remark that Prince George "swears and romps like a brat that has been bred in a barrack-yard," and that the Princess Victoria "does not look as if she would be pretty."

ARCHEOLOGY and literature appear to be somewhat at variance—as they often are—in the poem of "Hiawatha." We lately gave an account of the Ojibway legends upon which "Hiawatha" was founded (THE LITERARY DIGEST, February 9). In the latest book on the Amerinds or American Indians, entitled "The North Americans of Yesterday," the author, Mr. Frederick S. Dellenbaugh, says: "Longfellow's rendering of 'Hiawatha' is admired the world over. This is good literature, but it is not good ethnology, because in it an Iroquois hero-god is placed in a seating of Algonquin legends. But this was not Longfellow's mistake, but Schoolcraft's, on whose work Longfellow based his poem. Jeremiah Curtin [in 'Creation Myths of Primitive America'] says: 'Schoolcraft, with his amazing propensity to make mistakes, with his remarkable genius for missing the truth and confusing everything with which he came in contact, gave the name "Hiawatha" to his patchwork. . . . In the face of all this, Schoolcraft makes Hiawatha, who is peculiarly Iroquois, the leading personage in his Algonquin conglomerate; Hiawatha being an Iroquois character of central New York—he is connected particularly with the region about Schenectady—while the actions to which Schoolcraft relates him pertain to Algonquin Chippewas near Lake Superior. It is as if Europeans at some future age were to have placed before them a great epic narrative of French heroic adventure in which Prince Bismarck would appear as the chief and central Gallic figure in the glory and triumph of France.'"

# SCIENCE AND INVENTION.

## LONG-DISTANCE POWER-TRANSMISSION—A NEW METHOD.

A NEW method of transmitting power to a distance has been patented in Italy and other countries by Albert Bagnulo. According to its inventor, this new system insures the greatest possible security with great economy of energy. It is based on the principles of the transmission of pressure in liquids and gases, but differs from the ordinary methods of hydraulic and pneumatic transmission, as will be seen from the following description translated from an article contributed to *Cosmos* (Paris, February 9) by Dr. Albert Battandier. Says this author:

"Take a pipe filled with water and branching at one end into several smaller ones, each furnished with a piston. If, at the opening of the large pipe, we exert a given pressure, this must necessarily be transmitted through the whole conduit, and the small pistons that have been placed in the branches will be displaced by an amount [inversely] proportional to the ratio of their total surface to that of the moving piston. The principle, as we see, is very simple; the application of it is still more so.

"The piston must be able to move both backward and forward, by the action of a motor of any kind whatever, thus imparting the same oscillatory motion to the water in the pipes. The pistons at the ends of these pipes receive successive impulses, and hence oscillate in their turn. . . . Water being practically incompressible, it is certain that the pressure will be transmitted without heating, that is to say, without loss of mechanical energy by transformation into heat; and as, according to the inventor, this transmitter enables the realization of ninety to ninety-five per cent. of the initial energy, it follows that it would be an equal distributor of power. It should be added that the machinery would be absolutely silent, that all the mechanism would be out of sight, and that, provided the ratio of surface of the motor and receiving pistons had been well adjusted, their operation would be smooth, very sensitive, and absolutely without danger to the operator."

The inventor regards his system as preferable even to electricity, for the latter is more expensive and requires a dynamo at each end, while in this new method a piston is all that is wanted.

Monsignor Pietro Maffi, in his periodical the *Rivista di Fisica*, gives a description of the inventor's system, with a schematic plan of the proposed mechanism. The most important of his observations, according to M. Battandier, is this: "Altho we are certain that hydrostatic pressures are transmitted instantaneously, we can not admit that the same is true of pressures that are transmitted by movements of the liquid." On this M. Battandier remarks as follows:

"It is clear, in fact, that a liquid particle must take a certain amount of time to move from one point to another. But, besides this . . . it may be said that the author has neglected an important cause of loss, that is, the friction of the liquid in the tube. Since the liquid must be in motion, it is evident that there will be such friction, and this will be more energetic as the diameter of the tube is less. It follows that the results hoped for by the inventor will be far from realized in practise, especially if the operating-machines are at any considerable distance from the motor, and if the force to be transmitted is small; for then the friction of the liquid in the tubes will take it up. Regarding inventions of this kind, it is best to be skeptical, and to be somewhat cautious in drawing conclusions from the unsupported assertions of the inventor. We have on paper a host of brilliant ideas and ingenious devices that burst like a soap-bubble when we attempt to put them into practise. We have only to look into our own memories and we shall recollect how many splendid processes we have devised—which, happily, we have never ventured to put into execution. If we had, we should have lost our time, our trouble, and our money.

"Still, I hope that M. Albert Bagnulo will put his plans into practise, for I should like nothing better than to see my fears dissipated, and to witness the transmission of ninety-five per cent. of his power, as claimed by the inventor."

Most engineers will probably agree with Dr. Battandier in pronouncing M. Bagnulo's plan impracticable; any scheme of power transmission that involves the mechanical oscillation of a long column of water looks dubious, even aside from the objections brought up by the critic. Still, as a novelty which has been described by a reputable scientific journal, it is worth this word of notice.—*Translations made for* THE LITERARY DIGEST.

## THE MAGNETIC PHONOGRAPH.

THE form of magnetic phonograph invented by Poulsen and called by him the telegraphone has now been exhibited in this country, and, according to *The Electrical Review*, scientific men are greatly surprised by it and pleased with it. As readers of these columns will remember, the record, instead of being impressed mechanically on a cylinder covered with some plastic substance, is made by varying the magnetic state of a steel ribbon. The device thus differs from the ordinary graphophone somewhat as the modern telephone does from the old mechanical "lovers' telegraph." Says the paper already mentioned (February 16):

"Electrical engineers have very nearly outgrown the ability to be astonished. We have dealt so long with apparatus and methods that seem to perform the impossible that it is only once in a while we can feel the thrill of real enthusiasm and surprise. To those who have had the privilege of seeing the remarkable performance of the telegraphone, described in *The Electrical Review* February 2, there comes back some of the old wonder that a few of us remember when first we heard the telephone or phonograph. The thing is so amazingly simple, and its performance is so astonishingly perfect, that one feels the natural wonder why it has not been done before and long ago. This instrument is one of a class that occasionally makes its appearance in the face of the belief of most people competent to know about it that it will not work. Doubtless if we had no telephones we would say on inspecting a drawing of the original Bell magneto-apparatus that, while there was a bare theoretical possibility that such a contrivance would transmit sound, yet it was perfectly evident that it could not do so in practise. Indeed, this feeling was shared by the public, engineers, Patent Office officials, and nearly every one else who had to do with the telephone in its early history—until they heard it talk. It was much the same with Herr Poulsen's invention. Nobody would believe that magnetic strains of a permanent and reproducible character would be set up in a steel wire by the delicate magnetic titillations of the little apparatus employed. Indeed, it is stated that when patents were applied for on this machine they were refused on the ground that such an instrument was absolutely inoperative. Still, it works; and it works very much better and more distinctly than any form of mechanical phonograph we have had the pleasure of seeing. What its future usefulness will be is a matter which the future alone can determine, but it is certainly most interesting and so ingenious and beautiful in principle that it deserves more than passing notice."

**The Strength of Women and Men.**—A comparison was recently made by *The World* (New York) between tests of strength at Vassar College and men's college records. The result indicates that the athletic feats of the college woman equal those of boys of fourteen or fifteen, and are far below those of college men or even of high-school boys. The young women run fifty per cent. more slowly than men; they jump sixty-two per cent. as far—the average of three events in each case—and they throw a baseball only forty-five per cent. as far. Commenting on these figures, *The World* says editorially (February 14):

"These figures are from a single woman's college, as against the men's records for all colleges. The latter are the supreme achievement of years of selection and training and of inherited traditions of 'form.' Where women have been trained for acrobats as carefully as men, much less allowance need be made for

sex. Professional women gymnasts are little less efficient than men in skill and agility, and sometimes even in strength. The softness of their muscles is favorable to rapid and dexterous motion. Some trainers have even held that there is practically no difference in possible muscular ability between men and women of the same size, but that women are subjectively less athletic; that they are not so much the weaker as the gentler sex. They make good scores at tennis and golf, and their long-distance achievements on the bicycle have shown them possessed of marvelous endurance. As might have been predicted from the results of athletic observation elsewhere, the champion athletes in girls' colleges are as a rule above the average of their mates in personal appearance, classroom rank, and campus popularity. Health, beauty, and intellect go together."

## THE THOUSANDTH PART OF A SECOND.

IN a lecture recently delivered before the Urania Club in Berlin, and summarized in the *Illustrirte Zeitung*, Dr. Spiess made the thousandth part of a second his theme. Such a fraction of a second is hardly perceptible by the human senses, and yet in physics and mechanics there are occurrences that can be measured only by a very much smaller interval. The human eye needs time to get ready for vision, and a flash of magnesium passes before the pupil is able to contract itself. Far more quickly does the gleam of the electric spark pass; it lasts perhaps the one hundred thousandth part of a second. A white line on a black disk that is turning with the greatest rapidity can not be seen while a flash of magnesium lasts, but can be seen easily enough under the electric gleam. Electricity has also made it possible for us to measure the speed of flying projectiles. The doctor explained the various apparatuses that are used to measure small intervals of time, such as the millisecond watch of Engineer Lipp. This watch is also used to indicate "exact time," which, as is well known, is of great importance to the astronomer when he desires to state precisely the moment of the transit of a star. The lecturer showed by illustration how much time is required for response to an excitation of the sense of hearing. The human nervous system works somewhat methodically, but still with great quickness. What happens from the time when a sound is heard to the time when perception of the sound indicates itself through physical movement, is very complicated. The sound-waves (produced in the professor's illustration by a blow which, by means of an electric current, set the index of the millisecond watch in motion) must first put in motion the tympanum (and thereby the whole mechanism of the organ of hearing and its adjuncts) before sound can act on the nerves of hearing; this sound leads aural sensibility to the brain, where it is changed into an incitation to movement, which is communicated by current to the muscles of the fingers. These must contract themselves before they can close a contact that stops the index of the millisecond watch. And yet all this has taken place in a few hundredths of a second, and can take place in exceptionally fine natures in the thousandth part of a second. Incidentally the demonstrator made use of the chronoscope in the measurement of wonderfully short intervals. He measured, for instance, with the Boulengé apparatus the velocity of a bullet. A long and short bar of iron respectively hang from an electromagnet; the bullet interrupts the current at the mouth of the rifle and at the goal, the electromagnets lose their strength and let the bars fall; a knife indents the longer bar and thus shows, in accordance with the law of gravity, how much later the longer one fell than the shorter one. In this demonstration the bullet acquired an initial velocity of 225 meters a second. Such tests must, of course, have great importance in ballistics. By means of the Pouillet mirror apparatus the lecturer even succeeded in measuring the velocity of the projectile while it was still in the barrel of the rifle.—*Translation made for* THE LITERARY DIGEST.

**Change of Weight in Chemical Reaction.**—We have been taught that the corner-stone of modern chemistry is the principle that the weight of substances entering into chemical combination remains the same; yet recent investigation throws some doubt on this. According to a note in *Science* (February 22), however, it is not believed that the theory of the indestructibility of matter will suffer. If the weight of a chemical compound differs from the sum of the weights of its constituents, this is due, doubtless, to some relation between gravity and chemical attraction, and not to any change in the mass of the substances involved. To quote the note already referred to:

"Experiments by Heydweiller similar to those of Landolt seem to show that a slight change of total weight accompanies some chemical reactions. These experiments have been interpreted by some reviewers as throwing doubt upon the axiom of the conservation of matter. This axiom is not, however, incompatible with variation of total weight in chemical or even in physical changes. If it should be found, for example, that the weight of a given amount of lead and of a given amount of oxygen varied with physical and chemical conditions, a *standard state* of lead and a *standard state* of oxygen would have to be adopted in which state these substances would always have to be weighed, and the principle of the conservation of matter would have to be stated thus: Given so much lead and so much oxygen, measured by weighing under standard conditions, then, whatever changes these substances undergo, the amount of each is found to be unchanged if both are brought back to standard conditions and weighed. Variation of weight with physical and chemical conditions would, no doubt, throw light upon the nature of gravitation; but if such a variation becomes established it will have but little disturbing influence upon the notion of the indestructibility of matter. In the light of Professor Fessenden's electrical theory of gravitation, it would seem that the change of state most likely to produce a change of weight would be the dissolving of an electrolytic salt in water. For, assuming electrolytic dissociation to be a separating of positively and negatively charged atoms of *ions*, the region throughout which the electric force of the atom is exerted would be greatly extended by the dissociation."

## SCIENCE AND THE FREEDOM OF SPEECH.

THE recent dismissal from Leland Stanford and other universities of professors because their teaching was not in accord with the policy of the institution in which they taught, or of its supporters (see LITERARY DIGEST, January 26), has been the cause of considerable discussion which has not yet subsided. In *Science* (February 22), F. W. Clarke treats the question from a scientific standpoint. He says:

"That a university professor should be free to teach his honest convictions would seem at first sight to be a most reasonable proposition. But the rights of the teacher are not absolute; they are limited by the rights of the pupils and the rights of the institution in which he is employed. The institution must protect its own dignity and reputation; the student is entitled to protection against obvious error and against the wastage of his time; and to these rights the rights of the professor are subordinate.

"Suppose, for example, that a professor of mechanics should spend his time in teaching his class the possibility of perpetual motion. Or that the professor of mathematics should try to demonstrate in the class-room the squaring of the circle. Or that the professor of astronomy should denounce the heliocentric theory of the solar system and adopt the medieval teachings of Cosmas Indicopleustes. His right to freedom of teaching would avail him little, and he would be promptly invited to resign his position. The right of the professor to teach is conditioned by the right of the pupil to learn, and the latter right is entitled to first consideration. The teacher has no right to teach nonsense nor to waste the time of his students over his own personal vagaries. Irresponsible freedom of speech or of teaching is plainly inadmissible; a point which certain sentimentalists have failed to see."

Mr. Clarke admits that in the controversies under discussion the question has not been one of mathematical truth and error, but of some subject still under discussion and unsettled. He says:

"In sociology and economics we find the chief difficulties, and here the rights of the professor are not quite so clear. Still, the responsibility on his part remains, and it can not be honestly

evaded. If a professor of sociology, speaking in his class-room, should denounce the present institution of marriage and advocate either polygamy or free love, his honesty of purpose, his right to teach his views, would not protect him from dismissal. This is an extreme case, a case not likely to arise, but it serves to illustrate the principles at issue. All the rights of the professor are governed by reasonable limitations.

"Unfortunately, at the present time, the leading economic and social questions are partly political in their nature. Their public discussion is almost wholly partizan, rarely scientific, and violent passions are easily aroused. The tariff, the coinage, the question of the so-called trusts are all alive in the public mind, and the professor of economics therefore stands on very precarious ground. What are his rights and his duties now? They are still limited, and his responsibilities are greater than ever."

In short, Mr. Clarke maintains, the teacher should put his personal bias under strict control the moment he enters his lecture-room. He should cease to be an advocate and become a judge. He must be fair, judicial, tactful, and dignified; and failure seriously limits his usefulness. He may believe in free trade, but he should give the evidence and arguments upon both sides of the question. If he neglects to do this, he defrauds the students of their rights and is a failure as a scientific teacher.

## DECAY OF SCIENTIFIC LECTURING.

THE art of popular scientific exposition is not what it was in the days of Tyndall and Huxley—so, at least, we are told by an editorial writer in *The Electrical Review* (February 23). The result is, he says, "the absurd spectacle of a man who knows something addressing a number of people who want to be instructed, and yet not being able to make himself intelligible or to find a medium whereby to transmit his knowledge into their minds." In other words, the writer goes on to say, the art of lecturing has fallen into decay with men of science, and only a few in this country at least have the happy faculty of expressing themselves clearly upon subjects on which they are expert. To quote further:

"One such man as Tyndall does more for science in his generation than a host of teachers who deal in terms that only a favored few can understand. The reading of a paper before such a body as the American Institute of Electrical Engineers, for example, is an opportunity of a high character, but the delivery of a lecture before a considerable number of intelligent people, not specialists in the lecturer's own department of knowledge, is an even greater opportunity for the dissemination of knowledge and the production of good results to all concerned. We have in the ranks of American workers in electricity many men whose knowledge is such that they might well instruct the public, and in this way accomplish a result enormously to be desired. But in nearly every case, coupled with this knowledge, is an unfortunate inability to make use of it for the purpose. It seems reasonable, therefore, to hope that the art of telling what one knows may hereafter be taught. The schools fall short of their duty when they teach a man the basis of a science or an art and fill him with information concerning it, and then leave him bottled up, as it were, with no ability to uncork himself and pour forth the treasures of his accumulated wisdom. All of us have sat through weary and unprofitable hours listening to people who might greatly have instructed us and greatly benefited us if they had only known how. The matter is one of real importance and should be given more attention than it has received during the last decade or two."

**"Noiseless Milk."**—The lesson of the beneficial effect of quiet on the nerves is driven home in *The Dietetic and Hygienic Gazette* by means of a story which it quotes from a California medical paper. According to this authority an Indiana farmer was taken sick and went to the Hoosier capital for treatment. While lying in bed convalescing, he was greatly annoyed early each morning by the man who delivered milk. As soon as he recovered he had all his milkmen shod with rubber-heeled and rubber-soled shoes, and rubber tires put on all of his wagons. He presented each one of his customers a rubber mat upon which to set the milk can by the door, and he had his horses all shod with rubber shoes. Then he began to exploit his noiseless milk, and as a result his business has quadrupled and his noiseless milk has gained great popularity. *The Dietetic and Hygienic Gazette* comments as follows:

"There is a lesson in the above instance that I believe will be of great benefit. Let us all endeavor to reduce the noises of our cities. The rubber-tired vehicles have reduced greatly the noises on our streets. Many people are learning the personal advantage of wearing rubber-heeled shoes; this is materially lessening the street din. One physician in Los Angeles told us that his buggy with the rubber tires would last four times as long as one with metal tires. We do not doubt this, and on the same principle we believe that the man or woman who wears rubber-heeled shoes will be protected and life will be prolonged, as is the life of the buggy with the rubber tires."

## ARTIFICIAL PERFUMES.

THOSE who regale themselves with "real fruit juices" at the soda-fountain and those who buy the essences of divers blossoms for their handkerchiefs may flatter themselves that their favorite flavors and perfumes are derived from the vegetable products whose name they bear; but this is usually far from the case. Modern chemists are so skilful that if they can not manufacture the actual odorous principle that they want, they can at least make something that passes for it. In a recent note, the *Revue Scientifique* (Paris, January 12) speaks as follows of this industry:

"During these last years France seems to have made great progress in the industry of manufacturing perfumes by chemical synthesis, and at the Paris Exposition this branch of chemistry appears to be the only one in which the French exhibit was equal to that of Germany. . . . . .

"In the perfumery industry there are three principal methods; the extraction of odors from the products where they occur in nature; the artificial preparation by synthesis of odorous compounds that occur also in nature; and, finally, the fabrication of compounds that have odors similar to those possessed by natural substances.

"The odoriferous principle of oil of bitter almonds is one of the first that was isolated and afterward made synthetically. In 1832 Liebig and Woehler separated benzyl aldehyd from this oil, and now it is prepared no longer from almonds, but by the hydrolysis and oxidation of benzyl chlorid. Unfortunately, there remain some traces of this latter substance, whose odor is penetrating and disagreeable, so benzyl aldehyd serves only to perfume common soaps.

"Vanillin was prepared artificially in 1874 by Tiemann and Harmann by the oxidation of coniferin; but now it is generally extracted from eugenol, which when treated with soda gives isoeugenol, which by oxidation becomes vanillin. This synthetic vanilla has altogether replaced the vanilla-bean in perfumery and the manufacture of confectionery, and it now costs only about one-one hundredth of what it did in 1876. Piperonal, under the name of heliotropin, has replaced the essence of heliotrope, whose odor it has. It is extracted from safrol, an ether of the oil of sassafras or of camphor; in twenty years its price has fallen ninety-nine to one hundred per cent. . . . . .

"As the artificial perfume industry is evidently only in its infancy, we should expect interesting discoveries from the chemists who are at work in this line of investigation. They will be very bounteously rewarded, and, considering the prices paid for work in pure science, we can but congratulate them."—*Translation made for* THE LITERARY DIGEST.

**The "Oil-Pond" in the Gulf.**—In a recent account of the petroleum discoveries in Texas we quoted a notice of an outflow of oil in the waters of the Gulf, with a report that a company had been formed to exploit the supposed submarine oil-well

that caused it. We are assured by *The Engineering and Mining Journal* (February 9) that there is probably very little truth in this story. It says:

"The testimony of oil-men who have personally investigated this report [of the oil-lake] is to the effect that it has no foundation. This opinion is confirmed by that of pilots and seafaring men who are intimately acquainted with that part of the Gulf. All agree as to the quiet spot in stormy weather, and they offer the explanation that the depth of water there varies from 9 to 15 feet, with a soft, black mud for bottom. This mud, which contains more or less of the products of decomposing organic matter, becomes stirred up by the waves and rises to the surface, where it spreads out and acts to some extent as oil does in subduing the turbulence of the sea. Samples were collected at various points within the so-called 'pond' and were examined for oil, but yielded none. We may have in this locality an illustration of how oil deposits are made in the course of time, by the decomposition of material deposited on the bottom of shallow seas, covered with sediments and finally buried to considerable depths. One fact in connection with the so-called oil-'pond' militates against the statement that it is due to the outflowing of oil. The 'pond' is slowly changing its location and traveling toward the east. Some years ago it was much farther from the end of the jetty than it is now, and it is quite possible that the construction of the jetty has had a good deal to do with its restless moods."

## ELECTRICITY IN GLASS-MAKING.

THE components of glass have been usually melted together either in furnaces of ordinary construction, or, more recently, in gas-furnaces. The inconveniences of both are numerous. In the first place, the construction of the furnaces is difficult in the extreme, the expense varying from $5,000 to $14,000; their duration is limited, and it is very costly work keeping them in order. They require an enormous space, both below and above ground; the workmen who tend them must infallibly ruin their health; and the results obtained are far from proportionate to the expense. To make one pound of glass requires three to four pounds of coal in an ordinary furnace, and one and a half to three pounds with gas apparatus. The fusion is never complete in less than twenty-four hours, and manufacture must be uninterrupted, a furnace once extinguished being useless and requiring complete reconstruction. To obviate these inconveniences, various attempts have been made to utilize electric-arc furnaces. The experiments made by a company in Cologne, Germany, have been quite successful, as we learn from *L'Electriciene* (Paris). The process is thus described:

"In this process the components, after mixture, are placed on a series of platforms arranged like steps, and on each of these steps the material is subjected to the action of the voltaic arc. The fusion, incomplete on the first step, is completed as the fluid mass passes over the other steps in succession, carrying with it such of the material as still remains solid. At the foot of this staircase, so to speak, the vitrified substance falls into a receiver communicating by its lower part with a second, where the mass is cleared of impurities; it finally reaches a third receiver from which it is taken to be worked. . . . The cost of this new process can not yet be completely reported on, but, so far as the consumption of fuel is concerned, it can certainly compete on favorable terms with the old method."—*Translation made for* THE LITERARY DIGEST.

**Decrease of Population in France.**—The decrease of population in France has generally been treated from the alarmist standpoint, and various efforts have been made to stop it. These have proved so far unsuccessful, and apparently the French are now beginning to argue that it may not be such a great evil after all. In an answer to a correspondent, published in its issue for February 9, *La Science Illustrée* (Paris) speaks of it as follows:

"The tendency to diminution of population is noticeable as well in Germany as in France. The number of births has diminished by four and one-half per cent. during the period from 1880 to 1890. This rate of decrease has since become greater. We should present these figures to the snobs who spread the common alarmist stories, for want of sufficient instruction and brains to reflect. Besides, it is not the number of inhabitants, it is the individual value of each of them, that makes a country strong. An eagle is worth a hundred goslings. Unfortunately, our cowards are not eagles. Read Paul Combes's book on 'The Boer Heroes.' There you will see one of the smallest states in the world raising its head in victory above one of the most powerful, because it consists of men, not of chickens."—*Translation made for* THE LITERARY DIGEST.

**Grip and Appendicitis.**—It is reported in the daily press that on February 20, in a paper read before the Paris Academy of Medicine, Dr. Lucas Championnière demonstrated that one of the common causes of appendicitis is the grip, or influenza. This theory had been already advanced, but Dr. Championnière's statements were particularly well supported by facts and are said to have produced a sensation. Says the correspondent of *The Public Ledger* (Philadelphia, February 21):

"He called attention to the fact that an epidemic of appendicitis has ever followed a grip epidemic, or that the two often coexisted. He then demonstrated that appendicitis is but a localization of the grip affecting the intestines, and often the appendix itself. The paper cited innumerable instances where this had been directly proved by careful observation, the coincidence of parallel symptoms in every case observed admitting of no doubt. It was pointed out, however, that a similar localization of the grip often attacked the throat or ear. Appendicitis resulted most frequently when an improper diet has been pursued by the patient before grip set in. This was especially true, Dr. Championnière said, when the patient had been an excessive eater of freshly slaughtered meat. In such a case, it was pointed out, the grip almost invariably localized in the intestines near the appendix, or in the appendix itself, producing acute or chronic appendicitis. This, said Dr. Lucas Championnière, frequently gave rise to diagnostic difficulties attended by grave or even fatal results."

Hundreds of recent grip cases in Philadelphia are said to have been attended or followed by more or less serious attacks of appendicitis. Dr. W. W. Keen, of that city, has been quoted as saying that one third of its inhabitants have had appendicitis in some form; but, when interviewed by a *Ledger* reporter, the doctor made denial, and said that he knew of no connection whatever between meat-eating and appendicitis. "I may have said," concluded Dr. Keen, "that grip, being a catarrhal affection, predisposed those suffering from it to appendicitis."

## SCIENCE BREVITIES.

"THE question of fatigue caused to the eyes by various kinds of artificial lights has recently been taken up and studied at some length by a Russian government expert," says *Electricity*. "He says that the involuntary closing of the eye (winking) is a sign of weariness. Using surfaces illuminated by various lights he counted the involuntary movements of the eyelid, his results being that when candle-light was used the eyes were closed 6.8 times a minute; with gas-light, winking occurred 2.8 times a minute; with sun-light, the eyes closed 2.2 times, and with electric-light 1.8 times. From these facts he draws the conclusion, which seems to be corroborated by other observations, that the electric-light is the least injurious to the eyesight of all varieties of artificial illuminants."

A DESCRIPTION of the ravages of white ants, or termites, in Rhodesia is furnished by the Rev. A. Lebœuf to *The Zambesi Mission Record*, January. It is no uncommon thing, says the writer, for the colonist, on returning from his day's labor, to find the coat he left hanging on a nail of his cottage wall and the books on the table absolutely destroyed by these tiny marauders. Nor is this all. "On awaking next morning," writes Mr. Lebœuf, "you are astonished to see in the dim light a cone-shaped object rising from the brick floor a short distance from your bed, with two holes on the top like the crater of a miniature volcano. Upon closer examination you discover that the holes have just the size and shape of the inside of your boots, which you incautiously left on the brick floor the night before. They have given form and proportion to an ant heap, and nothing is left of them except the nails, eyelets, and maybe part of the heels."

# THE RELIGIOUS WORLD.

## DOES RELIGION REQUIRE WOMAN'S SUBJECTION TO MAN?

IT will be remembered that when Victoria was wedded to Prince Albert, she said she wanted to be married like any other woman, and that the promise to obey must not be omitted. The Anglican Church service requires the wife to make the solemn promise to "love, honor, and obey," and a similar promise is embodied in the marriage service of the Dutch Reformed Church, and was lately made by Queen Wilhelmina, another reigning sovereign whose legal position even after marriage is immeasurably superior to that of her husband, Prince Henry of the Netherlands.

The New York *Independent* (February 14), which alludes to these incidents, holds that true religious duty should no longer be invoked in behalf of a wife's subjection to her husband. It says:

"The promise of the wife to obey is the ragged remnant from the days when women were the despised servants and drudges of men. In old English usage the woman promised to be 'buxom' (bow-some, submissive). Now the phrase is, in nearly all churches that she will 'love, honor, and obey' him. The obedience is made very pronounced, and after the service the organ rattles out the music of 'Now you are married, you must obey,' and the bride is jibed about her promise, and declares that she had told the expectant groom that she would say it, but that she does not mean to keep the vow. . . . Clergymen, of conservative ideas, and whole denominations that provide a required form of marriage, insist on the retention of the falsehood. Sometimes they even try to justify it from Scripture. They quote Paul on the silence and obedience of women, as if what was right in Paul's day were to be right always. They even go back to the Garden of Eden for argument. But we know better now, because social and moral conditions are better. When the condition changes the law changes. But the sad thing is to see these teachers of religion requiring women to perjure themselves on such a solemn occasion, to promise to do what they do not intend to do, and ought not to engage to do. It is of a piece with the pledge required of ministers or theological professors giving their adhesion to a creed which was made generations ago, and which can be accepted only in some very loose construction of language. It tends to insincerity, to flippancy of thought about marriage, even to misunderstandings and differences that may lead to quarrels and divorce.

"Marriage is the foundation of society; it should be the fit foundation for the best society we know. Such society requires the best development of woman as well as of man. It makes neither a tyrant and neither a slave, but each the helpful mate and adviser of the other. In such society as the Christian religion has developed, with education and culture, the right and the achievement of the woman as well as of the man should be recognized. To require the woman to put herself under the will of the man, to obey him, as well as to love and honor him, is a cruel, wicked anachronism; and no clergyman is justified in compelling a woman to make such a promise, and hardly so even if she desires to make it. For her to make it is to dishonor her sex, if she intends to keep it; and if not, it is a falsehood which, on such a solemn occasion and on so serious a subject, approaches perjury."

Mrs. Elizabeth Cady Stanton, who from her long years of service in behalf of "woman's rights," is in her old age looked upon by certain classes as an uncrowned American queen, takes a somewhat different view. She holds that the teachings of Christianity about woman's subservience are too plain to be denied or explained away, and that religion is directly responsible for the unhappy marital conditions and for the social evil of to-day. The first step toward a better and nobler society, she says (in *The Free-Thought Magazine*, Chicago, January), is "to inspire woman with new self-respect, and the rising generation with a profound reverence for the mothers of the race":

"So long as we assign to woman an inferior position in the scale of being, emphasize the fables of her creation as an afterthought, the guilty factor in the fall of man, cursed of God in her maternity, a marplot in the life of a Solomon or a Samson, unfit to stand in the 'Holy of Holies,' in the cathedrals, to take a seat as a delegate in a synod, general assembly, or conference, to be ordained to preach the Gospel or administer the sacraments—the church and the Bible make woman the football for all the gibes and jeers of the multitude. When the Episcopal Church, in the great gathering at Washington two years ago, held a meeting for the discussion of a national law for divorce, tho an auxiliary meeting of fifteen hundred women belonging to the same church assembled there at the same time, the bishops discussed the questions of marriage and divorce with closed doors, and not one woman was permitted to be present, tho equally interested in these social questions; the moral effect of that act degraded woman in the estimation of every man connected with the Episcopal Church.

"The sentiments of men in high places are responsible for the outrages of the lower orders in the haunts of vice and on the highways; when, in their marriage service, woman must promise to obey, she is made the inferior and subject of the man she marries; when the following passages of Scripture are read from the pulpit they make woman the mere football of man's lust: 'Wives, obey your husbands; if you wish to know anything, ask of them at home.' 'As Christ is the head of man, so is man the head of woman.' 'For a man indeed ought not to cover his head, for as much as he is the image and glory of God, but the woman is the glory of the man. For the man is not of the woman; but the woman of the man. Neither was the man created for the woman, but the woman for the man.' 'Let your women keep silence in the churches; for it is not permitted unto them to speak, but they are commanded to be under obedience, as also saith the law.' 'It is a shame for women to speak in the church.' 'Wives, submit yourselves unto your own husbands, as unto the Lord.' 'As the church is subject unto Christ, so let wives be to their own husbands in everything.' 'But I suffer not a woman to teach nor to usurp authority over the man, but to be in silence.' 'For Adam was first formed, then Eve.' Such are some of the texts found in a book we are all taught to venerate as inspired by the great Creator of the universe.

"All our efforts to suppress prostitution are hopeless until woman is recognized in the canon law and all church discipline as equal in goodness, grace, and dignity with bishops, archbishops, yea, the Pope himself; we must have expurgated editions of canon and civil law, of Bibles, catechisms, creeds, codes, and constitutions, and of Paul's toilet directions as to covered heads, long hair, and sitting in silence and subjection, hanging on man's lips for inspiration and wisdom. Canon Charles Kingsley has well said: 'This will never be a good world for woman until the last remnant of the canon law is civilized from the face of the earth.' Lord Brougham is equally pronounced in regard to the civil law. He says: 'The laws for woman on our statute books are a disgrace to the Christianity and civilization of the nineteenth century.' The chaotic conditions of society can never become harmonious until the masculine and feminine elements are in perfect equilibrium."

---

**Roman Catholics who are Socialists.**—Tho commonly classified as a capitalist organ, like most of the metropolitan dailies, the New York *Press*—as we have lately noted—criticized the Pope's recent encyclical directed against socialism, and took issue with the Pontiff upon several points. Among other things, *The Press* calls attention to the fact that socialism in the Roman Catholic Church is by no means uncommon. It says (February 17):

"Two things occur to us in connection with this letter. The first is that socialism in the Church of Rome is by no means uncommon. Prof. Francesco Nitti, of the University of Naples, has written a volume of nearly five hundred pages entirely devoted to an account of Catholic socialism. In this treatise Professor Nitti traces the rise and progress of the doctrine among influential Catholics in various countries. One of the foremost advocates of Christian socialism was the powerful Bishop Ketteler, of Mayence. The bishop contended, as against the third

encyclical letter, that the Catholic Church had never maintained the absolute right of property. And Canon Moufang, another prelate of distinction, labored earnestly to devise some scheme by which workingmen might be delivered from dependence upon the current fluctuations of the market. This he would achieve by vastly enlarging the powers of the state, what we term 'state socialism.' In truth the group of Catholic socialists in Europe has been noted for ability and independence of thinking. The movement abroad goes a long way with the socialists in their cries of wrong, but only a short way in plans of redress. But the curious thing is that, in spite of encyclical letters, socialism as a scientific doctrine of industrial readjustment should have appealed with such force to many educated leaders of the Catholic Party."

Among American Roman Catholics there have been several priests who have shown marked sympathy with socialistic ideals. One of the most pronounced socialists in the United States is the Rev. Father McGrady, of Bellevue, Ky., whose book on "Socialism and the Labor Problem" takes the ground that in socialism the working classes find their only hope of freedom and equality. His novel, "Beyond the Black Ocean," is written from the same standpoint.

Exactly what effect the Pope's letter will have upon Roman Catholics who are intellectually convinced of the truth of socialism it is as yet too early to say. A papal encyclical, unless an *ex cathedra* utterance on a question of faith or morals, is not generally regarded as absolutely binding on the conscience of Roman Catholics, for according to Catholic theology a sovereign pontiff may err or possibly be in actual heresy in his ordinary letters. Yet it is probable that the solemn admonitions of Leo, conveyed in this formal guise, will have much weight with all except the class called "liberal Catholics."

## THE COMING OF LENT.

THE fact that the observance of the penitential season of Lent (which began on February 20) is growing among Christians of almost all denominations is generally recognized at present. One need not go far for evidence of this, remarks *The Christian Work* (non-denom., February 21); for in New York, Philadelphia, Boston, and other cities some of the least liturgical of the Protestant bodies, such as the Presbyterians, are uniting in holding Lenten services, and the movement extends westward also. The writer believes that these facts are proof that Lent meets a real want, such as had never been felt so strongly before. He says:

"And why should not this want be everywhere felt, and why should not Christians observe the Lenten period as the Christians before them have done for more than seventeen centuries?—altho the celebration of Lent was not introduced into the English church until the latter part of the eighth century. The truth is, all Christians need this period of rest and retirement from the round of pleasure, else unceasing, which enters into the life of society, and never so much as to-day. And is not change an essential principle of all growth? Do not the physicians tell us that change of atmosphere and environment is necessary to the maintenance of the general health, and do we not find change of occupation equally essential? And then consider what this Lenten season in its highest expression really is; for it is not a mere phase of a ritual, a mere ceremonial period of observance: it is not a phylactery or a robe, nor is it one other added method of expressing beauty in the service of the church. On the contrary, the Lenten period is something which takes hold of the daily life of the Christian. Lent lays its quiet finger upon the whirling wheels of the social life and teaches them rest. As the new year has been ushered in with festivities which continue through the long nights of winter, so Lent interposes when pleasure is on the throne, and declares that the time has come for 'holy calm and solitude'—for cessation from the endless round of social dissipation. The voice is heeded; even fashion owns its sway, for are not its votaries tired and dulled by this unceasing indulgence? Do not their bodies, their minds, their very souls seek for rest, even if not the spiritual rest which Lent affords?"

The Catholic view of the season is thus presented by the New York *Catholic News* (Rom. Cath., February 23):

"While the church never ceases to warn her children against the allurements of the world, the flesh, and the devil, it is during the holy season of Lent particularly that Catholics are urged to meditate long and earnestly on the subjects which concern their eternal salvation, to draw apart from the careless, worldly, pleasure-seeking throngs and devote themselves to spiritual things, to the sacraments, to penitential practises, to frequent prayer and meditation upon Christ's passion.

"It is unnecessary to remark that Lent is not so 'strenuously' observed as formerly. The ecclesiastical law regarding fasting and abstinence has been so moderated that a very small proportion of native-born Catholics trouble themselves much about their diet during Lent. With those who come from the 'old sod' it is different. They were reared in a different atmosphere, where fasting of the genuine sort was rigidly observed by young and old from Ash Wednesday until Easter, and there was little fuss made over the hardship it entailed."

## BRAHMANISM: A FAITH WITH TWO HUNDRED MILLION VOTARIES.

AMONG the great living religions of the world, Brahmanism, it has been pointed out, alone can not be traced back to a single founder, such as Confucius, Zarathushtra, Moses, Buddha, Jesus, or Mohammed. Like the ancient Egyptian religion, it comes down from an immeasurably remote period, and is first definitely found in the utterances of certain semi-divine sages and in philosophic systems which, altho formulated several millenniums before our era, in their subtlety and breadth of thought make many of our present-day religions appear elementary and semi-barbaric. In *The North American Review* (December), Sir A. C. Lyall, a member of the Council of State for India and an accepted authority on Indian affairs, gives an extended account of this great religion, which numbers most of the teeming millions of Hindustan among its adherents, and is now sending missionaries to America and Europe, represented in New York by the Swamis of the Vedanta Society. He says:

"In the first place it is neither militant nor aggressively missionary: it does not openly attempt to make proselytes, in the sense of persuading them or compelling them to come in. Secondly, it is not historic; it has sacred books, but no sacred history. And, thirdly, it has never been defined by formal creeds, nor has it ever accepted a single personal Deity. The general character of Indian religion is that it is unlimited and comprehensive, up to the point of confusion; it is a boundless sea of divine beliefs and practises; it encourages the worship of innumerable gods by an infinite variety of rites; it permits every doctrine to be taught, every kind of mystery to be imagined, any sort of theory to be held as to the inner nature and visible operation of the divine power.

"Now, at first sight this is not unlike the old polytheism of Greece, Rome, and the pre-Christian world generally, with its multitude of divinities and multifarious ceremonials. There are passages in Augustine's 'Civitas Dei,' describing the worship of the unconverted folk among whom he lived, the deification of every natural object and even of physical functions, that might have been written yesterday by a Christian bishop in India. But then, one might ask, why was not all this paganism swept out from among such an intellectual people as the Indians, as it was out of the Western countries, by some superior and more highly organized faith? Undoubtedly, the permanent conditions and the course of events which contrive to stamp a particular form of religion upon any great people are complex and manifold; but into an analysis of these elements I can not go. It is sufficient for my present purpose to point out that the two sheet-anchors of Brahmanism are the institution of caste and the sacred books, both of which were unknown to European paganism. The effect of caste is to give all Hindu society a religious basis;

and the sacred books provide Brahmanism with a theology—that is, with a science or philosophy of religion. I believe I may say that the old polytheism of the Roman empire had neither of these two things. According to Greek ideas, the business of framing laws for all departments of human life, of laying down rules of conduct, belonged to politics; while the philosophers of Greece and Rome were rationalists and teachers of morals, they seem to have regarded the popular superstitions with good-natured contempt. They conformed to public worship that they might avoid odium and accusations of impiety, but they gave it no help or countenance; and in philosophic discussions they treated the ordinary polytheism as unworthy the notice of serious men. They never, or very rarely, gave an inner meaning to myths and fables, or read the minds of the people through their fanciful beliefs.

"But the Indian philosophy does not ignore or hold aloof from the religion of the masses; it underlies, supports, and interprets their polytheism. This may be accounted the keystone of the fabric of Brahmanism, which accepts and even encourages the rudest forms of idolatry, explaining everything by giving it a higher meaning. It treats all the worships as outward, visible signs of some spiritual truth, and is ready to show how each particular image or rite is the symbol of some aspect of universal divinity. The Hindus, like the pagans of antiquity, adore natural objects and forces—a mountain, a river, or an animal. The Brahman holds all nature to be the vesture or cloak of indwelling, divine energy, which inspires everything that produces awe or passes man's understanding. Again, it is very common in India, as it was in Greece and Rome, to deify extraordinary men, and the Brahman does not tell his disciples that this is absurd; he agrees that such persons must have been special embodiments of all-pervading divine power. In short, he accepts every variety of cult and objective worship as symbolical; it is merely the expression or emblem, suited to the common intelligence, of mysterious truths known to the philosophic theologian. In this manner, the gross idolatry of the people is defended and connected with the loftier ideas. It is maintained that God is a pure spirit, but to make Him wholly impersonal is to place Him beyond the reach of ordinary human interest and imagination; so it is well for the less advanced minds to be encouraged by forms and signs of His presence. . . . . .

"Above and beyond the miscellaneous crowd of things and persons, living or inanimate, unseen or embodied, that are worshiped as possessed by divine power, we have the great deities of Brahmanism, from whom all this divine power proceeds, and in whom the principal energies and the fundamental laws of nature are personified. Brahma, Vishnu, and Siva are the realistic abstractions of the understanding from objects of sense. They denote creation, preservation, and destruction, the constant succession of birth and death throughout all existence, the process of destroying to produce, and of producing to destroy. Here we perceive that, as soon as we pass upward through the disorderly mass of ordinary paganism, we come upon polytheism backed by philosophy; we may scatter the irregular levies, and are confronted by the outworks of disciplined theology. The great Brahmanic trinity are adored with various rites and sacrifices; they have innumerable temples, images, and personified attributes. Yet to all the more intellectual worshipers, Vishnu and Siva represent the course and constitution of nature. And, if you inquire further about these things, you will learn that all phenomenal existence is a kind of illusion, to be gradually dissipated by the acquisition of knowledge; for the reality becomes intelligible only to those whose souls have been strengthened and clarified by long meditation, by ascetic exercises, by casting out all worldly thoughts and desires. To the eye of inner illumination, those who know God only by delusive appearances see no more than the shadow of divinity. And conversely, to the empirical or naturalistic mind the whole religion is intelligible as a kind of reflection or mystical transformation of human experience, the vast shadow of the earth projected upon the sky."

Science, we are further told, troubles the Eastern Mystic no more than a fresh religion; for science may be understood as merely a symbolical language, shadowing forth the truths of divinity. The Indians would accept Coleridge's view that the development theory—a theory of progress as regards the physical being—is typical of the progress of man as a spiritual being; that the living soul, springing from an unknown eternity, is capable of endless improvement, ever rising higher and higher through numberless cycles of existence.

## OUTLOOK FOR PRESBYTERIAN CREED REVISION.

THE meeting of the Presbyterian Creed-Revision Committee, held at Washington on February 12 to formulate a report to be submitted to the General Assembly this spring, has resulted in the following statement, given out officially for publication:

"The Committee on the Revision of the Creed came to the following conclusions, thirteen members out of sixteen being present:

"1. It was unanimously agreed that some change in the creedal statement was necessary.

"2. A majority of the members present agreed to recommend to the General Assembly that a change should be made by a supplemental explanatory statement, to cover certain points in the Confession of Faith, and also to include statements as to the doctrines of the Holy Spirit, missions, and the love of God for all men."

*The Presbyterian* (Philadelphia, February 20), which represents the conservative wing in the church, thus explains the outlook:

"It is given out in the secular papers that there will be a minority report in the line of a new creed, or, as it is more plausibly put, 'a supplementary statement of doctrine, without being restricted to specific and limited points in the Confession, but in entire harmony with the system of doctrine contained in the creed.' As yet, we understand, the dissenting members have not taken formal action, but have the matter under advisement, and so there is no official mention of their purpose or recommendation. But from what we hear and know of these brethren, there does not seem to be any question but what they will lay their views formally before the assembly and rally their forces upon the clean-cut issue which they shall present. They represent the more radical wing of our doctrinal formulators.

"The majority report stands for the more conservative element of the committee, and appears to favor only what is more popularly known as a declaratory statement respecting the meaning of the Confession of Faith on specific and misunderstood clauses. As far as we are able to gather the nature and extent of its recommendation, it simply means an explanatory confessional statement, similar to that adopted by the Free Presbyterian churches of Scotland, when the question of revising the Westminster document was before them. In view of the committee's conferences and conclusions, it is quite apparent that a revision of the text of our creed is a dead issue. The movement has lost its force. The committee has nothing to say in its favor. Some of the members favored it at first, but the more it was canvassed *pro* and *con*, the less practical and politic it appeared to be. Gradually 'the explanatory statement' took form and shape and became a rallying center. . . . It strikes us, in the light of the committee's report, that the 'new creed' is also in a dying state. The minority may try to galvanize it into some sort of life, but we believe it will not survive the hard blows which it will receive from devoted friends of a distinct Calvinistic theology, whether in the ranks of moderate revisionists or of those who want our standards to remain unchanged. Our church, as a body, is thoroughly sound, and does not, in our judgment, desire any substitute for it, nor any statement covering doctrines which it does not traverse. She may possibly favor some explanations respecting points about which difficulties exist, in order to obtain a better and clearer understanding of them, but she will not permit any formulations that will weaken, alter, or modify her distinctive doctrinal testimony."

The New York *Evangelist* (Presb.) says:

"Whatever the immediate decision of the coming assembly, therefore, the individual minister may now with good conscience

and with good courage exercise the freeman's right. For the disclosure of the mind of the church in the discussions of the recent months gives the assurance that it is only a question of time when she will frame a creed in harmony with her faith, when her sons shall stand forth to proclaim the truth, with the proud declaration of the apostle on their lips: 'But we were free-born!' There are not a few in the church to whom the present question is of little moment, because for themselves they have anticipated the day, not so very remote let us hope, when all 'creeds' shall be relegated to the cloister. But those who still feel a scruple at remaining in the church whose official documents give them pause may now in good faith continue to do so—yes, should more than ever feel the obligation to do so, to hasten on the coming day. For the new wine has already burst the bottles, whether those remote from the church's actual life are aware of the fact or not. The work of the church is done today by those who have to blow the dust from the confession—in case they have occasion to take it down from the upper shelf."

## THE BABYLONIAN STORY OF PARADISE.

THE Babylonian myths concerning creation and the deluge have been known to scholars for many years; but it is only of late that the cuneiform tablets have also furnished a story resembling the biblical tale of Paradise. The story is treated in an especially instructive manner by Professor Zimmern, of the University of Breslau, in a recent brochure entitled "Biblische und Babylonische Urgeschichte." According to Professor Zimmern, the Babylonian paradise myth, as extracted from the original sources, which are now deposited in the Berlin Museum, and which date from the fifteenth century before Christ, reads substantially as follows:

Adapa, evidently the first human being according to Babylonian tradition, is the son of the sea-god Ea. The latter has created him and endowed him with great wisdom, but has not given him immortality. Adapa lives in the sanctuary of Ea in Eridu, at the mouth of the Euphrates and Tigris. Here he acts in the capacity of a priest of Ea, and among other things is engaged in catching fish in the sea near by in order to supply the sanctuary. One day, as he is out on the waters in the pursuit of his calling, the sea is suddenly lashed into fury by a sudden South Wind, and the boat in which Adapa is seated is overturned and he himself cast into the sea. As a punishment for this, Adapa seizes the South Wind and breaks one of his wings, so that for seven days he is not able to fly over the land. Anu, the god of heavens, hears of this, and sends his messenger upon the earth in order to call Adapa before his throne to give an account of his deed. Ea instructs Adapa concerning the things in heaven and what he can expect there at the hands of Anu. "When you appear in the presence of Anu, they will offer you the food of death—don't eat it! They will give you water of death—don't drink it!" The messenger of Anu arrives and everything happens as predicted, with the one exception that instead of the food and the drink of death, they offer him the food and the drink of life. But, obedient to the command of Ea, Adapa refuses to take this food and drink, and thereby forfeits his chances of obtaining immortality. Anu says: "Get for him the food of life and let him eat!" And they brought him the food of life, but he would not eat. Water of life was brought, and he refused to drink. In amazement Anu says: "O Adapa, why did you not eat and why not drink? Now you shall not live!" And he commanded: "Take him hence and return him to the earth!"

It would be a mistake, says Professor Zimmern, to consider this Babylonian myth as the direct source of the Bible story; yet there are striking similarities between them. He writes in substance as follows:

According to the Babylonian story, Paradise is not on earth but in the heavens. The Hebrews, too, originally placed Paradise in the heavens. The story as found in Genesis is really a later phase, while the oldest Hebrew form is reflected especially by the prophet Ezekiel and by St. John. In that wonderful and mysterious forty-seventh chapter of Ezekiel, especially verses 9 and 12, the prophet describes the river and the tree of life as proceeding from the temple; but the whole connection shows that he is not thinking of the earthly but of the heavenly Jerusalem. In the apocalypse of John (Chap. 23) it is written: "And he showed me a river of water of life, bright as crystal, proceeding out of the throne of the Lamb, in the midst of the street thereof [*i.e.*, of the heavenly Jerusalem]. And on this side of the river and on that was the tree of life, bearing twelve manner of fruits, yielding its fruit every month, and the leaves of the tree were for the healing of the nations."

These statements are understood by many scholars as reflecting really the oldest sentiments prevalent in the beginning among the Hebrews concerning Paradise, and it is believed that they, too, like the Babylonians, originally found Paradise not on earth but in heaven. This is regarded as one of the reasons why the four Paradise streams can not be identified with perfect accuracy.

In many of the details the two stories agree to a remarkable degree. When Ea declares that the food and drink of death will be offered to Adapa, he reminds one of the statement made in Genesis that on the day that Adam and Eve eat of the tree of life they shall die. Fundamentally, both stories have the same underlying thought, namely, that man still falls short of perfect equality with God, in that he lacks immortality. As in Genesis (chap. iii.) it is declared that man is to be driven from Paradise lest he eat of the tree of life and live forever, so in the Babylonian narrative Anu remarks that Ea has revealed to Adapa the secrets of heaven and of earth (has given him the highest wisdom) and asks, what can be added to this that is even more valuable than Ea's gift? The answer is, the food of life; but as Adapa refuses to take this, he thereby loses immortality, both for himself and his descendants.

Singular details are added to this story from other sources. In the British Museum there is now deposited an old Babylonian seal cylinder, in the middle of which stands the holy tree of life, and to the right and to the left are found a male and a female figure, eating of the fruit of this tree; and behind the woman a serpent is unfolding its coils.—*Translations made for* THE LITERARY DIGEST.

## RELIGIOUS NOTES.

A "Converts' League" was lately organized in New York, composed of men and women who have left Protestant bodies for the Roman Catholic Church. The president is Dr. B. F. De Costa, late rector of the Protestant Episcopal Church of St. John the Evangelist, New York, and the membership is several hundred. The aim is mutual instruction and encouragement in their new faith. About the same time an Anglican "Society for Converts" was organized, composed of about two hundred converts from the Roman Catholic communion, about forty of them said to be former Roman priests.

THE discontinuance of *The New World* because of lack of support has caused some debate as to recent changes in religious journalism. The Boston *Evening Transcript* remarks: "The religious weeklies, owing to changed typographical form and altered methods of make-up, print fewer addresses on theological themes, and print less elaborate reviews of new works on theology and Biblical scholarship than they formerly did. This fact would seem to make for greater need of the monthly review, in which space can be set apart for such lengthy and technical articles as the weekly can not publish. And yet, one by one, the denominational quarterlies have died, the few that remain in the country at large either being subsidized by great denominations like the Methodists or Presbyterians, or by educational institutions like the University of Chicago, which is sponsor for *The American Journal of Theology*."

MANY Protestants who hope for the conversion of Italians to their faith believe that the ancient Waldensian Church possesses the most practicable organization for that purpose. *The United Presbyterian* says of this body: "It is a native Italian church, understanding thoroughly the Italian people, and belonging to the same part of Italy which has given to Italy Victor Emmanuel, Garibaldi, and Cavour. It is a martyr church, and has earned the confidence and respect of the Italian people by its endurance of centuries of persecution for its faith, and not a church whose pastors are made up of 'perverts' and 'converted priests' from whom Roman Catholics and unbelievers alike are disposed to turn away with distrust. It is a church which, by its loyalty, has secured the favor and friendship of the Government, the late King Humbert having knighted several of its pastors, and in many ways shown his admiration and love for the Waldensian people. . . . The Waldensian Church has by far the ablest evangelical ministry in Italy, her theological institutions maintaining the highest standard of excellence, and the greatest care being taken to guard her ministry against the admission of men disqualified as to scholarship or character. It is doing a splendid work in providing, through her eminent scholars and Christian professors, an Italian evangelical literature for the Italian people at home and abroad."

## FOREIGN TOPICS.

### THE LATEST SPANISH CRISIS.

THE present disorders in Spain, which have already assumed the proportions of a revolution, were precipitated (according to an anonymous writer in the *Journal des Débats*, Paris) by "four simultaneous incendiary events." These events were: the publication, by one of the young King's tutors, of a violent anti-liberal book; the taking of the nun's veil "under Jesuit pressure" by a rich Spanish girl (the famous Ubao case); the production in the Madrid theaters of Galdós's anti-clerical play "Electra"; and the marriage of the Princess of the Asturias, eldest daughter of the Queen Regent, to Don Carlos de Bourbon, son of the hated Caserta. The long-deferred but long-expected revolution in Spain "against a complication of national misery" is "nearer than it ever has been before," according to Señor Pi y Margall, the well-known republican leader and ex-president of the Spanish republic of 1873. An English writer, Lionel Holland, in *The National Review* (London) recals Macaulay's statement, that "all the causes of the decay of Spain resolve themselves into one cause, bad government." Spain, with a formal constitution almost as democratic as that of France (says Mr. Holland), and a people "far more democratic in temperament than the English," is arbitrarily misgoverned by a self-chosen, self-seeking dynasty of parliamentarians. Election results are prearranged by the party organizers in Madrid, even to the size of the majorities:

"The falsification of election returns is flagrant and unabashed. It will be decided with the utmost complacency that a constituency overwhelmingly republican shall be represented in congress by a reactionary legitimist. And when the elections are over, and the benches duly occupied by their quota of deputies—for the most part members of the legal profession—the nefarious trade in appointments and favors commences. If a change of government has been deemed expedient, a clean sweep is made of all existing officials, from the governor of the province and the mayor of a city to a messenger in a government office and the road-mender of a municipality. Those dispossessed receive pensions, those installed receive salaries and the prospect of a pension. The needs of members of the opposition are not overlooked. There is a friend to place, a coreligionist to promote, there is a monopoly to sustain, there is a convenient road to be constructed. So matters are satisfactorily arranged, and benevolence is insured by a cementing of mutual interests. It is only rarely this atmosphere of corruption will be disturbed by the voice of one of the tiny band of republican deputies, when the congress will hear in silence or with indignant murmurs an echo of the unplumbed sentiments of the great mass of the people whom it has tricked out of a share in the control of national destinies."

Galdós's drama, "Electra," which is described this week on another page, called forth violent anti-clerical demonstrations, including attacks on priests and the looting of monasteries. On this point Mr. Holland writes:

"The Spanish priesthood has forfeited, through the misconduct of many of its members, the respect of the populace, who now regard it with a curious combination of a half-jealous, half-contemptuous dislike and a superstitious reverence for its superhuman attributes. . . . The curse of untempered liberty has carried corruption to her [the church's] core. Every charge that Luther hurled against the hierarchy of the Roman Church in the sixteenth century can be established against her Spanish dioceses in the twentieth. Bishoprics are sold to the highest bidder regardless of the fitness of applicants, yet simony is one of the least of the scandals that flourish under ecclesiastical protection. Vicars and *curas* are sheltered from the punishment which their crimes or the disgrace which their immorality should entail by the fear of sacerdotal authority. An outrage of a character too grave to overlook and too widely known to hush up may necessitate the banishment to South America of an occasional reverend offender, his escape from justice being invariably connived at by provincial officials and the central Government. The vow of celibacy has become a mockery, the idea of serving mankind in poverty mere topic for ridicule. Irreverence often sneers through the stately service of the church, immodesty and skepticism make merry the conversation of her clergy, until it has become a proverbial saying among the people how the best way to follow the example of Christ is to avoid following the example of His ministers."

A writer in the *Revue Bleu* (Paris) points out the "striking difference between the national conditions of unity and disunion revealed by the two royal marriages of the month: that of Holland and that of Spain."

In the event of the death of the young King Alfonso, whose health is at present very feeble, Mercedes, his older sister, generally known as the Princess of the Asturias, would become Queen, and her possible issue heir to the throne. This fact makes her husband's antecedents of vital interest to all Spaniards. He is the son of the Count of Caserta, the famous leader who fought against King Alfonso XII., and who has been since regarded as an enemy of Spain. He is the grandson of Ferdinand II., the Bourbon King of Naples, whose misrule, says *The Guardian* (Manchester), was exposed by Gladstone and ended by Garibaldi. The newly married prince is generally credited with all the ultramontane and reactionary sympathies of his race. The marriage has the support and approval of the Pope, and its consummation (to quote *The Times*, London) "indicates that the Queen Regent has made up her mind to side definitely with the reactionaries, clerical and otherwise, and to conciliate the Carlists." The *Independance Belge* (Brussels) points out that this is not by any means the first time that "the Austrian woman" (as Spaniards contemptuously call the Queen Regent) has proved that she "cares more for the dynasty and tradition than for the Spanish people."

Comment in the Spanish papers is very meager, two of the Madrid journals having been suspended and a rigid censorship being exercised over the others by order of General Weyler, who has also proclaimed martial law in the capital. The *Epoca*, chief ministerial organ of the conservatives and Catholics, charges all the liberal factions with fanning the popular excitement against the Jesuits and other religious orders for political reasons. The *Imparcial* finds fault with the methods employed by the authorities to suppress riots. We are much afraid, concludes this latter journal, that the "ineptitude of the Government, which has been proved again and again in simpler matters, is displaying itself again in a more serious form during the dangerous crisis through which we are passing." The expression, "the suspension of the constitutional guaranties," which so often appears in despatches from Spain, is thus explained by Mr. Holland, in the article already quoted:

"A suspension of the constitutional guaranties, which involves the substitution of military for civil jurisdiction, has been the constant recourse of the conservative ministry since the war [with the United States]. . . . A movement is started at Zaragoza against certain projected taxation; the constitutional guaranties are suspended at Zaragoza. A few foolish enthusiasts hoist a Carlist standard at Bilbao; the guaranties are suspended in the province of Viscaya. At Ferrol, in Galicia, there are disturbances among the workmen in the arsenal; a state of siege is declared there. Some traders in Barcelona protest against the Budget by refusing to pay taxes; the constitutional guaranties are suspended and Barcelona subjected to a state of siege. Valencians follow the lead of the Barcelonese; Valencia also is deprived of her constitutional safeguards. The National Union, an association of commercial and agricultural firms, issues a manifesto; the union is denounced, and in various industrial centers of Spain the guaranties are placed in abeyance. A few dozen men take up arms at the instigation of some bourse manipulators; the constitutional guaranties are suspended throughout the whole of Spain. A government could not more clearly

manifest its distrust of popular tendencies than by availing itself so repeatedly of this extreme remedy against revolution."

M. Alcide Ebray, writing in the *Revue Universelle* (Paris), declares that the National Union, the association of progressive merchants and manufacturers organized last year in Valladolid, constitutes the "sole force or party capable of regenerating Spain."—*Translations made for* THE LITERARY DIGEST.

## AMERICA AS A POLITICAL FACTOR IN THE TWENTETH CENTURY.

THAT this country has taken its position among the world powers and is destined to become a controlling force in the future is a conviction that seems to be gaining ground in other lands. In a series of articles in the *Allgemeine Zeitung* (Munich), Professor Molden, of Vienna, publishes an estimate of the leading actors on the international stage during the new century, the significance of which lies in the fact that it is not the view of the journalist or the politician, but of the thoughtful student and savant. Of special interest to American readers are the following views, which form the kernel of the discussion:

The two most powerful forces in the new century will be Russia and the North American republic; and to a great extent the fate of the English empire will depend on what these countries do or do not do. Of these two colossal empires, the American republic occupies a favored position. In population, it indeed does not equal Russia; but it surpasses that country in energy and practical intelligence, and is the superior of all other nations numerically, having more than forty per cent. more inhabitants than Germany and a still greater lead over England. To this must be added the fact that it possesses an advantage over Britain in having a compact territory, which even in the time of war could supply its own needs and wants undisturbed by any foe; and over Russia and Germany it has this advantage, that its borders touch upon military powers against which it must not keep on its guard. It is like a mighty island, and as such it will be almost beyond attack from the day when it shall have a navy that can cope with the vessels of England, and that day is sure to come in the near future. Then, too, America is not under the necessity of keeping a large standing army after the manner of the continental powers of Europe, but is nevertheless able to maintain an armament sufficiently large to meet European nations, with the exception of Russia, on non-European territory. Now that the wild period of primitive development is passed and the interior of the country has been settled, the native energy and inherent activity will seek fields of operation elsewhere, as shown already, tho in a most awkward manner, by the Spanish-American war. It is possible that revolutionary agitations will not be wanting in the development of this new policy, and they certainly would not be so entirely without significance as such movements are in the republics of Central and South America, but would probably assume the form of a reaction against the autocratic sway of capitalism; but these would all end in securing an unwonted power for some military leader, for it is not at all impossible that out of these upheavals an American Bonaparte should arise. At any rate, this is no more than natural, that with the wonderful reserve power which is found in American life, there will be no lack of excellent soldiers and military leaders. A wonderful field of activity no doubt awaits the new world, altho no prophet can with a certainty predict in which direction this spirit of push and progress will make itself felt most. America, being in many respects an England in potentiality, has also this in common with that country, that it is a mobile and elastic democracy that is without the hindrance of universal military duty. All the more easily can it become a danger for all that come within the sphere of its operation, not only the other American republics, but also the Germans, the Dutch, the French (in their posessions in the Pacific), and the English in Canada. Two years ago England could not hide its joy that America jumped on helpless Spain, for this kept American ambition away from Canada. But in the long run it will be impossible to keep America's eye from this magnificent possession, and it must be regarded as quite natural that during the present century England should lose and America should gain Canada.

As far as Germany is concerned, it will be good policy to live on a friendly footing with America. The authorities must make this a matter of deep concern and earnest effort. The North American republic, as also England, has a deep interest in the position of Germany among the continental powers of Europe, because in this prominence lies the best security against the aggression of the Russian empire. England and America do not want Germany to be a strong colonial power, but they keenly recognize the importance of Germany in the congress of European nations, to maintain which Germany must depend solely on the sword. There seems to be no possibility of an open alliance between Germany, England, and America; but their interests are so much in common that their cooperation and friendship are of the deepest importance to the peace and prosperity of modern civilization.—*Translation made for* THE LITERARY DIGEST.

## FEAR AS THE BASIS OF CHINESE FOREIGN POLICY.

THE relations between the Chinese and foreigners have been little better than those of pirates who attack an inoffensive land and the inhabitants who defend their homes. This is the verdict of Maurice Courant, who analyzes Chinese character as shown in the foreign relations of the empire for the past five

THE BANQUET IN CHINA.

RUSSIA: "Good appetite, gentlemen!"
—*Kladderadatsch.*

thousand years. The dominant trait of the Chinese, says M. Courant (in the *Revue des Deux Mondes*), is a practical, patient, prudent disposition joined to an imagination essentially weak and impersonal. The Chinese know how to extract from a situation every possible practical application. They began, five thousand years ago, under a patriarchal *régime*, with the first regular organization of the family, founded on the so-called "filial cult." Since then it has never occurred to them to develop anything else. The respect for family ties inculcated by the family form of government has developed respect for ancestors and love of justice; and the hold obtained on his countrymen by Confucius is due to the fact that in his philosophy are united to a remarkable degree these national characteristics. M. Courant continues:

"Like his compatriots, Confucius lacked the imagination that constructs, he was incapable of the abstraction that generalizes. An analyst of men and of institutions, he attempted to restore their ancient purity; but he ignored the material nature in which man is placed and by which he is surrounded; he did not possess that remarkable penetration into the mystery of the world so characteristic of Taoist writers; he did not thrill with that universal sympathy which is such a marked characteristic of Buddhism; . . . he was a stranger to that 'curiosity for ideas' which spurred on the Greeks before Socrates and Euclid. Neither he nor his followers understood anything of science, of metaphysics, of philanthropy, of love, or of truth; this is the reason that, for

the past two thousand years, cast in the mold of an education so constrained and unprogressive, the Chinese, particularly those of the upper classes, having willingly remained dead to every sentiment of national expansion, almost literally imprisoned in their admiration for the orthodox forms of their moral code and their literature."

Religion, this writer continues, is not a force in China, neither is patriotism.

"The peasant defends his own field and his own hut, he worries over the troubles of his own district or the neighboring district—for the latter may become the former; but the man of Chantong does not bother himself at all over the invasion which threatens Chihli, and that province concerns itself as little about his."

A rapid survey of the early history of China brings the writer to the period of maritime expansion of Europe in the sixteenth century. Then, he declares, the "pirates" began their descents on the coasts of the Celestial Empire. First came the Portuguese (in 1517), whose relations with the Chinese M. Courant characterizes as "a succession of outrages and indignities." The Dutch arrived in 1622 and the English in 1637, and both began by attacking a Chinese city. In Batavia, Java, the Dutch always "quieted the suspicion of a conspiracy by a massacre of the Chinese." The Spaniards "made things very uncomfortable" from Manila. This, M. Courant declares, "cultivated in the Chinese that disposition which made them, up to the beginning of the nineteenth century, regard a foreigner as a man to be immediately killed. Since 1840, the Chinese have learned that foreign nations, when united, are stronger than themselves, and accordingly have played off one European power against the other. Only the Japanese and the Russians, concludes M. Courant, thoroughly understand the Chinese, and realize that they are real men like other men, the first by reason of living so close to them for generations, the second because of that subtlety of intellect and that humanitarian sentiment that is innate with them.

A writer in *The Contemporary Review* (John Ross) declares that Chinese foreign policy has always been founded on "fear of the foreigner, a fear arising from the belief in the unknown prowess and aggressive avarice of the West." He writes:

ST. PETER: "Kindly have the heads checked. Heathens are not permitted inside."
—*Simplicissimus.*

"It [this fear] sprang originally from dread of the unknown prowess of the West. Since 1842 it has been based upon fear arising from the known prowess of the West. Both the earlier ignorance and the more recent knowledge have produced a continuous policy. That policy may be summed up in the one word—exclusion. They sought no intercourse. They avoided every step toward intercourse. They dreaded intercourse as involving ultimate calamity to their country. The one ideal to which the policy of China has consistently clung is the passionate desire to avoid the foreigner. Happy would be the Chinese if no foreign ship ever sailed their seas, if no 'red-beard' ever offended their vision. We set before them the advantages of commerce. They do not want them. We speak of the utility of railways. They would prefer never to look upon the 'iron cart.' As well as we do they understand the benefits of railways. . . . [But] they knew that where a steam-engine appeared there must be a European, and there could come a European army to utilize the railway to seize the land. Fear of foreign aggression, and fear alone, has been the secret spring, and is the only explanation, of Chinese foreign policy. Hence the dread of any connection with the foreigner. It has caused the persistent objections to every treaty. It is the reason why every treaty, extorted by force, has been evaded, modified, or nullified at every turn where Chinese astuteness could find an opportunity."

AN INDIAN VIEW OF CHINESE POLICY.

"Too fond of Chinese Honey?"
—*Hindu Punch, Bombay.*

The Roman Catholic bishop of Peking, Mgr. Favier, upon whom the French Government has recently conferred the title of Chevalier of the Legion of Honor for "brave, pious work in the East," in an interview in Marseilles, declares that the present revolution in China is entirely and solely the work of Prince Tuan. We quote from this interview as reported in the *Courrier des États-Unis* (New York):

"Constantly held aloof from affairs of state for thirty-five years, Prince Tuan resolved to avenge himself and to stir up a revolt in China. When Tuan took up the reins of government, he was completely ignorant of state affairs. He was completely ignorant of the treaties that had been made, and he vowed an implacable hatred toward all those who had assisted in forming them. But when, with the aid of the Boxers, he fomented the Revolution, he was ignorant of the strength of the Europeans who had control of the mines and other industries. Having rallied about him all the discontented, he began by cutting off the heads of all Chinese suspected by his emissaries of holding commercial relations with the Europeans. The aim of Tuan was to gain possession of Peking, and he partially succeeded; but the result was far from that of which he had dreamed."

The Boxers, Mgr. Favier declares, are simply robbers and assassins. There has not been, he says, a religious war in China, but an uprising of bandits. A writer in *The Celestial Empire* (Shanghai), on the other hand, declares that the Boxers are the patriots of China, and that they are not anti-missionary, but anti-foreign. He declares that, having searched the native papers for expressions of their opinion, he has "everywhere come upon this statement, with but slight variations: 'The Christians, relying upon foreign protection, have cheated their neighbors and evaded their responsibilities, and the missionaries, not understanding the situation, have protected them.'" He says, in conclusion, that the Chinese regard Russia as their most dangerous opponent, and they "heartily fear and abhor her." But the sentiment of good-will toward Americans is practically unanimous. The most conservative native journal in Shanghai, he asserts, recently made the following editorial statement:

"Truly wise and just were the words of the American statesmen at Washington. . . . Amid this international jealousy and strife, heaven has preserved one great country which all alike regard without suspicion, and doubtless it is her allotted task to lead in bringing in the new era, the thousand years of peace and prosperity."—*Translations made for* THE LITERARY DIGEST.

## "THERE'S TROUBLE IN THE BALKANS."

RECENT developments in the Balkan nations, especially Macedonia, have called the attention of the world anew to "the most violent storm-center of Europe." The death of the notorious ex-King Milan, of Servia, has elicited considerable comment, and his death is considered a gain for Russia and a loss for Austria. It will be remembered that, in 1889, Milan abdicated in favor of his son. Since his abdication, according to *The Pilot* (London), he has been an Austrian agent, "kept to oppose the Russophile tendencies of the Servians." Now that he is gone, Servia will turn toward Russia, and what will Austria do? The ex-King was always a disturbing force, says the *Independance Belge* (Brussels), and "his death will mean for his country a guarantee of peace."

THE LATE EX-KING MILAN OF SERVIA.

The recent difficulty experienced by the Rumanian premier in forming a new cabinet is significant, according to the *Journal des Débats* (Paris), of grave impending changes. German influence, it says, along commercial and industrial lines has heretofore been paramount in Rumania; but now the Slavic propaganda of Russia has begun to bear fruit, and the present unsettled condition has been purposely fomented. Russian influence is also very plainly visible, so the Belgrade correspondent of the London *Times* thinks, in Bulgaria, which has just held a general election. A writer in the *Temps* (Paris), moreover, points out that Montenegro is "making a fight to become the center of a future Slav empire in the South; as Prussia united Germany and Piedmont brought Italy into being. Inhabited by a race of hardy mountaineers who were never conquered by the Turks, Montenegro became such a recognized force in the Balkans that, in 1878, it was given a road to the sea. The *Journal des Débats* sees in Montenegro a friend worth cultivating by France. It says:

"France should cultivate the friendship of Montenegro, even if only on account of Russia. The Czar highly appreciates Prince Nicholas, who has it in his power to form a coalition of the smaller Balkan states under Russian guidance, and two of the Prince's daughters have married Russian grand dukes. More important is the fact that another daughter has become Queen of Italy as the wife of Victor Emanuel. For it is no secret that Italy can not remain in the Triple Alliance. The Italians under Austrian rule are more restive than they have been for a long time, and Italy does not repel their advances as much as Austria could wish. On the other hand, the relations between France and Italy have been much improved, and an alliance between France, Russia, and Italy could be brought about by Prince Nicholas of Montenegro."

The Russian papers also speak highly of Prince Nicholas. The *Birshewya Viedomosti* (Moscow) says on this point:

"The Montenegrinian crown prince is specially interested in the formation of an alliance between Montenegro, Servia, and Bulgaria. Such an alliance would be the best protection for the new nations as well as the best guaranty for their economic development. Its realization would lead to the building of a railway through their territory and thus neutralize the efforts of Austria, who hopes to divide them by a railway from Serajewo to Soloniki, and thereby keep them in perfect economic dependence to the Hapsburg monarchy."

The "burning question" in the Balkans at present, however, proceeds from Macedonia. The *Journal des Débats* thus describes it:

"It has long been thought that the Turkish empire will sooner or later disappear, and ever since the Greeks obtained their independence they have regarded Macedonia as their heritage. Not without reason. The majority of the people speak a Greek dialect, the Greek Church is predominant, and in the local assemblies the Greek element predominates. But since the Bulgarians, too, have become independent, the Greeks find that their pretensions are not accepted without opposition. The Slav minority in Macedonia sympathizes with the Bulgarians, and the latter have behind them the prestige and influence of Russia. There is really a deadly rivalry between the Greeks and the young Bulgarian people. The Greeks hoped to increase their prestige by the war against Turkey. How grievously they failed is still in everybody's memory. If we remember that Rumania and Servia also wish for increase of territory, and that Austria is not at all anxious to see her smaller neighbors increase, it will be seen that the Macedonian question is not easy to solve."—*Translations made for* THE LITERARY DIGEST.

## WHY AMERICANS MOURN FOR QUEEN VICTORIA.

THE tributes paid by the American people to the memory of Queen Victoria have been ascribed by some to the fact that the Queen took the side of the Union during the Civil War and was always, politically, a firm friend of America. Others have ascribed them to the Queen's domestic virtues, which are supposed to make a special appeal to the American people. One English writer has asserted that, as Americans honor womanhood beyond other nations, they naturally mourned her who was the "representative of all that is best in woman." *The Spectator* (London) holds that the true explanation lies much deeper than any of these reasons, though it includes the others. Says *The Spectator*:

"The American people have felt the Queen's death so deeply because they and we belong to the same race speak the same language, follow the same ideals, moral, social, and political—because, in brief, truth, justice, freedom, honor, honesty, sincerity, and 'the conduct of a gentleman' mean not something that needs a shade of difference in translation, but exactly the same things to them and to us. Americans and Englishmen are, as Carlyle said, all subjects of King Shakespeare. They all vibrate to the deep elemental emotion of Wordsworth, to the passion of Byron, to the magic splendor of Scott. These are the essential reasons why the American people felt the death of the Queen as we felt it ourselves, and not as foreigners. They were sharers in our sorrow, while the foreigner, however much he was struck by the Queen's high character, and however anxious he was to show his respect, was merely an external sympathizer. Theirs was no complimentary mourning, for they are of the house. The feeling expressed by the American people is, in fact, a proof of the essential oneness of the English-speaking race. It is impossible for any person, sovereign or president, poet or divine, philosopher or weaver of romance, to rise to the very highest place in either land without becoming the common property of both peoples. Say what we will, we are sharers in the really great. The smaller men are sectional, and may belong exclusively to one nation, but in the highest both have a share."

*The Spectator* then refers to British grief at the death of Lincoln, whom the British nation recognized as "a representative of what was highest and noblest in the English-speaking kin." No Englishman, it says, "ever dreams of thinking of Washington in the way he thinks of foreign national heroes. He may admire and respect the foreigner, but for the American there is always in addition that thrill of emotion which is added by the freemasonry of race, language, and the tradition of kindred moral ideals." The "desire of both peoples to share in what is best in either" will last, concludes this British journal, "as long as we speak the same language and read the same Bible, and as long as Mr. Lincoln and the Queen remain as examples of public duty."

# BOOKS WORTH HAVING

**ETIQUETTE** By AGNES H. MORTON. Success in life is often marred by bad manners. A perusal of this work will prevent such blunders. It is a book for everybody, for the select sets as well as for the less ambitious. The subject is presented in a bright and interesting manner, and represents the latest vogue.

**LETTER WRITING** By AGNES H. MORTON. Most persons dislike letter writing, because they fear they cannot say just the right thing. This admirable book not only shows by numerous examples just what kind of letters to write for all occasions, but it teaches the reader to become an accomplished original letter-writer.

**SLIPS OF SPEECH** By JOHN H. BECHTEL. Who does not make them? The best of us do. Why not avoid them? Any one with the desire of self-improvement can. No necessity for studying rules of rhetoric or grammar when this book can be had. It teaches both without the study of either.

**DEBATING** By WILLIAM PITTENGER. There is no greater ability than the power of skillful debate. Here are directions for organizing debating societies, and suggestions for all who desire to discuss questions in public. Also a list of over 200 questions for debate, with arguments both affirmative and negative.

**TOASTS** By WILLIAM PITTENGER. What would you not give for the ability to respond to them? No need to give much when you can learn the art from this little book. It will tell you how to do it; not only that, but, by example, it will show you the way.

# $10 SECURES $400.00 LOT

## IN GREATER NEW YORK

### FREE TRIP TO NEW YORK CITY AND RETURN

**$2,000,000 INSURES YOUR INVESTMENT—THE ASTORS' WAY OF MAKING MONEY MADE POSSIBLE TO SMALL INVESTORS—$10 SECURES $400 LOT WHICH IS GUARANTEED TO BE WORTH $500 BEFORE ONE YEAR FROM DATE OF PURCHASE—WE TAKE ALL RISK—READ EVERY WORD**

THE largest, most reliable, most successful Real Estate Company in the world, Wood, Harmon & & Co., of New York City, are so positive that the values of their lots will increase 25 per cent. during the year 1901 that they will guarantee this increase to any investor—in case they cannot show it, they will agree to return all money paid them with 6 per cent. interest. We have one of the grandest opportunities of a lifetime for the small investor to make money—we give as good security as the strongest savings bank and instead of the 4 per cent. interest on deposits we can guarantee over 25 per cent. We thoroughly believe the lot which we now sell for $400 will in 10 years bring $4,000, in 20 years from $20,000 upwards. If you will carefully study this communication you will see our reasons.

The Astors and our wealthiest families have made their money from the increase in value of real estate. You can prove this point if you will take the pains to look it up. New York City property has increased in value more than that of any other place because of its enormous growth in population, and this growth of values and population is still going on. Since the consolidation of New York and Brooklyn, the increased facilities of rapid transit by bridge, trolley, and elevated, the immense tide of increased population has turned Brooklynward. The attention of the public has been called to the great advantages of Brooklyn because it is only in that section that New York can grow—please note that point, as it is the keynote to the situation. The influx of people into Brooklyn is so great as to severely tax Brooklyn Bridge—as a result new bridges are being built (one of which is nearly completed) and tunnels are being dug beneath the East River. Not only is Brooklyn Borough the only section in which New York can grow, but property in old New York City, the same distance from City Hall, would cost 20 to 40 times the money—note that point carefully, it is absolutely true.

**Listen to Our Story.** It is our business to study conditions existing or possible in the various cities of the United States, and we have aided in the development of 25 different cities. After 12 years' careful study in New York without purchasing, in 1898 we saw the trend of affairs, and before the consolidation of New York and Brooklyn we bought over 1,100 acres of the choicest land in Brooklyn, and which is now in the heart of that Borough. This land is only 3½ miles from Brooklyn Bridge and is only 35 minutes from New York City Hall. We have over $2,000,000 invested in this land and are making it one of the most beautiful spots of New York. The growth of the city, together with our improvements, have increased the value of the property over 25 per cent. since a year ago, and we feel so sure that the increase will be at least the same, that we think there is no risk in guaranteeing it.

**Listen to Our Proposition.** Our property is improved in exact accordance with City Specifications. Streets 60, 80, and 100 feet wide, built to City grade, bordered on each side by 5 feet granolithic cementine sidewalks, flower beds and shrubbery, city water, gas, etc., all at our expense. For $10 down and $1.50 per week or $6.00 per month we sell you a regular New York City lot, subject to the following guarantees from us:

If at the expiration of the year 1901 this lot is not worth $500.00 we will refund all of the money you have paid us with 6 per cent. interest additional.

If you should die at any time before payments have been completed we will give to your heirs a deed to the lot without further cost.

If you should get out of employment or be sick you will not forfeit the land.

Titles are guaranteed to us by the Title Guaranteed & Trust Co. of New York.

**Note Our References.** The Commercial Agencies, 20 National Banks, and 30,000 customers all over the United States, and especially the one at the bottom of this page; this is only one of a thousand.

You will note three distinct points of advantage in this proposition. First—it is a Life Insurance for your family. Second—it enables you to pay in small sums as you would in your savings bank, and cannot cramp you; and, Third—it enables you to participate in the great growth of values in New York real estate which are due to natural conditions; and, furthermore, the three advantages are absolutely without risk.

**FREE TRIP TO NEW YORK.** As a further guarantee of good faith, we agree with all persons living East of Chicago to pay you in cash the cost of your railroad fare to New York and return if you visit our property and find one word of this advertisement a misrepresentation, or **in case you buy** to credit cost of the trip to you on your purchase; to those living farther away than Chicago we will pay that proportion equal to cost of fare to Chicago and return. We would advise you, if you are satisfied, to send first payment $10 in cash at our risk immediately, and we will select the very best lot for you. Or, if you desire further particulars, to write immediately for maps, details, and information. It will cost you nothing to find out and thoroughly satisfy yourself—we solicit closest investigation. References by hundreds—our reputation is national.

**WOOD, HARMON & CO., Dept. 47, 257 Broadway, NEW YORK**

The following testimonial was given us by The Nassau National Bank of Brooklyn, by the authority of their Board of Directors, authorizing the President and Cashier to sign the same:

"There is no doubt the property offered by Wood, Harmon & Co. in the Twenty-ninth ward represents one of the best investments a man of limited income can possibly make within the corporate limits of Greater New York. It can be said without hesitancy that Wood, Harmon & Co. are perfectly reliable, and are worthy the fullest confidence of the investor, whether he resides in Greater New York or any other section of the United States.

THE NASSAU NATIONAL BANK OF BROOKLYN."

## CURRENT POETRY.

### The Black Bear.

By FRANCES STERNE PALMER.

At rustle of bud the red fawn leaps,
Its mother trembles while she sleeps,—
A whisper breaks the forest hush,
And both are off through the underbrush.

But not a fawn in wild wood born
So timid as he of the coat unshorn,
This mighty one who shuffles along
And never dreams that he is strong;
A cowardly bully, put to flight
By hares that romp in the still twilight,
Barked at by squirrel, by bird-cry stung,
Belabored by every forest tongue:

Gone—a black flash—ere you can make out
What all in the wood are scolding about.

—In *Harper's Magazine* (January).

### The Rose's Avatar.

By CHARLES G. D. ROBERTS.

There grew a rose more wonderful
Than ever Saadi sang,
Its loveliness occult and strange,
A rapture and a pang.

Its petals had the pulsing touch
That shakes the blood with fire;
Its warm deeps were the avatar
Of unassuaged desire.

Hid scents and hushed seraglio dreams
Were in its subtle breath,
The madness of the Mænad's joy,
The tenderness of death.

Its soul was all the mystic East,
Its heart was all the South—
Till tears and love transmuted it
To the dark rose of your mouth,

—In February *Smart Set*.

### Is it Spring Again in Ohio?

By EDITH M. THOMAS.

Is it Spring again in Ohio?
Is the sleep of the Winter over?
Far in the heavens the bluebird,
Low in the marshland the plover,
Anear, in the orchard, the redbreast;
Wherever one looks, the hover
Of wings—wherever one listens,
The note of the homing rover!
Is it Spring again in Ohio?

Is it Spring again in Ohio,
And the sleep of the Winter over?
Blooms in the woods the wild service?
Where Zephyr bendeth above her,
Gleams the faint dawn of the windflower?
Breaks from the turfy cover
The tender star of the thistle,—
The dew-cradling leaf of the clover?
Is it spring again in Ohio?

Is it Spring again in Ohio,
And the sleep of the winter over?
Are these the rare days—O my Comrade—
Blithest for homing rover?
Once would we forth and follow
Far as the cry of the plover—
By stream, and by greening pasture,
By fallow, and breezy cover!
Is it Spring again in Ohio?

Is it Spring again in Ohio—
Is the sleep of the Winter over?
Say to each wakening beauty,
I am, as ever, its lover,
Hourly, from far saluting:
I, too, were a homing rover,
If I, from the sleep of the Winter,
All that I loved might recover!
Is it Spring again in Ohio?

—In the March *Lippincott*.

## PERSONALS.

**The Rajah and the Chinese Ship.**—The guile of the "Heathen Chinee" dates back beyond the days of Ah Sin, and seems to have stood the Celestials in good stead in parlous times of the long ago. The story is retold as follows in the New York *Staats-Zeitung:*

"The Rajah Suran was one of the earliest rulers of India. He overran the entire East with the exception of China, killed innumerable sultans with his own hand, and married all their daughters.

When the Chinese heard of his triumphant progress, and learned that he had reached their frontier, they became much alarmed. The Emperor called a council of his generals and mandarins, and upon the advice of a crafty old mandarin the following strategem was carried out:

"A large ship was loaded with rusty nails, trees were planted on the deck, the vessel was manned by a numerous crew of old men and despatched to the Rajah's capital. When it arrived (the most wonderful part of the story is that it did arrive) the Rajah sent an officer to ask how long it had taken the vessel to make the trip from China. The Chinamen answered that they had all been young men when they set sail, and that on the voyage they had planted the seeds from which the great trees had grown. In corroboration of their story they pointed to the rusty nails which, they said, had been stout iron bars as thick as a man's arm when they started. 'You can see,' they concluded, 'that China must be a very long distance away.' The Rajah was so much impressed by these plausible arguments that he concluded he would not live long enough to reach China, and abandoned his projected invasion."—*Translation made for* THE LITERARY DIGEST.

---

**Verdi and the Hand-Organs.**—Every summer Verdi was accustomed to spend some time at the springs of Montecatini, where he rented a small house. A few years ago, according to the *Courrier des États-Unis*, one of his friends who came to pay him a visit was greatly surprised to be received in a room which evidently served the composer as salon, dining-room, and bed-chamber.

"I have two other large rooms," said Verdi to his visitor, whose astonishment did not escape him, "but they are at present invaded by a quantity of objects that I have rented for the season." With these words Verdi opened two doors and the *maestro* perceived two large rooms literally filled with hand-organs.

"Upon my arrival," continued Verdi, "all the proprietors of these instruments continually serenaded me from morning till night. There was a constant repetition of 'Rigoletto,' 'Il Trovatore,' and 'La Traviata.' Then I made a resolution. I rented all these organs for the season. That cost me fifteen hundred francs. But now at least I am quiet and shall be able to work in peace."—*Translation made for* THE LITERARY DIGEST.

---

## MORE OR LESS PUNGENT.

**A Severe Blow**—"That will be a popular song," commented the composer's friend. "Is it as bad as that?" groaned the composer.—*Detroit Free Press.*

---

**A Natural Result.**—"Hist!" whispered the villain, creeping stealthily away. "I expected you

THE SANITARY STILL

on your kitchen stove furnishes plenty of distilled aerated water at trifling cost. Simple as a tea kettle. HON. WILLIAM R. MERRIAM, Ex-Governor of Minnesota and Director of the U. S. Census, writes; "I am now using one of your Sanitary Stills in my home with satisfactory results, and I take pleasure in recommending your still to any one who wants wholesome and pure water." The Sanitary Still used in the WHITE HOUSE. Highest award at Paris Exposition. DURABILITY UNEQUALED. AVOID CHEAP AND FLIMSY STILLS.

Cuprigraph Co., 68 N. Green St., Chicago

the magistrate to the clerk. "What is your occupation, madam?"

"Sir," said the witness, "you have made a mistake of ten years in my age."

"Put down fifty-five years, then," directed the magistrate. "Your residence——"

"Sir," exclaimed the lady, angrily, "my age is thirty-five years, not fifty-five!"

"Thank you, madam," said the magistrate, blandly, and the entire bench joined in the smile that went round the court. —*Tit-Bits.*

## Current Events.

### Foreign.

CHINA.

February 25.—Minister Conger turns over the conduct of affairs at Peking to W. W. Rockhill, preparatory to his return to America.

February 26.—Two Chinese officials are publicly beheaded in Peking in compliance with the demands of the powers.

February 28.—A new list of Chinese officials, whose punishment is demanded, is announced at Shanghai; Germany disclaims any thirst for more vengeance.

March 2.—A Russian column near Moukden, China, is defeated by a Chinese force, losing a gun and having twenty-men killed and thirty wounded.

SOUTH AFRICA.

February 25.—It is announced in the British House of Commons that ten officers have been dismissed for their connection with surrenders of British posts in South Africa; the cost of the Boer war to date is estimated at $130,000,000.

March 1.—General Kitchener reports that De Wet has been driven north toward the Orange River, with heavy loss; also that the Boers captured a scouting party of eighty British.

March 3.—Fifteen hundred Boers, led by De Wet and Steyn, elude the British forces and succeed in crossing the Orange River.

OTHER FOREIGN NEWS.

February 25.—King Edward arrives at Cronberg on a visit to his sister; he is met by Emperor William.

February 26.—The House of Commons adopts an address in reply to the King's speech, by a vote of 297 to 71.

An exciting scene occurs in the French chamber of deputies, when one member referred to the execution of Louis XVI. as assassination, and a retraction of his words is demanded.

February 28.—The Turkish Government orders fifty thousand troops to the Bulgarian frontier to prevent marauding.

March 2.—The Pope on the ninety-first anniversary of his birth delivers an address on the attitude of the church.

March 3.—King Edward returns to London from his visit to Cronberg.

A strike among the dock-workers at Marseilles reaches large proportions, and prevents the unloading of cargoes and the landing of steamers.

### Domestic.

CONGRESS.

February 26.—*Senate:* A modification of the Spooner Philippine amendment, offered by Mr. Hoar, is accepted; Mr. Allen makes a sharp attack on Admiral Sampson's letter to the Navy Department regarding Gunner Morgan's request for promotion.

February 27.—*Senate:* The Spooner amendment for the government of the Philippines, and the Cuban amendment, are both adopted. The army appropriation bill is also passed.

February 28.—*Senate:* Both houses adopt the conference report on the war revenue reduction bill, thus finally passing that measure.

OTHER DOMESTIC NEWS.

February 25.—The articles of incorporation of the United States steel corporation — the

PHYSICIANS AGREE

that **Robinson's Bath Cabinet** cures the very worst cases of RHEUMATISM, NEURALGIA, COLDS, CATARRH, ASTHMA, TYPHOID and OTHER FEVERS CONGESTIONS, KIDNEY, LIVER, SKIN and BLOOD DISEASES, OBESITY and STOMACH TROUBLES, SOOTHES THE NERVES, and PREVENTS SICKNESS. GIVES A BEAUTIFUL COMPLEXION. **A TURKISH BATH AT HOME FOR 2 CENTS.** It opens the pores, and sweats the POISONS (which cause disease) out of the blood. The best Physicians in America and Europe endorse and use the Robinson Bath Cabinet

**Dr. Anderson, of Yale University, says:** "I am using your cabinet in the College gymnasium, and at my home. I find it very valuable in treating **Rheumatism** and many other **diseases.**"

**Dr. Brereton says:** "It has become a question with me not that the Vapor Bath **will cure,** but what it **will not cure.** Pains and aches vanish as if by magic."

Our cabinet possesses four **Essential Features,** covered by patents, necessary for the successful use of the Cabinet Bath.

**$2.00 Book Free to Patrons.** It containsfull instructions for curing disease, written by prominent Physicians.

**Please send for our handsomely illustrated catalogue, and our "Special Offer"** to customers

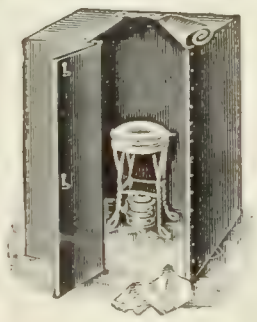
**AGENTS WANTED**

**$75 to $200** monthly made by our representatives. We want enterprising Men and Women to represent us. Exclusive rights. Write at once for Special Agent's 1901 Proposition. Do not delay, as territory is being taken rapidly.

**$500.00 in Gold** will be given to the Agents doing the largest business this year.

**ROBINSON THERMAL BATH CO.,**
764 Jefferson St., Toledo, O.

Turkish Baths
For 3 Cents



A RACINE folding bath cabinet gives you a Turkish bath room at home. At a cost of three cents, you get all the possible benefit of any vapor or hot air bath. These baths taken regularly insure health vigor and, cleanliness. They clear the complexion; they cure colds. And no other treatment is so widely employed by the best physicians in the cure of most chronic diseases.

The Racine is not like the flimsy and unserviceable cabinets that are widely sold. It is a stout, double-walled room, rubber coated inside and outside, and fitted with a door. Merely tip it, and it folds into a six-inch space. The four best features in the Racine are controlled by our patents. Without them no cabinet can be satisfactory.

The Racine is guaranteed to be the best cabinet on the market. We sell on approval, to be returned at our expense if not satisfactory. Prices $5 up, freight or express prepaid. Alcohol or gas heater, vaporizer, face-steaming attachment and 35 prescriptions for medical baths included. Send today for our illustrated catalogue, and order from that.

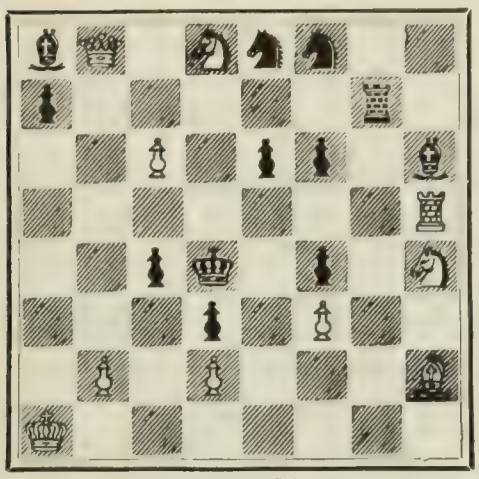
## CHESS.

[All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

### Problem 541.

By STANLEY B. BAXTER.

Black—Twelve Pieces.



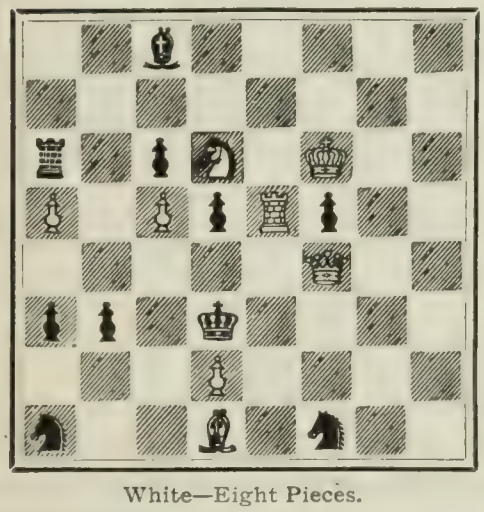
White—Ten Pieces.

White mates in two moves.

### Problem 542.

By B. G. LAWS.

Black—Ten Pieces.



White—Eight Pieces.

White mates in three moves.

These problems, published in *The B. C. M.* (February), were submitted for solution at a recent meeting of the Surrey County Chess-Association, England, and "no papers were handed in." There were two prizes offered for the solution, and the prizes were not won. We do not know the time-limit, but it would be interesting to know how long it takes our solvers to master them.

### Solution of Problems.

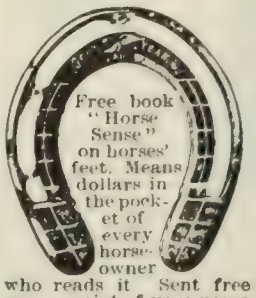
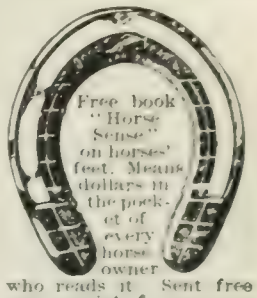
## NOTICE!

Conveying an offer probably never before paralleled in American horse-matters.

The new composition of rubber specially invented for horseshoes by the Goodyear Tire & Rubber Company is the most remarkable rubber product ever created. This recently perfected material is destined to prove one of the most useful productions in the world. It is put out by this concern in shoe pads called the Goodyear-Akron. This shoe is undoubtedly the greatest improvement ever evolved for the benefit of the horse. Do not consider this exaggeration before you realize what is meant by it.



who reads it. Sent free upon receipt of your name and address.

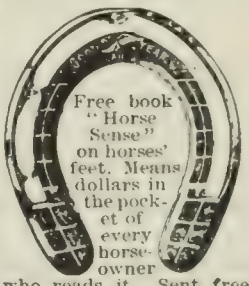


who reads it. Sent free upon receipt of your name and address.

Relief to the feet on an economical basis is now in a practical way made possible for all horses.

The Goodyear-Akron Shoe Pad is cheaper than steel shoes. It wears longer than any steel shoe ever put on the horse. It is a neat HORSESHOE—not a "pillow" or clumsy contrivance. They make slipping impossible. Balling with snow is also prevented.

They deaden the jar which so soon bows the knees or disables the horse of to-day on the modern hard roads. They keep him always "on soft ground." His footing on any road is always firm and confident. He strikes out freely and fearlessly. They improve his action beyond possible belief until you see it. They are a complete, unqualified, triumphant success.



who reads it. Sent free upon receipt of your name and address.

## Our Remarkable Offer

It is doubtful if an article put out by a large responsible concern was ever before presented to the public with a proposition equalling this:—

Have your shoer send for a pair of the Goodyear-Akron Rubber Shoe Pads and try them on front or hind feet of your horse. (We prefer to quote wholesale prices to your shoer instead of retail prices to you.) If afterward they are not considered simply a boon to both horse and driver—and a very great economy in shoeing bills—and a thing you wish never to be without, we will promptly refund to you the cost of the shoes.

Certainly this is a proposal which speaks for itself, and it is made by

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### ANOTHER FILIPINO APPEAL.

JUDGE TAFT'S encouraging cablegram from Manila last week, declaring that the conditions in the Philippines "have in fact never been so favorable to restoration of complete peace and accomplishment of declared purposes of the President," gives to the earnest appeal for Philippine independence delivered by Señor Sixto Lopez (Agoncillo's secretary) before a Philadelphia audience on the evening of March 12, something of the interest that attaches to a last entreaty for a dying cause. That the opposition to the American arms is at last really dying out continues to be manifest in the despatches from Manila. The hostilities in the island of Panay have ended in the surrender of the native forces, negotiations are said to be in progress for the surrender of all the insurgents in the island of Cebu, and all the northern half of Luzon is reported quiet. Judge Taft says that "anxiety for provincial government" is everywhere apparent, and satisfaction with the form adopted is manifest. He adds: "Federal Party, avowed and direct outgrowth election, has spread with wonderful rapidity all parts archipelago, and is active and urgent in advocacy of peace and presenting advantage of civil liberty under American sovereignty, assisted in securing surrenders in Panay. Party's banquet of 300, eve Washington's Birthday, and gathering of 7,000 members party on Luneta to hear loyal earnest addresses leading Filipinos, were most convincing of its power, purpose, completely representative character."

Many of the facts brought out in the address of Señor Lopez (as given in an advance report sent to us) relate to the native capacity of the Filipinos. Little has been said hitherto in the Philippine discussion about the early history and civilization of the natives. Many appear to think that they are just emerging from savagery. Says Señor Lopez:

"At that period when the Normans were invading Britain, and bringing to Celt and Saxon new institutions and a greater degree of social refinement, the Moors were migrating to the Philippines, taking with them their science and arts. Long prior to the Spanish occupation, that degree of civilization and culture to which the Filipinos had attained was remarkable, and was regarded by many as superior to that of Mexico, Peru, or Japan. Their form of government was similar to European feudalism, and was as good in practise as were those of European countries at the same period. Education was further advanced, and was more general than in any country in the world at the time. The people had a written language, Moorish in character, which was taught in almost every village school, and 'there were very *few*,' says Dr. de Morga, the first Spanish governor-general, 'who could not write well and correctly.' The religion of the people was similar to that of Zoroaster. When Christianity was being introduced into the islands, it was found that there were words in the language of the Filipinos capable of expressing all the higher spiritual phases and doctrines of the Christian religion.

SIXTO LOPEZ.

"The industries of the country at that time were extensive. Most of the arts of peace and domestic life were flourishing. There were factories for the weaving of delicate silks and other textile fabrics. Father St. Augustine mentions that the making of cotton stockings for exportation was then a large and flourishing industry. The secret of the manufacture of gunpowder was known to the Filipinos from an early period. They had powder and ammunition factories; and there were brass and iron foundries in Bulacan, Pangasinan, Ilocos, and Manila. When some of the European armies were assaulting city walls with the battering-ram, the Filipinos were making double-barreled revolving cannon, or 'lantacas,' as they were called, many of which were afterward exported to Spain and South America."

Some of the charges of Filipino barbarism during the present war Señor Lopez refers to, and says:

"It is no doubt true that during this war some irresponsible Filipinos have been guilty of acts of cruelty. It is said that some such Filipinos buried alive one of the Macabebe scouts who had tortured Filipino prisoners of war. I do not know whether that is true; I hope it is not. But in any case, it should no more be taken as a gage of Filipino character, generally, than the burning alive of a negro should be taken as a gage of American character generally. Burying alive is no more characteristic of the Filipinos than burning alive is characteristic of Americans."

And as to the present intellectual condition of the Filipinos he says:

"The number of those who can read and write has been estimated by various authorities at from 70 to 90 per cent. of the entire population. My own opinion is that between 70 and 80 per cent. of the people can read and write. This compares very favorably with the 58 per cent. of Italians, 31 per cent. of Rus-

sians, and, according to the census of 1887, the 28½ per cent. of Spaniards who can read and write. The percentage in the Philippines is higher than in any European country, with the exception of Germany, France, and Switzerland. It is higher even than in some of the States in America, and very much higher than in any of the South American States."

"There was a university in Manila," he continues, "several years before the Pilgrim Fathers landed on Plymouth Rock," and he enumerates a large number of other colleges now existing in Manila and in other parts of the archipelago, and declares "with very great pride" that "the funds for the foundation and maintenance of every one of these colleges have been provided exclusively by the Filipinos themselves."

The point of all this, in the view of Señor Lopez, is that the Filipinos are capable of self-government and fit for independence. Judge Taft, he thinks, is mistaken in his impression that the natives want American rule. No Filipino, remarks Señor Lopez, dares express sympathy with the native cause within hearing of the American authorities, so that "only those who are favorable to American sovereignty are allowed to express their opinions"; and, "as a consequence, Judge Taft is surrounded from morning till night by office-seekers and others who pour into his ear the sought-for assurances that a majority of Filipinos are favorable to that to which he desires they should be favorable. He never hears an expression of the contrary opinion, and consequently he does not know how he is being deceived." The natives are "united," he declares, "in their desire for independence, and in their opposition to foreign rule," and he quotes the words of General MacArthur and several other American officers in support of this statement. He quotes from our Declaration of Independence and refers to the early history of the United States to bear out his argument in favor of the right of the Filipinos to independent self-government, and says:

"Are the Filipinos fit for independence? Who has a right to be the judge? That is a question to which there is but one answer, namely: the Filipinos themselves. Let it once be established as a precedent that America or any other nation has the right to judge of another people's fitness for independence, and not only will the fundamental principles of human liberty be uprooted, but every weak and struggling nation will be placed at the mercy of the powerful and despotic."

## PLAN TO LIMIT DEBATE IN THE SENATE.

THE death of the shipping subsidy bill and the river and harbor bill by filibustering tactics in the Senate has given unusual interest to the proposal of Senator Platt, of Connecticut, as expressed in a resolution offered in that body, that when a matter has been considered for a "reasonable" time, "it shall be in order for any Senator to demand that debate shall be closed." The resolution continues: "The demand shall not be debatable, and if it is seconded by a majority of Senators present, the question shall be taken without debate. Once the decision to close debate having been reached, the measure under consideration shall have precedence over all other business. Action shall be taken upon the measure in its successive stages according to the rules without further debate, except that every Senator who may desire shall be permitted to speak upon the measure, including all amendments, not more than once, and not exceeding thirty minutes." The resolution has been referred to the committee on rules, and will probably come up at the next session of the Senate.

Many papers are heartily in favor of the proposed reform. The New York *Mail and Express* (Rep.), for example, says: "The 'courtesy of the Senate,' carried to the absurd extreme of permitting any Senator, however fanatical or perverse, to talk to death any measure, however important to the country, instead of being a safeguard of dignity and deliberation, has become a legislative nuisance and a national scandal. Its abuse enables a little gang of filibusterers to hold up and defeat action of the greatest pith and moment, for which its occasional use in blocking bad legislation affords no compensation. There is, in fact, no permanent justification for saving the majority from the responsibility of bad legislation." The New York *Evening Post* (Ind.) thinks that it is "only rational that a legislative body should have the power to limit debate, and that the majority should be able to bring a question to a vote." The Boston *Journal* (Rep.) declares that "it is a very stupid thing for the American people to provide all the elaborate machinery of a republican government and then weakly to permit their hands to be tied by a few unprincipled autocrats in the Senate." The present custom, it says, "is really a parody on republican government." Says the Baltimore *American* (Rep.): "There have, of course, been occasions when unlimited debate has proved of great benefit to the general public. But these instances are far outnumbered by the others in which, by the absence of such a rule as is now proposed, the majority has been placed at the mercy of a filibustering minority. In this country, where one of the salient principles is a government by the majority, anything that gives the minority practically absolute powers is wrong, and should be corrected."

WHAT HAPPENED TO THE MINORITY IN CONGRESS.
—*The New York World.*

On the other side, the New York *Tribune* (Rep.) believes that filibustering has its good uses, and the New York *Sun* (Rep.) thinks that "unlimited debate in the Senate is one of the safeguards of our institutions," and that "the Senate's methods have counted for good government ten times where they have counted once against it." So, too, thinks the Philadelphia *Record* (Ind. Dem.), which points out that "filibustering has rarely been successful except when applied to bad measures which were condemned by a large body of public opinion, without regard to party." The Brooklyn *Eagle* (Ind.) and the Baltimore *News* (Ind.) express similar opinions, and the Springfield *Republican* (Ind.) fears that the limitation of debate would increase the power of the Executive over Congress. It says: "The Congress must be made more completely a mere register of the Executive will. Deliberation must give way to action in the Senate as in the House. The exigencies of imperialism demand it, and the spirit of imperialism demands it. It is no doubt important especially that extreme celerity of movement be put at the command of the majority at Washington during the next two years, before the possibility arises of Congress passing into opposition hands."

The Philadelphia *Times* (Dem.) facetiously advocates a still more radical reform. It says:

"An improvement on this patent has just been introduced in the British House of Commons that is worthy the attention of the Senate. When some Irish members, who objected to having debate cut off before it reached the subjects in which they were especially interested, refused to vote at the speaker's command, he summoned the police and threw them out. One of the honorable members and several of the police seem to have fared badly in the melée, but the speaker's authority was maintained and closure was successfully applied.

"The timeliness of this suggestion for the Senate is obvious. The Vice-President would not need to call in the police. All that would be necessary, when a Senator had occupied the floor 'a reasonable time' and refused to leave off, would be for the Terrible Teddy to descend from his dais and with his own strenuous arm fire the recalcitrant into the lobby. The Senate rules should be so amended as to give the Vice-President this authority."

## ERNEST CROSBY ON THE ABSURDITIES OF MILITARISM.

ERNEST HOWARD CROSBY, the author and social reformer, is an apostle of non-resistance, but he confesses that he once served eight years in the National Guard of New York and attained the rank of major, and that he "used to wear a cocked hat with an ostrich feather a yard long," and knows what it is "to prance up and down Fifth Avenue on a riding-school nag, feeling like a composite photograph of Washington and Napoleon." His opinion of the military spirit now is that "there is nothing but vanity at the bottom of the whole business." In a recent address in Tremont Temple, Boston, delivered during the meetings held in commemoration of the progress of the cause of international peace during the nineteenth century, and now published in pamphlet form, Mr. Crosby directed his attention to this subject of military vanity, and said, in part:

"Picture to yourselves, if you can, a village in which each householder spends the greater part of his time in fortifying his home. He keeps a keen lookout at the window, and every time

THE GUNNER OF THE FUTURE
Meeting the Representatives of Foreign Powers Politely.
—*The Minneapolis Journal.*

he sees his next-door neighbor come in with a new blunderbuss, he rushes off to invest in another catapult for himself. Twice a day he drills his children and makes them shoot at a mark in the backyard, and all night long they carefully patrol the garden fence. Every cent that can be scraped together is spent on powder and dynamite, and most of the inhabitants in consequence are forced to go about half-fed and in rags. There is only one flourishing man in the place, and that is the gunsmith. Meanwhile, strange to say, these people never dare to fight each other, but act to their neighbors with the most punctilious politeness, bowing almost to the ground as they pass in the street, and addressing each other as if they were the best of friends, altho their pockets are bulging with small artillery. For over twenty long years there has not been a fight in the place, except one insignificant row in a corner of the village in which two small boys were the belligerents.

ERNEST HOWARD CROSBY.

"Would not this be a good subject for an opera by Gilbert and Sullivan? Even in Kentucky such a comic piece would bring down the house. It is impossible, we all should say, that men could be such fools. Yet this is precisely the condition of armed Europe to-day. To this pass has the wisdom of rulers and diplomats brought the great powers of Christendom! Is this really history or is it opera-bouffe?

"But let us return to our village for a moment. One of the starving householders at last suggests, very modestly and tentatively, that it might be a good plan to have a conference to consider how they may spare themselves the necessity of spending every penny of income on bludgeons and shillalahs. The meeting is convened under safe-conducts in a room bristling with bayonets and smelling of powder. Each of the parties comes in toying with the hair trigger of the revolver in his hip-pocket, and the sound of drilling, of drum and fife, is borne in on the summer air. Can these gentlemen, thus coming together, look each other in the eye with a straight face? Ordinary, every-day people like you and me could not. But statesmen and diplomats, courtiers and generals, find nothing unusual in it. It is a part of their business. But it seems to me that if they had not been blinded by the atmosphere of make-believe in which they live, they would have shaken down the whole structure of militarism in a hearty fit of laughter, which would have been heard all round the world. Think of it! Generals and admirals played a conspicuous part at the Peace Conference. Fancy sending butchers to a congress in the interests of vegetarianism!"

Directing his attention to the comicality of the petty jealousies that run all through our army and navy, Mr. Crosby remarks that "when a few hours' fighting is followed by as many years' quarreling over the results, our admiration is put severely to the test. I may add that the habit of rushing home from the field of battle to advertise one's own exploits in the magazines at a hundred dollars a page makes hero-worhip a difficult job. I shall not dwell on the sad fatality which dooms naval heroes, old and young, to lose their laurels among the petticoats." He continues:

"The truth is that the profession of the modern warrior is indeed a curious bundle of anomalies, with its torpedo-boats and torpedo-boat-destroyers, and its torpedo-boat-destroyer-destroyers; with its smokeless powder and its artificial smoke to counteract the smokeless powder; with its barbarous enginery for mangling men, and its Red Cross for piecing them again; with its indignation at such a crime as the destruction of the *Maine*, and its high honors for the wretched men who prostitute their talents to the invention of the infernal machines which produce such catastrophes; with its precious mysteries and secrets, its

foreign military attachés specially licensed to find them out, and its assumption of horror when, as in the Dreyfus case, the attaché actually fulfils his only ostensible function; and, finally, with its proud claim to the monopoly of honor, and its readiness to obey anybody's order to do anything! Oh, for a little sense of humor in this all too solemn world of ours!"

War's pomp and circumstance, too, fail to impress ex-Major Crosby any more seriously than does his discarded ostrich-feather. "Can anything be more comical," he asks, "than the little round pill-boxes which the English soldiers tie on the side of their heads, and which are supposed to be particularly smart?" Yet, he observes, "a standing army could not be kept together a month without brass buttons and epaulets."

"All soldiering is a 'playing at soldiers.' Not a man takes it seriously. It is all a grand hurrah, until some fine morning the novice finds himself on the field of battle, where there is not one in a hundred but would give his ears to be safe at home again; while the hundredth man is temporarily insane, hypnotized into a 'hero' by all the stage-machinery of a semi-savage histrionic and hysterical civilization. It is the feathers and tom-toms that do it. The man who beats the drum, to screw up the courage of himself and his fellow soldiers, is but a short step in advance of the medicine man of Central Africa. We will display the head-feathers of the red Indian, and in the navy at least tattooing is still common, while the fondness for dressing up in bright colors with plenty of gilt is distinctly a relic of barbarous tastes.

"Then think for a moment of the military custom of hanging medals and ribbons on your breast, which say, 'I am brave,' as clearly as the beggar's placard says, 'I am blind.' Other people get medals sometimes for life-saving or something of the kind, but they never think of wearing them. They hide them away in bureau drawers, and blush when they are questioned about them. It is only the military man who goes into society with a decoration on to say, 'Look at me, I am a hero!' I have seen British officers with a string of ribbons on that ran across the chest from shoulder to shoulder. They are the civilized equivalent of the scalps that dangle at a savage's belt.

"The committee which has been examining into the matter of hazing at West Point has been puzzled to understand why this childish custom should survive there so long after it has died out in other institutions of learning. Why should young men of twenty and more, at the Military Academy, still take pleasure in dosing their juniors with red pepper and Tobasco sauce? The secret lies, I believe, in the silver buttons and rooster-tail feathers which they are obliged to wear. A reversion to the infancy of the race in costume is sure to bring with it a reversion in spirit."

All this reveals that the time is ripe for a new Cervantes. Says Mr. Crosby:

"Cervantes has often been erroneously credited with bringing the age of chivalry to a close in a roar of laughter. This is of course a mistake. It was not chivalry, but the literature of chivalry, that Don Quixote ended. There is an opportunity to-day for a new Cervantes to perform a far greater exploit than has ever been ascribed to the Spanish author. A new Don Quixote might, nay, could, make the profession of war impossible by opening our eyes to the irresistible comicality of it. Mr. Dooley has done excellent work in this direction. Mark Twain has given some evidence of his insight into the truth. Will not one of these gentlemen, or some other genius yet to be discovered, turn his winged shafts squarely against war and the war-maker? When another Cervantes shall have decked out another soldier Don Quixote in his true colors—when he shall have laid bare the childishness of the paint and tinsel that have so long held us under their spell, then, indeed, the twentieth century will be able to boast of a greater star in literature than has as yet appeared, and bold indeed will be the 'hero' who will thereafter select war as a career. Such a book would ring down the curtain upon the profession of the soldier."

"I AM afraid I am going to have trouble with this ark," said Noah, reflectively. "In what way?" "The boys are so scared for fear they won't be considered officers and gentlemen that I doubt whether I can get them to lend a hand and help run the ship." *The Washington Star.*

## SENATORIAL DEADLOCKS IN DELAWARE AND MONTANA.

IN two of the last three congresses Delaware has had but one representative in the Senate, and now, by the failure of the legislature to elect, both its seats in the upper House are vacant. This situation is credited to the ambition of Mr. J. Edward Addicks (Rep.), a capitalist and promoter of gas companies, who has shown an unusually persistent desire to represent Delaware in the Senate. The Philadelphia *Ledger* (Rep.) tells the story of his efforts as follows:

"Addicks appeared on the scene in Delaware in 1888 as a candidate for the senatorship. He had never had any previous connection with Delaware politics and was wholly unknown to the people of the State. His pretensions were laughed at and derided as preposterous by all parties and everybody. In 1895 he had in the legislature four members devoted to his interests, who announced that they would vote for 'Addicks or nobody.' The Republicans in the legislature had decided to elect Colonel H. A. Du Pont, a lifelong Republican, a man of character and standing, and he received fifteen votes. One more vote was necessary to elect, but the four Addicks members refused to vote for Du Pont, and carried out their threat to make it 'Addicks or nobody.' The State was left with a vacancy in the Senate, and at the next session Kenney, a Democrat, was chosen. In 1899 the Addicks contingent was much increased, and in the balloting three Democratic recruits were added to the Addicks forces, amid the execration of their party associates. After 113 fruitless ballots the legislature adjourned without filling the vacancy in the Senate. The failure to elect Senators yesterday leaves two vacancies in the United States Senate as the result of J. E. Addicks's unfortunate participation in politics."

Mr. Addicks does not seem to enjoy the favor of the leading papers of his own party. "It is unfortunate," observes the New York *Tribune* (Rep.), "that the two seats in the Senate which belong to Delaware should be left unoccupied for two years, but it would have been a greater misfortune for that State, for the Republican Party, and for the whole country if Addicks and a colleague congenial to him had been sent to take them." And the New York *Sun* (Rep.) says: "We may add that a temporary appointment of Addicks by Governor Hunn would be no stain on this sturdy little State. The stain would be on the governor, personally and individually."

Montana, which has gained notice before by its methods in senatorial elections, has just chosen Mr. Paris Gibson (Dem.) as colleague of W. A. Clark to represent that State in the upper House. The legislature elected Mr. Gibson three and a half hours after the constitutional limit of its session had expired, turning back the clock several times, and finally smashing it. Says the New York *Journal* (Dem.): "It would be interesting to have a judicial decision upon the exact extent to which a legislative body can prolong its existence by manipulating a clock. The United States Senate usually takes from twenty minutes to half an hour. A week would probably be too much for any court's patience. Would the line be drawn on this or the other side of the Montana legislature's three hours and a half?" The Philadelphia *Press* (Rep.) says of the other Montana Senator:

"William A. Clark comes to the Senate branded with the previous verdict and with a presumption against his present title. It deserves scrutiny. It ought to have investigation. The case bears manifest analogies to the position in court of an habiual criminal. William A. Clark may have been elected from Montana this time on an honest money-free canvass. He has been sworn in and no objection has been made. The case may never be opened.

"But it is idle to suppose that a man with this trail behind him and this record on the files of the Senate can take his seat without a deep hint to the Senate, its place, its power, and its position in the republic. The cup fills slowly, but it is filling. Some day it will overflow. The result no man can predict. The presence without protest, objection or inquiry of a man like Clark in

the Senate will be found to have done much to bring the great mass of Americans near drastic reform in the Senate."

Senator Chandler, of New Hampshire, in the closing hours of the Senate session on March 4, spoke against the admission of Mr. Clark, saying, among other things, that Mr. Clark spent $829,850 in 1900 and 1901 in his efforts to obtain his Senate seat. Mr. Clark took his seat in the extra session last week.

---

## EX-PRESIDENT HARRISON ON GREAT BRITAIN'S COURSE IN SOUTH AFRICA.

EX-PRESIDENT BENJAMIN HARRISON continues his "Musings upon Current Topics" in the current number of *The North American Review*, touching this time upon two important questions concerning recent British politics. For an ex-President, he is surprisingly outspoken on both questions—the talk of an Anglo-American alliance, and the British treatment of the South African republics. On the former subject, his musings are to the effect that a close friendship between Great Britain and America is quite desirable and quite "in the course of nature"; but he sees more in our personal debt to the English people than he sees in our governmental debt to the British Government. He writes:

"We have fellowship with the stout Britons who sheared the prerogatives of the King, and with the martyrs who died for freedom of worship. We are grateful to *them*, not to the government that persecuted them. But is it logical to derive from such considerations the deduction that our sympathies must be given to every British ministry that inaugurates a war, without reference to its origin or its justice? We did not take English literature or English law by voluntary conveyance, upon a consideration of love and affection. Will not the argument for a friendly spirit toward Great Britain be stronger, if the plea of gratitude is made less of? For gratitude takes account, not of one incident, but of all; and the average between 1774 and 1898 had better not be struck. There may be found more things that it would be pleasant to forget than to remember!"

If Great Britain stood by us in the war with Spain, her sympathy is robbed of all moral quality unless it sprung from a belief in the justice of our cause. "To say that we must stand by Great Britain in the wrong because she stood by us in the right is not reasoning—it is the camaraderie of brigands." By "Great Britain in the wrong," Mr. Harrison evidently refers to her position in South Africa, and in his further musings on that subject he takes even a humorous view of one of the principal reasons advanced in justification for the present war—namely, the denial of the Outlanders' request for suffrage in the Transvaal. He writes:

"Any self-respecting government, which was strong enough to make its diplomatic notes express its true emotions, would have answered Great Britain's complaints by a flat refusal to discuss them, on the ground that they related to matters of internal administration. That such would have been the answer of the United States, if we had stood in the place of the Transvaal Republic, can not be doubted—and there is no more room for doubt that the answer would have terminated the discussion.

"If the subject of naturalization is not a matter to be determined by a nation for itself, and solely upon a consideration of its own interests and safety, there is no subject that is free from the meddlesome intervention of other states. . . . . .

"The idea of a war waged to enforce, as an international right, the privilege of British subjects to renounce their allegiance to the Queen, and to assume a condition in which they might be obliged to take up arms against her, would be a taking theme for a comic opera. And the interest and amusement would be greatly promoted if the composer should, in the opening act, introduce the 'Ruler of the Queen's Navy' overhauling an American merchantman in 1812, and dragging from her decks men who *had* renounced their allegiance to Great Britain to become American citizens, to man the guns of British war-ships!

"'If he produced naturalization papers,' says McMaster, 'from the country under whose flag he sailed, he was told that England did not admit the right of expatriation.'

"But, in those days, the 'renunciation' was sincere and final. The men who made it meant it—meant to fight the King of Great Britain, if war came. Did these Transvaal Britons, who were seeking Boer naturalization, mean that? Did Mr. Chamberlain suppose that he was turning over to Mr. Kruger a body of Englishmen skilled in engineering and the use of explosives upon whose loyalty to the Boer cause Mr. Kruger could rely? The climax of the fun will be reached when the opera composer offers this situation. Most of these men whose naturalization was to be forced upon the Boers were actively and aggressively hostile to the Boer Government. No safe occasion to show this hostility was missed. . . . . .

"But it has been stated, upon apparently excellent authority, that the British commission expressly rejected a form of naturalization oath that contained, as our form does, a renunciation of allegiance to all other governments. If, upon the basis of a retained British allegiance, suffrage, whether in local or general affairs, was demanded for the Outlanders, the comic aspect of the situation disappears; the unreason is too great for comedy.

A QUICK FINISH NEEDED.

JOHN BULL: "I 'ope I'll get there soon or my blasted machine will give out." —*The Minneapolis Journal.*

"Great Britain can not, we are told, safely give local government to the Boers when she shall have subjugated them, because she can not trust their loyalty to the crown; but she is seeking to destroy the republics, because the Transvaal refused suffrage and local control to Englishmen who had attempted by arms to overthrow the Boer Government, and who sought suffrage for the same end."

It is interesting in this connection to note that Mr. Arthur B. Markham, a member of the British Parliament, advocates (in the February *Nineteenth Century and After*, London) the importation of Chinese coolie labor to work the mines, the "coolies working under indentures." He seems to think, too, that the Government's proposal to pay the cost of the war by taxing the mine-owners is impracticable, for the present at least. "To levy at an early date a heavy tribute on the Transvaal," he says, "would be a suicidal policy, and would destroy and ruin the trade of South Africa. It will be no doubt a matter of years fully to develop the resources of the Transvaal, but the future of a great continent is after all of more account than the immediate repayment of the war debt." As the war has cost about $500,000,000 up to date, and as the gold-mines of South Africa produced only about $75,000,000 worth of gold during their last productive year, it can be seen that a tax of even five per cent. on their production would fail to pay the interest on the war budget, and would leave the principal untouched.

## EXPIRATION OF THE HAY-PAUNCEFOTE TREATY.

AS the period for the exchange of ratifications of the amended Hay-Pauncefote treaty expired on March 4 without action by the British Government, that much-discussed convention falls to the ground, leaving the old Clayton-Bulwer treaty to define the powers of the United States and Great Britain in the construction of an isthmian canal. The American newspapers pretty generally agree that the Senate amendments, demanding American control of the canal in peace and war, made the treaty unacceptable to England. The New York *Press* (Rep.) remarks:

"This is the net result of the amateur bungling of the foreign relations committee. They have killed the canal treaty. They have killed the canal bill. For the time being they have killed the canal. Not even a beginning at new legislation can be made until next December."

The Baltimore *Herald* (Ind.), on the other hand, thinks that "the lapsing of the canal treaty will cause no embarrassment." "Perhaps," it says, "by the time the subject is again brought up, Great Britain will have reason to display a more accommodating spirit. In any event, we can not permit ourselves to be bulldozed into doing something incompatible with our national dignity and the interests of the American people." "It has been intimated," observes the Cleveland *Plain Dealer* (Ind.), "that the British Government might be willing to concede something beyond the original Hay-Pauncefote agreement if the United States were to make such changes in the Alaskan boundary line as to give Canada that access to the Pacific which was rigidly denied it when Alaska was Russian-America"; but, it remarks, "an arrangement of that kind would be harder to get through the Senate than the original Hay-Pauncefote convention."

The Detroit *News* (Ind.) declares that "it might be just as well, indeed, that the whole subject were dropped"; for "the proposal to get a canal at any cost had many merits while it was to be an American canal in ownership and control; but a scheme to build a canal at a cost to this country of from $250,000,000 to $300,000,000, and then hand it over to the control of a syndicate of possibly hostile foreign powers, or of England alone, is an entirely different thing. It is not worth the money. Indeed, under the circumstances, it would be very much better for this country that no canal should be built at all." A different opinion is held by the Philadelphia *Inquirer* (Rep.), which believes that it is "a narrow-minded and mistaken" view to hold that we must assert and exercise over the canal "an absolute and entirely irresponsible ownership"; for "the primary purpose of the canal is not military, but commercial," and "the insistence upon its fortification," declares *The Inquirer*, "shows a failure to grasp and understand the facts of the situation."

A Pacific-coast opinion may be seen in the following comment from the San Francisco *Chronicle* (Rep.):

"There is no occasion to concede any doubt of our building the canal, anything in the Clayton-Bulwer treaty to the contrary notwithstanding. We shall build the canal, and we should be perfectly frank about it; but if, by the failure of the Hay-Pauncefote treaty, the old treaty of 1850 again becomes an obstacle, we should get rid of it in the way least calculated to injure the pride of the British people or to cause adverse comment in the international forum. It is not wise to deny that the Clayton-Bulwer treaty has just as much force as it ever had, and much more than it has had at some periods of its existence. There is no doubt that the treaty as interpreted was never ratified by the Senate. There is no doubt that Great Britain violated its terms as directly as we should violate them by now building the canal, and that at that time there was no question of our right to declare the treaty void. But we have condoned all those things. Our executive department, which doubtless in such matters has the power to bind the nation, has recognized and still recognizes the validity of the Clayton-Bulwer treaty. To ignore its provisions on the ground that its terms were many years since, for a short time, violated by Great Britain, would be to base our contention on a quibble unworthy of a great nation. Our right to abrogate the treaty must rest on the broad grounds that when conditions have essentially changed, treaties based on those conditions become voidable, and that former generations have no power to bind mankind forever to their policies. Treaties affecting the future policy of nations ought always to contain within themselves a reasonable time limit. If they do not, they should be treated as if they did contain it. We should announce this as the principle by which this country is guided and that the weakest nation in the world is at any time at liberty to invoke it against us without objection. Then we shall occupy a tenable position founded on reason and justice, under which we may, if we are unfortunately unable to secure the concurrence of Great Britain, proceed of our own motion to abrogate the Clayton-Bulwer treaty. That treaty is now in all essential respects a commercial as opposed to a political treaty. Our political influence

THE RETIRING TO THE INCOMING PRESIDENT: "Take my advice and be careful of the company you keep." —*The Cleveland Plain Dealer.*

ANOTHER EXAMPLE OF "HERE'S YOUR HAT; WHAT'S YOUR HURRY?" —*The St. Louis Republic.*

## CURRENT CARTOONS.

in Central America is conceded, by Great Britain at least, to be paramount. The canal has no important military bearing, as it is conceded that no nation with which we might be at war would attempt to make use of it or would be permitted to do so. The canal would be built for the purposes of peace and not for war, and treaties regarding it must be regarded as commercial treaties, which, in the nature of things, can not bind eternally."

## "THE WOMAN WITH THE AX."

ALTHO Mrs. Nation's activities have been recently considerably curtailed by four arrests in one day in Topeka, Kans., and prolonged imprisonment in the county jail, in default of a bail bond for $2,000, her unquenched ardor but illustrates anew that—

"Stone walls do not a prison make,
Nor iron bars a cage."

While confined in prison, she spends her time in praying and in writing temperance articles; when she emerges, it is always to inaugurate a still more energetic campaign against the "joints." Mrs. Nation made a contract some time ago to edit the Peoria *Journal* for one day (February 26), but as the date drew near she found that a serious obstacle, to wit, the jail walls, stood between her and the fulfilment of her promise. She accordingly wrote a note to Judge Hazen, of Topeka. "I want you to quit your fooling," she said, "and let me out of here, so I can be in Peoria Monday morning. I am to edit *The Journal* there and get $150, and if you are the cause of me missing my engagement there I shall not feel like a ministering angel unto you." The judge was deaf to her appeal, and tho she had conscientious scruples against giving bond, she finally consented to do so. She took charge of the Peoria newspaper for one day, and contributed to it eight columns of temperance editorials and an account of her crusade against the "joints." In her leading article, she declared:

"Love is the one thing that gives us real happiness, and I am glad to be able to love the worst of men so much that I will dare to smash the thing that injures them. And the more I love them the more I smash; and the more I smash the more I love. And the more I love and smash the more the people love me. Loving and smashing are two good yoke-fellows, and should never be separated.

"I have never hurt a hair of the heads of my bad brothers, the saloon-keepers, and hope for pity's sake none of them ever will get in the way of my hatchet, for it gets dreadful reckless when it flies around smashing that which murders men. I long to see the day when all men shall be freed from the slavery of drink. And if any poor effort of mine shall hasten that day, I count it a great privilege to give it—no matter what the cost."

No attempt was made by Mrs. Nation to handle the advertising space in the paper, and whisky advertisements filled several pages. A "Special Sale of Hatchets" occupies a prominent place in the advertising columns, and intending purchasers are advised not to miss "this opportunity of getting the best at reduced prices." To a recent issue of *Leslie's Weekly* (New York) Mrs. Nation contributes an article explaining and analyzing the motives that led her to take up her crusade. She says:

"My heart is bursting with the wail of outraged motherhood. 'Tho seas threaten they are merciful,' and with mother-love we should overcome evil, rather than, year by year, day by day, and night by night, beholding with a bursting heart and distracted brain the crushing out of these lights into outer-darkness, where there is weeping and gnashing of teeth. O woman! you can be but the 'painting of a sorrow, a face without a heart,' should you submit to this outrage. Ask of those who know me at my home in Barber county, Kansas. They will tell you, if they speak right, that I was led to my last resort. Man's extremity is God's opportunity, and this way was shown me by God. Truly, 'Diseases desperate grown by desperate appliances are relieved.' I was ready for this desperate remedy, and when my Lord showed it me I said, 'Good is the road of the Lord.' For use almost can change the stamp of nature and either curb the devil or throw him out with murderous potency. So I suited the action to the word and the word to the action. The impulse was *smash* and so was the act.

"A saloon has no right in any place. I will smash the saloons in New York, Milwaukee, St. Louis, and Chicago just as in Kansas. But I must clean up my own home before I dare say to my neighbor, 'I can tell you how to clean yours.' . . . . . .

"We propose to organize an army of true mothers who are physically able and willing to join in a crusade to drive out the murder-shops by destroying their instruments. We do not desire

MRS. NATION AT PRAYER IN HER CELL IN A KANSAS JAIL.
From a Photograph. Courtesy of *Leslie's Weekly*.

nor intend to injure the person of any one. We in self-defense go out from our homes to the rescue of children which are the victims of this traffic. We can bear it no longer and live, and wherever the mother-heart is crushed with this outrage we desire to fly to its relief."

In conclusion, Mrs. Nation adds that she may lecture in some of the large cities in order to raise funds for the transportation and board of "brave mothers" who are willing to take part in her crusade; and she advises good citizens to boycott any class of merchants who uphold the saloon. Mrs. Nation has just started, in Topeka, a paper called *The Smasher's Mail*, whose purpose is indicated in its name.

# LETTERS AND ART.

## POETRY IN THE TWENTIETH CENTURY.

WHO will be the English poets of the twentieth century? What will they be like? Of what will they write? These questions, of much moment at the end of the century and of the Victorian era, are asked by a well-known English scholar, Dr. T. Herbert Warren, president of Magdalen College, Oxford, himself a poet of merit. After the death of Chaucer, he points out, England had to wait a century and a half for another great poet, and there have been other similar altho less prolonged poetical interregnums. But this, he thinks, is hardly likely to happen again. The eighteenth century had scarcely closed with the death of Cowper when the bells were ringing the first chimes of the new and far more glorious era of Wordsworth, Byron, Coleridge, Shelley, and Keats. Mr. Warren writes (in *Literature*, London, January 19):

"With, and following them, there set in, as we all know, something like a hundred years of song which closed only the other day. The truth is that here again the old era ended with the century or a few years before. The change of date coincided with a real transition. . . . . .

"Are we now again at the end of an era? Has an old order broken up; are we on the threshold of a new? The answer would seem to be that we are. The expression *fin de siècle* on so many lips ten years ago anticipated and discounted the real end of the century, because the era was even then already dead or dying. When will the new age begin? What will it be like? Two things we seem to see, that it will be an era of empire, or the struggle for it; an era perforce of larger national aggregations, and an era of scientific discovery, progressing in an accelerated ratio. An age of empire. But what is the poetry of empire? Virgil and Horace sang the Roman empire in. For about a century the provinces reinforced it. Then it sank into stagnation and silence. Will our empire and its poetry go the way of the Roman? Tennyson, the English Virgil, is its first poet. Will he be the last? Hardly, for unlike the Roman it will have to struggle to maintain its existence. Unlike the Roman it rests not on the compelled obedience of tributary states, but on the spontaneous cooperation of young and growing daughter nations. And Tennyson again—and it is another reason why, as the multitude of books being written about him show, he is still as popular as ever and is indeed, tho dead, emphatically a poet of the twentieth century—was the first English poet of science. It was his view that in the development of science the poet of the future would have new material and more opportunity than the poet of the past. Such announcements as those of Mr. Tesla, even if premature, would have interested him profoundly. Once more he would have felt and sung how

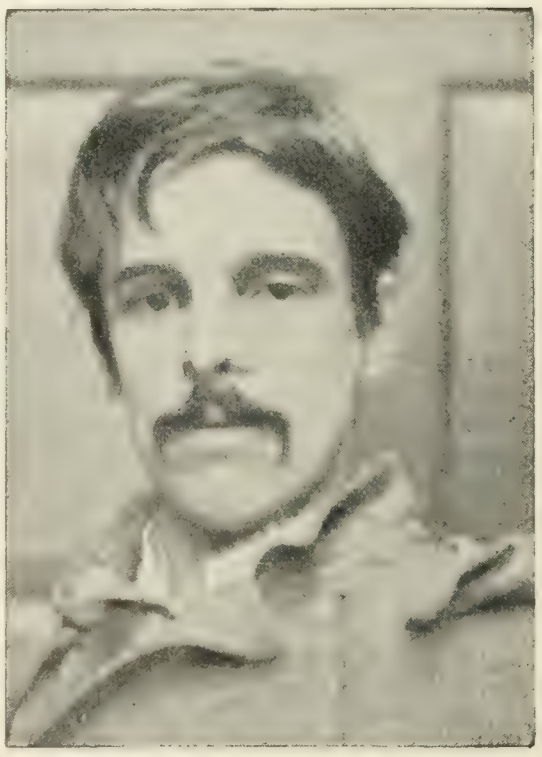
> Science reaches forth her arms
> To feel from world to world, and charms
> Her secret from the latest morn.

"And poetry, again like all art, is the expression not only of thought but of feeling—nay, even more of feeling than of thought. And it exists for delectation, even for amusement, yet more directly than for illumination, much less instruction. There are signs that the stage, which so many actors and managers have toiled to lift, has reached a really higher level, and that it will bear and even welcome true poetry. There are signs, too, of a general elevation of the standard of literary technique through education. Such works as Professor Raleigh's on Style and on Milton are significant; significant in themselves, still more in their popularity. A new style will go with the new themes and tastes. Here, then, is much promise and certainly ample scope for poetry as fine, as great, as any we have heard before. Mr. Stephen Phillips, one of the most gifted of the Victorian Elizabethans, in an ode of much dignity and grace, full of a solemn unearthly beauty, as of night and dream, has endeavored to forecast what the new age will be. Happier, healthier—we shall have no war, he tells us, and no death, or rather a death which will not be death, for it will not part us from our friends. But, alas! too probably we shall find that his is indeed a dream. Yet even so the reality of the morning may be less but also more beautiful. Happier times, happier poets; healthier lives, healthier songs. Let us hope so. Anyhow the poets will be different and yet similar. For there are eternal canons in every art. The new poets may be different as Dante is from Virgil, Goethe from Sophocles, Wordsworth from Milton, Tennyson from Spenser, or Mr. Phillips, shall we say? from Marlowe; but perhaps not more different. Anyhow, let us hope that they will be yet happier and gentler, not less serious, not more voluptuous, but more 'humane' voices of a serener world."

*Literature*, commenting on this, remarks that there are plenty of instances in which periods of national greatness have not been followed by golden ages of literature. The Periclean age of Grecian literature *preceded* and did not follow the Peloponnesian war. The wars of the Roses stimulated no great writers. The golden age of Anne had no connection with any clash of arms. Neither does the writer see in Mr. Stephen Phillips a sure augury of the much-desired elevation of the stage, for one swallow does not make a summer. In the main, however, *Literature* is in accord with Mr. Warren.

## MR. YEATS'S NEW MYSTICAL DRAMA.

MR. W. B. YEATS, *doyen* of the Celtic cult of Irish poetry, which has its headquarters in Dublin, has long been known for his mystical, unearthly, insubstantial verse.



MR. W. B. YEATS.
Courtesy of *The Lookman*.

His last work, a drama named "The Shadowy Waters," is spoken of as a still nearer approximation to the stuff that dreams are made of. The London *Academy* (January 26) gives the following analysis of the play:

"The motive of 'The Shadowy Waters' is apparently to be found in the contrast between the earthly and the mystical conception of love. The chief persons are Forgael and Dectora. Forgael is upon his galley. Mysterious messages have bidden him to

> Seek
> His heart's desire where the world dwindles out.

He neglects his craft of buccaneering, to the loud discontent of his men, in a dream of 'a love that the gods give.' His friend warns him that:

> No man nor woman has loved otherwise
> Than in brief longing and deceiving hope
> And bodily tenderness; and he who longs
> For happier love but finds unhappiness,
> And falls among the dreams the drowsy gods
> Breathe on the burnished mirror of the world,
> And then smooth out with ivory hands, and sigh.

But Forgael is faithful to his dreams. Then another ship looms through the fog. The sailors board it, slay the crew and the king, whose souls hover round the mast like gray birds, and bring on to their own ship Dectora. At first Forgael will have none of her:

> I wait
> For an immortal woman, as I think.

But as the queen speaks, endeavoring to persuade the sailors to take her home, he becomes half-convinced that this is the love

of his eternal quest. With his harp, given him on an island by the fool of the wood, he charms the sailors, who threaten to slay him, and they betake themselves to the ale. He charms Dectora, and she forgets.

> I know you now, beseeching hands and eyes,
> I have been waiting you. A moment since
> My foster-mother sang in an old rime
> That my true-love would come in a ship of pearl
> Under a silken sail and silver yard,
> And bring me where the children of Ængus wind
> In happy dances, under a windy moon;
> But these waste waters and wind-beaten sails
> Are wiser witchcraft, and our peace awakes
> In one another's arms.

And still Forgael has to teach the woman that the love of dreams is beyond the bodily tenderness.

> DECTORA.
>
> The love I know is hidden in these hands
> That I would mix with yours, and in this hair
> That I would shed like twilight over you.
>
> FORGAEL.
>
> The love of all under the light of the sun
> Is but brief longing and deceiving hope
> And bodily tenderness; but love is made
> Imperishable fire under the boughs
> Of chrysoberyl and beryl and chrysolite
> And chrysoprase and ruby and sardonyx.

There is an ebb and flow of the spirit. Dectora is half won, and the voices of the sailors quarreling over their ale half recall her to the light of the sun. Forgael bids her go and love his friend with the earthly love and share his happy throne. But in the end the dream triumphs over the reality, or the reality over the dream, which you will, and the lovers cut the rope that binds them to the other galley with the sailors in it, and glide away together to the music of the harp-strings.

"Certainly, Mr. Yeats makes a beautiful thing of it, with his gift of level, unruffled speech. Yet it is all rather impalpable, and one has an uneasy sense that it is all rather inhuman."

## HAS THE PHILIPPINE WAR HURT OUR LITERATURE?

SOME new views of our literature have recently been stated by Mr. James Lane Allen, author of "The Choir Invisible" and "The Reign of Law." National fiction and national poetry, he says, always follow the flag if they can. "I mean," he explains, "that the flag of a country sums up its ideas and ideals. If they are right, literature is eloquent; if they are wrong, literature is silent. If these are worthy, national literature may be worthy; if they are worthless, national literature must be worthless. The two rise and fall together. English literature has followed with enthusiasm, whenever it has been possible, every movement of the flag. The same has been true in the United States." Mr. Allen further explains his position as follows (in a syndicate article, quoted in the St. Louis *Republic*, February 10):

"The novels of a country and the poetry of a country are two ways in which its life is recorded, and always recorded with reference to its best deeds and highest ideals. And in modern civilization these two are never silent. History may long be silent, but modern fiction and poetry are irrepressible forces, incessantly active, and whenever it is possible intensely patriotic. If they can not find in their own country and time the ideals they delight to celebrate, then they seek these in other countries and in other times; or they turn away from national ideas altogether. . . . And the first man to write the American novel on a national scale was Fenimore Cooper. He was a true child of that Revolution, and tho he did not always celebrate he always felt the great human forces which had made the American people independent and made them one, which had created a new nation and a new flag among the nations and flags of the world. It was a great time and place for a novelist—a fresh earth; a young republic of Anglo-Saxon freemen; a home of the oppressed; a spotless flag, waving victoriously on land and ocean. The first national movement in our literature was inspired by the Revolution and followed the flag. It did not die out till toward the close of the first half of the nineteenth century, for Cooper himself lasted till then, and he worked while he lasted. . . . . .

"The second movement began some time after the Revolution. It turned away from the entire American past to deal with other national ideas which began to threaten and darken the American future. The country had already become divided on the subject of slavery, the introduction of which was the first blot on the flag of freemen, the first contradiction by the young republic of its own great writ of human independence, the first wrong inflicted by the American people on their own type of government. I am not now speaking of the South or of the North, but of the American republic, conceived as the unit of state by the entire American people, when I say that the presence of slavery within the nation gave rise to a second movement in American literature, which was national in ideas but sectional in feeling, which began soon after the Revolution and lasted till the close of the Civil War. . . . From the time that slavery became an issue between parts of the American people until it ceased to be an issue, it affected every form of public utterance. For one thing, the press gradually ceased to be simply American and became sectional, the newspapers being ranged on one side or the other of the great quarrel. This quarrel spread to the pulpits of the land. Only read the sermons of those days. It took possession of the hustings, it invaded state legislatures, it filled the halls of Congress; it embodied itself in lectures and orations and pamphlets; it was in the voices of a million firesides. On the whole, it produced a body of embittered writing, the variety and vastness of which no one would to-day believe without express examination. And the effect of it all was to drive the halves of the nation farther and farther apart until they should meet in a war of partial annihilation. . . . It brought out of the North some of the most memorable of American poems. But these were not national, in the sense that they were hurled at part of the nation. Remember Lowell, Bryant, Whittier, Longfellow! Its effect upon fiction also was deep and ineradicable. Examine the Northern novels of this period and find, if you can, a single one that is in sympathy with Southern institutions or Southern types of character. Examine the Southern novels of the period and find, if you can, a single one that does not treat the North with ridicule or aversion. The entire attitude of the two sectional literatures of fiction was antagonistic."

Mr. Allen does not agree with Mr. Hopkinson Smith (see THE LITERARY DIGEST, February 9, page 158) that "Uncle Tom's Cabin" was largely responsible for the Civil War; neither does he think that this war helped the national literature:

"Had Mrs. Stowe never lived the war would have come when and as it did. No doubt her work inflamed the passions of the time. But it did not add anything to the convictions of the nation; and such a war is not fought out on the basis of passions, but on the basis of ideas. As to the truth or falseness of her work, that is not a question here. This should be borne in mind, however, that her book belongs to the class of great prose satires which so often precede a revolution; and it is the very genius of satire to exhibit what it attacks on a scale of gross exaggeration. Witness Rabelais. In a word, Mrs. Stowe was only one voice among innumerable ones that had been sounding over half a century. She did not produce the Civil War; it was produced by the uncontrollable evolution of human societies, from the slaveholding to the non-slaveholding type. It was not Mrs. Stowe who was back of that evolution; it was God. . . . . .

"But this must be remembered, that the literature of a country, whether or not it deals with national ideas, is always affected by the condition of the country, by its prosperity or reverses, its rest or its unrest. The very fact that some of the best literature produced in the United States at this time was not national only goes to prove how the American writers turned away from their own civilization in its disturbed and excited condition. . . . No civil war has ever helped any national literature when it has been fought out by parts of the nation on questions of right and conscience. How could the Civil War have helped national literature? It broke down national unity; it was a case of a house divided against itself. How could either part speak for the whole? How, afterward, could either celebrate its triumph over the other in the name of the whole nation? The

best that such a war can do is to put an end to an old quarrel which had made national literature impossible, and in this way to prepare for a new movement."

What Mr. Allen calls the "third great movement" was a direct result of the Civil War. That war "had taught the Northern people more about the South than all the preceding years of peace"; and, moreover, the old cause of misunderstanding was gone forever. "Out of the North sounded for the first time the new voices of peace, forgetfulness, reconciliation, reunion"; and similarly at the South sprang up a new generation of native writers who sent all their work North to be published. Mutual sympathy and understanding were thus developed. These two south-going and north-going waves thus performed "one of the most important historic offices ever performed after a civil war by the literature of a dissevered nation"; nevertheless the century closed, and "not a single great national work appeared on the subject of the Civil War—one of the most heroic that the human race ever fought."

Concerning the phase of American literature inspired by the recent outbreak of militarism, Mr. Allen is not enthusiastic. He says:

"The disparity of the powers [Spain and America] and the shortness of the struggle put an end to the conflict almost before the literary movement had expressed itself; but the beginning was spontaneous and irrepressible. But note what followed. Scarcely had our war with Spain become our war against the Philippine Islands before there was absolutely literary silence. I challenge any one to make any sort of collection of American literature that celebrates our long war of two years to subjugate an innocent people who never wronged us but by desiring the same liberty which we ourselves would die to defend. One important distinction should be observed here; it is often possible to celebrate the soldier without celebrating his cause, for he has nothing to do with that cause. The American people are ready to a man to back up the American soldier, whether in the Philippines or anywhere else; the national feeling about him never changes; but that is a different thing from backing up what may happen to be the policy of the nation as directed by a particular Congress. So far from there having been any national literary response to our war in the Philippines, it is certain that there has begun to appear a literature against it; and if our policy is not changed, this literature of revolt will deepen and spread."

But Mr. Allen finds hope in the latest literary movement—that of the new American novel—which he calls "deeply significant":

"It is a true national movement, which with one clear bound has gone back to the glorious period of the Revolution. That still, after a hundred or more years, remains the most inspiring theme for our national literature. And mark this contrast: Then we were a weak people struggling for liberty against a strong one; now we are a strong people making war on a weak one, who are struggling to be free. The spirit of national art finds everything to celebrate in the former; it has not yet discovered anything in the latter, to judge by its silence."

---

**Queen Victoria's Love of Books.**—The English literary journals continue to devote much space to the late Queen. The royal taste in literature appears to have been a very creditable one. A writer in the London *Bookman* (February) states that the royal libraries as they stand to-day are a testimonial to the breadth of the Queen's interests both in pure literature and in books of statecraft and questions of the day:

"One feels instinctively that her taste was formed in earlier, happier days, and that she did not greatly wander from it. Dickens, Thackeray, Scott, Black, Mrs. Oliphant, George Eliot—these were her favorites; and tho not, perhaps, a critical reader, she was an appreciative and an affectionate one. . . . Her interest in Dickens's work is well known. This author's popularity was as old as Her Majesty's reign, but Dickens did not actually meet his Queen till the year of his death. It was a long and gracious interview when it did take place; and at the close the Queen took from the table her own 'Journal of Highland Life,' with an autograph inscription, 'To Charles Dickens,' and gave it to him with her own hands, saying that the humblest of writers would be ashamed to offer it to one of the greatest, but that Mr. Helps had said it would be valued most if given by herself."

It was in books relating to questions of the day, however, that the Queen's hardest reading was done:

"These are the books by which she mastered the details of the great events which were taking place in her empire, the books which could teach her the salient points concerning the countries which were important to her. As far back as the days following close on the Crimean war, a great soldier said to a friend that not even among his fellow soldiers or the responsible statesmen had he found a more thorough knowledge of the Crimean country, the war, its cause and effect, than in his conversation with Her Majesty. It is said that the same tireless attention to her country's weal was shown by the Queen in the present South African war, when book after book on the subject was read to her, until every point dealing with the past and the present was familiar to her. It was with such books as these—books bearing upon the constitution and government of her empire—that the greater part of the Queen's reading time was spent."

The Queen, it is stated, also took great interest in medals, seals, and coins, and had a rare collection of historical miniatures.

## A GREAT DISCOVERY OF GREEK STATUES.

ONE of the most striking marvels in the brilliant record of archeological discovery of the past few years is the finding of a number of magnificent Greek statues in a sunken Roman galley (probably the ship mentioned by Lucan in his "Zeuxis" as foundering near the dreaded Cape Malea), near the Grecian island of Antikythera, the ancient Ogylos. This ship, loaded with the choicest loot from the famous Grecian temple of Delphi, was sunk just after leaving the harbor for Rome—perhaps by a shaft of the angry Delphian Apollo—and the priceless contents have been resting safely in the sand for nearly twenty centuries. The finder of this treasure-trove, Prof. Rufus B. Richardson, director of the American School of Classical Studies in Athens, thus writes from the Grecian capital in *The Independent* (February 28):

"From the dry land we have been extorting with great pains valuable additions to Greek art; but now, to the astonishment of the world, the sea gives up what it had been withholding. Last fall some sponge-fishers reported the existence of statues, both bronze and marble, in the sand, at a depth of about fifty feet below the surface of the sea to the south of Cape Malea. At first it seemed to be a fish story, like so many other reports about buried treasures. But on investigation by the proper authorities it proved to be true. After great difficulties caused by operating in stormy weather, enough was hauled up and brought to Athens to allow the world to see its value.

"On this point there is no difference of opinion. The finest piece of the collection is a bronze statue a little over life size, somewhat broken, it is true, but nothing of it is lacking unless it be a few small bits around the loins. The upper part of the body, including the head and arms, is almost as fresh as when it was new, except for the strong action of the salt water upon the breast. The head, perhaps from being covered by the sand, is perfect, even to the whites of the eyes. As one looks upon this face one's first thought is that it is a second Hermes of Praxiteles in bronze. The expression, however, is more excited. The arms show that the figure represents one in the act of enforcing conviction upon an audience; and as the features are more ideal than would seem to fit a mortal, it is proposed to consider it a Hermes Rhetor (Hermes Λόγιος). It is perhaps more likely to be pronounced a work of Lysippus than of Praxiteles; and it may even be brought down into the third century. It may be that it will cause disagreement among the authorities in sculpture as great as that caused by the sculptures from Lycosura; but it will hardly be doubted that it is a masterpiece of Greek art."

According to Professor Richardson, only one other life-size

bronze has been recovered entire from Greek art—that of "The Charioteer," found five years ago at Delphi. This new figure, however, belongs in the time of the perfected art of Greece, while "The Charioteer" belongs to the archaic period. Professor Richardson proceeds with the description of his find:

"But it is not merely bronzes that give the collection its importance. There is a marble figure of a youth about the size of the Ægina gable figures, bending forward with an intensity far surpassing that of the 'Wrestlers' in the Naples Museum. It may be that this youth is also to be thought of as a wrestler intent on grappling with his antagonist. Some are disposed to think of him as gazing intently into the distance. At any rate, the intense muscular strain of the right shoulder and the adjacent parts of the back and side is wonderfully portrayed. It is almost as valuable as the bronze Hermes. The figure lay with its left leg protruding out into the water, while its whole right side and its head were covered by the kindly sand. The left side is consequently badly corroded, and the left leg entirely eaten away with the exception of a thin stump about a foot and a half long. But what luck that the head and right side were saved!

"One of the most impressive parts of the collection is a row of bronze feet and a pile of bronze arms, which show that much more is still lying at the bottom of the sea. In fact, the divers are reported as saying all along that there were great and heavy bodies that they could not bring to the surface. But we shall have them ultimately. The means at the disposal of the Greeks were inadequate to the occasion; but they are to bring improved diving-apparatus, and with that they will probably succeed in securing all the treasure."

## BOSTON'S LITERARY CENSORSHIP.

THE daily press—especially the Western portion of it—has been much wrought up over the alleged Puritanical censorship which exists in the Boston Public Library. The Chicago papers, in particular, appear to take considerable satisfaction from this opportunity to hurl back upon Boston some of the witticisms indulged in by Eastern editors concerning Chicago's alleged literary Philistinism. The Chicago *Tribune* (February 27) states the case thus:

"The delicate task of selecting new works of fiction is intrusted largely to the individual judgments of the members of a 'reading committee' made up of prominent women in society and club circles. The Boston woman is nothing if not critical, and the result of this arrangement has been a standard so strict, apparently, as to bar out of the library most of the novels that less critical communities are reading and enjoying. A discovery of the real state of affairs has caused a commotion which promises to end in a fall of the feminine reading committee from power. A mere list of the widely known novels recently rejected by this committee fills half a column. The nature of the Boston censorship may be imagined from the fact that the books reported for rejection by the committee include Mr. Westcott's 'David Harum,' Mrs. Ward's 'Eleanor,' Mr. Howells's 'Their Silver Wedding,' Mrs. Wharton's 'The Touchstone,' Henry James's 'The Two Magis,' Mrs. Catherwood's 'Spanish Peggy,' Lillian Bell's 'The Instincts of Stepfatherhood,' Winston Churchill's 'The Celebrity,' Sir Walter Besant's 'The Changeling,' Miss Wilkins's 'The People of Our Neighborhood,' and Maurice Hewlett's 'Little Novels of Italy.' The Boston committee rejected twelve of the thirty-two novels chosen by the New York *Nation* as worthy of review in the year 1900. Evidently the committee takes its critical functions seriously.

"The reasons for rejection are as diverse as the volumes concerned. 'Eleanor' is condemned on the ground that 'it would not be good for girls; they would be casting about for Manistys as girls of a bygone period looked for Rochesters.' Marie Corelli's 'Master Christian' is rejected for its turgid style. Henry James's later works are rejected because they 'hide plot, expression, style, clearness, and force under a rubbish-heap of senseless words.' Robert Grant's 'Unleavened Bread' is in disfavor because it is 'disagreeable.' Mary Johnston's 'To Have and to Hold' is said to lack dignity because of a superfluity of 'agony.'"

The Nashville *Banner* (February 22), finding its local pride touched at a tender point, becomes excited and calls for vengeance:

"This wholesome slap to American authorship, administered by this arrogant—we had almost said ignorant—examining board, strikes home with force upon our local jowl, for is there not upon this lengthy list 'The Loves of Lady Arabella,' from the pen of Miss Molly Elliot Seawell? Shall not one word of protest rise against this insult to our local pride? Baltimore's public library once hurled stones at Mrs. E. D. E. N. Southworth, but this was at the apex of her career, when slander could not win from her the army of her readers. Not so with 'The Loves of Lady Arabella,' which henceforth may be roughly cast aside by other libraries patterned after Boston's queer institution.

"We repeat: Who are these Weylers of the Boston library? Literature demands their names."

The Memphis *Commercial Appeal* (February 13) remarks that "in conformity with Boston's assumption of the intellectual and esthetic supremacy of the entire visible universe, the public library of that exalted city—that Soracta of culture, as it were—" has established an Index Expurgatorius which banishes into the outer darkness all books except such as "nobody outside of New England cares to read."

Even the Hartford *Times* (February 25) has this fling at the "ladylike committee":

"Tolstoy's 'Resurrection' is condemned as 'a powerful but incomplete work, giving a photographic picture of the mental, moral, and physical filth believed by the author to exist in all classes in Russia from the nobility to the peasantry. Mrs. Humphry Ward's 'Eleanor' may not please some people, but what did Mrs. Ward do to merit this description: 'It leaves a sensitive reader unnerved and miserable. It would not be good for girls.' Here and elsewhere the committee makes the common mistake of giving an abnormal importance to the young person. It forgets that mature persons have rights and tastes also, and that there may be some sense in considering them at least as much as their offspring."

## INTERNATIONAL LITERARY STATISTICS.

PROBABLY the first attempt made on an exhaustive scale to give a statistical analysis of the literary output of the leading nations has been made by *Le Droit d' Auteur* (Bern), organ of the International Bureau of the Union for the Protection of Works of Literature and Art. To secure statistics that are absolutely reliable is next to impossible, owing to the different ways in which reports of different countries are made up. By appealing to the best sources available *Le Droit d' Auteur* procures the following results:

The combined literary output of the world, exclusive of newspapers and periodicals, is annually about 80,000. Twelve nations only report, and these issue each year 72,200 publications, distributed as follows: Germany, 23,000; France, 11,000; Italy, 9,500; England, 7,500; Austro-Hungary, 6,800; the United States, 5,000; the Scandinavian countries, 3,200; Holland, 2,900; Belgium, 2,100; Switzerland, 1,000. Russia reports only its periodicals. Including Russia and the Orient, and all Spanish America, the number reaches 80,000 or more.

Among the book-producing nations Germany easily takes the lead, the last report for a single year being 23,908 books, published by 7,288 houses. For decades Leipsic has been the headquarters of the German book trade; but recently Berlin has proved a powerful rival. The influence of German literature on the thought of the world can be seen from the fact that the export trade of German publication houses averages 70,000,000 marks [$17,000,000] per annum.

The reports from the Austro-Hungarian empire are the first of the kind ever issued, and are not complete. France shows an increase in periodical publications since 1896 of 900, of which 500 are in Paris. Out of a total of 2,790 French periodicals, Paris has 146 daily papers, 415 monthlies, 428 semi-monthlies, 735 weeklies. Russian periodicals number 967, of which 205 appear in

Finland. Italy's literary productiveness has been standing at the same point for a half dozen years. The United States shows an increase of 435 periodicals in the past year.—*Translation made for* THE LITERARY DIGEST.

## AMERICA'S DEBT TO BRITISH POETRY.

SEVERAL of the British reviews, in commenting on Mr. Stedman's "American Anthology," have dwelt on the fact that very little of America's lyrical output has been marked by strong national characteristics, and that the great body of American verse is merely an echo of European literary standards and ideals. Mr. George W. Smalley, New York correspondent of the London *Times*, admits the substantial truth of this, but at the same time does not lament the fact. Referring to Mr. Stedman's book, he writes (in the London *Times*, December 26):

"Much of the verse in these pages is academic and experimental. In much of it you hear the far-off echo, not of England only, but of Europe. There is more of this imitative resonance in Longfellow than in any other; albeit Longfellow was at one time proudly acclaimed, or proclaimed, our national poet. Parsons, who translated Dante; Bayard Taylor, who translated Goethe; Mr. Hay, who is not less at home in the Place de la Concorde than in Pike County, Ill.; Oliver Wendell Holmes, whose 'Grisette' is a pendant to the immortal 'Dorothy Q.,' are all good Americans, and are all children of civilizations much older than this. It is with poetry as with art. America is the birthplace; Europe is the school, sometimes the home. The ancestry, at any rate, is European. It derogates nothing from American fame, which does not consist, and will never consist, in self-assertion. The artists will tell you that the atmospheric effects in America don't readily lend themselves to the painter's purpose; the lights are too high, the lines hard, the landscape wants tenderness. The critics remind us weakly that Mr. Sargent and Mr. Whistler, Americans by nationality, are Europeans by training and by residence. If there be any reason in the nature of things for this exile, or for contact with an older world, the poet is freer from such obligations than the painter. He deals with the invisible. If the painter must journey to Seville to see Murillo and to Venice for the glory of Giorgione, the poet need not cross the Atlantic to hold converse with Dante or Homer. But his debt to them is almost the same as if he had made a pilgrimage to Ravenna, or sought among the seven contending isles for the birthplace of the Greek. It does not affect, nor need it affect, the pride of the American in American literature. The foundations of things are pretty much the same in England and the United States—law, religion, civilization, society, human nature. And the best poetry concerns itself with what is deepest.

"There are not many, probably there are not any, poems in this American anthology which do not bear visible traces of English influence. The racial influence is all but universal. The proportion of names among these American authors who are not obviously of English descent is very small, and if they are not English they are apt to be Dutch. . . . . .

"There are three invocations in this volume to Tennyson, two to Shakespeare, five to England, two to Landor, two to Wordsworth, one to Browning. The late Mr. John Bright has a long poem all to himself. I discover none to Mr. Gladstone, idol as he was (after his recantation) of the people whom he disliked and the nation he wished to see broken in pieces. There are many others, but they are as nothing to the references, allusions, inspirations to be found on almost every page, and to the direct inheritances of the American poets from their English ancestors. The debt is a heavy one. It would not become an American to say it had been paid, even were it of the payable kind. But it has been acknowledged. Mr. Stedman acknowledges it freely, insisting at the same time with not less energy and truth that the American writer shall be American, and that what is purely national in literature must hold a place by itself in national life."

**An Optimistic View of the Drama.**—The dramatic writer of the London *Daily Mail* lately created something of a tempest by drawing an unflattering picture of the English stage of to-day, and by asserting that a steady decline is evident from the first years of the nineteenth century (see THE LITERARY DIGEST, January 26). Mr. William Archer, on the other hand, sets out to show cause "why we may meet the pessimist case with a confident negative." In *The Pall Mall Magazine* (January) he says:

"The croakers are of two classes. The lamentations of the first class—the Podsnap-Puritans let us call them—are, in fact a strong testimony to progress. Starting from the principle that the stage ought to hold bashfully aloof from the realities of life they naturally cry out when they see it taking firm hold upon them. Their favorite maxim is that no topic ought to be mentioned on the stage which could not conveniently be discussed in the presence of young girls in a drawing-room. They would make Sardou's 'Sainte Mousseline'—Mr. Gilbert's 'Young Lady in the Dress-circle'—the arbitress of English dramatic literature. To this the answer is twofold: (1) The ideal which identified innocence with ignorance is extinct, and the young lady who must on no account hear any whisper of the existence of evil in the world is to all intents and purposes a myth; (2) there are, however, plays for adults and plays for children, and it behooves parents and guardians to exercise some intelligence in the choice of entertainments for the young. The idea that Mr., Master, and the Misses Podsnap ought to be able at any moment to stroll into any theater in London, without the least inquiry as to the nature of the play that happens to be running, has no basis in common sense. I am far from suggesting that there are no entertainments on the stage of to-day against which protest may justly be made on the score of good taste and decency. If Mr. Podsnap would condescend to discriminate, one might make common cause with him. But he declines to discriminate. If anything, he tends, like his mouthpiece the Censor, to tolerate sheer vulgarity and baseness in farce and 'musical comedy,' while reserving his wrath for whatever is serious, truthful, and virile.

"The second class of croakers are those whose memory is too short, or whose power of generalization is too limited, to admit of their drawing a just comparison between the present and the past. They are keenly conscious of whatever is annoying or depressing in the present, while in the past they remember only what gave them pleasure. Their sense of perspective is deficient. If you look down a straight mile of telegraph-posts, you see large but steadily diminishing gaps between the half-dozen or so which are nearest you, while those in the distance seem serried as a rank of soldiers. Let each telegraph-post stand for an interesting evening at the theater, and you have an image of the present and the past as they appear in the minds of a certain class of critics."

## NOTES.

BY an oversight, we failed to note in our number of March 2 that the article on "The Real Ibsen" was taken from *The International Monthly* (Burlington, Vt.).

PROF. BLISS PERRY, editor of *The Atlantic Monthly*, in a recent lecture said that the reason so many short stories are written in these days is that in them a writer is able to present problems without answering them. He said furthermore: "To write a short story requires no sustained power of the imagination, nor does it demand sanity, balance. The short-story writer, too, need have no philosophy of life, for he deals not with wholes, but with fragments. There is more in answer to the problems of life in 'Vanity Fair' or in 'Adam Bede' than in all of Kipling's works together."

HOW many "great" writers has England produced? Perhaps the best answer is to be found in the list of biographies in Morley's "English Men of Letters" series, a new edition of which is just announced at a reduced price. The series includes "nearly every great writer in the English language from Chaucer to Dickens," the qualifying word "nearly" being used apparently because Shakespeare is omitted. Of the thirty-seven biographies, twenty-four are of writers belonging to the five centuries preceding the nineteenth, and thirteen belong to the nineteenth. The ranks of the immortals do not yet seem to be overcrowded.

A HINDU *Punch* is one of the latest additions to the list of humorous periodicals, *The Westminster Gazette*, in speaking of a series of cartoons appearing in this Indian journal, observes: "Altho somewhat crude in execution, they are forcible, and the points are clearly brought out and accentuated. The model on which the artist, whose name is not given, has worked is that of our own *Punch*, and the spirit pervading them is restrained and refined. The application of European political caricature to Oriental subjects and the blending of the East and the West are very interesting, and well repay a careful study of the series."

## SCIENCE AND INVENTION.

### THE RISE AND DECLINE OF A STAR.

TELEGRAMS received in this country on February 22 announced that Dr. T. D. Anderson, an amateur astronomer of Edinburgh, Scotland, had discovered a new star in the constellation Perseus. This star immediately began to increase in brightness and has been eagerly watched from all the observatories of the world. In a few days it was announced to be of the first magnitude, having changed from the tenth to the first magnitude in two days, multiplying its brightness by several thousand in this brief interval. Students of astronomy are familiar with several other instances of this kind. Of course strictly no new celestial body has come into existence; an old one has simply become visible through enormous increase of temperature. Commenting on these facts, *The Sun* (New York, February 26) indulges in the following speculations:

"Consider what these bald facts signify. Every star is a sun, like our own sun. There is no reason to doubt that some, at least, of the hundred million stars shown in our large telescopes are accompanied by planets; our own star—the sun—has eight. If they exist—and who shall say that they do not?—all sorts of conditions prevail on their surfaces. Some of them are worn out like our moon. No air and no water are to be found there. They are worn out, just as volcanic pumice is worn out. Some, like the planet Jupiter of our system, are at a temperature so high that no life of any kind can subsist upon them. They are like the burning volcanic lakes of Hawaii. Among the hundreds of millions there may be hundreds of thousands whose surfaces are now supporting life—plant life, animal life, human life, perhaps.

"Lower the temperature of the tropic seas by ten degrees, and thousands of millions of organisms will die from lack of heat alone. Millions of others will perish from lack of food. Raise the temperature slowly and the arctic Esquimau will evolve into the Arab. The change in this n w star has come in a moment. In two days its brilliancy and its temperature have increased 10,000 times. Consider the fate of men, animals, and plants if this sun of ours suddenly increased its fervent heat even a hundredfold!

"If this unlucky star in Perseus was indeed accompanied by a train of planets what a fearful fate was theirs! It may be ours to-morrow—who can tell? Or we may pass it off with a laugh and say, and rightly say, that the old earth has endured for millions of years and is likely to endure for millions more, as indeed it is. But the catastrophe marked by the burning of this new light in the west has an impressiveness of its own. Let us stop a moment in our making of love, of money, of fame, it may be, and say that somewhere, somehow, a star has fallen, a sun has set; and that the consequences to some one, we know not who, have been literally overwhelming. The sign of it is in the sky."

The decline of the star in brilliancy has been as rapid as its increase. Five days after its first appearance, the Boston *Transcript* said:

"Like most new stars, the Nova Persei that is now occupying the attention of the Harvard astronomers and other scientific people is already fading. They all do it. That of 1891, while still visible, has been diminishing little by little until it is very faint. Sunday night [February 24] the present newcomer was notably brilliant; last night [February 26] the light was pale. The astronomers are learning as much about it as possible with observation and camera, while it lasts. In a few months they will have made up an estimate as to its distance from the earth."

A despatch to *The Sun* (New York) from Lick Observatory, dated February 26, gives the following report made by Director Campbell:

"The star has diminished in brightness about one fifth of magnitude in the past twenty-four hours. A careful study of the red, orange, yellow, and green regions of its spectrum was made, leading to many results of great technical interest, of which a few may be mentioned.

"The presence of hydrogen in the star is shown by broad bright bands of that element. The orange sodium lines are dark and extremely narrow, and the fact that they occupy the usual position shows that the star's distance from the earth is not changing rapidly. The orange line of helium is dark, and the spectrum has very few points of resemblance to the spectra of previous new stars."

On February 25 *The Public Ledger* (Philadelphia) had the following to say of the new star:

"It is upon the prismatic analysis of their light that astronomy relies for information respecting the constitution of the stars, and the evidence of the spectroscope is not yet conclusive in the case of various types of variables, including the so-called 'temporary' stars, which unexpectedly blaze sometimes where not even a glimmer has been detected before. But there have been fertile suggestions of causes from students of stellar spectra, such as collisions of swarms of meteorites, the near approach of two gaseous bodies, or the rush of a star, or swarm of meteorites, through a gaseous nebula. Perhaps more apposite still in the case of Nova Persei, as the 'new' star will doubtless be known, is the theory of gigantic eruptions, or even an 'explosion.' But, as has been intimated, the latter explanation might involve the rapid decay and death—rather than the birth—of a star."

The rapid decay of the star, which began just after the foregoing was written, may thus be taken as strong confirmation of the theory of a gaseous outburst.

### LOCAL VIBRATION IN MEDICAL TREATMENT.

ONE of the various phases of the so-called "Swedish-movement cure" is treatment by rapid vibration. This may be applied to the body as a whole, to a single limb, or to a very limited area on the surface of the body. This last-named method has recently been made the subject of special experiment by Dr. Saquet, of Paris, who writes to *La Nature* (February 16) that he has found it effective in a variety of ways. He says:

TREATMENT OF HEAD BY VIBRATION.

"Local vibration, that is to say, the vibration of a limited area of the body, has been known to the Chinese for two thousand years, and has been scientifically applied in Sweden since 1815. This method is superior to the general vibration of the whole body studied by Charcot in 1892 with his 'quaking armchair,' which was an imitation of the Swedish 'shaking-horse' of Dr. Zander, dating from 1864. 'There is nothing new under the sun.'

"A pedal has recently been adapted to the Swedish vibrator of Liedbeck to increase its speed and to facilitate experiment. The contact of this vibrator with the bottom of a plate on which is a heap of powder spreads the powder over the plate at once, an effect due to centrifugal action.

"A local 'trepidation' of thirty seconds, with a speed of two thousand vibrations to the minute, raises the temperature of the skin by 1° to 1.5° C. [1.8° to 2.7° F.], and the spot remains warm for several minutes. The Swede Kellegren, at London, has

shown clinically that manual vibration of the nerves lowers the temperature in fevers. The vibration of the whole body must also have an influence on its temperature.

"Local vibration has a very effective and very prompt calming action, which is well known to the Swedes, in gastralgia, neuralgia, colic, severe pain, etc. This action is sometimes instantaneous and lasting, for example, in sick headache, muscular rheumatism, lumbago, etc.

TREATMENT OF BACK BY VIBRATION.

"We should also mention the vasomotor and secretory action on the glands. The action contrary to contraction is less known, but we have observed it in the spasms of shaking palsy, chronic rheumatism, and gout. It should rarely be employed alone, for isolated from the other maneuvers of massage it gives but incomplete results."—*Translation made for* THE LITERARY DIGEST.

## "FLIPPANT DISPARAGEMENT" OF MR. TESLA.

A NEW YORK daily—*The Sun*—complains that other papers utter "flippant remarks of disparagement" regarding Mr. Nikola Tesla's recent inventions. In commenting on this, *The Electrical World and Engineer* observes that the reason for this disparagement lies in the nature of things. It says that modern electrical inventors are generally diffuse in their efforts from the fact that opportunities to win new triumphs present themselves so abundantly in every direction that the most enduring energy and the highest genius are in danger of dissipation without net results. And this is the reason why the public once in a while gets impatient with the inventor and says rude things. *The Electric World and Engineer* continues:

"The tide of this flippant disparagement has been rising high of late, possibly because Mr. Tesla, with the onrushing enthusiasm of a man who sees things ahead to be done and is fertile in expedients for doing them, inclines to discuss them as tho they were already disposed of. With men of this stamp of intellect it will be so to the end, and it would be a prosaic world of mediocre achievement if it were otherwise. Just at present Mr. Tesla and his brilliant fellow countryman, Dr. Pupin, have their names associated in the public mind with new means of communicating across the ocean, and the newspapers, as the popular sources of scientific information, are full of the subject—a thing we heartily prefer to seeing the same columns filled with murder cases. But it is certain, in advance, that before they get through both Messrs. Pupin and Tesla will encounter a good deal more of 'flippant disparagement.' What is now being heralded as a novelty in each instance has been known to the electrical community for some time past, as we show in reproducing our articles of nearly a year ago; and probably before the goal is reached there will be several successive outbursts of sensational writing, followed by more of the 'flippant disparagement.'"

Obviously, the writer goes on to say, the tasks of telegraphing to Europe without wires or telephoning to Europe with a "loaded" cable are serious problems, but the impatient public does not realize that such things may linger unaccomplished many years to come, without any fault on the part of those who are striving to bring them to pass. He adds:

"In Mr. Tesla's case the injury done him by the jokes and jibes one finds in almost every paper picked up is the more severe because so much is promised in his name without his direct personal sanction. There seems no way to stop this abuse of confidence, from which Mr. Edison has also suffered to such an extent that a shotgun is his preferred reception for the average reporter. But just now Mr. Tesla holds the center of the sensational stage, and the talk about him is all the looser for the reason that it has so little that is tangible behind it as food. He has read no scientific papers before the societies for years, and, since his monumental series of patents on polyphase work, has taken out extremely few patents. We can recall only one or two in recent years. Hence the gossip that always besets a great genius has little to feed upon save the wild and absurd stories to which few of the authors hesitate even at signing Mr. Tesla's own name. In this way, as all such men discover, the lot of the genius trying to crack the nuts of modern civilization is not much better than that of his predecessors treated as lunatics or witches. And this 'flippant disparagement' falls hardest upon those who are not drawing-room inventors with drawing-board inventions."

## A STATISTICAL STUDY OF GENIUS.

IN treating of the nationality and race of British men of genius, Havelock Ellis arrives at some interesting conclusions. He has taken as his test of eminence inclusion in the "Dictionary of National Biography," and he reminds us at the outset that nationality and race are not always identical terms. The fact that a man is English or Scotch or Irish tells us nothing positive as to his race, altho the particular district to which a man's ancestors belonged may indicate it to some degree, and this indication is further strengthened if we can ascertain his physical type. From an investigation along these lines Mr. Ellis (*Popular Science Monthly*, March) arrives at the following results:

"I find that 76.8 per cent. of eminent British men and women are English, 15 per cent. Scotch, 5.3 per cent. Irish, and 2.9 per cent. Welsh. The proportion of English is very large; but if we take the present population as a basis of estimation it fairly corresponds to England's share; this is not so, however, as regards the other parts of the United Kingdom; Wales, and especially Ireland, have too few people of genius, while Scotland has produced decidedly more than her share. . . . . .

"If we turn to the eminent persons of partly foreign blood (those of wholly foreign blood, like Disraeli, the elder Herschel, and Romilly, being necessarily excluded from our study), we find that they constitute a very inconsiderable proportion of the whole. A strain of foreign blood (not going farther back than the grandparents) occurs, so far as the 'Dictionary' enables us to ascertain it, only forty-six times. In twenty-four of these cases the element is French (at least half of them being Huguenot), in six German, in six Dutch. The most noteworthy fact about these elements of foreign blood is the peculiarly beneficial effect a French strain has in producing intellectual ability.

"It is somewhat remarkable that the geographical distribution of eminent women by no means follows that of eminent men. Here, after England, Ireland leads, and Scotland is but little ahead of Wales. The intellectual brilliancy of Irish women is, indeed, remarkable, and has been displayed in literature as well as on the stage.

"These facts serve to indicate that on the whole British ability has not been very unfairly distributed over Great Britain. We are still entitled to ask whether it is also fairly distributed among the populations of different physical types inhabiting the British islands."

To answer this question it is necessary at least to know the color of the eyes and hair of each person concerned, and to ob-

tain these Mr. Ellis has supplemented the description of biographers by examination of such portraits as exist. From the point of view of hair-color and eye-color he divides British persons of genius into the following four classes:

"Fair (with blue or predominantly blue eyes, and light or brown hair); mixed (with greenish, blue-yellow, or blue-orange eyes, and brown hair); dark (hazel or brown eyes and brown or black hair); and a class of individuals belonging to the so-called 'Celtic type' (blue or gray eyes and more or less black hair). The fair type includes twenty-two per cent. cases, the mixed type twenty-nine per cent., the dark type forty-one per cent., and the Celtic type eight per cent. This result probably indicates that all the races occupying Great Britain—however we may define or classify those races—have furnished their contribution to British genius. The interesting and somewhat unexpected fact which emerges is the undue predominance of the dark class, a predominance by no means exclusively due to Irish and Welsh influences, since very dark men of genius have been furnished by the Scotch Lowlands and the English eastern counties, where the populations are, on the whole, decidedly fair. This tendency is the more striking when we recall that the aristocratic class shows a tendency to fairness, and that our men of genius have been largely drawn from that class."

The next task essayed by Mr. Ellis is to classify British men of genius socially, and this he endeavors to do by grouping them according to the employment or status of their fathers. Here is the result:

"In 262 cases it has not been easy to pronounce definitely on this point, and I have, therefore, classed these cases as doubtful. The remaining 640 may be classed with a fair degree of certainty. I find that they fall into the following groups: Upper classes (or 'good family') 110 (12.2 per cent.); yeomen and farmers 39 (4.3 per cent.); church 113 (12.5 per cent.); law 49 (5.4 per cent.); army 26 (2.9 per cent.); medicine 26 (2.9 per cent.); miscellaneous professions 80 (8.9 per cent.); trade 113 (12.5 per cent.); crafts 63 (7 per cent.); unskilled workers 21 (2.3 per cent.); while the remaining 262 of doubtful origin constitute 29 per cent. of the whole."

The writer remarks that he has placed these groups in what he considers the order of their social importance, and he employs several pages in justifying his position and in telling, for instance, why he places yeomen before the clergy and the army before medicine. It is evident that he has chosen these divisions and placed them in this order simply because they indicate to an Englishman the social standing of those who are included in them. Of these results he goes on to say:

"It may be interesting to inquire whether our eminent men, when grouped according to the station and avocation of their fathers, show any marked group-characters; whether, in other words, the occupation of the father exercises an influence on the nature and direction of the intellectual aptitudes of the son. To some extent it does exercise such an influence. It is true that there are eminent men of very various kinds in all of these groups. But there is yet a clearly visible tendency for certain kinds of ability to fall into certain groups. It is not surprising that there should be a tendency for the son to follow the profession of the father. Nor is it surprising that a great number of statesmen should be found in the upper-class group. Men of letters are yielded by every class, perhaps especially by the clergy; but Shakespeare and, it is probable, Milton belonged to families of yeomen. The sons of lawyers, one notes, even to a greater extent than the eminent men of 'upper-class' birth, eventually find themselves in the House of Lords, and not always as lawyers. The two groups of army and medicine are numerically identical, but in other respects very unlike. The sons of army men form a very brilliant and versatile group, and include a large proportion of great soldiers; the sons of doctors do not show a single eminent doctor, and if it were not for the presence of two men of the very first rank—Darwin and Landor—they would constitute a somewhat mediocre group. It is an interesting, and I think a significant, fact that the fathers of as many as twenty-five artists exercised either a craft or some trade very closely allied to a craft. Great actors and actresses, more than any other group of eminent persons, tend to be of low, obscure or dubious birth; four, at least, can be definitely set down as the children of unskilled laborers.

"When we survey the field of investigation I have here very briefly summarized, the most striking fact we encounter is the extraordinary extent to which British men and women of genius have been produced by the highest and smallest social classes, and the minute part which has been played by the 'teeming masses' in building up British civilization. This is not altogether an unexpected result, tho it has not before been shown to hold good for the entire field of the intellectual ability of a country. . . . As we descend the social pyramid, altho we are dealing with an ever vaster mass of human material, the appearance of any individual of eminent ability becomes an ever rarer phenomenon, while the eminent persons belonging to the lowest and most numerous class of all are, numerically at all events, an almost negligible quantity. . . . . .

"It seems clear that, taking English history as a whole, the conditions of rural life have been most favorable to the production of genius. The minor aristocracy and the clergy—the 'gentlemen' of England—living on the soil in the open air, in a life of independence at once laborious and leisurely, have been able to give their children good opportunities for development, while at the same time they have not been able to dispense them from the necessity of work. Thus, at all events, it has been in the past. How it will be in the future is a question which the data before us in no way help to answer. So far as can be seen, the changing conditions of life have as yet made no change in the conditions required for producing genius. . . . Nor is there any sign that the education of the proletariat will lead to a new development of eminent men; the lowest class in Great Britain, so far as the data before us show, has not exhibited any recent tendency to a higher yield of genius, and what production it is accountable for remains rural rather than urban."

---

## CRIMINALITY AND EDUCATION.

CRIMINALITY is like greatness, in that some are born to it, some achieve it, and some have it thrust upon them. Students have been apt of late to dwell with special force on the born-criminal until it seems as if some of them had lost sight of the fact that education and example, as well as heredity, are factors in the matter. The influence of the two former causes is called to our attention by M. Laverune in *Cosmos* (Paris, February 9). Says the writer:

"When we read, in the news notices or the court reports of the daily papers, the records of certain criminals who come up for trial, we are sometimes struck with the amount of energy and intelligence that some of these unfortunates have expended in ruining their lives. Often less effort and intellect would have been required in leading an honest life. These are for the most part persons governed by impulse, able to make a passing effort, but incapable of regular and sustained work. In many of them may be found an hereditary taint of alcoholism or madness; but the influence of education and example must also be considered.

"Children are generally prone to imitate their parents and to follow their mode of life. This tendency to imitation is as powerful for evil as for good, and the pride of vice is as potent a motive in certain abnormal natures as the ambition of virtue in others.

"The Empress [Eugenie], accompanied by Emile Ollivier, went one day to the [prison of the] Little Roquette. She talked with a young criminal whose whole family for generations had been inmates of prisons. 'What is your father?' asked she. 'My father,' replied the youth, with a tone of pride and conviction difficult to imagine, 'my father is a forger!'

"The families in which both father and mother have trained the children to vice are very numerous. In a work on 'the contagion of crime,' Dr. Paul Aubry has cited several instances. He says: 'Families in which there are several criminals are very numerous. Mandrin was one of a family of peasants. His grandfather had settled at Romans at the opening of the eighteenth century, passing in the country for a converted Jew of German origin. A brother, a former convict, was hanged for

brigandage and counterfeiting in 1744. Another brother succeeded him in command of the band, of which traces are found in Switzerland and in Valois as late as 1757. A sister, a sort of virago, was imprisoned in 1757 for inciting a mob to pillage the abbey of the Grace of God in Burgundy.'

"There appears in these facts (of which we have cited only a brief example), besides hereditary influence, a contagion by example and education.

"According to M. Ribot, the influence of education is never absolute, and has effective action only on average natures. But, as M. Aubry remarks, these natures form the immense majority. It is upon them that we wish to act. As for the degenerates, the unbalanced and the hereditary criminals, education would still have the effect of directing their impulsive tendencies in a good channel; he who dreams of being a bandit chief might, if well brought up, have aspired to be a soldier, expending his surplus energy in his country's service.

"We have only to read criminal statistics to be convinced of the influence of education in certain families. We shall see how numerous are juvenile thieves.

"At Paris, writes M. Reinach, more than half of the persons arrested are less than twenty-one years old. They numbered 12,721 out of 20,882 in 1879, and 14,061 out of 26,475 in 1880 and almost all had committed serious misdemeanors. In a single year they were responsible for 30 murders, 39 homicides, 3 parricides, 2 poisonings, 114 infanticides, 4,212 assaults, 25 incendiary fires, 153 cases of larceny, 80 criminal assaults, 458 cases of petty larceny, and 11,862 thefts. Of 4,347 accused persons who went up for trial in 1879, there were 803 minors, eighteen per cent., of whom 43 were less than sixteen years old. . . . . .

"For the most part children of alcoholics and criminals, the greater number of these precocious miscreants have had only bad examples to look up to. There has been no moral influence, no religious teaching, to modify their tendencies to vice."—*Translation made for* THE LITERARY DIGEST.

**Will Snake-Poison Cure Leprosy?**—In a recent number of the *Deutsche medicinische Wochenschrift*, Marcondes de Moura, a physician of San Paulo, Brazil, reports on the favorable results he has attained in the use of rattlesnake poison as a remedy for leprosy. Among the natives of Brazil the rattlesnake (*crotalus durissimus*) has long been esteemed highly as a remedy for various diseases of the skin, being usually eaten by the patient, the head alone excepted because of the poison glands it contains. How much this cure is affected by superstition can not be ascertained easily; at all events, especial importance is given to the rattlesnake in the treatment of leprosy. It is stated that the leper who has been bitten by a rattlesnake and does not die from the bite is shielded for the rest of his life from the disease. Dr. de Moura, therefore, using every precaution, made a series of tests with snake-poison carefully prepared and administered to lepers who were violently ill. The poison, obtained by expression from the glands, afforded the most favorable results. The doctor has administered the remedy to fifteen patients in all, to some internally, to others in the form of a subcutaneous spray; and it is his conviction that by careful and intelligent use of the poison of the rattlesnake leprosy can be cured. He is now striving to improve his mode of treatment.

With much more reserve the distinguished pharmaceutist, Prof. L. Lewin, expresses his opinion in a brief article in the same *Wochenschrift*. He does not deny the possibility of the favorable effect of such treatment, but warns against exaggerated hopes. He recalls a case reported by Tschudi which shows that snake poison administered in large quantities kills lepers as easily as other men and women. A leprous patient . . . let himself be bitten by a snake, the *crotalus horridus*, because popular belief ascribed curative effects to the bite of this snake. Twenty-four hours after he had been bitten the patient died in convulsions. Professor Lewin admits, however, that this case proves nothing against the possibility of a cure of leprosy by snake-poison.—*Translations made for* THE LITERARY DIGEST.

---

**A New Geyser in the Yellowstone.**—The daily press tell us of the outburst of a new geyser in the Yellowstone Park. A special despatch to *The Times* (New York) from Livingstone, Mont., dated February 25, says of it: "James King, who has been living in the park during the past winter, where he has been employed looking after the property of some of the transportation companies near the Fountain Geyser, about forty miles south of the mammoth hot springs, states that in the early morning of February 18 he was awakened by a terrific explosion similar in noise to that of the explosion of a large quantity of powder. The ground rocked and quivered for some time violently, dishes rattled on the shelves, pictures hanging on the walls were thrown down, and the clock was stopped. Mr. King's first idea was that it was a severe earthquake shock, accompanied, perhaps, by the eruption of a volcano. On going out to try to ascertain the cause, Mr. King discovered that the Fountain Geyser had given birth to a new geyser. It is located about 200 feet immediately south of the famous Fountain Geyser, and, at the moment Mr. King discovered it, it sent a solid column of hot water fully 500 feet into the air, the water gushing forth from a hole about five feet in diameter with a loud roar. Mr. King says the thermometer registered about ten degrees below zero, and for one hour and thirty minutes the monster column of hot water shot upward. It then subsided, and has since been playing at regular intervals of about two hours. Word has also reached this city that Excelsior Geyser, the largest geyser in the park, which has not been in a state of eruption for several years past, began to play on Washington's Birthday, and continued in full play for over five hours. The volume of water sent out, which flows into the Fire Hole River, so swelled that stream that it overflowed its banks. The water of the river became so hot from the geyser water that fish in the stream for a distance of about two miles below the Excelsior were killed."

---

## SCIENCE BREVITIES.

"THE eggs of a scavenger hen are not fit to be eaten," says Dr. J. H. Kellogg, writing in *Modern Medicine*. "My attention was called to this a number of years ago. A lady said she could not eat our eggs. She wanted 'sunflower eggs.' I told her we had the best eggs in the country, but she wanted 'sunflower eggs.' I asked her what she meant by that, and she said that an old German at home fed his chickens on sunflower seeds, and that the eggs were remarkably sweet. Some of the eggs were sent for, and this was found to be true. Eggs do partake of the nature of the food which has been eaten. When chickens are fed on dead calves, dead hogs, or other dead animals, their eggs will partake of the strong, rank flavors that they have swallowed with their food."

POISON IN POTATOES.—Potatoes contain the alkaloid solanin, says *The Sanitary Home*, altho this fact is not generally recognized. "New potatoes contain comparatively little of this poison unless they grow above the surface of the ground and have a green skin, when they are generally known to be poisonous. It is not, however, known generally that old potatoes contain much of this poisonous principle, and that many cases of serious poisoning have occured in late summer when old potatoes were used. In 1892 and 1893 there was almost wholesale poisoning among the troops of the German army. The symptoms were frontal headache, colic, diarrhœa, vomiting, weakness, and slight stupor, and in some cases dilatation of the pupils. Meyer investigated the matter and found in old potatoes kept in a damp place and beginning to sprout twenty-four times as much solanin as in new potatoes."

A PRIZE FOR COMMUNICATION WITH OTHER PLANETS.—"The sum of 100,000 francs [$19,500] was bequeathed to the French Academy of Sciences in 1891," says *The Scientific American*, "to be awarded to the first person who would be successful in communicating with another world. The Academy at first did not care to accept such a curious bequest, but finally it did so in the following words: 'Madame Veuve Guzmann, a friend of astronomy and a believer in the plurality of inhabited worlds, has left to the Academy the sum of 100,000 francs to be given as a prize to the person who shall first enter into communication of an astre other than the planet Mars.' The will wisely further stipulates that each time the prize has not been awarded for a period of five years, the accumulated interest shall be devoted to a work which will help the progress of astronomy. The intentions of the founder will be scrupulously followed. Astronomers naturally wonder why Mars was debarred.

"THE well-known French astronomer and writer, M. Camille Flammarion," says *Electricity*, "has for some time been making a special study of the effects of lightning on men, animals, and other objects, and in order to illustrate the freakish conduct of lightning he recently told some stories which seem incredible. Thus he tells of two peasants who were preparing to eat breakfast, when suddenly all of the dishes were thrown on the ground, the bread, cheese, and fruit vanished from the table, and they themselves were covered with straw. On another occasion a man, walking through Nantes, was enveloped in lightning, yet was not injured. When he reached home, however, and opened his purse, which had contained two pieces of silver and one of gold, he found that the gold piece had vanished and that in its place was a silver piece. The lightning had, in fact, pierced through the leather of the purse and had covered the gold piece with a coating of silver taken from the other two pieces."

## THE RELIGIOUS WORLD.

### EDWARD VII. AND THE RETURN OF "THE MASS" IN THE CHURCH OF ENGLAND.

MANY English journals comment on the fact that a prophecy, attributed to Mother Shipton, who is said to have lived in Yorkshire from 1486 to 1561, contains the following couplet:

> When Edward the Seventh comes to reign,
> King Edward's Mass will come again.

Some Roman Catholics have taken this prophecy as applying to themselves, and point to the new "Catholic Directory," which contains a map of England and Wales divided into Roman Catholic dioceses, and with marks showing that mass according to the Roman rite is said daily or weekly in every city and in nearly every small town in the Kingdom. The London *Tablet* (Rom. Cath.), however, admits that "King Edward's mass" must be taken as referring to the service in the first Anglican Prayer-Book of Edward VI., printed in 1549, in which the order for the Holy Communion is headed: "The Supper of the Lord and Holy Communion, Commonly called the Mass." This order for service, which would now be called rather "high," was later emasculated under Puritan influence in the Second Prayer-Book of 1662. Since the great Tractarian movement at Oxford under Newman and Pusey, however, the English church has been steadily, even tho slowly in the more remote parishes, tending toward a more ornate ritual. It is said that there are already fifty Anglican churches in London where the full ceremonial of "the mass" may be seen; and in every large city, even in Protestant Liverpool, there are several churches similar to these. An illustration of how far the old "mass" has been restored in many English churches is the "solemn requiem mass" for the Queen, lately sung at the Church of St. Matthew, Westminster, which the London correspondent of *The Living Church* calls "the most remarkable memorial service that has been held in England" since the first year of Queen Elizabeth's reign. He thus describes it (*The Living Church*, March 2):

"The elaborate appointments of the function were arranged under the auspices of the two councils of the Guild of All Souls and the English Church Union, and followed as closely as possible those described by that old chronicler Heylin in his account of the requiem service ordered by Queen Elizabeth on the occasion of the obsequies of the King of France, Henry II., at St. Paul's Cathedral on September 9, 1559, at which Archbishop Parker, assisted by Bishop Scovy and Bishop Barlow, officiated, which highly ceremonial service was held, it is worth bearing in mind, *under* the Act of Uniformity which we have lately been hearing so much about in connection with the archbishops' opinion on reservation. In front of the choir screen in St. Matthew's and directly beneath the great rood, there was erected a canopied 'herse,' about twelve feet in height, draped with purple velvet, the platform being covered with black cloth. The pall, also of purple velvet and decorated with a cross of cloth of gold, bore a cushion of crimson velvet whereon were placed models of the imperial crown and scepter in real size. On both sides of the catafalque there were six tall candlesticks with lofty tapers, while on a rail midway to the top there were pricks bearing eighteen lighted tapers. The valance of the canopy bore escutcheons, and scrolls whereon were the words '*Fides Defensor*,' '*Dieu et mon Droit*,' 'India,' 'Australia,' 'Canada,' and 'South Africa.' There were also escutcheons emblazoned with royal arms on the four posts of the 'herse' and on both the 'herse' and altar candles.

"The requiem was described as 'a service for the faithful departed, set to the ancient Plainsong of the Rouen use, in modern notation,' being arranged by the Rev. J. B. Croft, the priest-organist of St. Matthew's, who presided at the organ. Chopin's 'Marche Funèbre' was played as a prelude. The celebrant and his ministers, who were all clergy of St. Mary Magdalene's, Munster Square, wore vestments of black damasked velvet with red and gold orphreys, while the three cantors were vested in copes of black satin, with gold hoods. Incense was used at the Introit and Sequence and the altar was censed. The Introit, 'Rest eternal grant them, O Lord,' was sung by the cantors and choir, the *Dies Iræ* being sung as the Sequence. The collect was from the Burial Office and the Epistle and Gospel from the Prayer-Book of 1549. Before the offertory, the Rev. the Hon. F. Hanbury-Tracy, vicar of St. Barnabas's, Pimlico, ascended the pulpit and requested all present to pray for the soul of our late Sovereign Lady Queen Victoria, by the Grace of God Queen of England, Scotland, and Ireland; Empress of India; Sovereign Lady of the Dominion of Canada; Sovereign of the Commonwealth of Australia and of New Zealand; Sovereign and Supreme Lady in and over her Dominions in Africa; Defender of the Faith; the Mother of all her people. Then followed the singing of the *Contakion* from the Russian burial service. At the conclusion of the mass special prayers were said on behalf of His Majesty the King, and those present were requested to pray for him. Lord Halifax, who had taken keen interest in the arrangements for the service, was unable to be present, as he had contracted a severe cold. Lady Halifax, however, was there, and also many other distinguished persons, among whom were Lady Cavendish, widow of the late Lord Frederick Cavendish, brother of the Duke of Devonshire, Lady Malet, Miss Talbot, daughter of the Bishop of Rochester, Earl Grey, and also Mr. Lathbury, editor of *The Pilot*, besides many prominent [Anglican] Catholic priests, including Canon Knox Little and Father Adderley. Many were turned away from the doors of the church, among others Lord Edward Spencer Churchill, some Roman priests, and also some well-known Protestant dissenters."

The advance, of the "Catholic movement" in the English Church—which, as upheld by Dr. Pusey, Canon Liddon, and others, does not contemplate any submission to Roman Catholic authority, but a return to the earlier Catholic principles and ritual of the English Church itself—is, *The Tablet* admits, already of a "tremendous character," and "as Lord Halifax says, forbids any Anglican [High-Churchmen] to despair." As for the effect which the accession of the new King will have upon the English Church parties, public opinion is divided. The sovereign is, of course, only the temporal, not the spiritual, head of the church, and can not alter doctrines or national ritual. In the appointment of bishops, however, he is consulted by the cabinet, and his opinion carries great weight. The correspondent of *The Living Church*, alluding to the fact that of late years there has been marked favor shown to Catholic usages in English royal funerals, points out that in the arrangements made after the Queen's death the same influence was evident. He writes (February 16):

"The dining-room of Osborne House has been fitted up as a *chapelle ardente*, the walls being clothed in crimson, and the only picture to be seen is a 'Madonna and Holy Child,' by one of the old masters. The coffin, a simple oaken shell, rests on a crimson-covered dais, and is covered with a very beautiful ivory satin pall, representing the royal standard, which was worked by the ladies of the South Kensington Royal School of Art Needlework, of which the Princess Christian, one of her late Majesty's daughters, is president, in the short space of twenty-one hours. Upon the breast of the royal corpse was laid an ebony and gold crucifix, placed there by Queen Victoria's youngest daughter, the Princess Beatrice, Princess Henry of Battenberg, who, like the King's consort, Queen Alexandra, and like both the Duchess of Cornwall and York, and the Princess Christian, is a believer in Christian symbolism, and also generally inclined to sympathize with the Catholic revival in the Church of England. On each side of the bier stand three tall silver candlesticks with lighted tapers. The altar in Her late Majesty's private chapel at Osborne has been removed to the dining-room, and, vested in a crimson gold-embroidered velvet frontal, has been placed at the foot of the bier. Upon the altar stands a large mother-of-pearl Greek cross, beautifully inlaid with mosaic work, flanked with silver candlesticks bearing lighted tapers, while at the foot of the altar-pace burn candles in tall silver standards."

The London *Christian World* (Free Church) "entertains good

hope" of the new King's personal attitude toward non-conformists, in spite of the exceedingly uncomplimentary allusions to them contained in a letter to Archbishop Benson some years ago. In this letter, written about the time of the Tranby Croft affair, the Prince complains of systematic slander by non-conformists and of the Low-Church Party—"but especially non-conformists" and of the "torrent of abuse" launched upon him because of his alleged gambling propensities. In it he adds: "I have a horror of gambling, and should always do my utmost to discourage others who have an inclination for it, as I consider that gambling, like intemperance, is one of the greatest curses with which a country could be afflicted."

---

## A PRESBYTERIAN'S ONSLAUGHT ON JOHN CALVIN.

IN connection with the present movement in the Presbyterian Church toward a revision or explanatory restatement of the Westminster Confession, a controversy is going on as to the character of its chief inspirer, John Calvin, the great expounder of predestinarianism and preterition. In the Chicago *Interior* (February 21), the chief liberal Presbyterian journal, Dr. W. C. Gray, who has been its editor since 1871, makes a determined assault on the memory of the reformer. In a succeeding issue of the same journal a defense of Calvin is to be made by the Rev. Dr. A. J. McKelway, editor of *The Presbyterian Standard*. We give part of Dr. Gray's indictment, to be followed later by the plea for the defense. "In calling ourselves Calvinists," he remarks, "we are the most unfortunate of all the sects." Lutherans, Zwinglians, and others "incur no reproach from the name by which they are designated. It is different with us, and it is due to ourselves that we should face the truth of history." For the real facts about Calvin, Dr. Gray confines himself to Calvin's own "Institutes" and Letters. He says:

"And, first, the apology for Calvin that he represented the spirit of his age would have merit if it were true. Whether it is true may be seen from the numerous protests of his contemporaries against his disposition and acts, each of which protests Calvin deeply resented:

"'We have beside exhorted you to continue faithful, using moderation in all things, lest you lose those whose salvation is desired by the Lord, who does not break the bruised reed nor quench the smoking flax."—Bullinger to Calvin, page 441, vol. ii., Letters.

"'We do not believe that it is necessary to treat those who err with too much severity, lest for wishing to defend with too great zeal the purity of dogmas, we swerve from the law of Jesus Christ, that is, from charity. Jesus Christ loved the truth, but He loved souls also; not only those who advanced without declension but also those who went astray. And it is of the latter of which the Good Shepherd in the Gospel parable takes the greatest care.'—The Ministers of Bern to Calvin, page 335, of above.

The ministers defended Bolsec, whom Calvin was persecuting and had banished. His reply is that he 'had good ground to be displeased' with their letter and with others which were 'so very worthless.' Of Bolsec, further along.

"The bubonic plague, known as the Black Death, was then prevailing in Europe. It is estimated that it slew one third of the human race. It visited Geneva, tho not with its virulence in densely populated cities. Calvin says of it:

"'A conspiracy of men and women has lately been discovered, who, for the space of three years, had spread the plague through the city, by what mischievous device I know not. After fifteen women have been burned; some men have even been punished more severely; some have committed suicide in prison; and while twenty-five are still kept prisoners, the conspirators do not cease, notwithstanding, to smear the door-locks of the dwelling-houses with their poisonous ointment. You see in the midst of what perils we are tossed about. The Lord hath hitherto preserved our dwelling, tho it has more than once been attempted.'—Page 452, vol. i., Letters.

He says it was spread 'by what mischievous device I know not,' and then says it was by the use of a 'poisonous ointment.' That the 'conspiracy' was a figment of a gloomy and ferocious imagination should have appeared to him from the fact that the burning alive of fifteen women, and the torture of the men before burning them, had no effect on its spread. Calvin was at that time all-powerful in Geneva, as we shall see further along.

"We quoted from another source and in another place Calvin's fearful philippic against Castalio. The question between them, as between Calvin and Bolsec, was the justice of damnation without actual transgression. The council was trying to restrain the violence of Calvin, and he complains to Farel that they both deceived him and kept Castalio out of his way. 'They did not venture to trust me with him, that he might not exasperate me beyond all bearing.' But that was not to be the end of it:

"'Therefore we must wait for a better opportunity which I shall be always looking for. Those small vermin Malizi and Crociati, you can not do better than to constantly crush and bruise them, which you may do without danger for they can only spit venom.'—Page 160, vol. i., Letters.

"Calvin had the habit of hiding the names of those he was pursuing under Latin aliases. Who these two were who were to be crushed and bruised because it could be done without danger is not indicated. Nor does he give the name of a man whom he desired to burn at the stake as stated in his letter to Madame de Caney. He wrote:

"'Knowing partly the man he was, I could wish he were rotting in some ditch. . . . And I assure you, madame, that had he not so soon escaped, I would by way of discharging my duty have done my best to bring him to the stake.'—Page 338, vol. i., Letters.

Who was this intended victim? The editor of the letters asks, 'Can it be Bolsec?' Calvin was not insensible to the opinion of the Bernese, who were sheltering and defending Bolsec, and he denied that he desired any severer punishment. Castalio and Bolsec both 'escaped.' He meant to burn one of them if he could, and there was no reason why he should wish to burn one rather than the other. It is of interest to read what the Bernese ministers thought of these persecutions. They wrote to Calvin:

"'To come to the subject of dispute with Bolsec, you are not ignorant how much vexation it has caused very many good men, of whom we can not have a bad opinion, who reading in the Scriptures those passages which exalt the grace of God to all men, have not sufficient discernment rightly to understand the true mysteries of divine election, attach themselves to the proclamation of grace and of universal benevolence, and think that we can not make God condemn, harden, and bind any man, without being guilty of the insupportable blasphemy of making God Himself the author both of man's blindness and of his perdition, and by consequence of all sin.'—Page 355, vol. ii., Letters.

"In regard to Servetus: Letter to Farel:

"'He takes it upon him to come hither if it be agreeable to me. But I am unwilling to pledge my word for his safety, for if he come I shall never allow him to depart alive, provided my authority be of any avail.'—Page 33, vol. ii. Date, February 13, 1546.

Observe the date. Servetus perished October 27, 1553, seven years and eight months after the above was written. Calvin therefore cherished his awful design all that long period. Calvin explains that Servetus attempted to pass through Geneva 'when at my instigation' he was arrested (page 428, vol. ii.). In his letter to Farel, he exults over the sentence of Servetus. . . . . .

"Letters 407 and 408 to Farel (pages 204-5, vol. iii.) reveal Calvin's character in a strong light. It appears from these letters that there was what we would call a riot. We quote first from letter 408:

"'The younger Berthelier does not deny that he threw the stone by which a man was knocked down. But then both of them attempted to varnish over everything with the most puerile shuffling. Before two days we shall see, I hope, what the rack will wring from them. Moreover, lest the absence of so many citizens should depopulate the city, as the runaways kept saying in derision, Vandel has been summoned back by the town crier, together with a numerous band.'

It appears from that same letter that the judges, in sentencing two brothers to death in this affair, directed that they should

not be tortured, but that the more merciful sentence was set aside. He says:

"'And assuredly I am convinced that not without the judgment of God they suffered, contrary to the sentence of the judges, a long torture under the hand of the executioner.'—Page 205, vol. iii.

As he here expresses the determination to 'see what the rack will wring from' the Berthelier brothers, it is morally certain that the long torture of the two other brothers, contrary to the judgment of the judges, could only have been inflicted at the order of Calvin. There was no other man in Geneva who had the influence and authority to add to the sentence of the judges. This comes out also in his vexation that the victims stood the agonies of the rack during the 'long torture,' maintaining their innocence till the end. 'The two brothers' he says, 'who were executed, gave, at their death, proofs of the most obstinate disposition' (page 204). 'How wickedly at their death the two brothers attempted to throw obscurity on the affair you have no doubt heard.'—Page 215, vol. iii., Letters.

"The apology is offered that Calvin's character should be attributed to the age in which he lived. But 'the age' is not a date nor a country, but a surrounding and a class. Calvin's age was the Reformation and the Protestant Reformers. Among them he stands solitary for acumen and malevolence."

## BRUNETIÈRE: A LITERARY CONVERT TO ROMAN CATHOLICISM.

NOT since the conversion of Newman has the Roman Catholic Church made so important an individual conquest as in the case of Ferdinand Brunetière, who, as the editor for many years of the *Revue des Deux Mondes*, has been regarded as the ex-officio head of French letters. The event is a sensation among literary folk all over the Continent; for, aside from his position as a sort of literary dictator of France, he is an acknowledged master of French prose and the ablest critic since Taine. *The Literary Era* (Philadelphia, February) thus speaks of him and his new religious belief:

M. FERDINAND BRUNETIÈRE.

"In his earliest efforts as a lecturer in the College of France, Brunetière was known as something more latitudinarian even than an agnostic; none of his works encourages undue confidence in orthodox belief; his studies of the French classics—and he has gone as deeply into them as all of his contemporaries put together—do not give any hint that he regarded faith as an article of very great moment. His declaration, therefore, that he has come to believe, and believe as profoundly as the humblest neophyte, has caused as much curiosity, if not controversy, in continental Europe as Newman's conversion a half-century ago. He took the occasion of the annual congress of Catholics at Lille, in the north of France, to make his public confession in an address entitled 'The Actual Reasons for Believing.' The text makes a pamphlet not quite so ample as Newman's 'Apologia pro sua Vita,' but it is marked by almost as much philosophic profundity, and, if anything, by clearer reasoning.

"He distinguishes the need of believing into three categories, so to speak—philosophic, social, moral. The social or moral, he explained, were the main reasons that urged him to believe. 'That which I believe'—and I dwell vehemently on the word—'that which I believe, not that which I suppose or what I imagine, and not what I know or comprehend—go and ask in Rome.' Naturally, the astonished Parisians, who have not followed the convert's recent essays in homiletics, seek personal or occult causes for this unexpected defection from the ranks of the Voltaireans; for even the *Deux Mondes*, while clerical and monarchical, never draws the line against the widest latitudinarianism. It is of interest to learn that Brunetière was first set to thinking of the possibility of belief on marking the gross materialism of the so-called Anglo-Saxon races. To him the British have no religion, and when he visited America he looked in vain for anything more of religion than forms and platitudes. Six years ago Brunetière had occasion to visit the Vatican, and, incidentally, was accorded an interview with Leo XIII. Writing of the event afterward in the *Deux Mondes*, he made a somewhat mysterious allusion, which at the time piqued curiosity. 'What the Pope was good enough to say to me it is not to be expected that I should reveal here.' Presently, however, he began an exposition of the works of the 'Eagle of Meaux,' Bossuet; and in the delivery of a course of lectures on this prelate he has let it be seen that he found both inspiration and satisfaction."

## THE EVANGELICAL SECTS OF RUSSIA.

READERS of Tolstoy's "Resurrection" will recall the evangelical preacher whose drawing-room talks on religion were resorted to by many of the ultra-fashionable people of St. Petersburg. The Protestant movement in Russia has hitherto been confined almost wholly to the peasants; but as pointed out by Felix Volkovsky, editor of *Free Russia*, it has of late gained not a few powerful patrons among the nobility and upper classes. He writes (in *The Forum*, March):

"The present political order of Russia is such that every independent action—whether on a religious, social, or economic ground—inevitably assumes a political meaning, and produces a political effect, as it undermines the very principle on which the all-absorbing, all-grasping, and absolute power of the Russian Government rests. According to that principle, the citizen is not a mature personality, but a child for whom everything is determined by the Government. He has no part in imperial legislation. It is the bureaucracy, headed by the Czar, that frames, promulgates, and enforces the laws; and he must obey. His education, his political opinions, his religion, are prescribed for him; he can not even move about without a permit from the Government, in the form of a passport. One understands that under such circumstances sectarianism assumes a political meaning. A peasant who, contrary to law, secedes from the established orthodox church and declines to give up his new faith, puts the commands of his personal conscience above the commands of the Government, the Czar included. Every one has heard a good deal about the Stundists, the Shelapouty, the Doukhobors, and other dissenters of Evangelical type, some of them with a strong tendency toward Quakerism. These deserving people, who are the best specimens of their race, were, and still are, subjected to the most revolting persecutions. They have been beaten, imprisoned, systematically starved, inhumanly tortured, exiled, and their female relatives have been treated in a most shameful and brutal manner. Yet notwithstanding all these facts, heroic men and women have declined point-blank to comply with the orders of the Government and the official clergy which they have considered sinful. The movement has created thousands of able and fervent apostles, who, by reason of governmental deportation, are scattered throughout the empire. It has converted millions of unthinking, passive creatures—who were until then driven about by the officials and clergy like cattle—into discriminating beings, with a sense of self-respect and a determination to oppose wrong. Many dissenters who, until last year, had concealed their real religious doctrines, profited by the last census to state their creed openly.

"Besides, the upheaval of their spirit is being manifested by increasing proselytism, for which purpose some sects, for example in the Tomsk province, train their own missionaries. They

also build new chapels, and write polemic books. The movement has found its way into the higher classes of the population, as evidenced by the names of Tchertkov, Birukov, Tregoubov, Prokhanov, Pashkov, Prince Khilkov, Dr. Volkenstein, and others. It has its powerful prophet in the person of Count Tolstoy. It has established its own free press, as the activity of Mr. Tchertkov, at Purleigh (in Essex), and the periodical *Bessyeda* formerly published in Sweden, show. It commands the active sympathy of the world, as has been proved by the world's press, by the emigration of 5,000 Doukhobors, through the substantial pecuniary aid of the Society of Friends and the money forwarded from England to the suffering Stundists, etc. True, this very emigration may be regarded as a victory for the Czar's Government, as it has contrived to drive 5,000 courageous souls, who knew how to stand by their banner, out of the country, which needs such people badly."

## ARE THE JEWISH COLONIES IN PALESTINE A SUCCESS?

COLONIES were established for the Jews in Palestine by Montefiore, the Rothschilds, and others long before the Zionistic movement was organized among the Jews; but since that movement has become so pronounced, the question as to the success or failure of these colonies has been bitterly debated by the friends and foes of Zionism. One of the most significant and seemingly impartial utterances on this question is found in the *Bote aus Zion*, from the pen of Pastor Schneller, the son of the famous Father Schneller, in Jerusalem. Pastor Schneller is the author of a number of exceptionally fine works on Palestine. He says, in substance:

Palestine is not a country that invites the establishment of colonies or that promises rich rewards for such enterprises. Success can attend only special efforts, and the chances for success depend largely on the character of the undertaking, whether it is industrial, commercial, or agricultural. Ventures of the first class have been made in several cities, but as a rule they have flourished for only a short time, as the needs of the Orient are very small in this line. Commercial enterprises, especially in Jerusalem and Haifa, have, to a limited extent, been successful; but, largely on account of the attitude of the Government, they are doomed to failure. The most successful men in this department have been the Jews.

Even the agricultural colonies founded by and for the Jews have been but partially successful, and some of them are total failures. In reality, the only ventures of this kind that have been paying investments have been the vineyards, and, to a limited degree, the dairies and the vegetable gardens. The raising of grain has brought only meager returns. As both the hill countries and the plains are favorable for the growth of the grape, the Jewish colonies have confined themselves almost exclusively to the vineyard, and do reasonably well, as the Rothschilds buy the grapes at a good price, but themselves lose heavily on their investment. Matters have improved recently for the Sarona colony, since both Egypt and Germany have begun to buy Palestinian wines, and the orange trade of Joppa has also developed by the growth of export trade. But exceptionally favorable conditions prevail in Sarona. Even the colony at Haifa can not support itself without assistance. Here olive plantations have been established, but the profits have not been encouraging. As there is a steady demand for olive oil, a number of the Jewish colonies have turned almost exclusively to the cultivation of the olive-tree.

The experiences of the Jewish colonists, as also of the Christian Templars, who have been established in Palestine for half a century and more, go to show, therefore, that even agricultural colonies in that country can count only on meager returns, even if system and industry prevail in the management. The colonist in Palestine can never become a rich man. At most, he can gain by hard industry a fair living.

The *Saat auf Hoffrung*, the famous Jewish mission quarterly, edited for so many decades by Professor Delitzsch, in discussing this problem expresses its full agreement with Pastor Schneller, but adds that it is probably a blessing in disguise that Palestine is not a promising land for the colonists, otherwise it would attract the fortune-seeker from all directions, while now it appeals only to those strong in religious sentiment and aiming to realize high ideals, and for this very reason may be reserved for the Jewish resettlement sooner or later. The professor states:

"It is a pleasure to hear that Pastor Schneller confirms the claims of the more moderate Zionists, namely, that a certain class of colonists, the industrious and deeply religious Russian Jews, have, as peasants and tillers of the soil, been fairly successful in Palestine; and that in such colonies a second generation is now living that promises to become permanent cultivators of the soil."—*Translation made for* THE LITERARY DIGEST.

**The Oldest Known Texts of St. John and St. Matthew.**—According to Dr. W. C. Winslow, vice-president of the Egypt Exploration Fund, the two oldest texts of St. Matthew's Gospel and of the Epistle to the Romans are now in this country. In *The Living Church* (March 2) he writes:

"The former is in the museum of the University of Pennsylvania, the latter papyrus is at Harvard University. They are among the 118 papyri recently presented by the Egypt Exploration Fund to the universities of our land.

"The fragment of St. John's Gospel forms an important portion, small tho it be, of a book of about fifty pages containing that Gospel, dating about 200. We have St. John i. 23-41, except that verse 32 is wanting; also, St. John xx. 11-25, except that verse 18 is missing. In the former chapter we have those profoundly significant words, 'Behold the Lamb of God, which taketh away the sin of the world.' In the other chapter, we have St. Mary addressed by Jesus, after His resurrection, at the sepulcher. The handwriting is a round upright uncial of medium size, and the usual theological contractions for God, Jesus Christ, Spirit, occur. The reason why these two chapters (in part) are preserved is that chapter i. and chapter xx. were very nearly the outermost of a large quire containing the other chapters. The text appears to have affinities with the Sinaitic Codex, and, I need not add, absolutely confirms our version.

"The manuscript of the first seven verses of St. Paul's Epistle to the Romans is in a large and rather rude uncial, and appears to be a schoolboy's exercise at Oxyrhynchus, and of the date of 316. A few mistakes in spelling occur, which a beginner in his lessons would naturally make. That a chapter of St. Paul should be used for such a purpose shows that the writings of the New Testament had long been in common circulation. The older fragments of St. Matthew are retained in England (Oxford or the British Museum), and the fragments of St. Mark of the fifth century also remain in England."

In a later article (March 9), Dr. Winslow explains that while the oldest known text of St. John has been found, he was mistaken in stating that it is owned by the University of Pennsylvania. The text owned by the latter is one of St. Matthew, even older—in fact "the *very oldest bit* of New-Testament text known to us."

## RELIGIOUS NOTES.

THE series of conferences at the University of Chicago (THE LITERARY DIGEST, January 26, page 96), dealing with "The College Student's Difficulties with the Bible," were reported by the daily press in such a way as to give misimpression as to their character. So the University authorities claim, stating that the purpose was to meet modern difficulties of Biblical criticism. Several hundred students of the University attended the conferences, with the result, it is claimed, that many difficulties were removed.

DR. EDWIN A. ABBOTT, the author of the monumental article on "The Gospels" in the Encyclopedia Britannica, has just published the results of his latest work in scientific Biblical research under the title. "A Guide through Greek to Hebrew Scripture." It is the first part of a series of volumes dealing with the Gospels, and presents Dr. Abbott's view that the synoptic Gospels were largely either translated from earlier Hebrew documents or were modified by them. The succeeding parts will give the author's thesis that St. Matthew and St. Luke borrowed from the earlier Mark. All three synoptics, he believes, are derived from a Hebrew original, which influenced the fourth Gospel also. But the translators were not very familiar with Hebrew, and thus fell into errors. In the accomplishment of his task of a minute study of all these documents, Dr. Abbott asks the cooperation of competent students everywhere, since it is far beyond the powers of a single man.

# FOREIGN TOPICS.

## AMERICAN "FAILURE" IN THE PHILIPPINES.

ABSOLUTE incompatability of temperament between the Americans and Filipinos, utterly different aspirations and interests, and a complete lack of experience on the part of the former in dealing with the great majority of questions that press for settlement in the Philippines, are the causes of the "American failure in the archipelago." This, at any rate, is the way the situation is outlined by a French writer (André Lebon) in a long article, under the title "A Conflict of Races," which appears in the *Revue des Deux Mondes* (Paris). M. Lebon finds in the report of the Worcester commission, which he uses as his text, "reading which is infinitely suggestive to Europeans." Imperialism, he declares, has spread like a contagious disease over both sections of the Anglo-Saxon world. Americans, however, make a poorer showing than the English because our Constitution is much less elastic than that of Great Britain. Forgetting our unjust treatment of the Indian, the Chinaman, and the negro, he declares, we have permitted John Bull to lure us, by his example, into an unjustifiable course with another alien race, but in this case a race beyond our borders. He considers at length the racial, social, and political characteristics of the Filipinos, whom he calls "by no means the inferior race the Americans would have the world believe"; and then gives a detailed statement of American history and development, to show how unfitted we are for the task we have assumed. In the first place, he holds, the "hypocrisy of the public speaker" has greatly weakened the moral stamina of the American people. It has dulled our perception of the true significance of public acts and of their consequences in the world of morals. We like to believe that we can do everything, and we have no scruples about inflicting our views upon others. To the factors which make up most of the problems in the Philippines we are utter strangers, and we have proved our ignorance in the treatment of the Chinese (he refers to the plan recommended by the Worcester commission), our disposition of the customs question, but especially in the matter of the religious orders in the islands. In this latter particular we may be pardoned, as we could not possibly have had any experience, knowing nothing in America of the union of church and state. The Catholic Church in the United States, he says, has had a most marvelous development, having acquired, without secular aid, a character and vitality such as it does not possess in any other country in the world. In the Philippines, however, everything is different. M. Lebon says:

"For generations there has existed in these islands, and existed officially, a powerful Catholic clergy recognized by enormous 'credits' in the budget and by the participation of the priests in every act of public life, municipal, judiciary, and governmental. Nor is this all. Side by side with the secular clergy, the monastic orders have acquired a largely preponderating influence. The friars control many parishes; their congregations monopolize the educational machinery in all its branches, and, as these congregations are everywhere very powerful, the question of the 'dead hand' has become a most important one. The natives, who are believers and adherents of the Roman Church, accuse the friars of having taken possession of large landed properties, of course with the complicity of the Spanish authorities. The friars are, for the most part, of European origin, while the secular clergy, at least in the lower ranks, are recruited principally in the archipelago, and so the social problem which presents itself, as it has presented itself throughout the ages in nearly all the Catholic states, is complicated by the fact of nationality."

While the Filipinos demand the expulsion of the friars, says M. Lebon, the American commission declares that such questions of ecclesiastical politics should be left entirely to the ecclesiastical authorities. Yet there are inevitable points of contact between the church and the state in the Philippines. Civil law is practically in the hands of the clergy. A man can not marry unless he is a Catholic. The Americans are not fitted to grapple with this problem because they have never had any knowledge of or experience with its factors. When the Filipino tore himself away from Spain, he did so to "proclaim his individuality." When the Anglo-Saxon expanded to the other side of the world, he set out to impose his code of life and morals. "As soon as the two came together, they are found to be truly strangers, of two opposing civilizations, which must meet with a shock; and one can not say as yet whether one will extinguish the other or whether the meeting will result in some strange, unforeseen miscegenation."

Much the same ground is taken by M. de Berard, French consul at Manila, in a recent report on trade conditions in the Philippines. The natives, M. de Berard says, are much worse off under American control than ever before:

"The rebellion and the consequent military operations have killed agricultural enterprise. The methods of the Filipinos may have been primitive in many ways, but their industry made them affluent and furnished wealth for the foreign merchant. This prosperity is now a thing of the past. For more than a year trade has been almost completely at a standstill. Many firms will never recover. The tariff is ruinous. . . . At present it is useless for any European to begin business anywhere outside of Manila, Iloilo, or Cebu. Peace and peace only will render business safe and profitable. . . . American competition in the business that is done has not been successful. The Americans have not gained anything over the nations which formerly supplied the Filipinos. . . . Yet the Americans thought they could easily compel the Filipinos to become their customers. Their [the American] failure should encourage those who have heretofore been interested in Filipino trade."—*Translations made for* THE LITERARY DIGEST.

## OUR TARIFF DIFFERENCE WITH RUSSIA.

TWO points are brought out prominently in the European comment on the Russo-American tariff difference. One is, as stated by a German paper, that Russia has assumed the lead in the great European tariff war against the United States prophesied and advocated several years ago by the Austrian premier Count Goluchowski. The other is found in the general assumption that Germany will profit richly by capturing our Russian market for machinery.

M. DE WITTE,
Russian Minister of Finance.

Russian papers appear to have been taken by surprise, and, in general, express a hope that the difference may be adjusted without disturbing the cordial relations of the two countries. The *Bourse Gazette* (St. Petersburg), which usually has the confidence of the Minister of Finance, warns both sides to the controversy that tariff wars may interfere with good political relations. Says this journal: "We hope the friction will be removed as quickly as it arose, since the political re-

lations now existing between the two powers are the best they have ever known. Both are playing the game of the *tertium gaudens* [referring to Germany], which is preparing a blow against both. Doubtless American public opinion is wiser than the sugar producers and the Government that is acting in their interests."

The *Journal de St. Petersbourg* (published in French), another semi-official newspaper, points out that attempting "to prove at any price that alleged secret premiums are concealed by the Russian sugar régime" is "walking in a slippery path." It continues:

"If Russia employed the same logic, she would, with even greater justification, be forced to impose countervailing duties on cast-iron, steel, copper, and other American products. . . . She would also be perfectly justified in applying this new procedure, not only against the United States, but also against Western Europe, inasmuch as this singular idea of secret premiums originated in no way with the United States. It was first announced by Europe at the Brussels Conference of 1898, and it is this scheme—for which Europe is responsible—that Russia must thank for an iniquitous act on the part of the friendly United States."

The *Novosti* (St. Petersburg), which is opposed to the principle of protection, declares that, had such a difference arisen before the closing of Vladivostock as a free port, the United States Government might have been apprehensive of evil results; but now "the business relations of the two countries are insignificant." Altogether, concludes the *Novosti*, the present incident "furnishes an additional reason for hoping that the Russian people will be freed from the special tribute imposed upon them for the express purpose of keeping alive many rotten sugar refineries."

The St. Petersburg correspondent of the London *Times* declares that it is generally believed in the Russian capital that M. de Witte (Russian Minister of Finance), whom Henry Norman calls "probably the ablest and most far-seeing statesman in Europe to-day," is not aiming at the United States, but is merely eager to seize an opportunity to mobilize Russia's industrial army, with a view to proving its ability to stand the test of a tariff war, and that he is even more desirous to impress Germany than the United States.

The German press finds cause for gratification. Says the *Boersen Zeitung* (Berlin): "Now that the Russo-American tariff war has begun, Germany can easily supplant America in the importation of machines into Russia." The (German) Bureau for the Preparation of Commercial Treaties, in the course of a special circular in which Russo-American relations are fully explained, concludes by saying: "Germany, above all, ought to rejoice if, by such a clumsy proceeding against Russia, the further monopolization of the Russian markets by the United States is stopped." *The St. James's Gazette* (London) thinks that Americans are getting only what they deserve. It says: "Some Americans, including Secretary Gage, appear to think that the United States has the monopoly of the protection policy; but they have been sharply reminded by Russia that two can play at the game of hostile tariffs, as the import of Russian sugar is a trifle compared with the exports to Russia. The present game of retaliation is one in which Russia holds the best cards. Therefore she will win most of the tricks."

The Canadian papers rejoice at the setback Uncle Sam is assumed to have received. Russia has responded to the commercial rapacity of the United States, says the Toronto *World*, "in a way that does credit to the business acumen of Minister de Witte and to the patriotic instincts of the Russian people. . . . The policy just adopted by Russia is the one that Canada should have adopted years ago. It is only by the adoption of such a policy that Canada can ever hope to receive fair play from the United States."

Despite the free-trade folly of England, says *The Telegram* (Toronto), the European nations are "not wedded to free-trade idols, and they can not see why the tariffs which govern the purchase of foreign goods by the United States should not govern the sale of American products to foreign peoples."

In a bitter arraignment of the protective policy of the United States, *The Witness* (Montreal) says:

"There necessarily comes a time when even the most tolerated protective system runs to seed. It comes when the protected industries, having secured the whole of the home market, have spread out into and become dependent on foreign markets. Of course the protected interests see no incongruity in selling at home at three times the price at which they sell to foreign nations. There is a limit, however, to the tolerance of the flock which has been folded to be thus fleeced. Apart from that there is often a limit at which foreign powers will not consent to be excluded without retaliation and there is a limit to what protected interests are prepared to suffer in each other's behalf."—*Translations made for* THE LITERARY DIGEST.

## IS THERE A WAY OUT IN SOUTH AFRICA?

"PEACE with honor" is now the cry of a large and increasing section of the British press. The London *Daily News*, which has recently come under new management, is conducting a vigorous campaign "for a policy other than 'drift,' and a statesmanlike way out of the South African horror." Says *The News*:

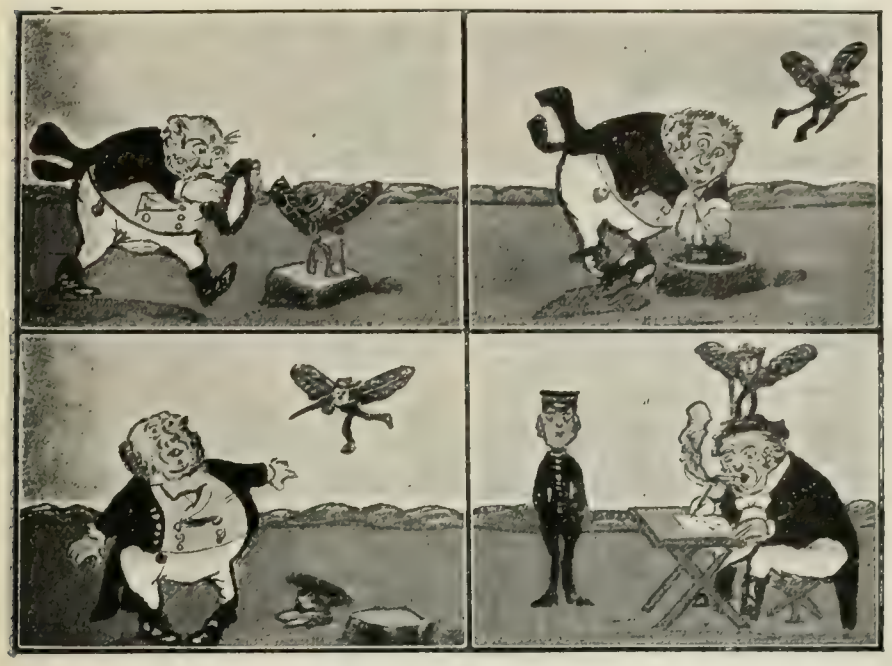
CHAMBERLAIN: "What fine fertilizer these would make for my plantation!"
—*Novoye Vremya, St. Petersburg.*

"We have occupied the chief towns for many months, worked our will on the population by military methods, issued a long series of barely intelligible and mutually contradictory proclamations, transported a large number of men to St. Helena and Ceylon, and imprisoned women and children in camps after destroying their homes and slender means of subsistence; but as for governing the country or bringing it near the time when military rule, with all its harsh expedients, will give place to a more or less orderly civil administration, we have not advanced, nor, so long as the present methods continue, are we likely to advance a single step."

Fight to a finish, it continues, means loss of the Cape. Why not make terms with the Boers, for "there is neither glory nor honor for us in this business"? The problem can not, it holds, be solved by mere force. "The idea that the Dutch can be treated like the Kafirs, and kept in subordination, is a grotesque and fantastic dream. . . . We may be well assured of one thing. We may pour yeomanry into South Africa and set our teeth doggedly against losses, but until South African matters are taken in hand by men who have some statesmanlike insight into the elements of the problem, we shall be no nearer to a settlement, even tho we should add 30,000 to the 30,000 men now called for, and pour another 100,000 into the abyss of wasteful extravagance and incompetence."

"Calchas," writing in *The Fortnightly Review* (February),

declares that, while there can be no cheap solution of the difficulty, "unless the empire can settle the question there will be danger sooner or later of the question settling the empire." The remedy of restoring independence to the republics, he holds,



THE DE WET HUNT: A GERMAN FABLE.

1. Gently, now. 2. Got him! 3. Good Gracious! 4. Enemy disappeared. —*Wahre Jacob.*

"can not be tried, because it has been tried before and could only come again as a forced concession of the most reluctant and ignominious kind. . . . Magnanimity can not be pleaded this time even by way of cant, and, of all possible ways—and there are several—of ultimately losing South Africa, restoring Boer independence is the most certain." For the Boer ideal of local independence, "we must substitute from the outset that ideal of a united and organic South Africa which is the only one that even the Boer must acknowledge to be in at least some respects greater than his own. . . . The only moral means of superseding the passionate adherence of the Dutch as a whole to the local independence of the republics will be in the creation of an Afrikander commonwealth under the British flag."

By the fortune of war, the British have become the responsible race before the world. "Calchas" declares that, because of this fact, the only security for both Briton and Boer must con-

DEWET: "And they wonder how it is done!" —*The Owl, Cape Town.*

tinue to be, for an extended period, what it is now—strong military possession. A constructive program, he admits, is very difficult to offer, but he gives the following outline:

"The restoration of the burghers to the land must no doubt be preliminary to further steps, and whether ruined farms should be rebuilt and restocked at the expense of the empire is a point by no means clear of difficulty. If assistance were given as a bonus in cash or even in kind it might be taken as a sop by a people who have unfortunately shown themselves strangely apt at misconceiving the motives of concession on our part. If the aid were given as a loan, its repayment would be an irritation, and would probably turn bitter memories into an illogical sense of present grievances. To dump down, on the other hand, the returned prisoners upon the saddening scene of their wrecked and silent property would certainly provoke, and in the Orange Free State above all, resentment rather than repentance, and would be the unlikeliest way in the world to persuade Boers to become good subjects. There can be little doubt that we shall take the more generous course."

The crux of the whole question, he concludes, is to be found in this problem: "To place the Boers in the position of the South in the [American] Civil War, and to make every suggestion of renewed revolt an attack upon the organic system of South Africa. This alone would turn the balance of moral weight far more clearly in our favor in the eyes of all the world than it has ever appeared during the war."

We must find a way out, says *The Speaker* (London), and we must find it soon. In the opinion of this journal, another year of war in the Transvaal would mark "the moral insolvency of the empire; it would mean failure, portentous and undisguised, in a test and crucial case for the whole system of British government." "Does any man in his senses," it asks, "want to see Cape Colony, the Transvaal, and the Orange State converted into another Alsace-Lorraine, with a soldier to mount guard over every civilian?"

In an article on "England, the Transvaal, and the Opinion of Europe," the *Journal des Débats* (Paris) makes light of the English fear that a solution of the difficulty without further recourse to arms would mean loss of prestige to Great Britain. Nothing of the kind would take place, says this journal. To have sought peace after any of the great reverses of Tugela, Stormberg, or Magersfontein, would, of course, have been construed as "a confession of powerlessness." But now that England has "reestablished the honor of her arms at Ladysmith, Kimberley, and Mafeking, and proved her power of attack by the capture of Bloemfontein and Pretoria, there is no exaggeration in saying that the honor of the British arms is safe." Moreover, it is no longer war, but guerilla contests, and in such matters, it is not a question of military prestige, but of material interest.

A BAD ADVISER.

PAUL KRUGER: "When I told those two fool republics to put their heads in the lion's mouth, I didn't expect they were going in boots and all." —*Toronto Telegram.*

The *Handelsblad* (Amsterdam) points out that, tho England still has plenty of money, she is discovering that money is not everything. Why not try a little diplomacy? asks this journal. "De Wet and Botha, Steyn and Hertzog, De la Rey and Vilgoen will probably convince the English in their own effective way

that the Government of Great Britain is wrongfully stubborn. A bloodless victory must first be won in England; the diplomats will then be able to mediate."—*Translations made for* THE LITERARY DIGEST.

## INCREASED SIGNIFICANCE OF ANGLO-PORTUGUESE RELATIONS.

THE recent visit of the British fleet to Lisbon and the reference made by the King of Portugal to "England, our ancient ally," has set some of the continental journals to speculating upon the real nature of the *rapprochement* between Great Britain and the little Iberian nation. In a review of Portuguese politics during the past two years, Alcide Ebray declares that an actual alliance exists between the two nations, altho its form he does not attempt to define. We condense his remarks from *La Revue Universelle* (Paris):

It has been generally known for many years that the foreign policy of Portugal is based principally on an alliance with England. This alliance, which once existed openly, has been formally anulled; but there is good proof for the assertion that it still exists in secret. In February, 1899, the journals of Lisbon published a document intended to show that an effective alliance exists to-day. This document was a despatch addressed by Lord Granville, chief of the British Foreign Office, under the date of February 19, 1873, to the British minister at Madrid. This was eight days after the proclamation of the Spanish republic. It was a statement informing the British minister that the Spanish ambassador in London had been notified of England's intention, should the Spanish Republicans attempt to annex Portugal, to defend that country, "by virtue of the interests which are common to the two nations."

Since that time, it would almost seem that England regarded Portugal as an enemy; but the deference of Portugal to England during the Boer war and the regard displayed by the latter for the former, would seem to indicate that, if the alliance between the two nations was ever actually dissolved, it has, to all intents and purposes, been reestablished in some real form.

The advantages of such an alliance to both countries are set forth at length by the *National Zeitung* (Berlin). We quote:

"Even during the Napoleonic wars, when France possessed only the Isle de France, she planned an attack on India. In 1808 Napoleon wanted to throw 30,000 men into India; but the rise of Spain, the war with Austria, and the enmity of Russia prevented him from executing his plan. To-day, when Madagascar is in French hands, an attack upon India appears still more possible, and Delagoa Bay alone can be utilized to neutralize Madagascar. But this is not the only cause of British anxieties. There is not the slightest doubt that France is doing her best to obtain overpowering influence with Spain, and Russia is strongly interested in these endeavors. This is all the more important as the relations between Spain and Great Britain are not as cordial as they were before the Spanish-American war. Great Britain is continually accused of wishing to obtain Spanish possessions, especially Minorca, which the English once possessed for a time in the eighteenth century. Minorca would certainly be an ideal point of defense against Toulon. The rumor that Russia wishes to obtain Ceuta, in order to neutralize Gibraltar, is not likely to turn British attention from the subject." . . . . .

The road to India lies along the Portuguese coast, and as long as this is neutral, the British fleet has a much easier task in defending communications. For the British Channel squadron is not only intended to guard the Channel; it must also keep open the communication with Gibraltar. Without this, the Mediterranean fleet would be isolated. Great Britain, therefore, can not afford to see the abrogation of Portuguese sovereignty."

An extended history of Anglo-Portuguese relations is given in *The Friend of India* (Calcutta). The alliance between England and Portugal, says this journal, is more than five hundred years old. It dates from the year 1373, when King Edward III., of England, and King Ferdinand, of Portugal, "entered into a definite treaty for an offensive and defensive alliance, to maintain and uphold each other mutually by sea and land against all men that may live or die." This treaty, we are told, was republished in 1898 by the British Foreign Office and declared "still obligatory." Other treaties were concluded, amending or confirming this original compact, in 1386, 1642, 1654, 1660, and 1661. All these treaties were expressly confirmed in the agreement signed at Lisbon, in 1703, by which Great Britain and Holland bound themselves to "guarantee Portugal against all attack from France or Spain." The omnibus treaty of Vienna, in 1815, declared that "all preceding treaties between Great Britain and Portugal are hereby acknowledged to be of full force and effect." The result of the war in the Transvaal, concludes *The Friend of India*, has made it more than ever important to England to work in harmony with Portugal.—*Translations made for* THE LITERARY DIGEST.

## CORRESPONDENTS' CORNER.

### Is Mohammedanism Growing?

*Editor of* THE LITERARY DIGEST:—I have read with interest Mr Mann's article in THE DIGEST for November 17, on "Rapid Spread of Mohammedanism." As I have recently returned from a five years' residence in Burma and have with me the official data of the census of 1891, I feel compelled to correct Mr. Mann's very misleading statement in regard to the spread of Mohammedanism in that province. One would infer from his statement that the increase was entirely due to *conversions* among the Buddhists on other religions in Burma, whereas, as a matter of fact, the Mohammedans make no converts at all.

The increase in the number of Mohammedans in the census is due to two facts: 1. The census of Upper Burma, annexed in 1885, was taken for the first time in 1891, which added 76,552 natives of India to the population. Probably 60 per cent. of these are Mohammedans, which alone would account for the increase. 2. The increase of Mohammedanism not traceable to this cause is entirely due to *immigration* from India proper. These immigrants number in the whole of Burma 432,639. Of these 210,049 are Mohammedans. To the same cause may be traced the increase of 13 per cent. in Assam mentioned by Mr. Mann. In Burma, Buddhists comprise more than 90 per cent., Mohammedans 3⅛, nat-worshipers and Hindus about 2¼, and Christians about 1¼ per cent.

The grand total of the Indian empire as taken at the census of 1891 showed an increase of 12.34 per cent. for the decennial period. So that on the whole the increase of Mohammedanism has little more than kept pace with the growth in population, according to Mr. Mann's own showing.

HARVEY, ALBERT CO., N. B. M. E. FLETCHER.

### The Divining-Rod Delusion.

*Editor of* THE LITERARY DIGEST:—I was greatly interested in the article appearing in your edition of December 22, under the head of "The Divining Rod." While able writers in our best magazines seem to concede occult powers to the "dowser" and are spending valuable time of societies of psychical research in trying to discover the sources of this remarkable power, it strikes me that the most remarkable thing about the whole affair is the ignorance and credulity of the people who believe in it, and the utter lack of observation or reasoning on the part of the public generally.

*The Guardian* considers it very remarkable that the "dowser" is able to find water in 85 to 90 per cent. of his trials, and that there are well-diggers who will undertake to dig wells upon a contract of "no water no wages." Here in Lancaster County, and, in fact, all over southeastern Pennsylvania, our farms average about seventy acres to the farm; and on pretty nearly every farm there is one well, in most cases two, and in some instances three or four. In this section, in several of the counties, the old German population predominates, the language as well as many of the old beliefs and superstitions of the fatherland of a hundred and fifty years ago prevail, and yet they have long since discovered the hidden key of "the water-smeller's" knowledge and discarded his services. There was a period in our history, dating back fifty years or more, when this belief in his power found followers here; and we yet see the relics of it occasionally in wells and pumps set off in the corner of a garden or orchard or some other out of the way and ridiculous place, far from the house; but they were dug many years ago, and are now being rapidly abandoned.

Now when we dig a well we do not hunt the "water-smeller" or make any inquiry as to where we may find water; but the only question is in what place will it be most convenient to have the pump; for we have long since discovered the truth *that we will get water wherever we dig for it.* The depth to which we will have to go is governed mainly by the height of our location above the level of the nearest running surface stream; growing less in proportion to that height as the distance of the location of the well is greater from the stream. There is not a well-digger to my knowledge that will not dig you a well at any point you designate and agree to a contract of "no water no wages." More than that, if you desire he will level the ground for you, and tell you within ten feet of just what depth you will have to go; and yet he makes no pretense whatever to any occult power, and he would hardly know a hazel twig if he saw one.

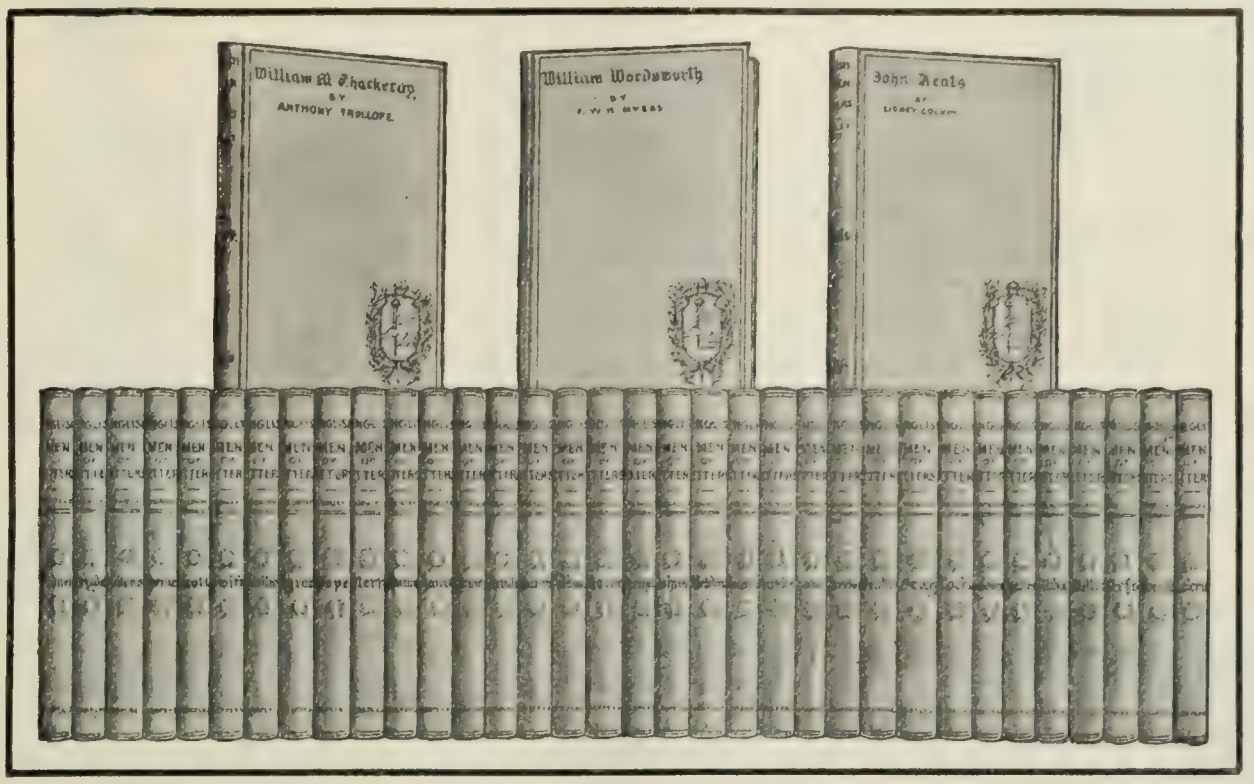
LANCASTER, PA. D. F. MAGEE.

# English Men of Letters Series

## Edited by JOHN MORLEY, M.P.

**A Series of Brilliant Biographies of the Greatest Writers in the English Language**

THE ENTIRE 37 VOLUMES SENT ON RECEIPT OF $1.00



SPECIAL CLUB PRICE FOR LITERARY DIGEST READERS

# These Books will be sent you for $1.00

Payment thereafter to be made at the rate of $2.00 a month for nine months.
Cost to you per volume, about 50 cents.

The "English Men of Letters" Series includes the life of nearly every great writer in the English language from Chaucer to Dickens. It is edited by the greatest living English historian. In a catalogue of best books for a library, selected by the American Library Association and shown at the World's Fair, ALL the volumes of this series were included. Here are some points about the books:

1. There are 37 volumes in the set; average number of pages, 224.
2. They are all substantially bound in cloth.
3. They are printed on good paper from good plates.
4. The size of cover is 5¼ x 7½ inches.
5. The books will occupy 3 feet of space of your shelves.
6. They constitute an entire library in themselves.
7. The books are themselves the work of some of the greatest English writers and scholars.

### THE TITLES OF THE BOOKS

| | |
|---|---|
| Geoffrey Chaucer. | Edmund Burke. |
| Edmund Spenser. | William Cowper. |
| Sir Philip Sidney. | Edward Gibbon. |
| Francis Bacon. | Richard Brinsley Sheridan. |
| John Milton. | Robert Burns. |
| John Bunyan. | William Wordsworth. |
| John Dryden. | Sir Walter Scott. |
| John Locke. | Samuel Taylor Coleridge. |
| Daniel Defoe. | Robert Southey. |
| Richard Bentley. | Charles Lamb. |
| Jonathan Swift. | Walter Savage Landor. |
| Joseph Addison. | Percy Bysshe Shelley. |
| Alexander Pope. | Thomas De Quincey. |
| Henry Fielding. | Lord Byron. |
| Samuel Johnson. | John Keats. |
| David Hume. | Thomas Babington Macaulay. |
| Laurence Sterne. | William M. Thackeray. |
| Thomas Gray. | Charles Dickens. |
| Oliver Goldsmith. | |

*These biographies are the work of such men as James Anthony Froude, Austin Dobson, J. A. Symonds, Goldwin Smith, Anthony Trollope, and Thomas Huxley.*

**OUR OFFER** We will send you the entire set of thirty-seven volumes, charges prepaid, on receipt of $1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the $1.00. If you do like them, send us $2.00 every month for nine months.

In order to keep you in touch with us during these months, on receipt of your request for these books we will enter you as a subscriber to either HARPER'S MAGAZINE, HARPER'S WEEKLY, or HARPER'S BAZAR for one year, without any additional cost to you. In writing, state which you want. Address

## Harper & Brothers, Franklin Sq., New York City

# The Ostermoor Patent Elastic Felt Mattress, $15.

TRADE MARK.

## Is Good Enough For You

(Even if you have to count your pennies), because it is good enough for such men as

| | |
|---|---|
| Wm. K. Vanderbilt | George H. Daniels |
| C. Oliver Iselin | James Gordon Bennett |
| John Jacob Astor | Charles Warren Lippitt |

and scores of others of equal prominence, who have adopted it for their homes, their yachts, or both (a complete list in our book, mailed free). These men don't have to count their pennies, and could *afford* hair mattresses if they thought they were better—the matter of $15 or $50 is not what sells our mattress. It is the QUALITY and this guarantee:

**SLEEP ON IT 30 NIGHTS**

And if it is not even all you have *hoped for*, if you don't believe it to be the equal in cleanliness, durability and comfort of any $50 hair mattress ever made, you can get your money back by return mail—"no questions asked."

**U. S. Judges Chambers, New York City**

*Addison Brown, Judge.*

February 20, 1900.

GENTLEMEN:—The Patent Elastic Felt Mattresses you made for me *fifteen years* ago have been *in constant use ever since and are still good.* I am well pleased, and entirely satisfied in every way. ADDISON BROWN.

**HANDSOME BOOK MAILED FREE**

Remember that fully one-third of your life is *spent in bed.* **HARD BED, HARD LIFE.** And that is the reason why our 72 page book, "The Test of Time," should be in the hands of every one. Send a postal card request and the book will be in your home by return mail, FREE, whether you need a mattress or not.

## CURRENT POETRY.

### In An Egyptian Garden.

By CLINTON SCOLLARD.

Can it be Winter otherwhere?
  Forsooth, it seems not so!
The moonlight on the garden square
  Must be the only snow,
For all about me, fragrant fair,
  The blooms of Summer blow.

Wine-lipped and beautiful and bland,
  The rose displays its dower;
The heavy-scented citron and
  The stainless lily tower;
And whiter than an houri's hand,
  El Fûl, the Arab flower.

In purple silhouette a palm
  Lifts from a vine-wreathed plinth
Against a sky whose cloudless calm
  Is hued like hyacinth;
And echoes with a bulbul's psalm
  The jasmine labyrinth!

In life's tumultuous ocean swell
  Here is a charmèd isle;
I hear a late muezzin tell
  His holy tale the while,
And like the faint note of a bell
  The boat-songs of old Nile.

Across my spirit thrills no theme
  That is not marvel-bright;
I see, within the lotus, gleam
  The nectar of delight,
And tasting it, I drift and dream
  Adown the glamoured night!

—In March *Smart Set.*

### Vox Poverty.

By WILLIAM J. LAMPTON.

Behold me,
Oh ye
Who hunger after gold,
Or to be the mold
Of fashion;
Who have a passion
To own all
They can of this big, round ball,
Called Earth;
Ye, to whom the dearth
Of anything it gall
And wormwood; say,
Get onto me,
I'm Poverty;
And I am gay
While you are glum;
By gum,
My money doesn't bother me,
And my brain isn't sore in the exercise
Of chasing around to find a prize
Of investment paying ten per cent.
On stocks or bonds or houses to rent;
And I'm not ugly and sour and blue
Because I have got a million or two
That doesn't bring in a revenue
As large as I think it ought; and I
Ain't frightened to death for fear I may die
And lose what I've got,
Oh no, I am not
That kind at all,
And I don't scare at a fire alarm,
For I've got nothing that fire will harm;

# Pears'

Only they who use it know the luxury of it.

Pears' is the purest and best toilet soap in all the world.

## New Suits and Skirts for Easter.

WE are enthusiastic about our Spring Catalogue, because never before have we shown such attractive Suits and Skirts at such very low prices.

We make every garment to order, and as our designs are exclusive, you do not run the risk of meeting other ladies wearing garments which look exactly like yours.

Our Catalogue illustrates:

**Tailor-Made suits, $8 up, Visiting Costumes, lined throughout with excellent quality taffeta, $15 up. New Skirts $4 up. Rainy-Day Skirts, $5 up. Wash Skirts, $3 up. Wash Dresses, $4 up.**

***We pay express charges everywhere.***

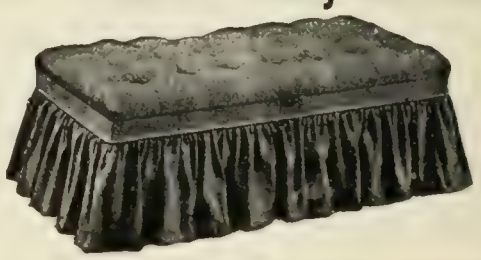
You may order from us with perfect freedom, because if what you get does not fit and please you, you may send it back, and *we will refund your money.* Catalogue and Samples of the materials from which we make our Suits and Skirts are now ready, and we will send them *free* by return mail.

**THE NATIONAL CLOAK COMPANY,**

**119 and 121 West 23d St., New York.**

*Direct From Our Factory*

## The "Graeme" Handy Box Seat



**$5.70** Buys this elegant **Box Seat**, direct from the factory, freight prepaid. To be returned at our expense if you are not greatly pleased with it. Handy for any room in the house, or for the office. At retail it would cost **$10.00** to **$12.00.**

**Upholstered** with the finest moss, deep tufted, and covered with Gobelin Art ticking and Art denim in all colors, both plain and figured goods. Samples sent on request. **Trimmed** with brass beading and brass nails and is fitted with smooth running castors. Box prettily lined with contrasting colors. Has loop to lift the cover and strap to hold it when up. Size, 36 x 17 x 14 inches high. Made in any other size desired and in many popular, artistic coverings. Write for prices. **We Prepay Freight** to points east of the Mississippi and north of South Carolina. Points beyond equalized. Write for our catalogue showing **Window Seats, Hall Seats, Shirt Waist Boxes, Cozy Corners, Wardrobe Lounges,** etc.

**Graeme Mfg. Co., 34 S. Ionia St., Grand Rapids, Mich.**

## PIANO Do You Want a Genuine Bargain in a Piano?

We have hundreds of **Upright Pianos** returned from renting by persons moving which must be disposed of at once as we cannot make room for them in our salesrooms. These pianos include Steinways, Knabes, Fischers, Sterlings and other well known makes. Many of them cannot be distinguished from new, yet all are offered at an enormous discount from prices when new. Uprights as low as $100. Very easy terms of payment to reliable persons. It would probably cost about $5 for freight to have one of these pianos shipped to you. New large size mahogany pianos, with mandolin attachment, $175, sent anywhere on easy payments. Write at once for complete list and full particulars. You can make a great saving by securing your piano from us. Every piano warranted exactly as represented. **LYON & HEALY, 46 Adams St., Chicago.**

*The World's Largest Music House.*

And panics don't bother;
And mobs don't curse
At the size of my purse;
I don't get drowned
From the deck of a yacht,
And cranks ain't after me
For what I have got;
And a horse doesn't fall
And break my neck,
And nobody forges my name to a check.
I don't over-eat
Enough to kill,
And kick like a steer
At a doctor's bill;
And I don't wear my nerves
To a frazzle
Trying to shine in the social dazzle,
With an income less
By a thousand or so
Than the outgo is
To maintain the show.
The trusts
May bust
And the Octopus may
Be peremptorily and permanently chased away,
But it's nothing to me,
For I have a kind of security
That nothing can shake,
And I'll be on deck
If the whole darned shooting-match
Goes to wreck.
Oh, I've got a snap,
And my peace of mind
Is as much to me
As the other kind
Get out of their money;
And why should I care
About rents and rates?
They don't charge admission
At the Pearly Gates

## PERSONALS.

**The Prince of Wales and the French Comedian.**—Edward VII., when Prince of Wales, was a frequent patron of the French drama, and to his intervention was due the permission to perform several French plays previously prohibited in England.

*The Courrier des États-Unis* publishes an account, by the actor Fréderic Febvre, of the graceful way in which the Prince once showed his appreciation of the comedian's art.

"I had noticed," says M. Febvre, "that his Royal Highness, when he did us the honor to attend the Comédie Française, was compelled to leave the theater to enjoy a cigarette. A committee room was therefore transformed into a reception and smoking room for the Prince, who seemed much pleased by this attention.

"One evening at a performance of Feuillet's 'The Sphinx,' he asked one of his friends—who repeated the conversation to me—how he could repay me for my trouble.

"'If we had a decoration for artists in England,' said the Prince, 'I would confer it on Febvre with great pleasure, but as there is none I am perplexed. To buy something to give him would be *banal.* If I should give him my cane do you think he would like it?'

"'There is no doubt of it,' the friend answered.

"After the third act, when the Prince came to the foyer to thank the artists, after complimenting Sarah Bernhardt and Croizette, he turned to me and said:

"'My best compliments, Monsieur Febvre; your Englishman is quite up-to-date, and I am much obliged to you for not making him speak the intolerable jargon usually given my fellow countrymen on your stage. Your costume and appearance are quite correct. Only one thing might be improved—your cane.' Permit me to offer you mine. If the fact will give it any value to you I

may add that the cane and I have seldom been separated—it has even been to India with me.'

"When I thanked him for the precious souvenir the Prince added, with a smile:

"Oh, but you must carry it on the stage"—an order with which the actor cheerfully complied.—*Translation made for* THE LITERARY DIGEST.

## MORE OR LESS PUNGENT.

**Cleanliness.**—"Waiter, this water is very dirty." "I am vaire sorry, but ve can not be expect to wash ze water, zare."—*Tit-Bits.*

**She Stops.**—SOULFUL YOUTH (at the piano): "Do you sing 'For Ever and For Ever'?"

MATTER-OF-FACT MAIDEN: "No, I stop for meals."—*Tit-Bits.*

**And Papa Pays for Cooking Lessons!**—DAUGHTER HOUSEKEEPER: "Oh, Papa! would you mind having cold mutton for dinner, as I have to attend my cookery class?"—*Moonshine.*

**Somewhat of a Puzzle.**—WIFE: "John, here is a picture I took of you with my kodak."

HUSBAND (after looking at it): "Great Scott! What did you take me for, my dear?"—*Smart Set.*

**A Typographical Error.**—A young lady wrote some verses for a local paper about her birthday, and headed them "May 30th." It almost made her hair turn gray when it appeared in print "My 30th."—*Tit-Bits.*

**Sponge Cake.**—MISTRESS: "Do you call this sponge cake? Why, it's as hard as can be!"

NEW COOK: "Yes, mum; that's the way a sponge is before it's wet. Soak it in your tea, mum."—*New York Weekly.*

**In Germany.**—THE COUNT: "Dear me, Baron, your face! Dueling again, at your age and so recently married?"

THE BARON: "Ach, no! it is my American wife. She makes me eat with a fork!"—*Life.*

**His Furniture.**—FIRST STUDENT: "I've been up to Professor ——'s room, and do you know he's hardly got a bit of furniture in the room?"

SECOND STUDENT: "That's why he sits on our daily themes, I suppose."—*Harvard Lampoon.*

**An Old Instrument.**—VIOLINIST (proudly): "The instrument I shall use at your house to-morrow is over two hundred years old."

PARVENU: "Oh, never mind! It's good enough; no one will know the difference!"—*Tit-Bits.*

**Novel Writing.**—RUSHER: "I can write a novel in a month, but I can't sell it in five years"

BIGHEAD: "Perhaps if you reversed the process you might succeed. If you wrote a novel in five years you might be able to sell it in a month."—*Life.*

**Quite in Agreement.**—BOY: "Please, sir, the squire's compliments, and 'e sends me to say that 'e doesn't like skating on this pond."

MAN (who has just fallen): "Well, give your master my very kindest regards, and tell him that I don't either."—*Moonshine.*

**At the Party.**—CLARENCE COONLEY: "What's yo' goin' to cook, Miss Mokington?"

MISS MOKINGTON: "A Welsh rabbit."

CLARENCE COONLEY (eagerly): "Would it be askin' too much, Miss Mokington, to save de left hind-foot fo' yo's sincerely?"—*Puck.*

**All Eaten.**—TEACHER (inculcating the "try-try-again" maxim): "If the Arctic explorers keep trying, year after year, to discover the North Pole, what will eventually happen? Well, Johnny?"

JOHNNY UPTONOW: "The Eskimo dog will become extinct."—*Puck.*

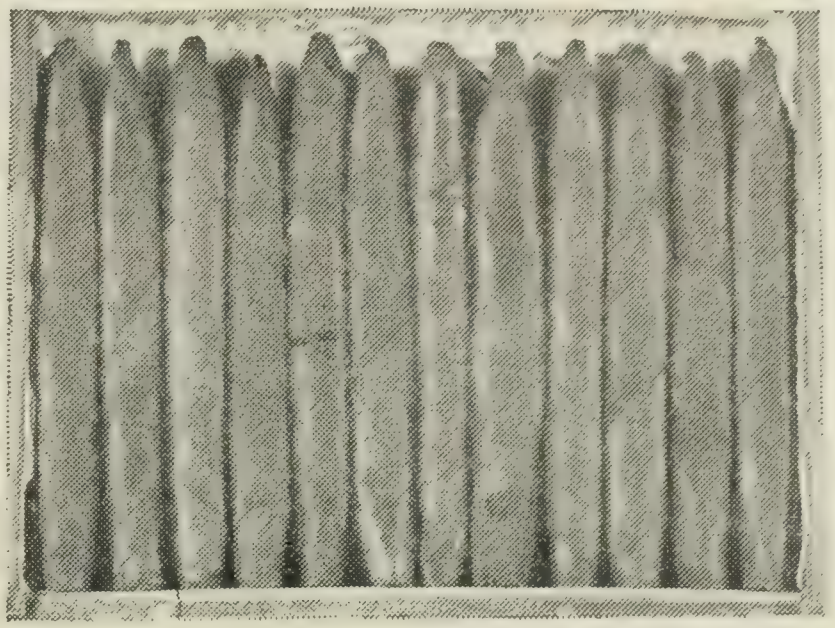
to the Address of any smoker.



This cut is about half size both ways. The cigars are twice as long (less ¼ inch).

Photo of cigar showing the fine, smooth, delicate flavored wrapper stock.

# A PROGRESSIVE BUSINESS VENTURE

In all the enterprise and liberality of modern progressive business methods, nothing from a well known, highly rated wholesale house has ever equalled this proposition:

# SEND NO MONEY

but if you are a regular smoker, write at once for a box.

One of the factories we represent as wholesale distributors to all trade has placed in my hands over two millions of a certain cigar packed in salesman's sample boxes, with which—while they last—we are booming sales for the goods by Complimentary Distribution among smokers direct.

For some weeks announcements have appeared in the Chicago papers inviting all callers to try these samples at our expense. Though expensive, it has been the most effective advertising ever done in this country. It has forced almost at once an enormous sale locally, and we are now extending the offer to smokers at a distance who are asked only to pay the amount exp ess companies would charge for delivery—25 cents. I insure 25 cents covering all cost whatsoever of placing a sample box in any smoker's hands, anywhere in the U. S. Not a cent beyond this is incurred. All we want is a trial of the goods. It may surprise you, but it is a frank, square, open invitation—and it sells goods in enormous quantities. It is a case of merit pushing itself.

Send no money, but if you are a smoker and able to buy afterwards by full box if pleased with samples, write at once giving your name and address. No minors need apply, and boys representing themselves as adults will be punished, if caught.

**Department A** **197-199 La Salle Street, CHICAGO**

## Current Events.

### Foreign.

CHINA.

March 4.—A cablegram from Peking, received in London, says the foreign ministers have demanded the death of twelve Chinese officials and the punishment of ninety provincial mandarins.

March 7.—Count Lamsdorff, the Russian Minister for Foreign Affairs, gives out an official statement reiterating that the occupation of Manchuria by Russia is only temporary; Count von Waldersee reports that fifty Chinese soldiers have been killed in a fight with a German column.

March 8.—The governments at London and Washington exchange views with the purpose of taking joint action against the absorption of Manchuria by Russia.

March 10.—Prince Tuan and General Tung Fu Hsiang are reported to be preparing to resist arrest with an army of 30,000 troops; Li Hung Chang is reported seriously ill.

SOUTH AFRICA.

March 4.—General Kitchener reports the capture of three guns from the Boers and the surrender of burghers in the Eastern Transvaal; the pursuit of De Wet continues briskly.

March 8.—After a consultation at Pretoria, General Kitchener grants to General Botha an armistice of seven days to enable the Boer commander to communicate with the other burgher leaders; the end of the war is believed to be near at hand.

OTHER FOREIGN NEWS.

March 4.—In the British House of Lords Lord Wolseley sharply attacks the administration of the War Office, and is as sharply answered by Lord Lansdowne, former war secretary.

The names of the exiled deputies, Deroulede and Marcel-Habert, are ordered stricken from the rolls of the French chamber of deputies, after a stormy debate.

March 5.—Count von Bülow, the German Chancellor, speaks in the Reichstag defining the policy of the German empire to foreign nations, referring especially to the Emperor's visit to England.

The Irish members of Parliament refuse to leave the House of Commons when a division is ordered in a matter in which the closure was enforced, and are forcibly ejected amid scenes of wild disorder.

March 6.—Emperor William, driving through the streets of Berlin, is wounded on the cheek by a piece of iron thrown at him by a man supposed to be insane.

A British punitive expedition burns the capitals of two marauding emirs in Nigeria.

March 7.—The United States is reported to have addressed a sharp note to the Danish Government regarding the Danish West Indies.

March 9.—The formal document excommunicating Count Leo Tolstoy is made public at St. Petersburg by the Holy Synod of the Orthodox Greek Church.

### Domestic.

CONGRESS.

March 4.—The LVI. Congress comes to an end, with the usual formalities in both branches; the river and harbor bill, carrying nearly $50,000,000, is killed by the filibustering of Senators Carter and Wellington, but all other appropriation bills are passed; Vice-President Roosevelt calls the Senate of the LVII. Congress to order, and the members take the oath of office.

March 5.—Vice-President Roosevelt presides over a session of the Senate for the first time; a closure resolution is offered by Mr. Platt of Connecticut: the renominations of the members of the former Cabinet are received from the President and confirmed.

March 9.—The extra session of the Senate comes to an end, all the executive business for which it was called having been transacted.

**TO CURE A COLD IN ONE DAY**

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

**FREE TO YOU.** Our latest catalogue of Metaphysical & Occult **BOOKS**

Universal Truth Publishing Co., 87-89 Washington Street, Chicago.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

OTHER DOMESTIC NEWS.

March 4.—William McKinley and Theodore Roosevelt are inaugurated President and Vice-President of the United States, Mr. Roosevelt taking the oath of office in the Senate Chamber and Mr McKinley being sworn in on the main portico of the Capitol; the inauguration parade and ball passed off with much pomp, tho accompanied by disagreeable weather.

The period for the ratification of the Hay-Pauncefote treaty expires.

March 5.—The President names Col. Wm. Carey Sánger to succeed Mr. Meiklejohn as assistant secretary of war; and Robert S. McCormick as minister to Austria-Hungary.

March 7.—The Anderson County grand jury in South Carolina report that their investigation shows the existence of a system of practical slavery in that State.

Governor Stone signs the Pennsylvania "Ripper" bill, thus making it law.

March 8.—The Delaware legislature adjourns without electing Senators to fill the two vacancies in that State, owing to a deadlock.

Rear-Admiral Francis T. Bowles assumes his duties as chief constructor of the navy.

March 9.—Most of the anthracite coal companies announce the continuance until April, 1902, of the wage increase adopted last fall.

Andrew Carnegie gives money for five new libraries, including Springfield, Ill.; Lincoln, Ill.; Davenport, Iowa; Sheyboygan, Wis.; and Cohoes, N. Y.

March 10.—Ex-President Harrison is reported seriously ill at Indianapolis.

AMERICAN DEPENDENCIES.

March 4.—*Cuba:* The Cuban constitutional convention discusses the Senate amendment; the delegates threaten to resign if the United States presses the question of coaling-stations.

March 6.—*Philippines:* The text of the proposed Philippine tariff, as recommended by the commission, is received at Washington; it is similar in its provisions to the Cuban tariff.

The War Department receives from Judge Taft at Manila a highly encouraging report on the condition of the islands.

March 9.—Frank A. Brannigan is appointed treasurer of the Philippine archipelago, and an additional appropriation is made for the improvement of Manila harbor.

March 10.—More than forty thousand natives of Panay are reported to have taken the oath of allegiance to the United States.

## CHESS.

[All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

### Monte Carlo Tourney.

The full score is as follows:

| | *Won.* | *Lost.* | | *Won.* | *Lost.* |
|---|---|---|---|---|---|
| Janowski | 10¼ | 2¾ | Gunsberg | 6¼ | 6¾ |
| Schlechter | 9½ | 3½ | Marco | 6 | 7 |
| Scheve | 9 | 4 | Marshall | 5½ | 7½ |
| Tschigorin | 9 | 4 | Reggio | 4¾ | 8¼ |
| Alapin | 8½ | 4½ | Mason | 4½ | 8½ |
| Mieses | 7 | 6 | Winawer | 4 | 9 |
| Blackburne | 6½ | 6½ | Didier | ¼ | 12¾ |

Janowski lost two games to Alapin and Mason, and he drew with Marco and Marshall. Schlechter lost only two games to Janowski and Scheve, but he had four Draws. Sheve lost three games with two Draws, while Tschigorin lost only two but he had four Draws. Alapin lost only one game, with eight Draws. Mieses lost five games and only two Draws. Didier had only one credit-mark, his Draw with Mason. While Marshall finished tenth and greatly disappointed his friends in America,

## SHAVING WITH PLEASURE

is enjoyed only by those who possess good razors. Our Masterpiece Razor, the razor of the new century, is worth its weight in gold and fully represents what it is marked. We sell a pair of our Masterpiece Razors for $5 00. We sell Razors exclusively; we make them, we grind them, we hone them, put them in good cutting order, ready for the face,—that has been our specialty since 1819.

We use the best material money can buy. Every man in our employ is "an artist in his line." The work comes as near perfection as human ingenuity can make it.

We have no agents, we sell direct to consumer; we deliver free; we warrant every razor to be precisely what we say it is, and have but one price. Our pamphlet, "All About Good Razors," will be mailed to any address upon request.

### Masters' Blunders.

Ordinary mortals are all the time making blunders, that is the reason that they are ordinary; but the masters of Chess are extraordinary folks, and, we do not look for the stupid blunders seen in the skittles of the amateur. Yet they have their lapses, and it is some satisfaction to the man who consistently makes errors, to find the masters doing the same thing. In the Marshall-Tschigorin game (Monte Carlo), Tschigorin played 34 P—Kt 6, and had hard work to get a Draw, whereas he had an easy win by P—R 6. In the Marco-Mieses, the latter conceived a fine combination involving the sacrifice of a R. Marco took the R, and lost. He afterward said; "I wasn't sure that Mieses's combination was sound; if it didn't turn out all right, I was a R ahead." In the Blackburne-Mieses game, Mieses calculated up to a certain point, but Blackburne went a little further, and the Englishman knocked the other man's combination into smithereens. We saw a game, recently, between two very strong players, in which Black gives a R for a B, expecting to win the Q if White takes the R. Now there was one move that Black overlooked, and he lost the exchange. It is so easy not to see lots of things in a game of Chess.

**Stranger Than Fiction**

**A Remedy Which has Revolutionized the Treatment of Stomach Troubles.**

The remedy is not heralded as a wonderful discovery nor yet a secret patent medicine, neither is it claimed to cure anything except dyspepsia, indigestion and stomach troubles with which nine out of ten suffer.

The remedy is in the form of pleasant tasting tablets or lozenges, containing vegetable and fruit essences, pure aseptic pepsin (government test), golden seal and diastase. The tablets are sold by druggists under the name of Stuart's Dyspepsia Tablets. Many interesting experiments to test the digestive power of Stuart's Tablets show that one grain of the active principle contained in them is sufficient to thoroughly digest 3,000 grains of raw meat, eggs and other wholesome food.

Stuart's Tablets do not act upon the bowels like after-dinner pills and cheap cathartics, which simply irritate and inflame the intestines without having any effect whatever in digesting food or curing indigestion.

If the stomach can be rested and assisted in the work of digestion it will very soon recover its normal vigor, as no organ is so much abused and overworked as the stomach.

This is the secret, if there is any secret, of the remarkable success of Stuart's Dyspepsia Tablets, a remedy practically unknown a few years ago and now the most widely known of any treatment for stomach weakness.

This success has been secured entirely upon its merits as a digestive pure and simple because there can be no stomach trouble if the food is promptly digested.

Stuart's Dyspepsia Tablets act entirely on the food eaten, digesting it completely, so that it can be assimilated into blood, nerve and tissue. They cure dyspepsia, water brash, sour stomach, gas and bloating after meals, because they furnish the digestive power which weak stomachs lack, and unless that lack is supplied it is useless to attempt to cure by the use of "tonics," "pills" and cathartics which have absolutely no digestive power.

Stuart's Dyspepsia Tablets can be found at all drug stores and the regular use of one or two of them after meals will demonstrate their merit better than any other argument.

**THE HUMAN HAIR** Its Care and Preservation. By J. R. STITSON, M. Sc.

A scientific study of the causes and prevention of falling hair and baldness. Contains sound advice and counsel. —*New York Times.* Treats the subject completely and sensibly. VOL. XXII., NO. 12 NEW YORK, MARCH 23, 1901. WHOLE NUMBER, 570

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

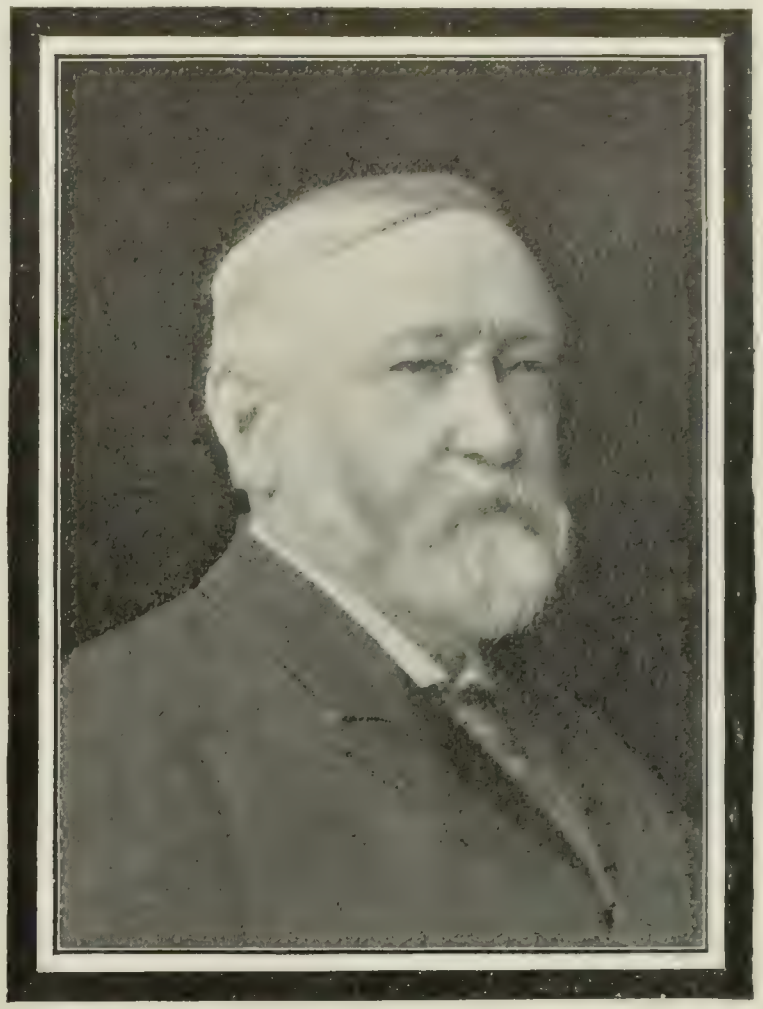
**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### DEATH OF EX-PRESIDENT HARRISON.

THE end of ex-President Harrison's life found him enjoying the respect even of his critics and the attention of the entire American people. Some of his recent utterances—and notably his speech at Ann Arbor—could hardly have roused a wider discussion if he had occupied a high position in the Government, and "whatever may be thought of some of his views concerning pending questions," says the New York *Sun* (Rep.), "no doubt is possible regarding the motives which led him to express them." The New York *Journal*, as strongly Democratic as *The Sun* is Republican, declares that "when the historian of the next century appraises the merits of the Presidents of the United States, it will not be Benjamin Harrison who will be described as anybody's grandson, but William Henry Harrison who will be distinguished as Benjamin Harrison's grandfather."

It was as a lawyer, the newspapers seem to agree, that ex-President Harrison excelled. His gallantry during his three years' service in the Civil War, during which he rose from colonel to brigadier-general of volunteers, is not regarded as notably greater than that of many other Civil War commanders who have gained less distinction since; while his logical, incisive, and sincere methods of thought and speech carried him to the leadership in the Indiana bar; to a nomination for the governorship, which he lost; to a term in the United States Senate, where he attracted the attention of the country; to the Presidency, and, finally, to a position of large influence as a public man in private life. His sincerity is especially dwelt upon. He was not a man of winning personal manner; some papers speak of him as cold and repellent, but "if 'personal magnetism' was denied him," remarks the Hartford *Courant* (Rep.), "he was rich in some more desirable things that do not always go with that curious endowment." And the Baltimore *American* (Rep.) says: "Perhaps the highest eulogy that can be spoken of the dead ex-President is that while he was at the helm no American citizen had any fear for the honor or safety of the country." General Harrison's election to the Presidency in 1888 illustrated one of the possibilities of our electoral system. He received 5,439,853 votes, against 5,540,329 for Grover Cleveland, but, as they were so distributed as to give Harrison 233 electoral votes to Cleveland's 168, the former was declared elected. His administration was marked by the friction with the Italian Government over the New Orleans massacre, the Bering Sea contro-



THE LAST PHOTOGRAPH OF EX-PRESIDENT HARRISON

Taken by Kitchell, Indianapolis, and used through the courtesy of the New York *Journal*.

versy with England, the Chilian affair, negotiations for the annexation of Hawaii, the enactment of the McKinley tariff law and the Sherman silver purchase act, and the defeat of the Lodge federal elections bill. President Harrison was the supreme power in his cabinet, and overruled the efforts of Mr. Blaine, his Secretary of State, to negotiate reciprocity treaties. He was renominated in 1892, but failed of reelection. The New York *Press* (Rep.) says: "That it was his party rather than himself that was defeated in his candidacy for reelection is shown by the almost eager attention accorded by his countrymen to his every utterance since leaving office." His career since the close of his Presidential term is thus sketched in the New York *Times*:

"After his retirement from the Presidency, General Harrison was engaged by the late Senator Stanford to deliver a course of lectures at the Leland Stanford, Jr., University, in California, on constitutional law. He was chosen as counsel to represent Venezuela in the Anglo-Venezuelan boundary arbitration commission. Afterward he was appointed by President McKinley as a member of the international court of arbitration, established by The Hague Peace Conference. He was also prominent in the

Presbyterian councils and was a member of the committee on revision at the time of his death.

"As presiding officer of the Ecumenical Conference on Foreign Missions, held in this city last spring, General Harrison replied to the addresses of welcome delivered by President McKinley and Governor Roosevelt, and his speech on that occasion has been reckoned as perhaps the best speech made during the sessions of the conference.

"During the campaign following the renomination of President McKinley, General Harrison announced his support of the Republican ticket in a letter in which he took sharp exception to the Porto Rican tariff policy of the Administration. After the Presidential election he wrote several articles for magazine publication concerning the relation of the United States Constitution to the territorial possessions acquired during the Spanish war, and he supported by elaborate argument the contention that 'the Constitution follows the flag.' "

Ex-President Harrison was born in North Bend, Hamilton County, Ohio, August 20, 1833. In 1853 he married Miss Caroline Lavinia Scott, and their two children, Russell and Mary (now Mrs. James R. McKee), are still living. General Harrison's first wife died in 1892, and four years later he married Mrs. Mary Scott Lord Dimmock, his first wife's niece, who, with their one daughter, survives him.

**His Last Years Were His Best Years.**—"Consciously or unconsciously, he left the Presidency as one who threw off a great and cramping weight. It was not until he ceased to be the politician and became the citizen, not until the partizan passed into the patriot, that the people got the full measure of the man and felt their debt to him.

"'You can almost hear him grow,' said Lowell of Seward, as the latter's anti-slavery note rose higher and clearer. So the eight years after General Harrison left the White House were for him years of almost audible growth. It was a remarkable thing to be true of any man at his age. His whole mind and character seemed to expand and broaden. His activities as a lawyer were never more vigorous and fruitful. Instead of a merely perfunctory return to his profession, he took it up, not only with the utmost simplicity of an American whom the fact of having held the highest office of the land did not exempt from the duty of earning his daily bread, but with zest and eagerness, flinging himself into legal contests with the energy and enthusiasm of youth. And how he became, for felicity and force combined, our first occasional speaker—winning the highest praise from the foreigners at the Ecumenical Conference for the grace, dignity, and thrilling power of his addresses as presiding officer—how he gave his time and strength to worthy causes, and how, finally, in the last months of his life, he rose above the trammels of party, despised the terrorism of a time of national mania, and with voice and pen fearlessly undertook to correct and guide public opinion in matters of the most vital concern—all this is too fresh in the memories of all to require recapitulation here."—*The New York Evening Post* (*Ind.*).

**"What Shall We Do with Our Ex-Presidents?"**—"He gave an admirable answer to the old question, 'What shall we do with our ex-Presidents?' None surpassed him and perhaps only two since Washington equaled him in this regard. For fifteen years, in the retirement of Monticello, Jefferson, occupied with incessant correspondence with his successors and other statesmen, was the sage of American politics. John Quincy Adams on the floor of the House of Representatives rounded out his service of his country and vastly augmented his Presidential fame. General Harrison became neither an oracle nor a legislator, but he became an active private citizen of the most useful type, holding a place of international distinction in his profession and interesting himself frankly, yet with the dignity and reserve becoming his former high office, in all the public concerns of the American people. His fellow citizens listened to him with a universal respect such as was accorded to no other man in the country by the people, regardless of agreement or disagreement with his views. This profound popular regard was won, moreover, immediately following a time of political warfare, in which he was the target of bitter criticism, and notwithstanding the fact that he was not a man who created enthusiasms and gathered a large personal following. His eminence was distinctly a triumph of intellect and character."—*The New York Tribune.*

**His Sincerity.**—"Disagree with his ideas on the tariff or other moot points as one might, the suspicion that he was doing or saying things for mere effect, and without conviction at the back of them, could not occur to the unprejudiced and independent observer. No chicanery, nor hypocrisy, no double-tongued practise, has been ascribed to Benjamin Harrison. He belonged in character and conduct to the inheritance of the era of American independence; and of late years he had grown old-fashioned along with them. Say, rather, that he had sprung into new vigor, reviving that old atmosphere of honor and liberty, and in his powerful writings concerning our national errors had brought to the front those eternal truths which Cromwell's general and the signer of the Declaration stood for in their days, at a moment when their assertion was most necessary, and his influence most important. Benjamin Harrison's last days have given a worthy emphasis and a strong extension of the radical principles of a democracy. It has been a fit culmination of an honest and capable life."—*The Springfield Republican.*

**A Critical View.**—"History probably will not rank Benjamin Harrison among the great Presidents. Rather will the historian of the future, to whom will be open a truer perspective than is possible to the writers of to-day, incline, in all probability, to place General Harrison in that class of very able men who disappointed their contemporaries and themselves. . . . . .

"We are perfectly prepared to believe that no President ever entered the White House with better intentions than General Harrison. His extension of the classified system of the civil service would have shown conclusively that he had no sympathy with the pettier methods of politics, had any such demonstration been needed; but in the larger domain of national politics he was a partizan. His ideas had been formed under the stress of the Civil War and the anti-slavery agitation, and at that point their development stopped. According to his lights, while he despised the looting of post-offices and clerkships, the more valuable spoils belonged unquestionably to the victors. He made a number of utterly indefensible appointments, which could be regarded only as rewards of dubious men for dubious services, and in the closing days of his Administration found himself opposed, despite his extension of the merit system, by most of those who held the civil-service reform cause dear. He had failed at once to disarm opposition and to rally support.

"Many Presidents have done worse for the country than General Harrison, but no one of them ever did worse for himself. In a popular government unpopular manners in the executive constitute a misfortune for his party. People are too willing to see in them the expression of a cold and grudging nature. In time all the world will know General Harrison better than thus to interpret his lack of 'magnetism.' His manner was not the expression of his nature, but an obstacle to its expression, for his heart was kindly, his life was pure, and he was far more justly generous than were his severest critics."—*The Boston Transcript* (*Rep.*).

**His Ancestry.**—"General Harrison is one of the instances too-rare in American life where the scion of an historic stock continued to make history and add new luster to a name long ago distinguished. His father was a member of Congress from Ohio from 1853 to 1857. His grandfather was the ninth President of the United States. His great-grandfather, after whom he was named, was active and influential in Revolutionary politics and a signer of the Declaration of Independence. For one hundred and fifty years before the Revolution the Harrison family from father to son through five successive generations were prominent and influential in the colony of Virginia. Some of the biographies of Benjamin Harrison trace his descent from Thomas Harrison, one of Cromwell's major-generals, who perished on the scaffold after the Restoration for having signed the death warrant of Charles I. This is an error, for Benjamin Harrison's grandfather, preceded by five greats—Master John Harrison—was settled in Virginia when Thomas Harrison, the regicide, was still a peaceful subject of Charles I. It is not unlikely, however, that the first Virginia Harrison and Major-General Harrison, of Marston Moor and Naseby, were kinsmen. . . . . .

"Tho he came of a Virginia family, his character and temperament were more akin to the old Puritan and Anabaptist stock,

who were uncomfortable to their friends and invincible to their foes and who did not hesitate to kill their King for the glory of God and the good of the Commonwealth."—*The Philadelphia Press.*

## MR. CARNEGIE'S GIFTS AND HIS GOSPEL OF WEALTH.

THE sum of Mr. Carnegie's gifts to about sixty city libraries, to the Carnegie Institute in Pittsburg, and to other public institutions amounted, up to last week, to $11,363,252. Now upon his departure for an eight months' stay in Europe, he gives $1,000,000 more for maintaining three libraries in towns near Pittsburg, $4,000,000 for a relief and pension fund for the employees of the Carnegie Company and other companies in and around Pittsburg, and $5,200,000 for the extension of the free library system in New York City. Simultaneously with these announcements, the Pittsburg *Dispatch* says that "intimate friends of Andrew Carnegie say it is the intention of the steel master to give at least $25,000,000 for the erection of buildings and for the endowment of the proposed technical school of Pittsburg." Whether this last report be correct or not, Mr. Carnegie has said that he has "just begun" to dispose of his wealth, and in his letter "to the good people of Pittsburg" he writes: "I shall have more time now to devote to the Institute and to the Technical School which are in the higher domain of Pittsburg's life, and these I have long seen to be my chief work—the field in which I can do the greatest, because the highest, good for Pittsburg."

The Boston *Transcript* says of Mr. Carnegie's latest benefactions: "The example is worth as much as the gifts. There are many other men gathering in enormous fortunes. Mr. Carnegie is setting up measurements by which the public will henceforth estimate the possessors of those fortunes. That standard will be Carnegie's matchless monument. A new rule of moral responsibility is being established in the modern world to meet its new conditions, and the man of wealth must hereafter be a philanthropic and public-spirited man, else the only effect of his riches will be to prejudice him in the public eye. This is a contribution to the twentieth century not to be measured in millions or billions. It is simply incalculable."

But more interesting than the newspaper comment on Mr. Carnegie's gifts is his own opinion of how the millionaire should use his wealth. In his essay on "The Gospel of Wealth," first published in *The North American Review*, and now republished in book form, he attacks vigorously the prevalent customs of bequeathing wealth to one's children, or for philanthropic purposes. The man of wealth, he argues, should administer his estate for the public good during his lifetime. Bequests of great sums to one's children, he believes, "often work more for the injury than for the good of the recipients," and sums bequeathed by the man of wealth for public uses are in many cases "so used as to become only monuments of his folly." Besides this, "it may fairly be said that no man is to be extolled for doing what he can not help doing, nor is he to be thanked by the community to which he only leaves wealth at death. Men who leave vast sums in this way may fairly be thought men who would not have left it at all had they been able to take it with them. The memories of such can not be held in grateful remembrance, for there is no grace in their gifts. It is not to be wondered at that such bequests seem so generally to lack the blessing." Mr. Carnegie warmly approves "the growing disposition to tax more and more heavily large estates left at death," and he thinks that "it is desirable that nations should go much further in this direction." He declares, indeed, that "it is difficult to set bounds to the share of a rich man's estate which should go at his death to the public through the agency of the state, and by all means such taxes should be graduated, beginning at nothing upon moderate sums to dependants, and increasing rapidly as the amounts swell, until of the millionaire's hoard, as of Shylock's, at least 'the other half comes to the privy coffer of the state.'"

"This, then," Mr. Carnegie says, "is held to be the duty of the man of wealth:

"To set an example of modest, unostentatious living, shunning display or extravagance; to provide moderately for the legitimate wants of those dependent upon him; and, after doing so, to consider all surplus revenues which come to him simply as trust funds, which he is called upon to administer, and strictly bound as a matter of duty to administer in the manner which, in his judgment, is best calculated to produce the most beneficial results for the community—the man of wealth thus becoming the mere trustee and agent for his poorer brethren, bringing to their service his superior wisdom, experience, and ability to administer, doing for them better than they would or could do for themselves. . . . The day is not far distant when the man who dies leaving behind him millions of available wealth, which was free for him to administer during life, will pass away 'unwept, unhonored, and unsung,' no matter to what uses he leaves the dross which he can not take with him. Of such as these the public verdict will then be: 'The man who dies thus rich dies disgraced.'"

Mr. Carnegie names the establishment and endowment of universities, observatories, libraries, art galleries, museums, hospitals, medical colleges, laboratories, public parks, city improvements and decorations, halls for public meetings and concerts, swimming-baths, and church edifices as the best gifts that the man of wealth can give to the community.

His well-known partiality to public libraries he explains as follows:

"When I was a working-boy in Pittsburg, Colonel Anderson, of Allegheny—a name I can never speak without feelings of devotional gratitude—opened his little library of four hundred books to boys. Every Saturday afternoon he was in attendance at his house to exchange books. No one but he who has felt it can ever know the intense longing with which the arrival of Saturday was awaited, that a new book might be had. My brother and Mr. Phipps, who have been my principal business partners through life, shared with me Colonel Anderson's precious generosity, and it was when reveling in the treasures which he opened to us that I resolved, if ever wealth came to me, that it should be used to establish free libraries, that other poor boys might receive opportunities similar to those for which we were indebted to that noble man."

**Utah's Polygamy Bill.**—The news from Utah that the legislature of the State had passed a bill on March 11 which would operate practically for the protection of polygamy aroused considerable surprise and indignation, which were quieted only when Governor Wells vetoed it on the 14th. The bill provided that no prosecution under existing law shall be instituted except on complaint of the husband or wife or near relative of a person accused. "No clearer evasion of the state constitution by which 'polygamous or plural marriages are

GOV. HEBER M. WELLS, of Utah.

forever prohibited' could have been devised," says the New York *Evening Post*; and the Salt Lake *Tribune* declares that the object of the measure was simply to "gradually restore and continue polygamy," and was a "shameless" breach of faith. Governor Wells, in vetoing the bill, said that he yielded to no one in his affection for those of his people who "from the highest motives and because they believed it a divine commandment" entered into the relation of plural marriage, but he gave it as his opinion that the present bill "holds out only a false hope of protection, and in offering a phantom of relief to a few it in reality invites a deluge of discord and disaster upon all."

## GAMBLING AMONG WOMEN.

REV. DR. WILLIAM R. HUNTINGTON, rector of Grace Protestant Episcopal Church in New York City, tossed a bombshell into the woman's camp in his sermon on Sunday of last week before the New England Society of New York. Observing that the New England of to-day is sadly lacking in the old characteristics of Puritan life, he spoke of the good influences women might exert, and asked: "Who can say but that if the 1,500 members of the society exerted their organized influence along right lines we would have a cleaner and a better city?" Then he said, as reported in *The Sun*:

REV. WILLIAM R. HUNTINGTON.

"When women are discussing in their clubs what is the limit of allowable luxuries and are deciding after a vote that there is none except personal inclination, is it not time to call a halt? What are these stories about uncontrollable games of chance? Is it possible that the leaders of society are countenancing games that are contrary to the laws of chance? Is it true that hostesses are found in the higher walks of society who will let young men depart impoverished from drawing-rooms to which they have been invited?

"I do not say that this is true, but if true, I cry shame. Is it true that women of high station are exhibiting jewelry bought with the profits of the gaming-table? Is there anything more infamous than this? What avail crusades by committees of five, fifteen, or fifty, if behind closed doors such things go on as these? Is there not need of discipline to save society? With Sunday losing its sanctity, with marriage degenerating into a fast and loose contract, with pleasure obliterating the landmarks of decency, who shall say there is no need for discipline? I draw my illustrations from the lives of women because they are the custodians of men's morals. Men are what the women make them. The more men desert the church for the clubs, the more woman as the arbiter of morals becomes accentuated. In the life of the Puritan, the matron and the maiden stood out spotless. The spirit of discipline made them what they were. We must have that back if we would have life."

The New York *Sun*, which runs in its Sunday issues a department entitled "The School for Card-Players," and another entitled "The Bridge Whist Table," and which is regarded as an authority on card games, says, in an article in its news columns: "Bridge whist is the game to which Dr. Huntington referred more than any other. The growth of this game this winter has been remarkable. There is a bridge whist fever in town, and it is largely responsible for the increase in gambling among women. Progressive euchre is still played, but it has not the fascination of bridge whist. Prizes and not money are the stakes played for, whereas in bridge whist cold cash is put up just as it is in poker. The very character of the game levels itself to betting far more readily than euchre or ordinary whist." In its editorial columns the same paper calls the game "dangerous" and "pernicious," and says:

"There is every indication that a revival of the gambling passion on a wide scale and as a fashionable mania is proceeding rapidly, and in the very circle of society in which move leaders and members of the committees now engaged in making so much noise about the regular gambling-houses. . . . . .

"It is well, therefore, that the clergy have been called away from exclusive attention to the relative insignificance of public gambling and directed to consideration of the really portentous spread of gambling as a private and fashionable amusement, and that the note of warning has come from a pulpit so powerful and so far removed from sensationalism as is that of Grace Church."

Interesting views are expressed by society women in interviews printed in the New York *Herald* and *Journal*. Mrs. E. Marguerite Lindley, for example, is quoted as saying that "if children were going to gamble when they grew up, as ten chances to one they would, they might as well be taught to gamble at home"; and Mrs. Eugene Clarke is quoted as saying: "If the fashion is not abused, I see no harm in playing for stakes in the home." A number of women also express views on the other side, Mrs. Charlois, for instance, president of the Independent Euchre Club, declaring that "bridge whist for stakes ought not to be tolerated."

**Work for Convicts.**—One of the most serious problems of prison management is how to employ convicts without bringing them into harmful competition with free labor. "The contract system, by which the labor of convicts is hired to contractors," says the Denver *Republican*, "is almost universally condemned. The operation of prison factories by the State is open to a like objection. The result in many cases has been the maintenance of convicts in idleness." There are certain kinds of public work, it maintains, upon which convict labor could be employed with great advantage to the community, and it mentions in this connection the need of irrigation tunnels in the mountainous districts of Colorado, by means of which large tracts of arid land could be reclaimed. The Hartford *Times* suggests farm labor as the most suitable employment for convicts. "Outdoor work has conspicuous advantages for any one," it declares; "but in the case of prisoners it is doubly valuable for reasons which hardly need suggestion." It continues:

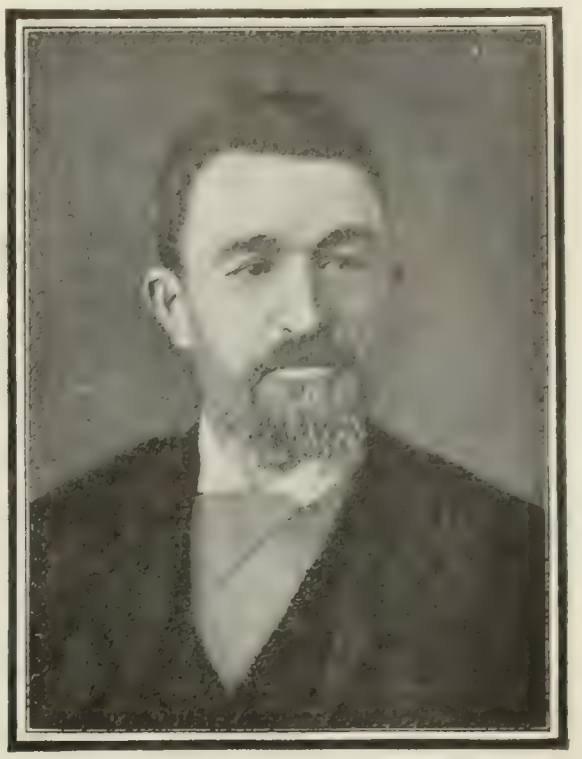
"Men who have yielded to certain temptations of city life, but have even a feeble disposition to go straight in the future if they can, are more likely to succeed in doing so if they live far in the country than if they go back to the place of their former habits and associations. When such go to prison they know nothing of farm work. If they learn it before they come out, the finding of employment is comparatively easy. Nor are they hampered by having a trade that is associated in the common mind with a term in jail or prison. They will not be asked to explain where they learned what they know, because a majority of those who seek farm work have learned it as boys, and in a farming region it is taken for granted that everybody knows the rudiments of the work. . . . . .

"Next to nothing has been accomplished toward carrying out the idea in any complete form. Fragments of what would be a complete scheme have been adopted, but they are only fragments. There is reason to believe that the farm plan leads more directly and hopefully to a wider development in the direction indicated than any other which has attracted attention."

## PEACE NEGOTIATIONS IN THE TRANSVAAL.

PERSISTENT but unofficial reports have been widely circulated to the effect that the Boer leaders are about to accept terms of surrender, or at least are willing to negotiate concerning such terms. The principal figure in these reports is General Botha, the Transvaal commander, and the further "information" is vouchsafed that his readiness to negotiate is largely due to Mrs. Botha's influence. The news elicits comment on the prospective terms of capitulation, and on the costliness of the war to Great Britain and the world. The Buffalo *Express* remarks: "The Boer leaders must, of course, know that any terms will involve the loss of their independence. In consenting to negotiate they indicate that they are prepared to concede this. Having gained so much, the British can well afford to be liberal on other points." Other papers comment on the fact that the names of De Wet and Steyn do not figure in the reports, and their absence arouses distrust. Thus the Hartford *Post* remarks: "It is rather singular that the appeal for surrender should come from the Transvaal Dutch, who were the first to take up arms, and that the most irreconcilable leader to-day is President Steyn of the Orange Free State, which went into the war in order to back up the Transvaal." "A peace in South Africa," comments the Kansas City *Journal*, "which does not include De Wet and Steyn will be like the play of 'Hamlet' with both Hamlet and the Ghost left out." The Memphis *Commercial-Appeal* similarly regards the reports as "almost incredible," adding: "Botha would render himself infamous for all time if he accepted the favorable terms which were denied to his allies."

THE FAMILY OF GEN. CHRISTIAN DE WET.
Now staying under British protection in Johannesburg.

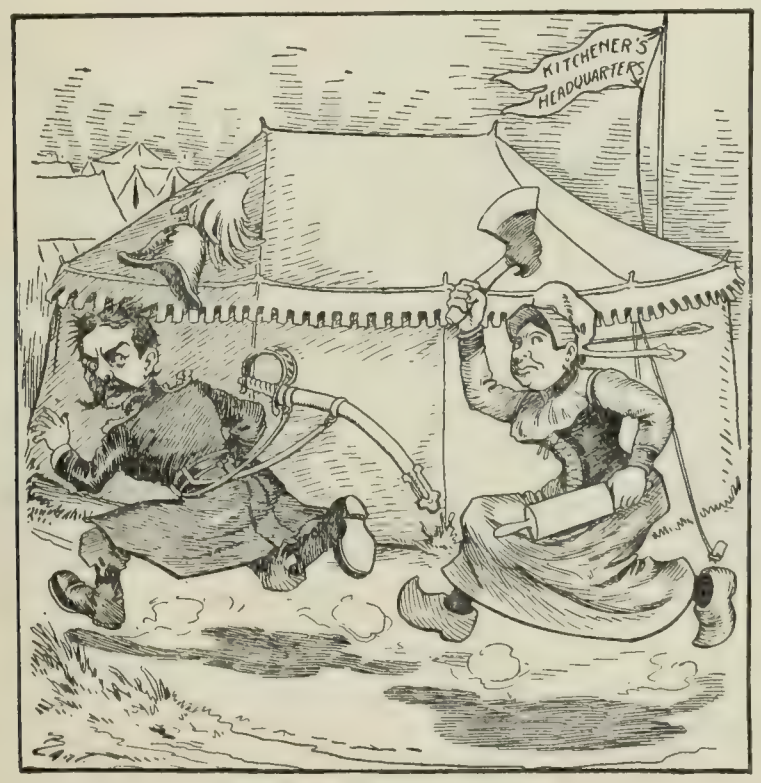


GENERAL CHRISTIAN DE WET.

The rumors give additional interest to the statement of British losses recently given out by the British War Office. Says the St. Louis *Globe-Democrat:*

"According to this statement there have been 13,258 deaths from wounds and disease among the British soldiers in the war, 1,734 discharges, and 937 missing. Presumably all of the missing are prisoners, and will be given up at the end of the war, or perhaps may be exchanged or be released earlier. This shows a loss in the aggregate of 15,929, and includes officers and privates. These figures are for the entire war along to the end of January, 1901, or about sixteen months.

"But the actual losses go even farther than this. The wounded in the war number 16,156 officers and men, and some of these, of course, have been permanently incapacitated for future service.



LOOK FOR A SPEEDY FINISH.
It is reported that Mrs. Botha is conducting peace negotiations.

YES, THE END OF WAR IS IN SIGHT.
—*The Minneapolis Journal.*

## "END OF THE WAR" IN CARICATURE.

Almost 41,000 officers and men have been sent to England on account of wounds or disease, and most of these, presumably, are seriously invalided. None of them, it is safe to say, will take any further part in the war, no matter how long it may last. The losses from deaths, discharges, captures, and shipments back to England have reduced the British forces in South Africa to the extent of 56,000, omitting the wounded who remain in the military hospitals near the seat of war, some of whom, of course, may be seen in the service again."

Financially, the war has cost the British about $500,000,000. No attempt has been made to estimate the Boer losses in money or men. The loss to the world's gold supply by the idleness of the South African mines is probably $125,000,000 or more, and "the resumption of the South African gold supply and the discontinuance of the war," says the Louisville *Courier-Journal*, "will be the biggest stimulating influence that can be applied to the business of the world."

## PRESIDENT HADLEY'S FEAR OF AN EMPEROR.

SOME remarks made by President Hadley, of Yale University, in an address delivered in the Old South Church, of Boston, have created something of a sensation all over the country. His topic was "The Development of Public Conscience," and he is reported to have said among other things:

"Trusts have got to be regulated by public sentiment, and that public sentiment is not merely the opinion of any particular part of the whole people, but is a readiness to accept, in behalf of the community, restrictions, independent of the question of whether you or I shall be personally harmed by these restrictions.

"You say the community will not be governed by this principle. We must expect that the community will, however, for the alternative is an emperor in Washington within twenty-five years."

This is not, however, an exact report of the address, which was in large measure extemporaneous. President Hadley does not deny that he referred to the prospect of an emperor governing this country within twenty-five years, but he says that he mentioned the contingency not as "probable," but as "inadmissible," and did not specifically connect the trusts with the advent of an emperor. The statement as it stands, with the explanation, is a very foggy one, but that fact has not prevented a rather lively discussion in the newspapers.

"Were this the prediction of a stump orator speaking in the stress of a campaign," observes the Chicago *Record* (Ind.), "it would not need to be considered; but it is the expression of a man who is noted both for sagacity and cool judgment, and who is discussing the situation in a purely academic spirit." It is as such that the utterance is considered, and press comment ranges all the way from enthusiastic indorsement of the sentiments expressed to bitter denunciation of President Hadley's "seditious spirit." "Unquestionably the sometime respect and almost reverence felt by the general public for the heads of great educational institutions have been turned in recent years to a mixture of ridicule and contempt," remarks the New York *Press* (Rep.). The St. Louis *Globe-Democrat* (Rep.) adds:

"With all due respect to collegiate cultivation, it must be remarked that this language is totally uncalled for. It is grossly unpatriotic and pessimistic. It comes at a time when gifts and bequests to colleges are reaching an enormous total every year and far exceeding all former anticipations. Does President Hadley regard the fact that $50,000,000 a year is presented to colleges one of the signs of desperate social degeneracy? This generosity is a noble development of the time, but givers will be discriminating in their largess if certain universities are to preach the gospel of pessimism and national decadence. Such teachings are not an emanation from a man who loves his country or from a sound, healthful mind."

On the other hand, the more radical papers commend President Hadley for his "timely note of warning." "He may be a 'traitor' to McKinleyism and trustism," says the St. Louis *Republic* (Dem.), "but he is faithful in his allegiance to the true Americanism."

This discussion gives special interest to Mr. Henry Litchfield West's article in the March *Forum* on "The Growing Powers of the President." "The Executive," he says, "has been gradually gaining an ascendancy over the legislative and judicial. The pivot upon which we revolve as a nation is no longer the Capitol, where the people's representatives assemble, but the White House, where one man sits in almost supreme power." Mr. West discovers the secret of this executive power in the "golden stream" which flows through the White House to the remotest corners of the republic, and he estimates this quadrennial largess at about $80,000,000. "A system of precedent is growing up," declares the Springfield *Republican*, "which is bound in time to make the President of the United States absolute master, in effect, of this nation's policy toward the rest of the world.... He personally disposes of salaries of $11,000,000 a year. He wages a war and makes peace in China all by himself. And, to cap all, Congress has now abdicated to him full civil power in the Philippines indefinitely, making him as much of a despot, benevolent tho he may be, as one of the old khans of Mongolia, over 10,000,000 human beings on the other side of the globe."

PRESIDENT ARTHUR T. HADLEY, of Yale University.

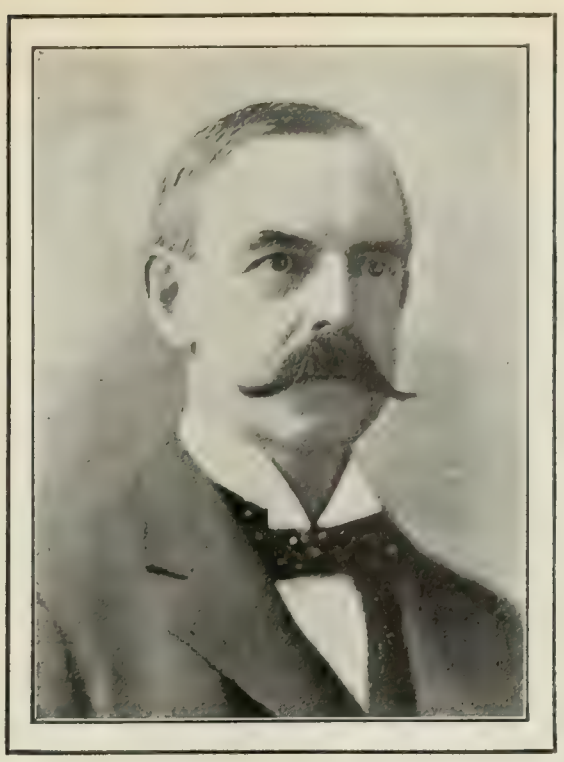
## TO EXPEL THE NEGRO FROM THE SOUTH.

WILLIAM ELLIS ABERNETHY, formerly president of Rutherford College in North Carolina, and a leader in the recent campaign that resulted in the adoption of the negro-disfranchisement amendment to the state constitution, now declares that the only solution of the vexing race problem in the South is the expulsion of the black man. Writing in his paper, the Morganton (N. C.) *Herald*, he says:

"There is one solution and but one. Cold and cruel as it may seem, the negro must go. If not voluntarily, then by force. His presence here is a perpetual menace. It keeps out immigration and capital. It engenders bad blood between North and South. It keeps alive bitter memories. An unnamed fear fills every Southern heart, and unnamable dread darkens every Southern home. Go he must. Better for black man, better for white man. We who have girl babies will rest more easily in our graves hereafter, if we die in the proud consciousness that this problem has not been left by cowardly policy to posterity. But the negro is a property holder; so was the Indian. Civilization is above constitutions, it makes and unmakes them at will. The Government is amply able to deport or colonize them, and all it needs is a sense of the serious need for it. That sense is being deepened day by day. If the money squandered in the Quixotic war with Spain, in the unholy and inhuman butchery of the

Filipinos, in gorging the greed of legislative leeches, had been devoted to this paramount issue, it would have been settled. Lift this incubus from the South, and she will become the garden of the globe."

The statement, which has found wide credence, that the removal of the Vesta cotton-mills from Charleston, S. C., was proof of the failure of the negro as a mill operative, is disputed by Captain Montgomery himself, president of the company. "The public may say that the negro, as a mill operative, is a failure," he says, in an interview, "but I do not believe it." The mills had twice tried white help unsuccessfully before they tried negro labor, and only failed with negro labor because the operatives would go bean- and berry-picking or pick up other odd jobs that promised better pay for a few days. Says Captain Montgomery: "Those who worked, did it well. Our superintendent told me he could pick out of the mill two hundred that would do as satisfactory work and be as faithful as any operatives."



WILLIAM CARY SANGER,
Assistant Secretary of War.

ROBERT S. McCORMICK,
Minister to Austria.

## TWO NEW APPOINTMENTS.

## RUSSIA AND MANCHURIA.

BEFORE the Boxer troubles broke out in China it seemed to be an accepted fact that Russia was tightening its grip on Manchuria, and would probably never let go; and this expansion of the Russian empire did not appear to rouse any very strenuous hostility anywhere, except in Japan, and there it roused a hostility so strenuous that it portended war. Now that indications of renewed Russian designs on Manchuria are becoming evident, Japan's war spirit is again rising, and the other powers are showing an interest that they did not seem to feel a year ago. Manchuria is considerably more than twice as large as Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania

THE NEW CHINESE WALL.
—*The Detroit Journal.*

combined, and has a population of about 20,000,000, or more than one fourth the population of the United States. American merchants have a large and growing trade with Manchuria, and many American papers believe that if Russia annexes the province, American trade will be shut out. Russia, it is true, joined in the agreement negotiated by Secretary Hay for the "open door" in China, but "the experience of the past," says the New York *Journal of Commerce*, "shows how utterly untrustworthy are all Russian promises on the subject of freedom of trade"; and the Washington *Star* remarks that "we have just had a taste of her policy in the matter of the countervailing duty on her sugar."

The New York *Herald* and the Detroit *Free Press* refuse to believe that Russia is trying to annex Manchuria, but *The North China Herald* (Shanghai) publishes what purports to be the text of the agreement by which China allows Russia to garrison the province, and the New York *Tribune* suspects that Russia's change of front in opposing the punishment of any more Boxer leaders means that Russia will pay for Manchuria by taking China's side against the powers. The New York *Sun's* Shanghai correspondent reports that the Chinese officials are much alarmed at Russia's desire for the province, Sheng, the director of posts and telegraphs, declaring his belief that "it will mean the beginning of the partition of all China if it is pressed." The Peking correspondent of the same paper says in a cable despatch that he has learned "that the Russians are expecting the speedy arrival of transports with additional troops, and that when they reach here that country will make a demonstration in the Gulf of Pe-chi-li. This action will be intended partly as a warning to China, but mainly a warning to Japan to keep her hands off if she has any idea of attempting to hinder Russian aggression. It is estimated that at the present moment there are 100,000 Russian soldiers in Chinese territory, and yet the Foreign Office at St. Petersburg is trying to convince the other nations that Russia has no ulterior purpose in China." A vast majority of the public in Japan are said to be eager for war with Russia.

The St. Paul *Pioneer Press* says:

"Russia is hardly likely to carry her opposition so far as armed resistance. With England, Japan, and the United States unmistakably in earnest in this matter, it is probable that Russia would prefer to forego her claims. She can count on the active support of no power, not even France, to enforce her utterly unwarranted demands and her open violation of her disclaimers of any intention to absorb Chinese territory. . . . . .

"The story of her pretended vengeance, of the excesses of her soldiers, and of her devastation by fire and sword of an enormous

tract of country is one of the most hideous passages in her history. It has no parallel in recent times, not even in Turkey. It was utterly wanton and inexcusable from any standpoint. But this crime with which our enlightened 'friend' closed the nineteenth century was only one step in the program of absorption. Its purpose was to reduce the population to abject terror, and forestall all resistance to the consummation of the project which first manifested itself in the lease of the Manchurian railway and the seizure of Port Arthur. Another characteristic move was her seizure of New-Chwang, where she deliberately stirred up trouble and made that trouble the pretext for the seizure of the custom-house and railway. Furthermore, she immediately began conducting affairs of New-Chwang, and everywhere else throughout Manchuria, as if the province were hers in fee simple. . . . . .

"As it is probable that an emphatic protest on the part of England, Japan, and the United States, especially if it has the sympathy or active support of Germany, will cause Russia to definitively withdraw her claims without resorting to arms, it is to be hoped that such a protest will be made. Apart from all considerations of national self-interest, involving either the prestige of our Government or any commercial interests, Russia ought not to be permitted to place under subjection 8,000,000 Chinamen or to reap the fruits of her lies and massacres. The United States with England and Japan can put a stop to this crime, and simple humanity demands that it do what it can."

## THE SWEAT-SHOPS OF CHICAGO.

SOME startling figures relating to the sweating system in Chicago are furnished by Miss Nellie Mason Auten, who recently made a study of the condition of the workers in the garment trades of that city. In her investigations among the Italians there she found only twelve workers who were able to earn more than $300 a year. One hundred and nineteen were earning less than $100 a year. Forty-three were receiving actually less than one dollar a week! The writer cites two extreme cases to show the depth of poverty and degradation to which some of these workers are reduced. In one case, a housewife button-sewer working sixty hours each week at forty cents per week (a rate of two thirds of a cent an hour!), in fifty-two weeks of the year earned $21. A housewife pants-finisher working sixty-six hours each week at thirty cents per week (a rate of five elevenths of a cent an hour!) in forty-eight weeks earned $14. The following table, showing the averages of the industrial conditions among the Italian garment-workers in Chicago, is presented (in *The American Journal of Sociology*):

| Industry. | Average weekly wages. | Average number of weeks employed. | Average yearly earnings. | Average family earnings. | Average earnings per week. | Average family earnings per week. |
|---|---|---|---|---|---|---|
| Dressmakers | $0.90 | 42.00 | $37.00 | $213.46 | $0.71 | $4.11 |
| Pants-finishers | 1.31 | 27.85 | 42.41 | 260.61 | .82 | 5.01 |
| Housewives & pants-finishers. | 1.58 | 30.21 | 47.49 | 245.92 | .91 | 4.73 |
| Seamstresses | 2.03 | 32.78 | 64.10 | 184.00 | 1.23 | 3.54 |
| Pants-makers | 2.13 | 30.77 | 75.60 | 239.05 | 1.45 | 4.60 |
| Miscellaneous | 2.77 | 29. | 81.80 | 405.81 | 1.58 | 7.80 |
| Tailors | 6.22 | 31.96 | 211.32 | 523.25 | 4.08 | 10.06 |
| General averages | $2.48 | 31.18 | $76.74 | $297.29 | $1.48 | $5.72 |

Of the five nationalities that make up the bulk of the Chicago garment-workers, the Italians are in the most deplorable condition. Next in ascending gradation come the Poles, Jews, Bohemians, and Swedes. Some of the Swedes earn fairly good wages, being better educated and organized than the other nationalities. Most of the sweat-shops are situated in the back part of tenements, shops, or stables, and in time of epidemic the danger to the public health from the manufacture of garments in such places is a very real one. Says the writer:

"There are so many shops that it is impossible to inspect them all at any such time to find whether garments are being made where disease exists. Through ignorance or indifference on the part of the workers, clothing permeated with disease germs may be sent out. Except in such a time of special danger, however, it is the workers who deserve our solicitude rather than the wearers. According to the statement of one of the trustees of the United Hebrew Charities, one person out of every twenty-five has consumption. This is the great bane, she says, of the garment workers. It causes almost more trouble than the low wages. The injury to one's eyes from the close and constant application to work has already been mentioned in connection with the tailors. It is they and the home finishers who are most lkely to work far into the night and cause their eyesight to fail.

"Long hours at a foot-power machine bring serious pelvic disorders upon the women and girls, and ruin their health. One of the inspectors said one day, when leaving a shop where a girl of fifteen was running a machine at a terrific rate of speed: 'If I had my way about it, no woman should ever work like that.' Even if none of these more serious troubles come, the constant nervous strain gradually takes the life and spirit out of one. The danger to physical health is the chief reason why the employment of women and children becomes a serious problem."

Comparatively little has as yet been done to alleviate the horrors of the sweat-shop. Massachusetts, New York, Pennsylvania, Ohio, and Illinois are the only States that have attempted to regulate or abolish the sweating system. In the opinion of Miss Auten, stringent legislation is needed, if possible of a federal character, since the problem is a national one. Organization of the workers is also to be desired, and always has a tendency to keep up the standard of living. Perhaps the greatest block to progress is the ignorance and poverty of the victims themselves. "On a low plane of intelligence in their own country," says the writer, "they remain on the same plane here or sink to one still lower, because in their own country they had known the common speech, but here they are almost helpless when away from their own people. . . . The sweating system surely works in two directions: if it is true that the people are poor because their wages are low, it is equally true that their wages are low because they are poor."

## LETTERS AND ART.

### INDIVIDUALISM AS THE KEYNOTE OF NINETEENTH-CENTURY LITERATURE.

THE characteristic note of the literature of the nineteenth century, according to Mr. Edmund Gosse, is individualism; and the most striking lesson which a study of that literature has to offer us is that, contrary to the notion usually entertained, durability depends upon the manner of the writer rather than upon his matter. Mr. Gosse contributes one of the thirty-seven chapters of a new volume on "The Nineteenth Century—A Review of Progress," his particular theme being "English Literature in the Nineteenth Century." "The general course of the hundred years in English literature," he writes, "has been one of individualism in a strong current, every now and then unsuccessfully fretted by attempts at reaction." And he continues:

"The form that this individualism has taken has been mainly that of self-study and self-revelation. The seventeenth century was all phenomenal and dramatic, with stormy fits of external observation. The eighteenth century sought, in unruffled calm, to meditate on man and the broad generic principles of his action. The nineteenth century shattered this artificial 'dome of many-colored glass' into innumerable fragments, each fragment an epitome of human kind; and desired to know the wants, the passions, and even the frailties of each individual. If we glance at the most characteristic names of the nineteenth century—Coleridge, Byron, Keats, Carlyle, Thackeray, Tennyson, Rossetti, Ruskin, Stevenson—whom we will—they are all the names of men who have written, with more or less tactful show of reticence, mainly about themselves, who have judged mankind by samples of their own brains and blood, who have made self-study and self-revelation the starting-points of all their adventures in the edification and entertainment of mankind. And in this sense Robert Browning, it may be, sums up the century and is its most characteristic exponent, since he, more consistently than any one else, has repeated the thoughts and emotions of us all, only with those splendid modifications which are the ornament of genius. And then, at last, comes Mr. Rudyard Kipling, who breaks with all his ancestors, who appears to have no desires or feelings of his own, who is exclusively external and objective, for whom (just as for the eighteenth century) 'a man' is nothing and 'Man' is everything. Is he the precursor of a totally new condition of literature, in which psychology, the analysis of the soul, will be rejected, as the impersonal rhetoric was rejected a hundred years ago? Perhaps so, but this is not the place for prophecy.

"In consequence, perhaps, of its tendency to self-study, the nineteenth century has been preeminent in the production of lyrical poetry. The young man, vividly conscious of the peculiarities of his personal temperament, and seeking solace in self-description, naturally confides his sorrows and his longings to the world in song. Looking back over our history, we find the century which has just closed to have been above all others the age in which the lyrical voice has made itself heard."

The novel, which is generally taken as the most characteristic literary form of the past century, Mr. Gosse does not think to be "in any way so characteristic" as the poetic note. Indeed, if we take the figure of Johnson as representative of the eighteenth century, he remarks, we must take not a novelist but a prophet, Carlyle, or a poet, Tennyson, "as the typical literary personage of the nineteenth." Mr. Gosse's view of the nineteenth-century novelists is a new one in some respects. He says:

"At the very opening of the age there was discord between the romance of Walter Scott and the naturalism of Jane Austen. But this might have been gradually eliminated if a genius had not arisen in whose hands the confusion became ten times greater. Dickens, one of the most enjoyable of writers, is one of the worst disturbers of literary history. He arrived at a time—1835—when the extinction of other forces in fiction made insistent the call for a thoroughly sober novelist of manners. Dickens arose with his gigantic humor, his fantastic misrepresentation of human nature, his incomparable vitality and vivacity, and he made the novel, as a branch of sound literature in England, almost impossible. Dickens led the whole nation away from the idea of the novel as a faithful picture of life, and he did this just at the moment when Balzac was leading the French habit of mind back to reality and genuine observation. While Dickens was at the height of his influence, that influence was resisted by Thackeray and by the Brontés. We owe much to the strenuous labors which made George Meredith, and later Thomas Hardy and Robert Louis Stevenson, possible. But it will take us English long to escape from our critical disrespect for experience, and even in 'Tess of the D'Urbervilles' and in 'Dr. Jekyll and Mr. Hyde' the Dickens deformation of types and incidents is marked. Of this national disease, this indifference to reality, the main bulk of nineteenth-century English fiction has died already or must soon be dead."

One of the most striking portions of Mr. Gosse's critique is his view of the great part which literary style has played in the century, and which it must continue to play, in spite of the commonplace that "what a writer has to say is of importance, not how he says it." Altho Matthew Arnold and hosts of readers differ from Mr. Gosse's view that Keats, the representative stylist, "had nothing very important to say," his use of Keats as an illustration of the value of style is novel and weighty. Referring to the common depreciation of style as compared with "matter," he says:

"It is not worth while to combat this contention, which springs up in the daily and weekly press like a pretty daisy. But when we attempt such a heroic, such a ridiculous task as to recapitulate in a brief essay the crowning merits of a whole century, we see how completely everything unattended by a fine manner disappears. In the larger sense, in the wider outlook, positively nothing whatever remains observable in imaginative literature except what has been recorded with consummate technical skill. In the survey of one hundred years, where so much has been written by an infinite cloud of authors, we have no time nor space to consider whether such an one displayed a valuable chain of moral thoughts or desired to deliver himself of really sound ideas. We are driven to selection, and we select those whose expression, whose form of delivery, was the most original and splendid. Keats had nothing very important to say, and while he was singing it, infinitely graver matters were being discussed by Godwin and by Mackintosh, by James Mill and by Jeremy Bentham. But it is now Keats, and not these people at all, who is read, and read with rapture. Perhaps the most striking lesson which the study of English literature in the nineteenth century has to offer us is that the only absolute element of literary durability is style."

---

**The Search for a Universal Language.**—Hermann Diêle, a German writer, thinks that a universal language is not only impracticable but that it would be of little value even if practicable. He writes in the *Deutsche Revue* (January) and notes at the outset that the movement for such a language has seemed to go backward of late years. After the time of Richelieu, the French took a position of supremacy among European languages, and in 1829 Goethe wrote that it would never be possible to dispute the supremacy of the French at courts and throughout the world. This is no longer true, notwithstanding the vigorous and skilful propaganda of the French "alliance" and even of the French Government. Everywhere an exclusive patriotism now protests against foreign intrusion and reacts against foreign languages, or at least prevents their dominant influence.

Diêle has no faith in the success of a universal language, unless Latin, which already holds this place in education, be the language selected. But even with Latin there are formidable difficulties, those of pronunciation among others. Few, even in Germany, are interested in the resurrection of Latin as a spoken language, and some educational curricula show a tendency to omit Latin entirely. Moreover, a universal language is of value

only in commerce, and its desirability has ceased to exist for the great commercial establishments since they can obtain at beggarly salaries clerks capable of writing business letters in five or six languages. We may infer, therefore, that the confusion of tongues will not soon vanish from the earth.

The following table of the numbers of people speaking various languages, compiled by the English statistician, Lewis Carnac, is given by Diêle:

| Date. | English. | German. | Russian. | French. | Italian. | Spanish. |
|---|---|---|---|---|---|---|
| | Millions | Millions | Millions | Millions | Millions | Millions |
| 1500..... | 4 | 10 | 3 | 10 | 9½ | 8½ |
| 1600..... | 6 | 10 | 3 | 14 | 9½ | 8½ |
| 1700..... | 8½ | 10 | 3 | 20 | 9½ | 8½ |
| 1800..... | 20 | 21 | 30 | 31 | 15 | 26 |
| 1900..... | 116 | 89 | 85 | 52 | 54 | 44 |
| 1900 Estimated | 640 | 210 | 233 | 85 | 77 | 74 |

## NEW REMINISCENCES OF EARLY VICTORIAN AUTHORS.

SIR GEORGE MURRAY SMITH, head of the great London publishing house of Smith, Elder & Company, has lately, after sixty years' acquaintance with literary England, been writing his recollections of some of the famous authors he has known. His account of Leigh Hunt is especially fresh and amusing. Writing in *The Critic*, he says:

"Business was by no means Leigh Hunt's strong point. In this respect, but not otherwise, he may have suggested Skimpole to Charles Dickens. On one of my visits I found him trying to puzzle out the abstruse question of how he should deduct some such sum as thirteen shillings and ninepence from a sovereign. On another occasion I had to pay him a sum of money, £100 or £200, and I wrote him a check for the amount. 'Well,' he said, 'what am I to do with this little bit of paper?' I told him that if he presented it at the bank they would pay him cash for it, but I added, 'I will save you that trouble.' I sent to the bank and cashed the check for him. He took the notes away carefully enclosed in an envelope. Two days afterward Leigh Hunt came in a state of great agitation to tell me that his wife had burned them. He had thrown the envelope, with the bank-notes inside, carelessly down, and his wife had flung it into the fire. Leigh Hunt's agitation while on his way to bring this news had not prevented him from purchasing on the road a little statuette of Psyche which he carried, without any paper round it, in his hand. I told him I thought something might be done in the matter; I sent to the bankers and got the numbers of the notes, and then in company with Leigh Hunt went off to the Bank of England. I explained our business, and we were shown into a room where three old gentlemen were sitting at tables. They kept us waiting some time, and Leigh Hunt, who had meantime been staring all round the room, at last got up, walked up to one of the staid officials, and addressing him said in wondering tones: 'And this is the Bank of England! And do you sit here all day, and never see the green woods and the trees and flowers and the charming country?' Then in tones of remonstrance he demanded, 'Are you contented with such a life?' All this time he was holding the little naked Psyche in one hand, and with his long hair and flashing eyes made a surprising figure. I fancy I can still see the astonished faces of the three officials; they would have made a most delightful picture. I said, 'Come away, Mr. Hunt, these gentlemen are very busy.' I succeeded in carrying Leigh Hunt off, and, after entering into certain formalities, we were told that the value of the notes would be paid in twelve months. I gave Leigh Hunt the money at once, and he went away rejoicing."

Of the author of "Jane Eyre," whom he afterward came to know well, Sir George says:

"I must confess that my first impression of Charlotte Bronté's personal appearance was that it was interesting rather than attractive. She was very small, and had a quaint, old-fashioned look. Her head seemed too large for her body. She had fine eyes, but her face was marred by the shape of the mouth and by the complexion. There was but little feminine charm about her; and of this fact she herself was uneasily and perpetually conscious. It may seem strange that the possession of genius did not lift her above the weakness of an excessive anxiety about her personal appearance. But I believe that she would have given all her genius and her fame to have been beautiful. Perhaps few women ever existed more anxious to be pretty than she, or more angrily conscious of the circumstance that she was *not* pretty."

The writer relates several anecdotes illustrating the spirit with which Charlotte Bronté could stand up for what she deemed her rights, against Thackeray and others. For instance:

"After Charlotte Bronté's first visit to our house her anonymity was dropped, and people naturally tried to draw her out. She shrank from this, or resented it, and seemed to place herself under my mother's care for protection. My mother accepted the position, and was generally equal to it; but sometimes, when accident left Charlotte Bronté exposed to a direct attack, the fire concealed beneath her mildness broke out. The first time this happened I was not a little surprised. G. H. Lewes, who was lunching with us, had the indiscretion to say across the table: 'There ought to be a bond of sympathy between us, Miss Bronté; for we have both written naughty books!' This fired the train with a vengeance, and an explosion followed. I listened with mingled admiration and alarm to the indignant eloquence with which that impertinent remark was answered. By way of parenthesis, I may say that 'Jane Eyre' was really considered in those days by many people to be an immoral book. My mother told me one evening that Lady Herschel, having found the book in her drawing-room, said: 'Do you leave such a book as *this* about, at the risk of your daughter reading it?' Charlotte Bronté herself was quite unconscious that the book possessed, in any degree, a reputation of this sort; and she was as much surprised as affronted when Lady Eastlake—then Miss Rigby—in her review of 'Jane Eyre' in *The Quarterly Review* (December, 1848) brutally said that 'if it were written by a woman, it must be by one who had forfeited the right to the society of her sex.'"

## A NEW DEPARTMENT FOR THE PUBLIC LIBRARY.

SINCE the opening of the new Providence Public Library last year, a unique experiment in bibliological arrangement has been made, in what may be called with some literalness the "power-room" of the library. An apartment has been set aside for what the librarian, Mr. William E. Foster, calls "The Standard Library," a collection of carefully selected volumes representing the best literature of all ages and peoples. It is a place, he says, for "the enjoyment of books, pure and simple," a place not for study, but for the development of power through a reading of the "literature of power." Of this special sort of literature, Mr. Foster says:

"In the literature of knowledge, the fundamental consideration is a technical one; while in the literature of power it is the underlying spirit that dominates, and as soon as anything practical becomes the end in view, the work passes into the realm of knowledge rather than that of power. One may go through almost all the divisions enumerated above under the literature of knowledge and find in them some work which, for one reason or another, is justly claimed by the literature of power. Take, for example, history. One will scarcely hesitate to place in the library of the literature of power that early and delightful historian, Herodotus, one of whose greatest charms is his lack of self-consciousness. There, also, the almost unanimous judgment of successive generations has agreed to place the most self-conscious historian of modern times, Edward Gibbon; for the literary quality is unmistakably present in his history also. . . . In each one of the departments, . . . there comes in the course of the centuries some writer with whom the 'spirit' is, after all, the controlling aim, and whose works consequently must be included in the literature of power."

In this "Standard Library" there are 1,013 volumes, selected from the works of 103 writers. The selection was made from

lists submitted by a large number of competent judges, representing various points of view, and it is believed by Mr. Foster that this new departure of the Providence library is one of national importance, and that the idea will arouse the interest of library managers throughout the country. Further details of the plan are thus given in the literary supplement of the New York *Times* (March 2):

"The plan of the Providence library in forming this standard collection is, as a rule, to include those authors whose writings have reached the dignity of uniform editions, yet there must be included single works, even in a few cases, perhaps, the work of a man of one book—for instance, Sir Thomas More's 'Utopia,' Bunyan's 'Pilgrim's Progress,' and De Foe's 'Robinson Crusoe' have been chosen, rather than their authors' collected works, while, in other cases, fragments or selections, such as the 'Lyrical Poems of Burns,' have been selected, and in others, in order to secure the best results, two editions, one containing matter not found in the other, have been added of certain authors. The ideal edition for the reader, as opposed to the student, was thought to be the purest and fullest edition of the text, without too copious annotations. Nor would it have been wise to limit a room devoted to the literature of power either to books written in English or to volumes in their original text. In the case of foreign authors, it was wisely decided that the best original texts should stand side by side with the best English translations. Wisely, too, no living authors have been included, and the books chosen to make up so limited a collection, belonging to different centuries and various countries, present an interesting subject for thought."

## LATEST LITERARY AND EDUCATIONAL MOVEMENTS IN GERMANY.

IN the course of his periodical "Letter from Germany" in *The Atlantic Monthly* (March), Mr. William C. Dreher sums up the chief movements in art, letters, and education in that country during the past year. The chief event of interest in the literary, artistic, and dramatic field has been the widespread counter-agitation against what German men of letters regard as the Puritanic and Philistine "Lex Heinze," to which we have already several times referred. He writes:

"Growing out of the agitation in connection with the Lex Heinze, the Goethebund, a union of many of the leading writers and artists, was formed, for the purpose of protecting art, literature, and dramatic performances from the clumsy efforts of legislation and police administration to force narrow and prudish ideals upon them. This organization has spread rapidly over all Germany. It held its first national conference at Weimar in November, when some strong words were spoken against the antiquated conception of life with which the authorities are trying to fetter the German mind. The Goethebund directs its efforts particularly against the dramatic censorship which still lags superfluous upon the stage of Germany; and it petitioned the Reichstag to abolish this 'unseemly tutelage of the German people.' This utterance of the Goethebund was drawn out by the fact that the dramatic censorship was exercised with unusual rigor in the latter half of the year. It was commonly believed that this was due to the influence of the Kaiser, to express his displeasure at the defeat of the rigid paragraphs of the Lex Heinze. As a result of this greater rigor an unusual number of plays were rejected by the censor, some of which, however, were later admitted to production, after appeal to the courts."

The appointment of a committee of literary people to act as experts in cases of questionable literary productions has been proposed and has attracted wide attention. It is supported by so eminent an author as Professor Mommsen.

In the sphere of education the chief event of the year, we are told, was the Kaiser's decree of November 26, for the reform of gymnasium instruction; giving to the English language a position in the German Gymnasien which it has never hitherto occupied:

"It is an incredible mark of the unprogressive spirit that has hitherto prevailed in the old Gymnasien, that English occupied in their curricula the same level with Hebrew. The Kaiser's decree changes all that, and makes English perhaps the most important foreign language taught in these schools. English will be compulsory in the Gymnasien for the last three years, French becoming for these years merely optional. In the classes prior to the three highest, English can now be offered in place of Greek; and in respect to Greek itself, the teachers are enjoined to avoid, so far as possible, insistence upon useless forms, and to emphasize more the intellectual and esthetic relations between Greek and modern culture. The decree also emphasizes the necessity of more attention to modern German history, which has hitherto been neglected in favor of the ancient history. The practical study of the natural sciences through experiments and excursions is to be fostered; and in teaching modern languages attention is to be given to speaking. All these points illustrate the bent of the Kaiser's mind toward modernizing and reforming German life, whatever may be said of his views in other directions."

Some progress is recorded in the movement for the better education of women by reason of the establishment of "gymnasium courses" for girls, and the admission of women to the universities as hearers. The Medical Society of Berlin refused to admit women as members; but the medical faculty of Heidelberg University voted to admit them as regular hearers to the lectures.

## PROFESSOR DOWDEN ON THE POETRY OF KIPLING.

MR. KIPLING has perhaps been more variously estimated, as a prose writer and as a poet, than any other literary man of the day. During the past two years we have printed estimates of him by German, French, English, American, East Indian, and Japanese writers, considering him from widely different viewpoints. This month we have an estimate of his poetical claims by one of the greatest of English critics, Prof. Edward Dowden, of the University of Dublin, whose article appears simultaneously in the first number of *The New Liberal Review* (the monthly publication just established in London by the Harmsworths) and the New York *Critic* (March). As the London *Academy* points out, Professor Dowden's estimate of Mr. Kipling's verse is "at once high and moderate." Kipling, especially in his verse, "has things to say; he says them in no halting or hesitating manner, but 'after the use of the English,' as he has himself described that use, 'in straight-flung words and few.'" Certain of his short poems have "served to evoke or guide the feelings of nations and to determine action in great affairs." Whatever explanation may be offered for this, Professor Dowden says, "the least tenable is that which represents Mr. Kipling as a music-hall singer, addressing a vulgar crowd in the vulgar tones which they expect for the coin they pay":

"La Bruyère has said somewhere that the favor of a prince is no evidence of merit, but that also it indicates no deficiency of merit; the statement holds good of the favor of Prince Demos. It is true that Mr. Kipling sometimes twangs the banjo; and with its *Tinka-tinka-tinka-tinka-tink* he has not done ignobly; as a satirist he has with it 'jeered the fatted soul of things'; he has with it gallantly mocked defeat, and sung the song of lost endeavor. But he has also touched the solemn organ-stops, and it is precisely to such a poem as 'Recessional,' with its old prophetic strain, its warning against vain idols and folly and carnal pride, that the deepest response of our race is made. Mr. Kipling's swift conquest of the people indicates of course that his inspiration is not private and solitary; it means also that he is not the poet of a coterie or *cénacle*. . . . . .

"Mr. Kipling is not fastidious, but he does not sophisticate with good and evil. In a certain transcendental sense he may tell us that 'sin is vain,' and may indulge a little in the amusements of those gallant gentlemen of the halls of heaven who, knowing the vanity of sin, can fearlessly whistle the devil to make them sport. In general his feeling is the devout one that

it is his task to 'draw the Thing as he sees It for the God of Things as They Are,' or, as he says with great dignity, in presenting to the Master a completed volume of his tales:

> One stone the more swings to her place
> In that dread Temple of Thy worth—
> It is enough that through Thy grace
> I saw naught common on Thy earth.

Naught common, however much that is unclean.

"But above this turmoil of passions, above this scene of shames and heroisms, of evil doing, weak doing, mean doing, brave doing, rises the immutable Law; and that is best in life, whether it be toil, or suffering, or sorrow, which brings men into obedience to this law, or rather into active cooperation with it. Even the goose-step is a stage in the evolution of order, for the young recruit is silly, keeping himself 'awful' much as he does his side-arms; and it is well for him that he should be hammered: it is well that he should be put in the way of

> Gettin' clear o' dirtiness, gettin' done with mess,
> Gettin' shut o' doin' things rather-more-er-less.

Not Carlyle himself could more sternly condemn the folly of doing things 'rather-more-or-less' than does Mr. Kipling."

Too often, Professor Dowden notes, Kipling relies on a superficial realism, to get cheap and ready-made effects, "heaping on local color to excess, abusing his mastery of technical terms (which yet affect our ignorance with a mysterious power like that of the blessed word 'Mesopotamia'), and using the cheap realism of Tommy's dialect to verify the strangeness of Tommy's romance. A day may come when the bloom of 'bloomin'' will have departed, and tho his dialect helps Mr. Kipling, not illegitimately, to certain comic and pathetic effects, a noble romantic poem in standard English, such as 'The Derelict,' may better stand the wear and tear of time." "The truth is," says *The Academy*, in comment, "that Mr. Kipling's voice is the nation's, not his own; and it is when it is most the nation's that it is impressive. With him any running on in superfluous numbers is fatal—a mere twanging in the wind and a facile habit of rhythm. But when he is full-charged with the nation's own passion (which presupposes that the nation has a passion), then he prevails. Always Mr. Kipling succeeds best as poet-anticipator, poet-interpreter."

---

## MR. HOWELLS'S ESTIMATE OF GEORGE ELIOT.

MR. W. D. HOWELLS, in a series of articles from which we have quoted from time to time, has been dealing with the heroines of the chief English novelists of the past century; and in his latest article (in *Harper's Bazar*, March 2) he considers some of George Eliot's delineations of women. As an ever-valiant champion of "realism," and as himself an exemplar of a refined realism, Mr. Howell's naturally finds more to praise and less to blame in her writings than in those of some of the other novelists he has dealt with, and whom he has handled without gloves. In her, he remarks, we come "to the greatest talent in English fiction after Jane Austen, but a talent of vastly wider and deeper reach than that delicate and delightful artist, and of far more serious import":

"It is useless to compare any of her contemporaries with this great woman in the expectation of finding them her equals except in that poorer expression which was from their singularities rather than their qualities. Neither Dickens with his dramatic, or theatric, picturesqueness, nor Thackeray with his moralized mockery, his sentimentalized satire, nor Reade with his self-celebrated discoveries in character and manners, nor Anthony Trollope with his immense, quiet, ruminant reality, ox-like, cropping the field of English life and converting its succulent juices into the nourishing beef of his fiction—none of these writers can match with the author of 'Adam Bede,' and 'The Mill on the Floss,' and 'Romola,' and 'Middlemarch,' in the things which give a novelist the highest claim to the reader's interest. Hawthorne, arriving at effects of equal seriousness from a quarter so opposite to hers, among her contemporaries can alone rival her in the respect, not to say the reverence of criticism. It was not till the wide canvases of Thomas Hardy began to glow with the light and color, the mystery and the comedy and tragedy with which he best knows how to paint, and which became the expression of a supreme mastery in his 'Jude'—it was not till these appeared that it could be felt George Eliot had a peer in late English fiction. But if there is a power in the Christianity which she disowned but which never disowned her, profounder than the farthest reach of fatalism, even Mr. Hardy can not stand beside her. She had many and lamentable defects; the very seriousness and sincerity of her motive implied them; her learning overweighted her knowledge; her conscience clogged her art; her strong grasp of human nature was weakened by foibles of manner; the warmth of her womanly sympathies and the subtlety of her womanly intuitions failed of their due effect because the sympathies were sometimes hysterical and the intuitions were sometimes over-intellectualized. Her immense reading, which freed her from the worst influences of the English examples in fiction, cumbered her with pedantic acquisitions, under which her style labored conscious and diffuse; her just sense of her own power fostered a kind of intellectual vanity, fatal to art, in which she first personally intruded herself into the story, and Thackerayesquely commented upon the facts and persons without the Thackerayesque lightness."

Mr. Howells chooses Maggie Tulliver in "The Mill on the Floss" as the representative woman of George Eliot:

"She is at any rate typical of that order of heroine which her author most strongly imagined, not quite upon the Miltonian formula for a poem of 'simple, sensuous, passionate,' but upon such a variation of it as should read complex, sensuous, passionate. She is of all the kinds of heroines the most difficult for men justly to appreciate, and in their failure something of the ignoble slight they feel for her attaches also to her creator. They are ashamed for a woman who could give herself with her heart as passionately as they seek women without their hearts. The fact will not be easily put into words, and if it be forced it demands terms too plain for print; but it underlies the vital difference between the grosser make of men and the finer make of women. Above all others Tolstoy has suggested it in the Natasha Rostoff in his 'War and Peace'; but most novelists shy off from it, leaving their readers to make what they can of the recorded events; and in English fiction George Eliot has alone recognized it so recognizably as not to leave it to the reader. Her heroines' souls are incarnate in bodies that glow with passion none the less but all the more pure because it is a flame. Maggie Tulliver, conscientious, intellectual, is compact of it; Dorothea Casaubon in 'Middlemarch' loves Lodislaw from it, as Romola loves Tito Melema in the romance of her name; poor little Hetty Sorrel in 'Adam Bede' is betrayed as much by it as by her vanity; Dinah Morris herself is not without it; in 'Daniel Deronda' Gwendolen Harleth is redeemed by it at least in the reader's pity."

Mr. Howells refers to the characters in "Adam Bede" as "almost primitively simple," even tho "imposing and important." From this first novel he finds a steady growth in mature power and subtle grasp of life:

"It may almost be said that in 'Romola' George Eliot, as an artist, came to what Tolstoy, in the moral world, calls 'the first consciousness.' In Tito Melema she must have rejoiced with full knowledge as the prime figure in English fiction, since Shakespeare's men, to illustrate the play of mixed motives in character. That consummate scoundrel is indeed a glorious achievement; but Romola, generously as she is imagined, is comparatively a failure. She is not an Italian of the Renaissance, she is not an Italian at all; she is a deeply ethicized intellectual English woman of the nineteenth century, with a Protestant conscience, and a middle-class tradition, moved by Puritanic principles, which even if we suppose her a Florentine Piagnone and a follower of Savonarola, would not have actuated a Bardi in the time of the declining republic."

Mr. Howells's high valuation of George Eliot, it appears not unlikely, may be the prelude to a widespread resuscitation of her popularity after the eclipse that has followed her death, and which appears to be the temporary fate of all authors. "George Eliot wears well," remarks *Literature* (London); "a wise world will not willingly let die Mrs. Poyser, or Tom and Maggie, or mine host of the Rainbow." And it announces that in view of the wider publication of her novels made possible by the expiration of her chief copyrights within the next two years, her publishers promise a new edition of her works in the near future.

## SCIENCE AND INVENTION.

### AN IMPORTANT PATENT DECISION.

WHAT is believed to be one of the most important patent decisions ever made in this country has just been rendered by the United States circuit court at Boston in the suit for infringement brought by the American Bell Telephone Company against the National Telephone Manufacturing Company. The decision was in favor of the defendant; that is, against the Bell Company. Regarding the far-reaching influence of the decision Charles A. Brown says, in a history of the case in *The Western Electrician* (March 2):

"If the claims of the American Bell Telephone Company regarding this patent had been sustained, it would have given that company or its successors the absolute monopoly of all forms of telephone-transmitters now in commercial use. Some form of transmitter is absolutely essential to the carrying on of the telephone business. By controlling, therefore, this essential detail of telephonic apparatus, the American Telephone Company would have been put in complete control of the telephone business of the country, as it is now carried on. When it is considered that throughout the United States there have grown up, in the seven years since the expiration of the fundamental telephone patents, vast interests independent of the American Bell Telephone Company—interests which have covered the whole country with a network of wires and have established exchanges in many of the important cities of the country, as well as a multitude of small towns, the importance of this decision may be appreciated. Since the expiration of the fundamental Bell telephone patents, the growth of telephony has far exceeded all its growth prior to that time. There is hardly a farming community in the country which has not its system of private lines."

The patent on which the Bell Company claimed infringement was issued to Emile Berliner in 1891 on a telephone-transmitter, and is broad enough to cover practically all transmitters now in commercial use. There was no question that this patent was infringed, but the defendant claimed that it was invalid and the court has so held. To quote again:

"The decision of Judge Brown, just rendered, following the decision of Judge Carpenter of the circuit court, will have the effect of relieving the apprehension of manufacturers and investors who are interested or likely to be interested in independent telephone enterprises, on the score of any fundamental patent controlled by the American Bell Telephone Company at the present time, and will give a decided impetus to new telephone enterprises, so that it may be looked upon with certainty that there will be more development of the telephone industry in the immediate future than there has been even in the past. . . . . .

"The Berliner transmitter, as devised by Mr. Berliner and described in his patent application, is barely an operative instrument. It would be absolutely commercially inoperative. The public owes the transmitter, as it is in commercial use today, not to Berliner, but to others who were working upon the telephone simultaneously with Berliner and who developed the commercial telephone independently of Berliner."

The belief expressed above that this decision will favor independent companies and give an impetus to telephone extension is also held by other technical papers. Says *Electricity* (March 6):

"Now the field is open to any company that may desire to use the microphone. There is no doubt but that the American Bell Telephone Company will take the case to the United States Supreme Court, but independent telephone company officials feel so confident that Judge Brown's decision will there be upheld, that they intend proceeding on those lines. The decision furthermore can not help but strengthen the independent movement, as capital that has heretofore been withheld from investment in telephone enterprises, owing to the uncertainty of the validity of the Berliner patent, will now unquestionably be forthcoming."

On the other hand, *Engineering News* says:

"The recent decision against the Berliner telephone patent is giving rise to numerous predictions that the telephone business will now be open to free competition. The prophets who venture such remarks overlook the fact that the telephone business is a natural monopoly anyway, even more so than the telegraph business; and not at all a proper field for competition. Of course, it is true that the patents of the Bell Company were originally of great aid to it in securing control of the business. Their annulment at the present time, however, while it might stimulate competition in the manufacture and sale of instruments, could do nothing to foster competition in the business of furnishing telephone communication."

In like manner, we are told by *The American Machinist:*

"The improbability that the Bell Telephone Company will be materially affected by the late decision is shown by the fact that the resulting break in its stock—'American Telephone and Telegraph,' as it is now designated—was comparatively small and quotations have since recovered in part. It is charged, indeed, that the company holds both sides of the case. The legal tactics which have successfully been pursued to keep this patent alive show the way that it is possible to give a patent a much longer life than the seventeen years nominally allowed by law."

The suggestion made in this last extract, that there has been undue delay, in various ways, which has resulted to the benefit of the Bell Company, and that the Patent Office is not without fault, is frequently heard. The patent, altho applied for in 1877, was not taken out until 1891. The reason is thus stated in *Electricity:*

"The whole explanation of this was that the Bell Company delayed the taking out of this patent until a time best suited to its interests. As the original Bell patents covering the receiver were to expire on March 7, 1893, the Bell Company caused the Berliner patent in question to be issued, with a view to securing a monopoly of the business for an additional period of fifteen years."

Unusually strong sentiments in regard to this matter are expressed by *The Journal of Commerce* (New York), which says editorially:

"It would be almost impossible to frame a more tremendous indictment of the Patent Office than the decision of Judge Brown. . . . The history of the Berliner transmitter patent proves that the Patent Office should be abolished or radically reformed."

That the Patent Office is in fault in any way is denied, however, by *Engineering News*, which says:

"Our contemporary is placing the blame in the wrong place. The Patent Office authorities are helpless against such delays in the issuance of patents as occurred in the Berliner case. They can only execute the laws as they find them. In the very latest report of Commissioner Duell, Congress is urged to amend the patent laws so that applicants shall be obliged to use due diligence in putting their papers in shape for final action. What is needed is such radical reform in Congressional procedure as to enable it to enact legislation of public importance. Reforms in a thousand directions are hopeless till this is accomplished."

---

**Effect of Milk on the Blood.**—Some recent interesting experiments on the effect of injecting fresh milk directly into the veins were reported to the Paris Academy of Sciences on December 31. An account in *Cosmos* (Paris) says: M. Camus has shown that fresh cow's milk deprived of cream by the centrifugal process prevents coagulation of the blood when injected directly into the veins. This property of milk manifests itself indirectly, that is, through some reaction of the organism. Mixed in a glass vessel with the blood, milk often hastens coagulation, but never prevents it. M. Delezeune, who has now taken up these experiments, has endeavored to prove that the indirect anticoagulant action of cow's milk on the blood of the dog depends on the fact that the milk is that of a different species, and that it would not

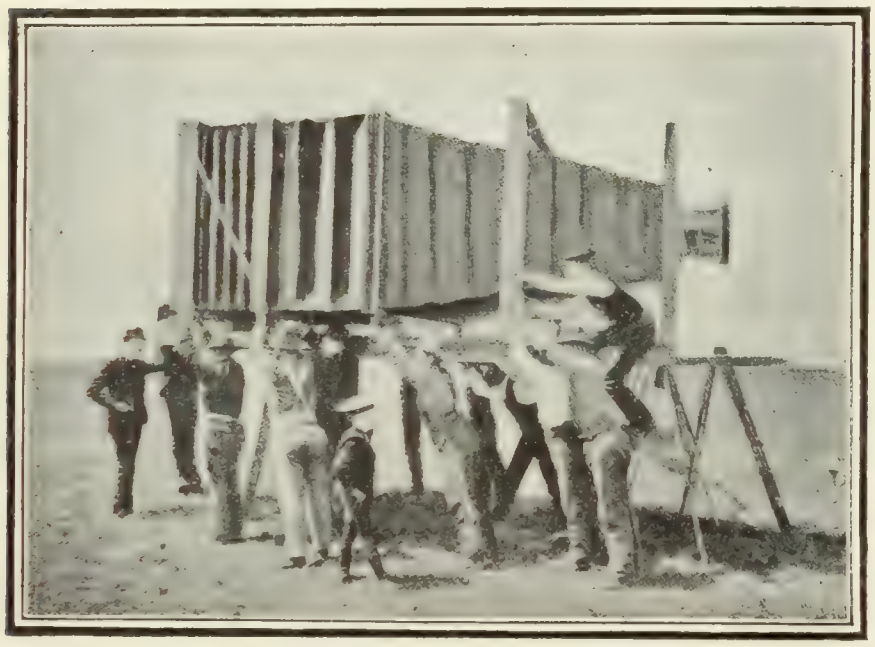
appear if dog's milk were used. Also, a female dog in lactation would not be affected by intravenous injections of dog's milk. Camus combats this theory, and has proved that the milk of the dog injected into the veins of the dog renders the blood incoagulable. At the same time there is a marked lowering of the blood pressure.

"As to the question of the insensibility of the female dog in lactation to injections of milk, there are at present no experiments that will clear it up; but the effect, if it exists, probably depends on some peculiar condition of the liver."—*Translation made for* THE LITERARY DIGEST.

## THE LARGEST CAMERA IN THE WORLD.

A CAMERA which, it is asserted, and probably with justice, is the largest in the world is described in *The Scientific American* (March 2). It was built in Chicago, and pictures taken with it were shown at the Paris Exposition of last summer, tho the camera itself was not exhibited. To quote the description:

"The idea of a negative 8 by 10 feet, or 96 by 120 inches, is certainly startling. The camera which we illustrate is by far



"FOCUSING" THE CAMERA.

the largest ever constructed, and in all probability it will hold this distinction for many years to come. During the summer of 1899, the workmen at the Pullman Works at Pullman, Ill., were busy building two trains, the plans for which differed materially from anything which had hitherto been built. These trains were for the Chicago and Alton Railway, and they were to be the handsomest trains in existence. The company desired fine photographs for exhibition at the Paris Exposition and elsewhere, and Mr. George R. Lawrence, their photographer, was requested to build the largest camera in the world, especially to photograph the 'Alton Limited.' Mr. Lawrence was given *carte blanche*, and in two and a half months the great camera was completed. It was designed and built in Chicago, and it is finished throughout in natural cherry. The bed is composed of four 2 by 6 inch cherry beams, and is about 20 feet long when fully extended. The bellows is made with an outside covering of heavy rubber, each fold being stiffened by a piece of whitewood a quarter of an inch thick. It was then lined inside with heavy black canvas and an additional lining of thick black, opaque material. In the construction of this bellows over 40 gallons of cement, two bolts of wide rubber cloth, and 500 feet of quarter-inch whitewood were used. The bellows is divided into four sections, as shown in our engraving, and between each section is a supporting frame mounted on small wheels which run on a steel track; the back supporting the plate-holder is operated as easily as in an ordinary camera."

This monster camera weighs 900 pounds, we are told, and the plate-holder when loaded weighs 500 pounds, making the total weight nearly three quarters of a ton. It is so constructed that after a long journey the plate may be dusted by the operator, who enters the camera as he would a dark room and performs his task by the uncertain light that filters through a cap of ruby glass, placed over the lens. To quote further:

"The Zeiss lenses for this camera are the largest photographic lenses ever made, one being a wide angle lens with an equivalent focus of 5½ feet and the other being a telescopic rectilinear lens of 10 feet equivalent focus; the latter being the one used in taking the photograph of the Alton Limited.

"Early one morning last spring the camera was transferred from a padded van to a flat car, and the start was made for Brighton Park, at which point the first exposure was made. The services of no less than fifteen men were required. The day was clear, and a perfect negative was secured after an exposure of two and a half minutes, on a Cramer isochromatic plate, this special, plate being used to preserve the color value of the train. The first three prints were sent to the Paris Exposition. One of them was placed in the railway section, another was hung in the photographic section, while a third was accorded a place of honor in the United States Government building. The stir which the immense picture created in Paris is shown by the fact that affidavits were required before the Exposition officials consented to label the exhibit the largest photograph ever made on one plate."

## IMPROVEMENT OF THE PHONOGRAPH.

THIS instrument, which since its invention has been used chiefly as a toy, may receive such important improvements in the next few years that it will realize the expectations that were raised when it was first described. At that time, we are reminded in an article in *The Scientific American*, it took a remarkably strong hold on the imagination. Public speeches, we were told, would soon be reproduced in any part of the country; letters would be spoken instead of written, and reuttered in the accents of the sender's own voice; and the voices of great singers and noted men would be preserved for future generations. How have these prophesies been realized? Says the writer of the article just referred to:

"Up to the present time, the instrument has been put to these uses to a very limited extent, to the last one scarcely at all. The wax records ordinarily used are not adapted to the purpose, because they are not sufficiently durable. They are frail and easily defaced, and gradually wear out after being used a few times. There are now, however, two or three satisfactory ways in which phonographic records can be preserved indefinitely, the most interesting of which, perhaps, is described in a recent patent of Mr. Edison's. From an ordinary wax record he produces a very perfect duplicate made of silver with a thin plating of gold. There seems to be no reason why such records will not last for centuries, and a collection of them, preserved perhaps by our museums and learned institutions, should be of the highest value to the future student of history, language and music, more especially as it is possible, by processes already well known, to obtain from them at any time an almost indefinite number of excellent copies.

"The reproduction of the voice given by the phonograph is still somewhat disappointing, and leaves much to be desired as a means of studying language; but there can be no doubt that if we had a collection of records made, say, in the age of Elizabeth, and as perfect as those now produced, we would learn much of the speech of the sixteenth century.

"Mr. Edison's process is simple but interesting. He takes a copper electroplate of a wax record. This copper relief obtained is then electroplated with silver, the surface of which, next the copper, of course has precisely the form of the original wax surface. The copper matrix is then dissolved away with acid.

"In the electroplating process the wax record is revolved under a bell-jar, in a Crookes vacuum, through which an electric discharge is passing between electrodes of gold. This causes a discharge of a vapor or infinitesimal particles of gold, which attach themselves to whatever they strike, forming a continuous coating of excessive thinness, and following the outline of the sur-

face with absolute fidelity. Upon this coating the copper matrix is plated, to form the inside surface upon which the silver is deposited when the wax is removed.

"The gold, like the silver, being unaffected by the acid used, remains as a plating on the silver record when the copper matrix is dissolved away. The amount of gold used is scarcely appreciable, and the silver may, of course, be a thin shell, backed up by other material, so that the records are not as expensive as might be supposed from the materials employed."

Readers of these columns will remember that other promising modifications of the phonograph have recently been patented, so that there is no doubt that the intelligence of inventors is once more being directed toward the realization of our dreams of a quarter-century ago.

## THE SENSES OF SAVAGES.

An interesting study of the senses of savage peoples has recently been made by an English physician, Dr. W. H. R. Rivers, from data gathered by him on Haddon's expedition to Torres Strait and New Guinea. Says the *Revue Scientifique* (Paris) in a report:

"In visual acuteness, the savages are superior to Europeans. . . . This is doubtless due to the faculty and habit of observation. The savage is accustomed by necessity to notice the smallest details, and he finally acquires surprising facility and precision. But this special aptitude of noting details does not appear to be favorable to the development of the superior intellectual faculties; it would seem that the savage makes up for his advantages of sense by an inferiority of mind. And he is inferior also from the esthetic point of view; he does not appreciate the beauty of a landscape. Nearsightedness is rare with him; he is rather farsighted, and he adapts himself better than the European to passage from light to darkness; he also sees better in the night-time. His sense of colors is but mediocre, to judge from his vocabulary. Every one knows that Geiger and Gladstone several years ago asserted that the author of the Homeric poems must have been very little able to distinguish colors, because of the poverty of his vocabulary in terms of coloration. If this argument holds good—and this is disputed—certain savages can distinguish very few colors. Among those of Northern Queensland, there are only three words indicating color. In the island of Kiwai there is the same name for blue and black. The vocabulary would seem to show that the best-known color, and perhaps the one that was first distinguished from others, is red; those that are least clearly separated are at the violet end of the spectrum. Thus, on Torres Strait, the savages never confound red and green, but they do confound blue and green. This imperfection is in marked contrast with the condition of the Esquimaux, who possess a highly developed color-vocabulary. As for hearing, the savages under consideration do not appear to have visual acuteness superior to that of Europeans. But we must take into account the fact that the individuals examined were divers. This occupation does not tend to develop fineness of hearing. As for odor, here also there is no superiority over Europeans in sensitiveness. The sense of touch is rather finer, but susceptibility to pain is less. Finally, the sense of weight is very delicate, more so than that of Europeans. And this is curious, for these people have neither the abstract idea of weight, nor the corresponding word."—*Translation made for* THE LITERARY DIGEST.

**Underground Wireless Telegraphy Impossible.**—The fact that hills appear to interpose no obstacle to the etheric waves by which "wireless" despatches are sent has made it probable that they travel as well through earth and rock as through air. A French expert has even stated his belief that they are propagated chiefly through the earth in all cases. Experiments made by M. Lagrange and reported to the Paris Academy of Sciences on January 28 show, however, that a buried receiver can not detect despatches. Says *Cosmos* (Paris) in a report:

"Altho the application of the Hertzian waves to wireless telegraphy has already reached a practical and industrial stage, the theory of the phenomena is still far from complete. The parts played by the earth and by the emitting wire, for instance, are not sufficiently well known. If we do not consider the influence exerted by the earth on the nature of the waves, it would seem that its rôle is limited to guiding, just as a conductor would guide, the waves emitted by the hanging wire. . . . To verify this point, M. Lagrange has inquired whether the action of the waves could be detected by a coherer buried about eighteen inches under the surface of the ground. In these conditions, when the hole was not filled in with earth, the coherer indicated the influence of the electric wave and was able to close a circuit and explode a mine at some distance. But when the coherer was covered with eighteen inches of earth, it was insensible to the action of the Hertzian waves. It must be concluded that the waves do not penetrate the ground and that the earth probably absorbs and reflects them. From the military standpoint, these experiments show also in what conditions mines may be fired from a distance."—*Translation made for* THE LITERARY DIGEST.

**Filth in Sausage-Skin.**—Dr. Shilling is credited with the discovery of a new mystery in the composition of that already sufficiently mysterious article of diet—the sausage. Says the London *Lancet*: "He had often remarked molds lodged in the inequalities of the inner surface of the skin. He examined pieces of dried gut such as are found in the market, and was surprised to find adhering to them a considerable amount of *débris* of straw and fragments of grain. He argued that if such remains were fairly abundant after drying, they must be still more so in the fresh guts used by pork-butchers. He had some difficulty in procuring samples, as only enough is prepared for the needs of the makers, and they are not willingly sold. After repeated examinations, he satisfied himself that these intestines of oxen or pig contained an amount of excremental matter which may be estimated at from 2 to 2½ grams per meter [10 to 12 grains to the foot] of small gut, and 5 per metre of large. If the skin of sausages is carefully removed, only a small part of this filth is swallowed; but, if they are eaten with the skin, a considerable quantity must be swallowed. Dr. Schilling estimates that a German workman consuming 10 to 15 cm. [4 to 6 inches] of sausage daily swallows 4 to 5 grams [62 to 77 grains] of excrement in the week, or 20 grams per month. One needs only, he says, see the butcher prepare the guts by washing in a little dirty water to know in what state they must be in regard to cleanliness. He admits that it is not easy to clean the intestines thoroughly, and he is not clear as to the pathological effects that may be caused by eating the matters referred to. There can be no doubt, however, that such substances answer to the definition of dirt as 'matter in the wrong place,' and, to say the least, they can hardly be regarded as wholesome articles of food. They are certainly not appetizing. Hogs' dung taken in water and wine had a great reputation in the Middle Ages as a remedy for blood-spitting and pain in the side. But the return of the *Saturnia regna* of organotherapy which appears to be in prospect has not yet led us to this particular medication. And, whatever may be its therapeutic virtues, most people would probably prefer not to have it administered in their morning sausage."

## SCIENCE BREVITIES.

PLANTS UPSIDE DOWN.—A series of investigations carried on in the famous zoological laboratory at Naples, is described in the *Jahrbucher für wissenschaftliche Botanik* by Hans Winkler. "The experiments were made upon a flowerless aquatic plant that grows normally with its roots in the sand and its leaves in the water. For example, plants having roots and stems already developed were placed upside down, with leaves buried in the sand and roots floating in the water in strong light. The roots changed to stems and leaves, while the parts buried in the sand became roots."

NEW AIR-PURIFIER.—"A new ingenious process to improve unhealthful room-air at once has recently been invented by a French physician," says *The Scientific American*, quoting from the *Pharmaceutische Post*. "Similar to the well-known Seidlitz powders, he incloses a scent in two different papers, one of which contains white barium peroxid, which is saturated with perfume in a concentrated form. This is first placed in tinfoil or oil paper. The other blue paper contains powdered potassium permanganate in the correct proportion, so that on mixing the two bodies together in a solution, oxygen is set free, which spreads the scent in the air and improves the bad air in the room. If the powder is to be used for disinfecting purposes the perfume may, of course, be left out. For sick-rooms and wherever an opening of the windows is not desirable or impracticable, this new air-purifier will doubtless prove of great value."

# THE RELIGIOUS WORLD.

## THE CRITICS AND THE CHRIST.

THE recent publication of another volume of the work of modern critical scholarship known as the "Encyclopedia Biblica" is again attracting the attention of the religious world to this series. The present volume—the second—covers the letters E to K, and like the others is edited by the Rev. T. K. Cheyne, Oriel Professor of the Interpretation of Scripture at Oxford, and Canon of Rochester; and by Dr. J. Sutherland Black, son of a well-known minister of the Free Church of Scotland. The following conservative yet appreciative consideration of this work, appearing in the New York *Churchman* (Prot. Episc., February 23), gives a fair idea of its scope and critical principles:

"Much as we may regret the attitude which some of the independent investigators who have contributed to this encyclopedia have taken, we can not regret the noble witness which it gives editorially to freedom of scientific thought. It is better that there should be intellectual error than intellectual stagnation. It is well that all positions should be subject to the keenest criticism and the closest scrutiny. It is well, too, that we should see how independent stedfast faith may be of many things that have been accounted its pillars, and that may yet come to be reckoned again by all as among its assured foundations. It may sometimes be hard to see how positions which are taken here are consistent with Catholic churchmanship. We think that some of them are not so; but that the distinguished churchman who edits, and that the churchmen who contribute to this encyclopedia are as sound in faith as they are bold in scholarship, we have no hesitation in believing. As a work of scholars and for scholars, it is a source of congratulation that an encyclopedia of such fearless and acute criticism should be issued under the editorship of a churchman. . . . . .

"Professor Bruce, of the Free College, Glasgow, writes under the same auspices, of our blessed Lord, that 'He was the child of His time and people'; and further that tho 'His spiritual traditions are pure truth, . . . the purity of the doctrine may seem to be compromised by occasional references to the reward of sacrifice.' His teachings, says Dr. Bruce, 'put morality on a level with, or even in some respects above, religion.' 'In setting forth the *summum bonum* as the kingdom of God, Jesus poured His new wine into a very old linguistic skin.' He was an 'idealist,' a 'poet,' words were 'symbols' for Him. His healing ministry was 'a manifestation of his enthusiasm of humanity,' showing our Lord 'as in a large, grand human way the friend of men.' If He thought of Himself as the Messiah it was because to Him that word stood for an ideal, 'the representative of all who live sacrificial and therefore redemptive lives.' It was in the same symbolic sense that He chose for Himself the designation, Son of Man. But even in the skeleton which Dr. Bruce's dissection leaves he finds 'all that is needful to give the Passion its tragic interest' and to 'encourage large hope for the world.' Faith will discern the Savior none the less clearly and believe none the less surely for the knowledge that in the crucible fire of the critical furnace this much remains permanent and undissolved. That the Resurrection was a very early faith and the second advent a very early hope may 'present one of the hardest problems for the student of the Gospel,' but is it not better that this should be said by the honest student, than if it were left to skeptical surmise that criticism could solve it if it were free?"

The London *Academy* (February 23) takes a far graver view of the inroads on the creed of Christendom made by this volume. *The Academy* had already drawn attention to the assertions, made in the previous volume, "as to the 'unhistorical' nature of the Genesis creation-story, the profane and trivial origin of the Song of Solomon, the vileness of the character of David, and also to the doubts cast by Canon Cheyne's contributors upon the credibility of many of the facts recorded in the Book of Samuel, the Book of Chronicles, and even in the Gospels." The present volume is no tenderer to Christian traditions, remarks *The Academy*:

"The Book of Esther, says Professor Nöldeke (Strasburg), was written 'to encourage the observance of the feast of Purim among the Jews'; it is perfectly 'unhistorical,' and, under a thin disguise, shows two Babylonian deities (Marduk and Ishtar) conquering the Elamite god Hamman, and his consort Vashti. . . . Some portions of the Books of Ezra and Nehemiah, say Canon Cheyne and the late Professor Kosters (Leyden), 'have great historical value, but the redactor's own contributions are largely inventions.' So, the Book known as Habakkuk's could not possibly have been written by him . . . while the 'original story' of the legendary Job is to be found in the Babylonian tale of Eabani, the friend of the solar hero Gilgamesh, and the Book of Jonah is 'an imaginative development of a thought suggested by Scripture.' As for mere history, the author of the Book of Chronicles is accused by Robertson Smith and Canon Cheyne (art. 'Elhanan') of deliberately altering the name of Goliath into that of an imaginary 'Lahmi,' his brother, in order to conceal the tradition that Elhanan and not David was the slayer of that giant."

"Did any of the opponents of Christianity, from Voltaire to Ingersoll," asks *The Academy*, "ever go further?"

Thus for the Old Testament. Yet this wholesale method of dealing with it is mild, remarks *The Academy*, compared with the drastic way in which the encyclopedists deal with the New Testament, particularly with those parts that relate to the life of the founder of Christianity. The Rev. Dr. E. A. Abbott, author of the longest article (on "The Gospels"), thinks that "Matthew's account of the Resurrection has been modified, so as to soften some of its improbabilities," and that "in course of time skeptics and enemies detected and exposed stumbling-blocks, and subsequent evangelists adopted traditions that sprang up to remove or diminish them." Professor Schmiedel (author of the second part of the article on "The Gospels") opines, says *The Academy*, that "some doubts as to the accuracy of the narratives can not fail to arise in the mind of the stoutest believers in miracles," when he sees "how contradictory they are." After giving a long list of these contradictions, he claims that these facts "show only too clearly with what lack of concern for historical precision the Evangelists wrote." The more credible statement in the synoptics as to the Resurrection is that "the first appearances were in Galilee." The statement that the risen Jesus was touched or that He ate are "seen to be incredible," and Dr. Schmiedel points out that St. Paul saw no difference between any of the post-resurrection appearances to others, and that to himself on the road to Damascus, the inference being that all were alike "visions." He is thus led to ask whether there are "any credible elements to be found in the Gospels at all?" He finds nine, however, all of them words spoken by Jesus; yet these, he asserts, "prove not only that in the person of Jesus we have to do with a completely human being, and that the divine is to be sought in Him only in the form in which it is capable of being found in a man; they also prove that He really did exist, and that the Gospels contain at least some absolutely trustworthy facts concerning Him." We may accept as credible, he says, everything that harmonizes with what he calls these nine "foundation pillars," or that is not otherwise "open to fatal objection." Chronological questions relating to the composition of the Gospels are of no moment, he says, for "if our Gospels could be shown to have been written from 50 A.D. onward, or even earlier, we should only have to say that the indubitable transformation in the original tradition had taken place much more rapidly than one might have been ready to suppose; but as the transformation has departed so far from the genuine tradition, it is only in the interests of a better understanding and of a more reasonable appreciation of the process that one should claim for its working out a considerable period."

*The Academy* thinks that Christianity is thus betrayed in the house of its friends, in this encyclopedia written by eminent ecclesiastics and preachers of various Christian churches. "Undignified as the simile may be," it remarks, "the position of the

man who sits on the branch of a tree while he saws it off next the trunk seems to exactly correspond to theirs." With regard to the churches "existing for the propagation of trinitarian Christianity," it concludes:

"The results of accepting the encyclopedia's position, tho not so easily defined, would be quite as serious, and, as far as we can see, they are now put to the election between rejecting the conclusions of the higher criticism altogether and effecting the most radical changes possible in the creeds they profess. If, as seems most likely to be the case, they choose the first-named horn of the dilemma—and this applies to the Church of England as well as to non-conformist bodies—they will henceforth have to reckon with a flank attack, which, from the learning of the adversaries and the care with which they have prepared their ground, can not but be very formidable. Looking at the whole situation, we are much mistaken if the publication of this volume does not prove to be the most serious blow yet struck at Protestant Christianity."

## KING EDWARD AND THE FREE CHURCHES OF GREAT BRITAIN.

WE have lately given some comments on the relation of the new King and the royal family of England toward the Established Church. The attitude of the English monarchy toward the Nonconformists—or Freechurchmen, as it is now more customary to call them—is also a matter of much importance. The eminent statistician, the late Mr. M. G. Mulhall, has recently pointed out (see THE LITERARY DIGEST, February 23, page 230) the great increase of British "dissent," showing that while in 1865 the Established Church stood to dissenters as 9 to 1, at present it is less than 3 to 1. Indeed, taking the United Kingdom of Great Britain and Ireland, it seems probable that the non-Anglican bodies predominate, altho there are no wholly authoritative statistics upon the subject. In the British empire as a whole, of course, the Anglican Church forms but a small fraction of the total number of religious believers, Christian and non-Christian.

The outlook of Nonconformity under the new reign is discussed by Mr. Albert Dawson, English editor of the Boston *Congregationalist*. He writes (March 9):

"A few months before her death the Queen asked a Church of England clergyman in the Isle of Wight how he got on with the Nonconformists, adding, with a delightful touch of the girlish mischievousness which she never wholly lost, 'You will have to get on with them in heaven, you know.' Similarly Victoria's son and successor is known to be kindly disposed toward the Nonconformists, who form at least one half of his subjects, and he certainly has never shown any ecclesiastical preferences or prejudices.

"On the other side much might be said. We live within a rigid constitution, which in its present form simply does not recognize the existence of dissenters, to say nothing of conferring upon them any ecclesiastical status. The monarch personally may be very friendly toward Nonconformists, may show them courtesies, and might desire to go further. But the law of the land hardly permits it. It is at just such times as the present that dissenters realize their actual place in the state. In the great national religious services and ceremonies they have no part, and in only a few local joint memorial celebrations have they been permitted to share. At Westminster Abbey and St. Paul's on great occasions room is made for them as spectators, but never as participants. At the jubilee celebrations, at the obsequies of the Queen, and at the opening of Parliament, dignitaries of the Church of England were much in evidence. But not a solitary Nonconformist was officially visible. It will be precisely the same at the coronation. Rev. C. Silvester Horne wrote to the papers, respectfully urging that before the order of service at the Queen's funeral was unalterably fixed Free-Church representatives should be invited to take audible part in the solemn national event, but the suggestion met with no response. The fact is, the whole country is enmeshed in a net of Anglicanism. It is the ecclesiastics who block the way, and, until they are either persuaded or forced to budge, Nonconformists, while enjoying equal civil rights, must continue to endure humiliating religious disabilities.

"Disestablishment would, of course, at once put an end to all this by placing all the religious communions upon an equal footing. But disestablishment seems just about as likely to be effected as communication with Mars, indeed rather less so. As an active force in the nation the disestablishment movement is practically dead. I may be rebuked for saying this, but you must accept it as the opinion of one whose business it is impartially to study current affairs. That religious equality will come, and probably at no very distant date, I firmly believe, but it will rather be along the line of a scheme of comprehension that does not involve the sacrifice of principle and conviction than in the form of disestablishment. When brought into prominence by such historic scenes as are now being enacted in our midst, the present anomalous position of Free Churchmen becomes so ludicrously unjust that one feels it can not last much longer. Possibly one of the brightest features of the reign of King Edward VII. will be a proper recognition by the state of that half of the subjects of the realm who are now ecclesiastically ignored."

## IS LIFE IN A FLAT UNFAVORABLE TO RELIGION?

IN a recent Lenten address, the Rev. Dr. S. D. McConnell, rector of Trinity Church, Brooklyn, viewed life in a city flat from a new point of view. According to a *résumé* of his address in *The Living Church* (March 2), he said:

"There is something about the flat that militates against religion. In all sections of New York, in Boston, and wherever the flat has been introduced, the fact is noticed. It may be the large city, which the flat accompanies as a necessity, where people more and more lose themselves among other people, or think they do, and so shirk responsibility and become irreligious. Whatever it is, the apartment, and especially the high-priced one, is looked upon with fear by all rectors."

A writer in the same journal (March 9) tries to account for this. His indictment, unlike Dr. McConnell's, is against the cheap flat, which, in New York and most American cities, is used largely by a migratory portion of the population:

"In all flats the rooms are so close together, often small, that there is absolutely no quiet or privacy; a person has no opportunity for quiet meditation or devotions of any kind. I am speaking of the moderate-sized, moderate-priced flats. I have had no experience with the high-priced ones, but think there may exist the same difficulty in them. There is not a spot in the average flat where one can shut out the sounds from the rooms. Bedrooms are small, usually with but one window; consequently the atmosphere is quickly vitiated when the doors are closed. In my own case during this winter we have had sickness and extra care and anxiety. In order to have any quiet for prayers and devotions, I must await until the family are in bed, or I must rise before they are astir, which is a serious tax on the physical strength, and, at best, fatigue renders meditation and prayers very nearly mechanical. Whatever affects the private devotions must equally affect church attendance.

"The one great remedy for this state of affairs lies, it seems to me, in opening our churches through the day. If one could drop into the church for a few minutes, daily, it would be an unspeakable help. It seems as if it would be a very simple matter to arrange to have the churches open from seven in the morning until seven in the evening. *Don't* close them at five or six, but give people a chance to stop on their way home from their daily work. In the part of the city in which I live, the churches are all closed throughout the week (barring the hours for Lenten services). The sectarians [*i.e.*, non-Episcopalians] are beginning to realize the importance of a quiet moment, for, to our shame be it said, there are more open doors in their buildings than in ours. The churches need not be warmed even, except in severe weather. It seems to me the crying need of our great cities, especially in 'flat' districts, is the open church. It might take some time to impress upon people that the church was always open; but I am sure many would thankfully avail themselves of the opportunity."

Another writer points out that even tho church doors are kept open, there is often an offensive officialism in Protestant city churches which limits their usefulness. While one can go into a Roman Catholic church at any time of the day and unnoticed spend an hour or more of meditation or devotion, in many Episcopal and other Protestant churches one is almost sure to meet an officious verger or sexton who eyes one with suspicion and keeps one in view as a possible depredator, in spite of the fact that Roman Catholic churches have in general incomparably more valuable altar treasures to be protected.

## HAS CARDINAL VAUGHAN BECOME A CONVERT TO DR. MIVART'S VIEWS?

TO those who followed the course of the very spirited controversy between Cardinal Vaughan, head of the Roman Catholic Church in England, and the late Prof. St. George Mivart, a leading Roman Catholic scientist, the supposition that Dr. Mivart would ever find a convert to his views in his ecclesiastical superior will hardly appear credible. Yet in the London *Tablet* (March 1), a journal owned and editorially controlled by Cardinal Vaughan, there has appeared an article which goes a long way toward meeting Dr. Mivart and the higher critics upon their own ground. The whole article, dealing as it does with what may be called the *crux* of the Old-Testament controversy —the Pentateuch—is of great interest and importance as showing how far a primate and prince of the most conservative church in Christendom has, as he states, been compelled to accept certain results of modern Biblical criticism. Cardinal Vaughan's initial steps in "liberalism" in fact date back several years. After premising that "those who are in any degree acquainted with the course of modern Pentateuchal study are aware that Deuteronomy is in some sense a key to the position," *The Tablet* remarks that for seven years it has accepted "the analysis of the Pentateuch or of the Hexateuch into four main documents," altho it has not as yet accepted the opinions of the modern critics as to the dates of composition. In a review of "*Zum Deuteronomium*," a recent dissertation by the Jesuit Dr. von Hummelauer, the writer says:

"In 1894, Dr. Robert Clarke convinced us—not indeed by new arguments, but by a forcible restatement of old ones—that there is no reasonable possibility of resisting the conclusions of the critics as to the documentary analysis of the books which for centuries were unhesitatingly ascribed to the personal authorship of Moses. We admit, provisionally at least, the analysis; but we are still in doubt as to the dating of the documents. And toward the clearing up of this doubt the first step, as Klostermann long ago pointed out, must be the assigning of an approximate date to Deuteronomy. If Deuteronomy be really a work of the seventh century B.C., then the question must be faced whether the 'Priestly Code' can possibly be, in its present form, pre-Exilic. If, on the other hand, Deuteronomy should turn out to be much older than the seventh century B.C., then the state of the question as to the historical setting of the Priestly Code can not fail to be considerably modified; even tho the arguments which seem to show that it is later than Deuteronomy should be unimpaired.

"Hitherto, so far as we are aware, no attempt has been made to assign to Deuteronomy any definite date intermediate between the time of Moses himself and the reign of Manasseh or Josiah. But now Father F. von Hummelauer enters the field with an entirely new hypothesis, which is at least of considerable interest, and which we proceed to lay before our readers, tho we would counsel those of them who can read from German by all means to make acquaintance at first hand with the little brochure which heralds his forthcoming commentary. According to Wellhausen, the fifteen chapters Deut. xii.–xxvi., or more precisely, Deut. xii. 1—xxvi. 15, form the original kernel of the book, to which all the rest was added by way of introduction or completion at different, tho not widely different, times. Now, altho Father von Hummelauer altogether dissents from Wellhausen as regards their relative priority, he agrees with him in thinking that the chapters in question are neither by the same hand nor of the same date as the remainder of the book. And in this he goes beyond many of the critics, among whom Kuenen and Driver—to name only two—strongly maintain the unity of Deuteronomy, or at least of that larger portion of it which consists of chapters v.–xxvi. and xxviii."

The writer gives a somewhat minute consideration to the facts upon which this Jesuit scholar bases views more "advanced" that those of the two great leaders of higher Old-Testament criticism. Father von Hummelauer, for instance, following almost the words of Voltaire, Thomas Paine, Ingersoll, and other more scholarly critics of the modern school, calls attention to the fact that the authors of the Mosaic books "read back" into their documents the spirit of their present period, when Moses had been dead for centuries. For instance, the Philistines, Dr. von Hummelauer argues, "came into prominence as the enemies of Israel not in the time of Moses, but toward the end of the Richterzeit, or period of the Judges." He chiefly dwells on the fact that the writer of Deut. xii. represents a social state among the Jews as actually prevailing which is little short of anarchical. Can it be imagined, asks Dr. von Hummelauer, that Moses in his own age should have so written about his own time? "No," he replies, "these words, tho spoken 'in the person' of Moses, were never spoken by Moses, but by one who lived at a later date and who referred back . . . the sad conditions of his own time to that of Moses." "This notion of a retrojection of present conditions to a past time is of course familiar to the critics," remarks *The Tablet*, "but it is something of a surprise to find so eminently orthodox a theologian as Father von Hummelauer adopting this idea and using it without hesitation as a working hypothesis." *The Tablet* concludes:

"It would be rash in the extreme for any one who had not given the matter long and serious consideration to venture to put forward an independent opinion on the date of the redaction of Deuteronomy; by which we do not mean the date at which it received its final literary revision, but the period within which it assumed a form substantially identical with that in which we now possess it. Dr. Driver and others of the same school are as firmly convinced that it reflects the circumstances of the seventh century B.C. as Father von Hummelauer is that it reflects those of the eleventh or twelfth. This new hypothesis at least deserves careful examination. . . . . .

"Meanwhile two useful lessons may be drawn from Father von Hummelauer's pamphlet: viz., (1) that it is not safe to pooh-pooh the methods of the higher criticism; for in fact the author of the dissertation before us makes some of the chief arguments of the critics his own, and employs methods which are, to say the least, very similar to theirs; and (2) that, as was said at the outset, it is not safe to accept as fully established the conclusions of the dominant school of critics with regard to the dating of the documents which are believed to underlie the Pentateuch as we now have it."

**Some Common Misinterpretations of Doctrine.**—The ease with which theological doctrines are misrepresented by outsiders is illustrated in a recent criticism of Mr. John Burroughs's work, "The Light of Day," in *The Sacred Heart Review* (March 9). The reviewer, the Rev. Dr. James J. Fox, points out that Mr. Burroughs, like many Protestants, takes the Catholic dogma of the Immaculate Conception to relate to the virgin birth of Christ, whereas it has nothing to do with that doctrine, merely meaning that the Virgin was, in her own conception, from her mother's womb, divinely preserved from all taint of sin, so that the Christ might be born from a sinless mother. Dr. Fox is indignant that, altho writing of Roman Catholic doctrines, Mr. Burroughs "has never taken the trouble to find out what these doctrines are." The writer further says: "He would, we presume, consider himself justly disgraced if, in speaking of some peculiarities of the gray squirrel, he confounded

it with the brown. If, in criticizing, let us say, the religion of the Maoris, he were to exhibit ignorance of what that religion is, he would feel that he had written himself a shameless pretender."

Added force is given to Dr. Fox's warning about the gray squirrel by the fact that in the same paragraph he refers to "the Calvinistic doctrine that unbaptized infants are condemned to eternal torment," and finds fault with Mr. Burroughs for wrongly attributing this "Calvinistic" view to the Roman Catholic Church. As has repeatedly been pointed out in the recent discussions of the Westminster Confession of Faith, Calvin and Presbyterians generally have always maintained that unbaptized infants, if elect, are most surely saved. Indeed, the belief that baptism is not necessary for salvation is one of the distinctive doctrines of Calvinism, as opposed to that of sacramentarians.

## ARE RELIGIOUS COMMUNITIES A SOURCE OF DANGER?

THE past two years have been marked by an arraignment of religious orders in several parts of the world. In the Philippines, a long, bloody, and costly conflict has been proceeding, whose first inception is widely ascribed to the popular antipathy felt toward the friars. In France a bitter discussion as to the conduct of many of the religious houses toward of 1899—their young protégés took place during the autumn and winter 1900, and was made the subject of parliamentary inquiry—later reflected in the remarkable articles of M. de Saint-Genix in *The Contemporary Review* (see THE LITERARY DIGEST, April 21, 1900, page 488), and in a defense of the orders (May 19, page 609). The present determined onslaught upon the congregations by the Waldeck-Rousseau ministry in France, and the recent outburst of popular antipathy to the Jesuits and other orders in Spain are, with the other facts mentioned, apparently part of a world-wide movement of popular distrust of the religious orders.

In view of this, *The Catholic World* (New York, March) gives the leading place to an exposition of what the religious orders really stand for, as seen by Roman Catholics. The writer says:

"Religious communities, then, are bodies of men or women who, in order to devote themselves more exclusively to the pursuit of their ideal of Christian perfection, abandon their homes and live together under a rule. Always this rule enjoins the observance of the three 'evangelical counsels,' poverty, or the renunciation of earthly goods; chastity, or the consecration of body and soul to a life of perfect continence; and obedience, or the subjection of private will to the command of legitimate superiors. Ordinarily, besides this the 'rule' prescribes a daily routine of exercises embracing both the worship of God and the service of one's neighbor at stated intervals and for definite lengths of time, leaving a margin to be employed as individual ability or inclination shall direct. We say 'ordinarily,' since there are some communities known as contemplatives in which the rule prescribes no other service of the neighbor than that of frequent and fervent intercessory prayer. Ordinarily, too, stability is secured by vows on the part of the members; that is to say, by promises made to God binding the individual under pain of sin to adhere to his state of life and to prosecute his strivings after perfection.

"To what loyal Christian mind can this ideal be offensive? Religious [an ecclesiastical term designating those in religious orders] find in the Gospel itself a divine guaranty for the worth of poverty, chastity, and obedience. The Son of Man, who had not whereon to lay His head, who taught the value of renouncing all, who subjected Himself to Mary and Joseph, who was born of a Virgin, died a virgin, and praised virginity highly, both with His own lips and through His inspired apostle—He is the type in whom Religious discover God's unmistakable approval of the state of life their rule prescribes. They find this type recognized and imitated in the apostolic church, consecrated by generations of saints, sanctioned by centuries of Christian teaching, rendered irresistibly winning by harmony with the noblest aspirations ever experienced by human souls. To obtain a definite and practicable means of imitating Christ's life is the ceaseless prayer of numerous hearts touched with the generous flame of divine love. For how many is it obtainable only by means of entrance into a religious community? How often does it happen that the young man or maiden, on fire with this inner sense of divine possibilities, can find contentment only in a shelter where the soul, 'espoused as a chaste virgin to Christ' and freed from the trammels and clamor of other loves, can suppress carnal desires, can renounce possessions, can learn the lesson of the cross in that 'greatest of penances,' a life passed under a common rule. Surely, lovely chastity can not but win the veneration of any mind honestly resolved to accept Christ's teaching as good for men. Indeed, it scarcely can fail by virtue of its own inherent charm to attract the souls of all who are capable of appreciating the real beauty of the supersensuous, of understanding the true poetry of love. Far beyond the wildest dreams of the young and romantic imagination are the sweet joys reserved for those who dedicate their lives to the cultivation of that hidden love born of the Creator's regard for His creature. As purity begets faith, so does renunciation of carnal delight prepare the soul for a spiritual relationship that can not be described in words. To those who believe in the reality of the Incarnation, surely this higher life should appeal as a precious grace bestowed upon chosen souls to set them peculiarly apart from things of earth and reserve them for the ineffable union of a love all spiritual and divine."

The celibate ideal is the one most widely misunderstood; far less can poverty as an ideal, the writer remarks, offend any one who ponders the true meaning of Christ's earthly life, of His example, His teaching to the apostles, and of His counsel to the rich young man seeking perfection, "Sell whatsoever thou hast, . . . and come, follow me." As to the third "counsel of perfection"—obedience—this does not mean, the writer explains, "that the subject substitutes the superior's command for his own conscience. . . . Neither church law nor any community has ever sanctioned the idea that an individual ceases to be a responsible moral agent."

After giving what he calls "an unprejudiced Gospel view" of these three fundamental principles of the religious life, the writer makes a plea for the reasonableness of vows—all the more remarkable as the Paulists do not themselves take any but the ordinary vows of the priesthood, and because the "Life of Father Hecker," their founder, met widespread condemnation in the church for its alleged hostile teachings upon this point. The writer says:

"If a man in response to what he believes to be a divine invitation enters into a contract with God formally and solemnly as he would in the case of a human contract, has he done anything unbecoming? Why should a soul not be espoused as firmly and irrevocably and publicly to the divine Lover as to a human one? And is it inconceivable that the soul thus wedded thereby gains a new title, so to speak, to the affection of Almighty God? Surely all this commends itself as perfectly intelligible and consistent to any one who has risen to that concept of divine love taught by Jesus Christ. Yet these truths are a logical justification for the Catholic notion of vows. A religious vow is a contract with God made by a man who thus binds himself solemnly to a perfect life—that is, to the pursuit of perfection. *Ipso facto*, therefore, a man with the three religious vows is in a more perfect state, blessed with peculiar privileges and special graces. Such is the universal and traditional Catholic teaching. Is it open to criticism? Certainly not from the point of view of the Gospel."

As for the present French crisis, the London *Spectator* condemns the clericals for the anti-Jewish crusade preached by many of them, and indicts the French Government for its attempt to depart from the principles of true liberalism. Of "Clericalism" it says (February 16):

"We desire to state most emphatically our dislike, nay, detestation, of the aims and actions of the more violent sections of Latin clericalism. We can not find words strong enough to ex

press our loathing, not only of the writings of men like M. Drumont, but of those who have thought it consistent with their professions of Christianity to let the outrageous outpourings of the anti-Semite and pro-clerical press pass by without any real or effective protest. The things written by these defenders of the church as Roman Catholics to Roman Catholics should have raised a protest that would have rung throughout Europe. Instead, the leaders of the Roman Church have been dumb, and dumb, alas! in the spirit of a friendly neutrality. Almost the only expressions of Roman Catholic indignation that have been heard have come as a faint whisper from a few insignificant and obscure, if upright, priests and laymen. Here are some extracts from the *Libre Parole*, which Mr. Conybeare uses to support his case against clericalism. They are messages written by correspondents of that paper who sent subscriptions to the funds raised by the *Libre Parole*, and were published by it, needless to say, not with disapproval, but as expressions of sympathy for the work the paper was doing:

"'St. Bartholomew's night saved France from dismemberment, 2 francs.' 'A. Baillière and one of his friends, who would like to see 100,000 Jews and other traitors to the country guillotined, 100 francs.' 'For the widow of Henry, for the extermination of the Jew and the Huguenot, 1 franc.' 'A group of officers who impatiently wait for the order to experiment with the new explosives and new cannon on the 100,000 Jews who poison the country, 25 francs.' 'One who begins to understand St. Bartholomew's in view of the anti-patriotic attitude of the Protestants, C. L., 3 francs 50.' 'An *agrégé* of the university who begins to understand St. Bartholomew's and the 18th Brumaire, 2 francs.' 'A *licencié* in history who finds the Inquisition to be an institution of public utility, and St. Bartholomew's a work of national purification, 5 francs.' 'Hurrah for a Jewish St. Bartholomew's, M. A. Poisson, 3 francs.'

"One might have imagined that M. Drumont's publications would have been placed on the Index, and that every bishop in France and every priest would have denounced such atrocities to their congregations. Yet as far as we know no mark of disapprobation by the Vatican or by the French ecclesiastical authorities was shown. And all the while the Roman Church in France and on the Continent assumes to itself the duty of directing men's consciences in questions of morals as well as of faith. Truly may we say of this wicked indifference, in Cromwell's words, 'This is a thing God will reckon for.'"

There is, however, says *The Spectator*, only one way by which "the extremer elements of Roman Catholicism can be effectively fought and overcome," namely, by "discarding, not copying, the campaign of oppression which the French clericals desire to apply to the Jews, to the Protestants, and to liberalism generally." That is, the humane principles of true liberalism must be applied to the clericals, and the religious orders must not be persecuted:

"It is idle to say that no outrage on liberal principles is involved because the men who will be touched by the new legislation entertain noxious and illiberal ideas. True liberty consists in the right to think as one pleases, to hold what opinions one likes, and to convince others, if one can, of those opinions. It involves the right to hold opinions which other people hold to be wrong, as well as those which they hold to be good. Action is, of course, another matter. Actions can not be as free as thoughts, or the world would be a pandemonium. But even here the minimum of interference must be allowed to the state. The policy of the bill before the French chamber is, in effect, to take away rights from monks and members of religious orders which will be allowed to laymen. That is a policy which is, in our opinion, as unsound in theory as in practise. It is illiberal and it is inexpedient, and it can not produce the results desired. As long as French parents want their children taught by Jesuits and Assumptionists they will contrive to get them taught by members of those orders. The Jesuits may, and will, disappear some day through internal decay, but as long as they are persecuted they will flourish. When the order was dissolved by the Pope, it was at its weakest owing to the deadening influences which always attach to old and rich corporations. The stimulus of a world-wide persecution restored the order to vigor. The French Government have themselves had experience of this fact. The orders are far more powerful to-day than they were before the Ferry bill."

## POTSHERD LITERATURE AND THE BIBLE.

A NEW source for the study of the history of the New-Testament era has been discovered in the many potsherds and clay fragments that have been found in recent years in Egypt, and which have been closely studied, especially by Prof. Ulrich Wilcken. The use of the "ostraka," or potsherds, for writing purposes was barely suggested by the classical Kleiothenes story; but it has been left chiefly to Wilcken to demonstrate that they were generally employed for writing as early as the sixth century before Christ in Athens and later throughout the Mediterranean countries, especially in the Hellenistic period. In recent years thousands of these potsherds have been found in Egypt, and they yield practically the same kind of data which the papyri yield. They have been found bearing inscriptions in the national Egyptian, both hieratic and demotic, in Greek, Latin, Coptic, Aramaic and Arabic. The greatest number so far discovered have Greek inscriptions and date from the time of the first Ptolemies, reaching down to the Arabian period. The contents are varied, including letters, contracts, bills, receipts, etc., including also extracts from classical authors. The greatest number of ostraka contain tax receipts. In Wilcken's book, which is entitled "Grechische Ostraka aus Aegypten und Nubien," 1,624 of these remnants are utilized, and of these 1,355 are published by him for the first time. These potsherds are found in the museums of Berlin, London, Paris, Rome, Turin, Leyden and elsewhere, and also in private collections. The writing is a peculiarly difficult kind of cursive script. Considerable material is found for the study of the New-Testament period, and especially of New-Testament Greek, as also of Philo, the Apocrypha, and the Greek Old Testament. Direct data on New-Testament interpretation are found only occasionally, such as information concerning the methods of collection, especially for religious purposes, practised in Egypt in the Greco-Roman period, a number of the terms used by Paul concerning his collection for the poor Christians in Jerusalem being found. Again, the publicans are described much as they are in the New-Testament books. No doubt this potsherd literature will give other sidelight information to the New-Testament student.—*Translation made for* THE LITERARY DIGEST.

## RELIGIOUS NOTES.

THE eradication of racial antipathies and misunderstandings by means of the Golden Rule is to be the subject for discussion at a meeting held in Calvary Baptist Church, New York, on March 24, under the auspices of the Baron and Baroness de Hirsch Monument Association. Among the speakere are to be Minister Wu Ting Fang, the Rev. Dr. Heber Newton, the Rev. Dr. Joseph Silverman, the Rev. Dr. R. S. MacArthur, the Rev. Dr. Thomas R. Slicer, Rabbi Samuel Schulman, the Rev. Dr. Donald S. Mackay, Edwin Markham, and others.

IN our issue of January 19 we quoted from *The Church Review* some remarks about a recent rendition, in St. Paul's Cathedral, of the hymn "Nun danket alle Gott," which this High-Church journal attributed to Luther, "that solifidian heresiarch." A reader calls our attention to the fact tha. this hymn is not by Luther but by Martin Rinkart, who wrote more than a hundred years later, and asks whether this peaceful hymn could have aroused all this anti-Protestant furor, or whether *The Church Review* did not have in mind Luther's famous hymn, "Eine feste Burg ist unser Gott." It is not improbable that the latter was the case, altho any hymn by a continental Protestant reformer would probably be unwelcome to *The Church Review* and the Anglo-Catholic party.

ELIZABETH ANN SETON will be the first canonized saint of the United States, if the investigations now under way are satisfactory. The Rev. Father P. S. McHale, president of the Niagara University, has received authority from Rome to look into the matter, as a preliminary to further investigations at Rome. Mother Seton was born in New York in 1774, and she died in 1821. In 1809 she established what later became the Sisters of Charity. The process of making a saint is a long one, extending in most cases over many years, sometimes centuries. The postulant for the "honors of the altar," as full sainthood is called, is first declared venerable. The Venerable Bede, the Anglo-Saxon writer of the eight century, has never passed beyond this step. Later, the "beatification" of the postulant is declared. Blessed Thomas More, Lord Chancellor of England, who was beheaded for his faith by Henry VIII., lately attained this title after being "Venerable" for several hundred years. Last of all, the postulant is canonized and has the title of saint. There are several Latin-American saints already, the best known being St. Rose of Lima, in Peru.

## FOREIGN TOPICS.

### IRELAND AT THE BEGINNING OF THE CENTURY.

A SEVERE arraignment of the Salisbury ministry for its treatment of the Irish question appears in the February *Fortnightly Review*. The writer, who signs himself "An Old Whig of the School of Grattan," declares that, in matters of general government, education, taxation, but especially in the question of land, the policy of the present Conservative government in Ireland has been "either a feeble, hand-to-mouth policy, or a policy of positive mistakes." As the century opens, he says, the constitution in Ireland is a "ghastly farce."

"That majestic structure of order and freedom, well compacted, broad based on the national will, is in Ireland a shapeless, nay, a tottering ruin. The Irish representation in the House of Commons is almost wholly composed of elements hostile to government, law, and social progress; moderation, wisdom, above all, property, that main pillar of stability in a state, are, with few exceptions, not to be found in it; it does not express, it falsifies, the best opinion of Ireland. The aristocracy which, in Great Britain, leads the people, is in Ireland powerless, degraded, contemned; it has hardly any part in political life, it has even been deprived of nearly all social influence. The government of Ireland is a mere bureaucracy, apparently strong but really weak; its modes of administration change as one minister succeeds another, and exhibit vacillation under the show of force; it is not in accord with the upper classes, which it has long ago ceased to consult or respect; with the lower it is completely out of sympathy."

In almost every respect, the writer continues, Ireland is in a bad way. We quote again:

"In Ireland the divisions of race and faith, made worse by agitation and legislation utterly unwise, are more deeply marked than they have been within living memory; the middle class in Ireland is happily rising, but is still of little weight in the state; the great mass of the people is a mere multitude without a stedfast purpose or will, tossed hither and thither by priests and demagogs, completely unfit for political power as every general election for the last fifteen years has proved. In this state of things the elements of true national life do not exist; society is disordered, almost turned upside down; revolution and socialism are ready to break out, and are only kept down by ill-directed force. These grave evils reveal themselves most fully in the land and in the relations formed in it, infinitely the most important in the entire community. The landed gentry have been changed from landowners into rent-chargers; they have been thrust out of the management of local affairs; they have been literally prevented by law from doing their duty. The peasantry have been gorged with the spoils of their landlords, but the advantages they have gained have been to little purpose; they are a discontented and dissatisfied body of men, disloyal for the most part in the southern provinces. In this position of affairs demoralization abounds, the sense of security and of what is settled hardly exists; sober industry and thrift find no encouragement, dishonesty and wastefulness are actually promoted by law, a restless and unwholesome craving prevails for a confiscation of property iniquitous, universal, infamous. And the results are becoming manifest in the land; the wealth of Ireland is slowly on the increase in commerce and among the middle classes; but in all that relates to the land it is plainly declining. Pauperism is steadily growing, tho population is still being reduced; the income tax on land is gradually falling off; the area of agriculture of all kinds is shrinking; husbandry, in many districts, is not nearly so good as it was, say before 1879, especially as to planting, arterial drainage, and the breeds of farming animals; capital has long ago been avoiding the Irish soil. It could not, indeed, have been otherwise, the Irish land system being what it is."

The writer offers no remedy for the trouble, but suggests, as "the imperative duty of the hour, the appointment of a "really strong commission to inquire into the working of the Irish land acts, and the administration of them by the land commission."

The progress of economic and political evolution is gradually bringing about "an irresistible sentiment in favor of a peasant proprietary," says *The Daily News* (London), which has lately come under radical auspices:

"More and more the landlord class has been withering away into what biologists call a 'rudimentary organ' in the body politic. They once had a function. That function has little by little disappeared, and they are left drawing nutriment from the body and making no return. They are becoming mere rent-receivers. Society does not permanently tolerate the existence of such a class. If it secures them their income, it at least prevents them from making mischief."

*The Daily News* argues in favor of the land-purchase scheme advocated by Mr. T. W. Russell, M.P., for "the compulsory purchase of all the agricultural land in Ireland which does not now belong to a single owner" (we quote Mr. Russell's words). This scheme, however, says *The News*, would make the British Parliament Ireland's landlord:

"Without in any way prejudging the issue, we can not help pointing out that the natural landlord of the Irish people, if there is to be any scheme of national purchase, is not England but Ireland, and the natural authority to superintend so vast a transaction, to coerce the maladministrators and redeem by amending acts the partiality of tribunals, is not a parliament at Westminster that has an unwieldy and unmanageable empire on its hands, but a parliament at Dublin that has Ireland to deal with and is composed of the Irishmen who alone can deal in full personal knowledge and sympathy with the difficulties of their own country."

Irishmen, *The News* believes, would have responded to the imperial call for help in the Boer war as readily as any other portion of the empire, but they felt that they, a subject race, were fighting to turn a free race into a subject one. *The News*, which is opposed to the South African war, concludes as follows:

"In every other part of the empire men might arm and drill and be praised for patriots; in Ireland voluntary drilling was a

IRISH LEADERS OF TO-DAY.

crime. Irish militia regiments were drafted out of Ireland, Englishmen were drafted in; the Irish were in the position of these poor Uitlanders, to whom was shamefully denied (so we read) the elementary right of civilized men to bear arms. And undoubtedly, if a volunteer force were allowed in Ireland, what happened in 1782 would happen again. Only now there would be more bitterness in the demand. That is the result of a century of union, that when the rest of the empire leaped to repel an invasion, Ireland still needed to be held down by a garrison of regulars and English militia. The ruling fact of the situation in Ireland is that the Union, which has passed virtually by force, is still maintained by force; and Ireland, which under the system accorded to Canada would be as loyal as Canada is now, remains as disloyal as Canada or Australia or New Zealand would be if denied their independence."

Colonel Arthur Lynch, of the British army in South Africa, who has had a long experience in Irish politics, writes (in *The Independent*, New York) of "Britain's need of Ireland." Even in her "present subjection," he says, Ireland has been the empire's best recruiting-ground for her army and navy. He continues:

"But a reconciled Ireland could supply a force of soldiers and sailors five times, or even ten times, as large as that of the Irish contingent now engaged in the British service. And the reconciliation of Ireland would have consequences far beyond the increase of England's material power. The discontent of Ireland not only immobilizes a considerable part of England's force, but it is also felt as a disruptive influence throughout the whole scope of England's politics, and is, of course, one of the causes of the hostility of a great section of the American people. A contented Ireland would act as a sort of cement to all the English-speaking peoples. The English Government would be well advised to bend its energies in this direction, with the object of making Ireland as powerful a factor of the strength of the British Isles as La Vendée and La Bretagne are now of France."

## MORE EUROPEAN OPINION ON AMERICAN COMPETITION.

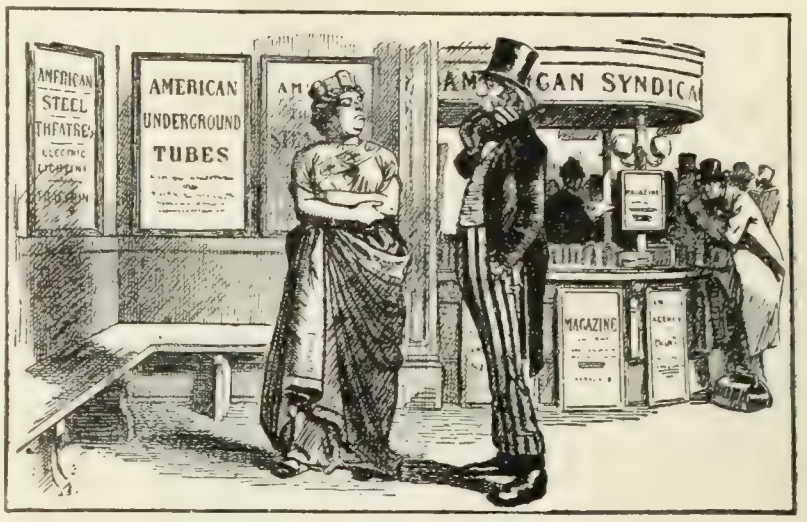
ECONOMIC writers of Europe continue to call for a European trade alliance against the United States as the only means of meeting our commercial rivalry. The German and Austrian journals are especially alarmed. The *Frankfurter Zeitung*, speaking of "the specter of American competition in European markets," says: "The entrance of the United States upon the scene as a creditor nation indicates a vast change. After the war with Spain the Government of the United States launched out for the conquest of the world. The European states will have to familiarize themselves with the idea that America will henceforth have its word in their councils." Handicapped by militarism, Europe, says the *Tageblatt* (Vienna), is no match for rich America, "which is destined to gradually become the creditor of the entire world." In the next few decades "all the European states, and also Australia, China, and Japan, will become its [America's] debtors, unless we take precautions not to fall into economic dependence on this new commercial world-giant." Europe's sole refuge, concludes this Austrian journal, "is the abolition of militarism, that cancer which is destroying her agriculture, her industry, and her commerce."

The *Volks-Zeitung* (Cologne) argues in favor of Germany's maintaining a good understanding with Great Britain in order to have a freer hand against the United States. It says:

"We have hitherto shown the gentlemen in Washington too much readiness to yield. We can only make them feel the full weight of our power when England does not stand in the way. Of course nobody in Germany intends to provoke a war with the United States, from which we would have nothing to gain; but the interests of our agriculture absolutely demand a more energetic assertion than they have hitherto had in Washington through the imperial Government."

The Berlin correspondent of the *Courrier des États-Unis* (New York) declares that several German newspapers, through fear of "the American commercial invasion," have gone so far as to refuse to insert the advertisements of American firms.

Our commercial victories continue in various parts of the world. Consul-General Bray, at Melbourne, Australia, reports that an Illinois steel concern has secured orders for all the steel rails and fish-plates for the government railroads in the colony of Victoria, having underbid several English and German firms. A Pittsburg company will supply nine locomotives and one hundred and fifty cars for a local railroad in Calcutta, India, successfully competing with four British concerns. *The British Board of Trade Journal* (London) warns British manufacturers that American boots and shoes are capturing markets where British goods ought to have a practical monopoly. Commenting on this warning, *The Standard* (London) asks: "What will awaken our manufacturers from their lethargy and pierce through the self-complacency of the British workingman?" An Englishman signing himself "A. M.," who says that he has had thirty years' business experience in the United States and understands our business methods, declares in *The Speaker* (London) that "the American's goods are making headway because he is pushing the trade with characteristic energy, because he is offering better value, lower prices, and quicker delivery than his European competitors."



A LONDON VIEW OF THE AMERICAN INVASION.

MADAM LONDON (to Uncle Sam): "Excuse me, sir, but are you running this metropolis or am I?"

UNCLE SAM: "Well, madam, unless your sons hustle a bit, I guess I'll get more than a look in." —*Moonshine, London.*

The British workman must wake up, this writer concludes:

"The Americans are already taking from us contracts for steel bridges, engines, machinery, and tools for India, Africa, and Australia, for steel rails for our own railways and steel plates for our own ships. Our printers get the monotype from them, they supply electric engines to the shrewd Corporation of Glasgow, and now our navy is going to adopt their submarine boat. Many of our young engineers find it advisable to complete their technical education at the great engineering works of Massachusetts and Pennsylvania, and even a British plumber who goes across to New York finds methods and workmanship on a level so much higher than anything he has been accustomed to that he has almost to learn his trade over again."

"The iron and steel trades have gone from us," wails the Edinburgh *Evening News*. "When the fictitious prosperity caused by the expenditure of our own Government and that of European nations on armaments ceases, half the men employed in these industries will be turned into the streets."

*The Evening News* believes that natural resources and improved machinery are what enable America to lead in the commercial race. It says on this point:

"It is useless to pretend that this generation of British workmen can ever hope to contend successfully with Americans under present conditions. They have cheaper coal and iron ore, improved tools, innumerable labor-saving machines, and, above

all, the strenuous efforts of the workmen to increase the output. How is it to be expected that our workmen, trained to regard restriction of output as their sheet-anchor, can suddenly be made to understand that it is a fatal heresy, and that their only salvation is an increased output at diminished cost?"

In a long editorial entitled "America and British 'Decadence,'" *The Herald* (Kobe, Japan, published in English) admits that England is being distanced, but remarks that, arguing from the general attitude of industrial America toward industrial England, and the expressions, written and spoken, of particular American commentators, it must be said that America is "not a graceful winner," also that "she is not graceful even in the process of winning." This, however, says *The Herald*, is but "one head of the general scheme of things American, in which the tendency is all toward the apotheosis of the millionaire and the worship of success." It continues:

"What is to be made of a country whose newspapers lead off a ten-column biography of the late Mr. P. D. Armour with a tabulated statement of the value of his interests and securities, with a pathetic description of his death-bed scene, the words of farewell to wife and children (reported verbatim) following immediately thereupon? What is to be made of it save that its creed must be the creed of Midas and its god the golden calf? Yet what again can be made of it, with its never-ceasing proclamations of the glorious principle of democratic equality (and, we presume, fraternity) when its newspapers write of the exceeding condescension of a Duke of Manchester in agreeing to shake hands with a chief of police who had come a long way in the dear hope of consummating his exquisite ambition? Some people would affect to see a contradiction in the two incidents. There is none. Money was the main fact about Mr. P. D. Armour. The American newspapers therefore print Mr. P. D. Armour's estate first and his death-bed scene second. A dukedom represents capital, since, altho it is bankrupt, it can marry American millions. Capital is money, and a dukedom is capital. Therefore, by rule of thumb, a bankrupt Duke of Manchester is an enormous capitalist like Mr. P. D. Armour, and as such—presto!—he is much worth while shaking hands with."

Says *The Herald*, in conclusion:

"It is apparent that if the American measure of success be the foot-rule of dollars and cents, and if England fail to make a march as long and large by that foot-rule as that of America year by year, then, plainly, England is 'decadent,' and her whole fabric has begun to decline. But then is it not possible, is it not conceivable, that the verdict of Destiny and of History—or whatever be the name and style of the final Referee and Appraiser—shall be arrived at by other and different standards or measures of virtue? There should, at least, be doubt enough of the answer to the question to convince reasonable American commentators that the reserve and restraint which success sometimes has grace enough to observe has a present dignity and may be a future mainstay."—*Translations made for* THE LITERARY DIGEST.

**Will Italy Leave the Triple Alliance?**—The fall of the Saracco ministry in Italy, and the King's choice of Signor Zanardelli to form a new cabinet, are regarded by Italian and French papers as a sign that King Victor Emmanuel has decided to yield to the republicans and socialists who oppose the Triple Alliance, with its policy of foreign colonies and army and navy expansion. Two of the cabinet ministers are now opposed to the alliance with Germany and Austria, says the *Tribuna* (Rome), and their appointment is significant of grave impending changes in Italy's foreign policy. The visit of the Italian fleet to Toulon, and the decoration of King Victor Emmanuel with the grand cordon of the Legion of Honor by President Loubet, indicate, declares the *Journal des Débats* (Paris), that the long-expected but long-delayed Franco-Italian *rapprochement*, which Crispi labored for so arduously, has "at last entered upon its final stages." A new Triple Alliance, composed of France, Russia, and Italy, concludes this journal, is an event of the not far distant future.

If Italy really does abandon her vain, exhausting policy of attempted imperialism, says the *Independance Belge* (Brussels), "a new impulse will be given to the economic and industrial renaissance which is everywhere evident in the kingdom. The new King has a difficult task, but, at the same time, a splendid opportunity before him."

What Italy needs, says *The Daily News* (London), is a "brave and sincere statesman who will tell her of her ailments as candidly as Mr. Gladstone told her during his life, and who will apply himself strenuously and wholeheartedly to their remedy." It concludes:

"Italian anarchy is but the symptom of Italian misery. Over great parts of Italy the taxation amounts to nearly half on the produce and industry of the people. The population, driven out by want, is spreading into every country of the old and new world. A large part of the severest manual labor is performed in America by these Italian emigrants. Italy threatens to become another Ireland, happy in any country but her own."—*Translations made for* THE LITERARY DIGEST.

## CANADA AND THE STEEL TRUST.

NEWSPAPER comment on the possibilities of Canada's iron wealth (as set forth in the recent speech of Mr. A. J. Moxham, manager of the Dominion Iron and Steel Company) has been given a new turn by the report that the American "steel trust" has acquired control of the plant of the Canadian company at Sydney, Cape Breton Island. Mr. Moxham told the Canadian Manufacturers' Association that the Sydney plant, which is less than two years old, can turn out iron at a cost of $2.45½ less a ton than it can be produced for at Pittsburg, and that the finished product can be landed in Europe at a total cost of $6 less a ton than the cost for Pittsburg iron. This is due, he declared, to the low "assembling cost" (the crude ore, limestone, and coal being nearer together than in any other iron-producing center in the world), and to the fact that Sydney is more than

UNCLE SAM HAS A STEEL CINCH ON THE WORLD.
—*Harper's Weekly.*

a thousand miles nearer the European market than is Pittsburg. The Canadian Government, moreover, pays a bounty of $3 per ton on pig iron manufactured in the Dominion and $3 on each ton of steel made from this pig. The supremacy in iron, says *The World* (Toronto), "means wonderful development and a rapid increase of population for the Dominion, and it means as much for the empire as for Canada." There is now no reason why the British empire should take a second place to any other country in the world in the matter of iron. "What Great Britain has lost can be much more than made up by Canada, so that between the mother-country and Canada the Dominion will soon place the British empire in the lead." We are at the beginning of a great forward movement in this country, says *The Globe* (Toronto) in a similar vein, and Sydney is the first point in the advance.

And now, close upon Mr. Moxham's speech, has come the report that the Morgan-Rockefeller syndicate has secured control of all the properties of the Dominion company at a cost of $60,000,000. This report has been denied, but (says *The World*, Toronto), this situation is always a possibility, and "this possibility is a menace to the country." The danger, says *The Globe* (Toronto), is twofold:

"One possibility is that the Sydney works would become a part of an American scheme for fighting British iron producers in the markets of the world. The other is that the syndicate might close the mines, so as to prevent competition with those of the United States. If the mines are kept open, it is said that they will draw $1,500,000 a year in bounties from the Canadian people, and if the bounty is repealed the Sydney works will be closed down. . . . If the trust should acquire the property, the continuation of the bounty will appear somewhat absurd. . . . It will also be very questionable whether the Canadian product of the syndicate should be protected against the American product. The whole situation will have to be reconsidered in the light of the new conditions."

*The Canadian Trade Review* (Montreal) says that, "in either of these eventualities, the course of the Dominion Government is clear: If the works are closed down, they can be taxed so heavily that the syndicate can not afford to let them lie idle. If it should turn out that the plant would be run for the purpose of breaking prices in Great Britain, . . . the bounty could be withdrawn or an export duty could be placed on the product. The Morgan syndicate will no doubt carefully consider the probable action of the Canadian Government in the event of the Sydney works being absorbed before the deal is finally consummated."

The whole question is a matter of deep concern to Canada, says *The Monetary Times* (Toronto). "If the American steel trust gets hold of the Sydney works, it would either work them on a large scale or doom them to idleness; if the former, Canada would supply bonuses to cut the throat of the British iron interest; if the latter, the result would be a good deal worse."

The Quebec correspondent of *The Sun* (New York) declares that "much of the present anti-American outcry in Canada is simply political trickery." Americans have the money and know how to develop Canadian resources, he says, because they have been developing similar resources under similar conditions in their own country. American enterprise has done much for the Dominion. He adds:

"Americans laid the foundation of the shoemaking industry in Montreal. The great bulk of grain-shipping from Montreal is done by Americans. American skill and American capital are going into the Collingwood iron and steel industry.

"Americans are searching every corner of the Rainy Lake and Lake of the Woods districts for gold and iron, and it is only when they have gone through years of privation, adventure, excitement, failure, and an occasional success that they are heard of at all. Canadians are there, too, but Americans overrun the place.

"Americans are going by the thousand with their families and effects to take up land in the Canadian Northwest. Last year alone there were something like 40,000 of them. Americans discovered the riches of Kootenay. They worked the Le Roi and the War Eagle mine. They went up the rocky rivers and climbed the high mountains of the Slocan. They found the gold in the Klondike."

---

**American Children.**—Julius Szavay, an Hungarian editor and poet, and secretary of the board of trade of Raab, has been sojourning in this country and publishing in book-form his observations. This is what he has to say about American children, as quoted in the *Neue Pester Journal*: "The education of the children is only another name for extreme liberalism, the children being regarded as exceptional creatures, almost as saints, who may demand anything and are superior to all others. After the women, the children receive the greatest protection from the laws, and everywhere there are societies for the prevention of cruelty to children. . . . This comprehensive protection naturally has its dark side also. The American children are the worst in the world. It is they who chase the Spanish ambassador because they believe his gala costume does not become him; it is they who throw stones at the Catholic priest when they see him in his official vestments; it is they who steal the boxes and barrels they find piled before the stores and burn them in the middle of the street (Americans, by the way, incline very strongly to pyromania); and it is they who steal the wooden steps before the doors of residences, a business in which they are assisted by the policemen, who complacently turn their backs to their mischief, for they tell themselves that they themselves were children once and that they have children of their own. On the other hand, these incomparable American scalawags are perfect marvels of adroitness and easily excel all their brothers on this side of the Atlantic in the art of making money. They are adepts in all the lighter kinds of business; not only in selling newspapers and blacking shoes do they find profit, but there are many other sources of income with which they are familiar and to which they devote themselves body and soul. One would have to smile at them if they did not know, in spite of their finicalness, how to turn to profit the zeal with which they attend to business. From these embryonic men, educated in utter freedom, and entrusted to accident and the natural development of instinct, comes the average American who is every inch an individuality, not content with the leveled and uniform compendium of scholastic wisdom, but who is swayed by a bold and original habit of thought that is prolific of tricks and stratagems, and which bewilders with its record of keen successes."—*Translation made for* THE LITERARY DIGEST.

---

**Death of a Progressive Japanese Patriot.**—The late Japanese author, Fukuzana Yukichi, wrote one hundred and seven volumes, was a recognized authority in science, and "did more than any other man to bring the Japanese vernacular—more vital, more flexible, and more picturesque than the Chinese—into common use among Japanese orators." He was a typical Japanese patriot of the progressive school, says *The Japan Gazette* (Yokohama):

"There may have been men in Japan equally qualified intellectually to mold the opinion of their contemporaries. But there have been none at once with principles and talents of so high an order. It was reserved for him to adapt the principles of the philosophy of the West to the needs of Japan; to lead the youthful energy of the country from the barren deserts of Chinese literature to the living waters of European science and thought; to liberalize the Japanese mind through the columns of its most influential and broad-minded daily paper; to afford, in times when it was most needed, an example of rigid morality and single-minded devotion to duty; and to exercise, through his famous school, a living influence on most of the young men to whom the future destinies of the country will be entrusted."

---

AN illustration of the disinclination of the Catalonians to be known as Spaniards is recorded by the *España Moderna* (Madrid). At the railroad station in one of the Catalan towns, the guard shouts: "All aboard for Spain," and in several shop windows one sees the sign, "*Aqui se habla español*," "Here Spanish is spoken," as tho it were a foreign language.

## CURRENT POETRY.

### The Records of the Snow.

BY FRANCIS STERNE PALMER.

At dawn the snow was new and white,
A spotless page that was turned in the night;
By noon it was marked with sign and trail,
Printing that tells a spruce-land tale.

This name, so boldly written, shows
Where the lordly moose-bull goes;—
Who has better right to sign
Than he of the North woods' royal line?

Here a clumsy track spells out
The name of one who is ever in doubt,
Shuffling step and shifty eye,—
The squirrel jeers as a bear goes by.

Long leaps in the snow are marks of a lynx;
The squirrel hushes, his small heart sinks;
Grouse whir away, and hare start back,
They read a harsh warning writ in this track.

An air of tragedy hunts the spot
Where splashes of blood make an ugly blot;
A clew to the murder the snows declare,
For fox-track follows the track of a hare.

Delicate tracks are telltales of
A gentle passage of woodland love;
The low-voiced snowbirds met together
In this to them sweet courtship weather,
And lifted their thoats in a soft love-tune,
Vowing to mate far north next June.

Again it snows, and the morning light
Shines on a fresh page, smooth and white.

—In the March *Harper's Magazine*.

### At the Sign of the Skull.

By MADISON CAWEIN.

*It's "Gallop and go!" and "Slow now, slow!"*
*With every man in this life below—*
*But the things of this world are a fleeting show.*

The postchaise Time that all must take
Is old with clay and dust;
Two horses strain its rusty brake
Named Pleasure and Disgust.

Our luggage totters on its roof,
Of Vanity and Care,
As Hope, the postboy, spurs each hoof,
Or heavy-eyed Despair.

And now a comrade with us rides,
Love, haply, or Remorse;
And that dim traveler besides,
Gaunt Memory on a horse.

And be we king or be we kern
Who ride the roads of Sin,

**TO CURE A COLD IN ONE DAY**

A scientific study of the causes and prevention of falling hair and baldness. Contains sound advice and counsel. —*New York Times.* Treats the subject completely and sensibly. The writer speaks with authority.—*Louisville Courier-Journal.* Cloth, 232 pages, $1.25. Booksellers or C.O.D., express prepaid. Circulars for stamp.
**Maple Publishing Co., 156 Broadway, N. Y. City.**

No matter how the roads may turn
They lead us to that Inn.

Unto that Inn within that Land
Of silence and of gloom,
Whose ghastly landlord takes our hand
And leads us to our room.

*It's "Gallop and go!" and "Slow now, slow!"*
*With every man in this life below—*
*But the things of this world are a fleeting show.*
*—Saturday Evening Post.*

## MORE OR LESS PUNGENT.

**Not to be Expected.**—SHOPMAN: "This matches your sample perfectly, madam."

CUSTOMER: "It certainly does. It couldn't be closer."

SHOPMAN: "How many yards do you wish?"

CUSTOMER: "Oh! not any yet. You see, this is the very first shop I've tried!"

**The Fashionable Pace.**—BROWNE-STONE: "Say, old man, I haven't seen or heard anything of my wife in two or three weeks. You haven't seen her lately, have you?"

SWELLINGTON: "No; maybe she's at home. Have you looked?"

BROWNE-STONE: "No, by Jove! Never thought of it."—*Smart Set.*

**What's in a Name?**—*Life* answers the question partially in "A Literary Nightmare," from which we take the following:

When does Mary Mapes Dodge?
When Thomas W. Knox.
What did Charles Reade?
Whatever he saw Mabel Osgood Wright.
What made Virg-il?
Having to Pla-to small audiences.
When is it that John Burroughs?
When he hears Edward Everett, Hale.
Who gave Thomas Paine?
Hamilton Wright, Mabie.
What is it that John Kendrick, Bangs?
Mrs. Harriet Beecher Stowe.
What made Winston Church-ill?
Eating what he saw John Esten, Cooke.
What was it that Bulwer Lytton?
De-land.
What victory did Agassiz?
He saw Charles Dar-win.
Why *did* Charles Dar-win?
Because he never turned his back to De-foe.
When did Mollie Elliott Seawell?
When she heard Charles Dudley Warn-'er.
Where did Captain Frederick Marry-at?
At the Ellen Olney Kirk.
When was Lawrence Sterne?
When he found Bill, Nye.
Where did H. Cabot, Lodge?
In a Dry-den.
For what did Eugene Sue?
For one of Samuel Smiles.
Why do we not laugh at R. D. Black,-more?
Because we find James Greenleaf W(h)ittier.
Why did Miss Mu-loch up the silver?
Because she saw Flora Annie Steele.
When did Victor's mother urge him to become a tailor?
When she said, "Victor, Hugo and help John W. Drap-'er."

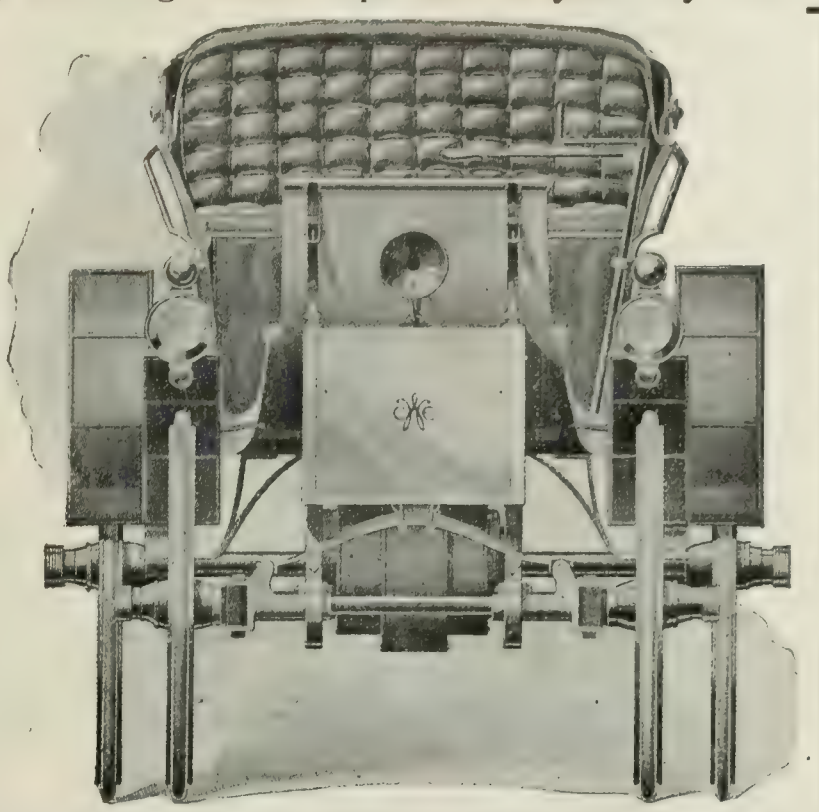
# YOU CAN EASILY
# WIN AN AUTOMOBILE

**By becoming our correspondent in your city—not agent—but merely correspondent.**

**The Clinton E. Woods Automobile.**

**Experiment Passed,**

**Real Utility Reached.**



THE uncertainty and experiment with which the automobile business has been encumbered are entirely done away with by Woods, Waring & Co. Clinton E. Woods was the pioneer Electric Automobile builder. As organizer of two of the largest Automobile Companies in the world, he passes into this new Company with the ripe experience of having built a thousand Automobiles. There is no old machinery on hand, nor imperfect parts to utilize. Therefore it is but fair to claim that the Clinton E. Woods Automobile stands to-day as absolutely the best from every standpoint—mechanically, electrically, and as a piece of carriage work. It is the only automobile which has passed wholly beyond the experimental stage, and fills every requirement perfectly. It has improvements and modifications that will standardize them in every part for all time to come.

## Our Great Offer to Correspondents.

All we ask of you is to give us the benefit of your knowledge and acquaintance among your prominent people, such as in your judgment, from your knowledge, can afford the luxury of an automobile—such of your residents as you think it possible to interest for us in this 20th Century pleasure.

We will with your assistance devote our best energies to interest these parties in the

## CLINTON E. WOODS AUTOMOBILE

which easily demonstrates its superiority to any one who wants none but the best. As soon as we progress far enough in your community we will send you a machine at no expense to yourself.

There will be no shifting or delay about this. This is a concern of prominence, reliability, and aggressive enterprise. We need your knowledge of your community and will gladly pay for it in this way. When you get all particulars you will recognize a remarkable enterprise well backed and carried out.

Do not answer unless you are a person of influential acquaintance in your community, and a man whose opinions command attention. What we want is an attentive, thoughtful consideration of every point about our vehicle as compared to all others. The result will mean a sale to practically every likely purchaser of an automobile.

If you will write to us, we will send you our catalogue and information, which will enable us at this end to take up the matter in an intelligent and effective manner with every probable purchaser of an automobile in your community, and will soon be able to send you a machine, clear.

**Address WOODS, WARING & CO., 17 Van Buren Street, CHICAGO, U. S. A.**

## CURRENT EVENTS.

### Foreign.

CHINA.

March 11.—Minister Conger, with his family, leaves Peking on his return home, the legation being left in charge of Secretary Squires; a Shanghai despatch says Russia has informed China that unless the Manchurian convention is signed at an early date harder terms will be substituted, and Li Hung Chang has appealed to the Powers to intervene in China's behalf.

March 12.—More punishment of Chinese officials is demanded by the foreign ministers, who will present a list of ninety-six, of whom they desire six executed and the others punished as the Chinese see fit.

March 14.—China objects strenuously to the limitations of the Manchurian convention; the Powers are still exchanging views regarding the absorption of Manchuria by Russia.

March 15.—Armed British and Russian forces are facing each other threateningly over disputed railway property at Tien-Tsin; in the Reichstag Chancellor von Bülow makes a statement on the progress of Chinese negotiations.

General Chaffee is ordered to withdraw the American troops from China, leaving only a legation guard of one hundred and fifty men in Peking.

SOUTH AFRICA.

March 11.—It is reported at Lorenzo Marques that General Botha is willing to surrender, and that the burghers in Orange River "Colony" are making common cause with the British.

March 13.—Boer invaders of Cape Colony are retreating to the north; it is believed in London that the end of the war is near at hand; the bubonic plague is spreading in Cape Town.

March 15.—General Kitchener reports further successes by General French in the Transvaal.

March 16.—General Kitchener reports the capture of a Boer laager and twenty-two men at Krugersport, including the Boer leader Erasmus.

OTHER FOREIGN NEWS.

March 11.—Elections in Spain show a large majority for the Liberal candidates.

Herr Bebel, the leader of the Social Democratic Party, makes a sharp attack in the Reichstag on the adminstration of the German colonies in Africa.

March 12.—Emperor Francis Joseph arrives at Munich to participate in the celebration of the eightieth anniversary of the birth of Prince Luitpold, Regent of Bavaria.

March 14.—In the House of Commons Lord Cranborne declares that the British Government has not undertaken to revise the Hay-Pauncefote treaty, but will consider in a friendly manner any new proposals from the United States.

Count Boni de Castellane insults the editor of the *Figaro* in Paris, and a duel is looked for; the expected duel between M. Déroulède and M. Buffet on Swiss soil does not take place, owing to the interference of police authorities.

March 15.—The Duke and Duchess of Cornwall and York start on a tour of the globe.

M. Bogoliepoff, the Russian Minister shot by Karpovich dies as the result of the wound.

## What it Means

to have your shingles stained with

## Cabot's Creosote Shingle Stains

It means that they will never decay (no re-shingling); that the colors will be soft and rich; that they will wear as long as colors can, and grow old gracefully; that the cost will be 50% less than with paint.

The census of India fixes the population at 294,000,000.

March 16.—The Count de Castellane and M. de Rodays fight a duel in Paris, the latter being shot in the thigh.

March 17.—A state of siege is proclaimed in several Russian cities, owing to the attempt of the authorities to suppress free speech among the students of the universities.

## Domestic.

DOMESTIC NEWS.

March 11.—Ex-President Harrison's illness takes a turn for the worse.

The reply of the British Foreign Office, declining to accept the Senate amendments to the Hay-Pauncefote treaty, is delivered to Secretary Hay by Lord Pauncefote

The President's plans for his trip to the Pacific coast are made public.

W. J. Bryan visits several publishing houses in New York, with a view to gaining knowledge to assist him in the publication of his new weekly, *The Commoner.*

March 12.—Secretary Gage, in Chicago, says that he has no fear of a tariff war as the result of his order placing a countervailing duty on Russian sugar.

A bill intended to disfranchise thousands of voters passes the lower house of the Maryland legislature.

March 13.—Ex-President Harrison dies at his home in Indianapolis; the governor of Indiana issues a proclamation, paying high tribute to the character and public services of General Harrison.

Andrew Carnegie gives $5,000,000 to endow a fund for superannuated and disabled employes of the Carnegie Company at Pittsburg, and for the maintenance of libraries in the vicinity; Mr. Carnegie sails from New York for England.

A negro is burned at the stake in a public square of Corsicana, Tex., for murdering a woman.

March 14.—President McKinley issues a proclamation on the death of General Harrison, and starts for Indianapolis to attend the funeral.

William Cary Sanger assumes the duties of Assistant Secretary of War.

Fire does damage to the extent of $500,000 in Cloverport, Ky., and leaves 1,000 persons homeless.

March 15.—The President arrives in Canton, on his way to attend the funeral of ex-President Harrison.

Andrew Carnegie offers to build sixty-five branch libraries for New York, at an expense of over five million dollars, provided that the city will furnish sites and means for permanent maintenance.

March 16.—The body of ex-President Harrison lies in state at the Indiana Capitol and is viewed by a great multitude.

The coal-mine workers vote to declare a strike on April 1, if the operators refuse to confer and no satisfactory agreement is reached.

March 17.—The funeral of ex-President Harrison takes place at Indianapolis with simple church services, attended by President McKinley, five ex-Cabinet ministers, several governors and many other public officials.

James J. Hill secures control of the Chicago, Burlington and Quincy Railroad, which is to be leased to the Great Northern and Northern Pacific companies.

AMERICAN DEPENDENCIES.

March 11.—*Cuba:* Fruitless sessions continue to be held by the Cuban relations committee in Havana; Gomez announces that he would not accept the presidency of the Cuban republic.

March 12.—*Philippines:* A provincial government is instituted by the Philippines commission in Tayabos, Southern Luzon.

March 13.—Six members of the revolutionary cabinet are reported to be captured in an engagement near Manila.

March 14.—Three hundred vessels engaged in trading among the Viscayan Islands of the Philippine group are destroyed by Americans.

*Cuba:* Lieutenant-General Miles and Quarter-

Solved by M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; C. R. Oldham, Moundsville, W. Va.; M. Marble, Worcester, Mass.; W. W., Cambridge, Mass.; A Knight, Hillsboro, Tex.; the Rev. J. G. Law, Ocala, Fla.; the Rev. G. Dobbs, New Orleans; W. R. Coumbe, Lakeland, Fla.; H. A. Horwood, Hoboken, N. J.;

The names of well-known people in whose homes the Aeolian and the Pianola are affording entertainment and pleasure will be printed in these columns from time to time. We believe that they will be interesting, and they certainly have significance.

**Her Majesty Maria Christina**

**Queen Regent of Spain**

**is included in the list of the Aeolian Company's patrons**

What is true in regard to judgment of a person by the CHARACTER OF HIS FRIENDS is equally true in regard to judgment of the Pianola and Aeolian.

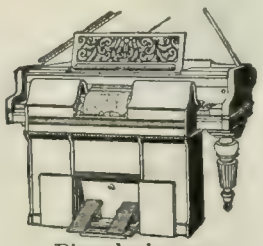
The fact that any one person of prominence has purchased a Pianola for his own pleasure does not add to the value of the instrument. When, however, these representatives of culture and refinement, with wealth sufficient to procure whatever they desire, are unanimous in their appreciation of the Pianola, and have purchased the instrument for their own homes, it represents a consensus of opinion which it is impossible to ignore.

**These instruments must have merit or they would not have the friends they have.**

Space is too short to publish many names, but the following is a representative list of the Aeolian Company's patrons:

Her Late Majesty Queen Victoria.
His Holiness Pope Leo XIII.
His Majesty Carlos I., King of Portugal.
Ex-President Grover Cleveland.
His Imperial Highness Grand Duke Alexander Michaelovitch of Russia.
His Grace the Duke of Fife.
Her Grace the Duchess of Devonshire.
His Grace the Duke of Manchester.
President Porfirio Diaz of Mexico.
Cornelius Vanderbilt.
George J. Gould.
J. Pierpont Morgan.
William Rockefeller.
Governor Benjamin B. Odell, Jr.
Col. Daniel S. Lamont.
Hon. William C. Whitney.
Hon. Eugene Hale.
Andrew Carnegie.
Henry Clews.
Mrs. Anson Phelps Stokes.
Mrs. Hermann Oelrichs.
Mrs. Samuel Thorn.
O. H. P. Belmont
Hon. John Wanamakar.
Thomas B. Wanamaker.
Edwin F. Fitler.
Samuel Cramp.
Joseph Milbank.
Isaac Milbank.

We can better explain the Pianola at our warerooms, and in a few minutes show you why it has created so much enthusiasm among the public in general, and has been singled out by the musical profession for commendation.



Pianola in use with Grand Piano.

The Pianola is an instrument which will enable you to play your piano, irrespective of whether you possess musical knowledge or not, and it allows you to control the expression to suit your own mood or individual taste.

Price, $250. Visitors welcome.

Catalogue No. 12 will be sent upon request.

Comments: "The Doctor's best"—C. R. O.; "Excellent idea; but too many mates on second"—M. M.; It easily takes its place in the first rank"—A K.; "Somewhat marred by duals"—J. G. L.; "Uncommonly fine. Q x B is one of the best 'tries' I have ever seen"—G. D.; "Not up to Dr. D's average; but showing the hand of an expert in the finish of detail"—W. R. C.; "The duals are unfortunate blemishes to a fine problem"—H. A. H.; "Many a 'Trek, 'twixt the Knight and the Check"—J. W. Y.

The reason that so few solvers, comparatively, solved this problem is that so many of them fell into the several traps so skilfully laid by the Doctor. Almost every possible move was tried, but the majority of those who didn't get it relied upon Q—R 6. The way the Doctor provided against this is very ingenious: 1 $\frac{Q \quad R\ 6}{P \times R}$; now what? Only one solver sent a continuation of this: "2. $\frac{Kt—K\ 5}{R \times Kt}$ 3. $\frac{Q \times Q}{P\ mate.}$" But Black does not play 2 R x Kt, but B x Kt; and there isn't any mate next move; for if Q x K P, B—Q 5.

In addition to those reported, 539 was solved by H. Sleeper, Meriden, N. H.; J. P. Plehn, Toledo, O.; W. W. Clement, Rabke, Tex.; M. K. Hartmann, United Church Seminary, Minneapolis.

### Mackenzie's End-Game.

# WHY

Has the STANDARD DICTIONARY been so highly honored in all countries?
Did the late **Queen of England** order it for the royal library at Windsor?
Did the **President of France** present a Sevres vase to the publishers?
Did the **Sultan of Turkey** confer a decoration in honor of the Standard Dictionary?
Have nearly all the great rulers of Europe procured the Standard Dictionary?
Have many experts of the **United States Government** declared it their favorite authority?
WHY have professors of all the great **Universities and Colleges** proclaimed its superiority?
WHY have the **press and public** of the whole English-speaking world joined in giving highest praise to the Funk & Wagnalls Standard Dictionary?
WHY is the sale of the Funk & Wagnalls Standard Dictionary rapidly approaching a **half million copies?**

WHY IS IT EVERYWHERE CONCEDED THAT THE

**Funk & Wagnalls** **Standard Dictionary** **Latest Subscription Edition**

IS THE MOST COMPLETE, MOST RELIABLE, MOST AUTHORITATIVE, MOST CONVENIENT DICTIONARY OF THE ENGLISH LANGUAGE IN EXISTENCE?

FINALLY, WHY SHOULD **YOU** HAVE A COPY IN YOUR HOME, YOUR OFFICE, YOUR STUDY?

**BECAUSE** It contains 79,000 more words than any other dictionary of the English language—179,000 more than any single-volume dictionary—in all 304,000 vocabulary terms.

**The Sun,** New York, says: "As regards its vocabulary, this dictionary far surpasses all of its rivals."
**The Athenæum,** London, says: "Its vocabulary is the most encyclopedic ever compiled."

**BECAUSE** It is the best guide to the correct use of words in English speech and writing; giving tens of thousands of nice discriminations in the meanings of words; explaining and illustrating the use of prepositions; correcting faults in pronunciation and diction, and presenting accurately and intelligibly the standard of English speech as used in the most refined circles.

## EXAMPLES OF CORRECT AND INCORRECT USES OF WORDS.

**"Everybody who pretends to believe in Christianity is a hypocrite."**
**—An infidel editor criticizing Dr. Sheldon.**

**Accidentally true! One "pretends to believe" when he professes what he does not believe; shams; feigns; hence is a hypocrite.**

**Hope is made up of expectation and desire; we may desire what we do not expect; we may expect what we do not desire: we hope for what we both desire and expect**

**Do not say: "I'm a new beginner." "Finally he grew worse, and then he died." "I will come, providi g it does not rain."**

**BECAUSE** It is the most convenient dictionary for practical use, the most common meaning of the word being given first; then, in their order, the rarer and obsolete meanings. The etymology is given last.

**The Atlantic Monthly,** Boston, says: "This simple change is so admirable, so truly popular, that it is astounding it has never been thought of and put into play before."

**BECAUSE** It is a work throughout of 250 of the world's leading scholars and specialists in all departments of knowledge.

**The Critic,** New York, says: "No dictionary ever had so many or so able editors"

**The Independent,** New York, says: "They represent a greater variety and a larger amount of expert ability in all departments than was ever before assembled on any one dictionary."

**BECAUSE** A new and valuable system of *group indexes* enables any one to find thousands of words and definitions in the Arts, Trades, Sciences, etc., that otherwise could not be located except by one already familiar with them.

**The New York Tribune** says: "An extremely interesting feature of the dictionary is the table under notable words."

**The Graphic,** London, says: "If the reader requires a word, and can not recall it, he has but to turn to the branch to which it belongs, and the chances are that he will find a list of the principal terms used in the trade or business"

**BECAUSE** The many full-page colored plates, and the thousands of smaller illustrations are marvels of exquisite art work and definite value. The Atlas of the World, with 88 pages of the best colored maps, is a most practical and useful feature.

**The Review of Reviews,** London, says: "The colored plates are truly masterpieces of lithographic art."

**BECAUSE** Disputed spellings and pronunciations have been dealt with by the leading philologists and masters of English in the American, English, Canadian, Australian, and Indian Universities.

**The New York Observer** says: "So thoroughly have disputed spellings and pronunciations been dealt with that we have a consensus of the best judgment of the English-speaking world."

**BECAUSE** The proper use of capitals has been indicated, and the compounding of words has been, for the first time, reduced to a scientific system.

**The Athenæum,** London, says: "The treatment of compounds is systematic and satisfactory."

**BECAUSE** There are innumerable other exclusive merits and practical conveniences which distinguish the Standard Dictionary Latest Subscription Edition, and place it far ahead of all others as THE dictionary for all people.

**The New York Herald** says: "It is admirable from every point of view. It is the most satisfactory and most complete dictionary yet printed."

**The St. James's Budget,** London, says: "The excellences of this book are so bewildering that whatever might be said of them there would be as much remaining to be said. To say that it is perfect in form and scope is not extravagance of praise, and to say that it is the most valuable dictionary of the English language is but to repeat the obvious."

## WE WANT EVERY LITERARY DIGEST READER TO KNOW MORE ABOUT THIS GREAT DICTIONARY.

### SEVEN CENTS A DAY WILL BUY IT.

**SEE WHAT THIS INQUIRY COUPON WILL BRING YOU FREE!**

We request every LITERARY DIGEST reader who has not already a copy of the Standard Dictionary to mail us the "Inquiry Coupon," opposite, and let us send him a handsome pamphlet containing the exquisite full-page plate showing the radial sections of 20 different kinds of typical woods in their natural colors; containing also several other full-page plates and sample pages, with full information concerning the Standard Dictionary, and our easy payment plan which enables any one to own the Standard Dictionary at an expense of less than 7 cents per day.

# A BOOK THAT IS ATTRACTING THE WIDEST ATTENTION.

LEADING PAPERS AND MAGAZINES ARE GIVING GREAT PROMINENCE TO DISCUSSIONS OF THIS BOOK—HERE ARE A FEW BRIEF EXTRACTS FROM A TYPICAL REVIEW.

**"'The Religion of Democracy'—A Book of Great Thoughts."**

Charles Ferguson's book, "The Religion of Democracy," is the sensation of the day. The leading daily papers and reviews of the country are devoting unusual space, often whole pages, to the book. For example, the San Francisco *Examiner* devoted a page to it as a special feature a few days ago, giving pictures of Socrates, Plato, Marcus Aurelius, Emerson, Carlyle, and Ferguson, as the seven great philosophers of the world. In *The North American*, Philadelphia, February 11, Julian Hawthorne devoted three columns to a study of the book, and *Current Literature*, New York, for March, gave it five pages. The New York *Journal* engaged the Rev. Charles H. Parkhurst, D.D., to prepare a long review, which appeared in that paper March 2. A few extracts from Dr. Parkhurst's review are given below:

**"A Review of Dr. Ferguson's Book by Rev. Charles H. Parkhurst, D.D.**

[*Extracts from the principal article on the book pages of the New York Journal, March 2, 1901.*]

"My second reading of Mr. Ferguson's book has meant more to me than the first. It is saying a great deal of a book to say that it is worth reading twice, and still more to say that it gains by acquaintance. . . .

"His program is constructive, even if he does litter up the ground with a good many chips. He has a tremendous sense of the real, the real in man, and the real in nature. Indeed, he handles the real so passionately as to become almost an idealist in the act. He has a vast belief in man—almost more so, it would sometimes seem, than in God; not that he does not believe in God, but man fills up so many degrees of the horizon that God has to content Himself with being a little crowded. . . .

"The thought of Mr. Ferguson is to find, feel, and illustrate the close relations in which the individual man is bound with the universal—the universal divine, universal human, and universal material. It is a great thought, and he works it out interestingly. It opens the door to observation and discussion along a thousand different lines; and it is this multitudiness of the book that constitutes one of its difficulties. . . .

"'The soul is swathed, bandaged, stifled in laws. The soul has gone clear under; there is scarcely a ripple on the surface of the oily sea of legality. Only here and there a bubble rises—the gasp of a dying rebel.'

"This quotation serves both to show his opinion of laws considered as means of soul's asphyxiation, and to illustrate the daring picturesqueness of his style. His ideas are so vivid that they instinctively clothe themselve in very material imagery.

"It would be difficult to map the method by which he develops his main theme: it would be too much like trying to make a chart of a succession of lightning-flashes. Each is startling in itself, but not distinctly related to its predecessors or successors. The very brilliancy of his style sometimes obscures the thought as a light placed between the eye and the page hides the page. . . .

"Mr. Ferguson has produced an interesting, stimulating, startling, and, all in all, wonderful book. I have not, in a long time, read an author, who in the space of 170 pages, has said so many bright things in so bright a way, or brought to the market of current thought so many scintillant epigrams that it would have been a serious misfortune not to have had the opportunity to appropriate and intellectually digest."

"The Religion of Democracy." 12mo, Cloth. Price, $1.00 postpaid.

**FUNK & WAGNALLS CO., Publishers**
30 LAFAYETTE PLACE, NEW YORK

## SIGN THE COUPON BELOW AND SAVE $2.50—HALF PRICE

The **regular price** of the New Cyclopedia when published **will be $5.** Until then we offer LITERARY DIGEST readers an opportunity to subscribe for the work at the **advance price of $2.50,**—just half price. **No money is required now.** Simply sign and return the following acceptance blank and mail the same to us at once. **We guarantee satisfaction.**

*The public speaker in using scientific illustrations is in touch with his age, in harmony with its present thought and movement. Mastery of such knowledge commands the confidence of thinking men.*

# SCIENTIFIC SIDE LIGHTS

**Edited by JAMES C. FERNALD**

*Associate Editor of the "Standard Dictionary" and of the "Columbian Cyclopedia"; Editor of "The Students' Standard Dictionary"; Author of "The Imperial Republic," etc.*

A Cyclopedia embracing four thousand apt illustrative selections gathered from several hundred volumes, and selected from the works of two hundred eminent specialists in the various branches of science. The whole illustrating thousands of Scriptural texts in new and original ways—all instantly available. The entire volume will constitute a library of scientific knowledge and thought, of inestimable value to the preacher, lecturer, teacher, or popular writer.

**THOUSANDS OF ILLUSTRATIONS—ALL INSTANTLY ACCESSIBLE**

In order to make the work most completely useful for its purpose, it will be thoroughly indexed. There will be first the general indexing in the arrangement of paragraphs throughout the book alphabetically according to topics. In addition to this, there will be an index of proper names, a Scriptural index of passages of Scripture illustrated, and a general index of over 25,000 topics, so that one who remembers a paragraph only by a single prominent word can recover it, and a glance through the topics of the index will open new trains of association and illustration.

**EVERY QUOTATION AUTHORITATIVE**

**Every Quotation Authoritative.**—Every quotation will be accompanied by a statement of the exact source from which it is taken, giving name of author, title of volume, chapter, page, and publisher (the names of publishers indicated by the same abbreviations as in the Standard Dictionary). The quotations will thus carry authority whenever and wherever used.

**Regular Price, when issued, $5.**
**Special Advance Price, $2.50.**

**Promptly sign and return the coupon opposite and save $2.50.**

**FUNK & WAGNALLS COMPANY, Pubs.,**
**30 Lafayette Place, New York.**

**ACCEPTANCE BLANK FOR SCIENTIFIC SIDE-LIGHTS.**

(*Copy or cut out, sign and mail at once.*)

FUNK & WAGNALLS CO., New York.

*Gentlemen:*—I accept your special advance offer of "Scientific Side-Lights" to LITERARY DIGEST readers. I agree to send you $2.50 for a copy of "Scientific Side Lights" (regular price on publication to be $5.00) as soon as you notify me that the book is ready for delivery. It is understood that you guarantee satisfaction, and that if for any reason I am not satisfied with the book, I may return it to you within five days after receiving it and you will refund the money I paid for it.

# SPIRITUAL KNOWING or BIBLE SUNSHINE

**The Spiritual Gospel of Jesus the Christ**

**By THEODORE F. SEWARD**

*Author "The School of Life," "Heaven Every Day," "Don't Worry: or, the Scientific Law of Happiness,"*

"The phrase 'Spiritual Knowing' is the keynote of thought and life in the twentieth century," says the author of this book. The American people, he claims, are unconsciously dividing themselves into two classes—those whose ideal is "the strenuous life" of vigor, energy, activity, dominion, and material prosperity, and those whose ideal is the spiritual life with the human will surrendered to the supreme Eternal Will. To apply the law of spiritual knowing to the varied experiences of life, and to the interpretation of the Sacred Scriptures is the purpose of Mr. Seward's new book.

**Critical Opinions from Some of Those Who Have Read and Reviewed the Author's Previous Works**

"Mr. Seward holds the reader's attention from the first chapter to the last."—***The Church Standard.***

"In diction Mr. Seward savors of Drummond; in catholicity of belief, of Phillips Brooks; and in originality of thought, of Ian Maclaren."—***New York Commercial Advertiser.***

"Mr. Seward writes in no dogmatic style, but for the sake of helpful influence, and out of the resources of experience; clearly, and with elevated, attractive style."—***Review of Reviews.***

# Forward Movements of the Last Half Century

**By ARTHUR T. PIERSON, D.D.**

*Editor of the Missionary Review of the World*

**The Social and Religious Evolution of the Last Half Century considered with a View to Future Progress.**

A service to thinkers along lines of pure spirituality, applied Christianity, and social evolution has been done by presenting to the public Dr. Arthur T. Pierson's "Forward Movements of the Last Half Century." Some may object that so broad a title should be given to a work manifestly dealing with only a class of forward movements. On the other hand, the august nature of the themes considered, the emphasis the author gives to character and conduct in his striving to fix the center of truth and real inspiration of social and religious evolution, and his thoughtful search to fix the compass of moral progress, vindicate the right of this volume of 400 pages to its title. The author sets forth in attractive pages, and in a style that never grows dull or prolix, the noteworthy, moral, ethical, philanthropic, missionary and spiritual movements that have made the age illustrious. No romance is more fascinating to the student of social and religious life. The reader is borne along by the writer's enthusiasm as down the current of a swift river. The intense earnestness of the man carries the weight of conviction with it. The book, as a whole, is to be commended to the student of social affairs, the minister and religious worker, and those engaged in reformatory work. It is an important contribution in the realm of practical and applied Christianity, and a high type of spirituality.—*N. Y. Times, Saturday Review.*

To the religious worker the volume will be of a great deal of interest and value.—*Buffalo Illustrated Express.*

It will receive from the clientele to which it especially appeals a welcome that will probably surpass that accorded to any of his other books. —*Chicago Daily News.*

**12mo, Cloth, Price $1.50.**

**FUNK & WAGNALLS COMPANY, Publishers**

# The Literary Digest

VOL. XXII., NO. 13 NEW YORK, MARCH 30, 1901. WHOLE NUMBER, 571

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

**THE LITERARY DIGEST EUROPEAN TOUR.**

ATTENTION is again called to the announcement on the opposite page. If you can go with THE LITERARY DIGEST European party the coming summer, it will be to your advantage to communicate at once with Henry Gaze & Sons so that they may reserve choice steamer berths for you. If you can not go, very likely some of your friends will be glad to avail themselves of the opportunity. Many of those who traveled with THE LITERARY DIGEST party last summer are advising their friends to go this year. That trip was characterized by one of the party, in a letter published last week, as "one series of happy hours" from start to return. Read the letters on the opposite page. Now is the time to secure membership.

## TOPICS OF THE DAY.

### BOER REJECTION OF BRITISH TERMS.

THE later reports of the peace negotiations in South Africa, showing that it was Sir Alfred Milner, not Botha, who began the negotiations, that the terms were far better than the "unconditional surrender" policy of a short time ago, and that General Botha rejected the suit and added that he was not disposed to recommend the terms to the earnest consideration of his government, are accepted by the American papers as revealing an amount of confidence that the Boers were not before supposed to possess. The New York *Sun* suggests that "knowing the difficulty of campaigning in the winter season, now close at hand, and being probably well informed of the way in which the British troops are suffering from disease, the Boers may believe that they need continue the war for only a short time longer to obtain better terms than those offered," and adds that "the fact that the British Government should have receded from its first position of unconditional surrender so far as to negotiate terms appears to have encouraged them to hold out."

Some papers think that General Botha heard of the Anglo-Russian friction in China, and hoped that the war in that quarter might bring about the withdrawal of the British "teeth" from South Africa; and "if Great Britain should become involved in war with a power like Russia," observes the Baltimore *Sun*, "the Boers would have an excellent chance to win their independence." The Brooklyn *Standard-Union* sees in this British complication the germ of danger to our own country. "Even if it were true," it says, "that the outcome of the Boer war had not a direct interest for the people of this republic, yet the fact that England's forces are engaged there in such numbers as to prevent the proper representation of the power of the English nation in China prospers the cause of Russian barbarism and aggression, and to that extent is harmful to all civilized countries." As for the Boers themselves, the Philadelphia *Record* and a number of other papers think that they are unwise in not accepting terms that are at all favorable, but other papers rejoice in their grit. "Against national annihilation," declares the Springfield *Republican*, "any people is justified in fighting, if it chooses, until every man has perished in defense of the state."

The New York *Evening Post* (Ind.) outlines and comments on the terms as follows:

"If the question of independence be left out of consideration, it can not be said that the terms offered to General Botha by the British were illiberal. As reported in the parliamentary papers issued to-day and summarized elsewhere, the English plan was to govern the Transvaal and Orange River colonies by a crown-colony administration, composed of a nominated executive advised by an elective assembly, this form of government to be succeeded shortly by a representative government. The English and Dutch languages were to have equal rights, Boer war debts to the extent of £1,000,000 were to be paid, assistance was offered to enable the impoverished farmers to start afresh, and the expatriated prisoners were to be returned. Certainly this is far from being the unconditional surrender demanded by Lord Roberts, and the very fact that Mr. Joseph Chamberlain himself directed the modification of the terms as late as March 6 shows how eager for peace even the great Jingo leader has become. Indeed, the Boers might well have counted this a substantial victory and have been justified in accepting the terms, trusting to future negotiations for further amnesty toward rebellious English colonists, and for the settlement of other disputed questions. Until the Boer side of the case is heard, the points at issue may not be clearly understood, but until then it would seem as if the responsibility for further bloodshed and suffering rests squarely upon Boer shoulders, and that General Botha's actions smacked somewhat of the renowned Boer slimness."

### ENGLAND, RUSSIA, AND THE RAILROAD SIDING.

MOST of the American press treat the Anglo-Russian dispute over a strip of land in the Tien-Tsin railroad yards, on which the English wanted to build a siding, as a very small affair, in both senses of that adjective. Now that the strained situation has been happily ended by the agreement of both governments to withdraw their troops and submit the matter to negotiation, there is a tendency manifest to treat the picture of two hostile camps guarding a railroad switch as a joke; but some papers see serious possibilities in the incident. The Springfield *Republican* says that it "has been like a flash of lightning in revealing the real peril to the world's peace of the present situation in China," and the Philadelphia *Ledger* believes that it indicates a tension that is "a constant menace to peace as long as the soldiers of the several nations remain encamped in China."

On the other side, the Peking correspondent of the Associated Press reports that "the people of Tien-Tsin see a considerable comic-opera element in the whole affair," that "every kodak in

the place has been snap-shoting," and that "one enterprising individual prevailed upon a Cossack to pose with his uplifted sword about to fall on a Sepoy's head, while the Sepoy's fixed bayonet was touching the clothes of the Cossack." "It is ridiculous," says the Detroit *Free Press*, "to suppose that the two nations would rush into war over a railroad siding and a few square feet of territory," and the New York *Tribune* believes that "there has been no serious thought of war, at least in the minds of serious and responsible statesmen." *The Tribune's* London correspondent says:

"The railway siding dispute is so petty that suspicion is excited in diplomatic circles that the crisis has been brought on artificially by Russia for the sake of diverting attention from Manchuria. If this theory be correct, the Tien-Tsin dispute will be settled by a display of conciliation at St. Petersburg, and England and Germany will be allowed the satisfaction of claiming diplomatic success in due time. Meanwhile Manchuria will become irrevocably Russian, and nothing will be said about scuttling or loss of prestige."

The London *News* and *Star* are reported as expressing regret that England's South African complication renders her powerless to do anything more than "bluster" in China. The Philadelphia *Ledger* says, in the same vein:

"There is no continental country, no second-class power anywhere, with which England could safely go to war at present. Her hands are tied in South Africa, and after her war there is closed it will be a long while before she can recover her former military prestige or strength. No matter, as the London *News* says, how just her cause of quarrel with Russia may be, England can not maintain it with force of arms, and tho Russia may act upon the aggressive in China, England can only threaten, not strike. Her hands have been tied by Mr. Chamberlain's blundering crime against the little African republics, and so once more does it appear that the mills of the gods, tho grinding slowly, are grinding exceedingly sure."

## WHAT THE "BOXER" TROUBLES HAVE COST AMERICAN TRADE.

THE sufferings of Americans in China from the effects of the Boxer uprising have been given such wide publicity that they are hardly likely to be forgotten or depreciated; but probably few are aware of the extent to which the interests of merchants in this country have been damaged by the Chinese troubles. "The year 1900," remarks Consul John Fowler, of Chefu, "began with the greatest increase in our trade ever known, and ended with the most serious losses." In order to give some idea of the way in which a few specified lines of imports fell off, Consul Fowler gives (in "Consular Reports," March 19) the following table, showing merchandise imported from America into the ports of Chefu, Tien-Tsin, and New-Chwang during the quarter ending September 30, 1900, and the same period of 1899:

| Article. | 1899. | 1900. | Decrease. |
|---|---|---|---|
| Drills.....pieces | 371,172 | 20,589 | 350,583 |
| Jeans.....do | 22,930 | 3,340 | 19,590 |
| Sheetings.....do | 839,480 | 81,790 | 757,690 |
| Flour.....haikwan taels | 158,275 | 19,225 | 139,050 |
| Oil, kerosene.....gallons | 2,053,100 | 50,000 | 2,053,100 |

"The above gives a good idea of what a mob in China can do in interfering with trade," comments Consul Fowler; "the greatest loss is, of course, in cotton piece-goods, and this cessation of imports must have been most keenly felt in the Southern States." The following table shows how the exports of American cotton were affected:

| Month. | 1899. | 1900. | Increase. | Decrease. |
|---|---|---|---|---|
| January | $855,528 | $820,217 | ..... | $35,311 |
| February | 1,047,275 | 702,406 | ..... | 344,865 |
| March | 982,722 | 1,172,152 | $189,430 | |
| April | 564,487 | 398,262 | ..... | 166,229 |
| May | 626,964 | 418,123 | ..... | 208,841 |
| June | 1,568,725 | 554,188 | ..... | 1,014,537 |
| July | 728,721 | 859,500 | 130,779 | |
| August | 598,380 | 103,520 | ..... | 494,860 |
| September | 669,013 | ..... | ..... | 669,013 |
| October | 772,834 | 25,375 | ..... | 747,459 |
| Total | $8,414,649 | $5,053,743 | ..... | $3,360,906 |

In some localities trade was almost annihilated. "I know of ships loaded with Oregon lumber," says the consul, "that reached Taku and were unable to land their cargoes, thus entailing an enormous loss upon the American lumber trade. One American firm paid through this office over $5,000 gold on demurrages alone on this account, besides losing the sale of the lumber destined for Tien-Tsin." The number of ships entering the port of Chefu during the quarter ending last September was 282, as compared with 522 the preceding year, and there was a decrease of 121 ships during the same time at New-Chwang. The total collection of duties for all China during this period was 5,163,795 taels ($7,228,000), as compared with 7,623,386 taels ($10,672,000)

WHICH IT OUGHT TO BE THE OTHER WAY.

the previous year. "Probably no country in the world," says Consul Fowler, "suffered as much as did the United States, for the scene of strife covered practically our field of trade."

The New York *Tribune*, commenting on the above figures, thinks that the most important lesson for American merchants is the "suggestion of the permanent loss this country would suffer if the 'open door' were closed against it, as is now threatened." "If, as is proposed, the northern half of the Chinese empire should be placed under Russian control and administration," it declares, "a trade which now amounts to many million dollars a year, and which is rapidly increasing, would practically be annihilated."

## WHAT THE PLATT-ODELL DISAGREEMENT MAY MEAN.

THE difference of opinion between Senator Platt and Governor Odell over the "Metropolitan Police bill," to place the New York City police force under state control, seems to contain some decidedly interesting possibilities. Senator Platt has yielded for the present, but intimates that he may bring his scheme forward again later. While the immediate bone of contention is the police bill, many papers see in the disagreement a struggle between the governor and the senator for the control of the New York State Republican "machine," and all the power that goes with that control. The New York *Times* (Ind.) calls it a matter "of the highest importance to this city, to the State, and to the Republican Party," and adds that "it may have serious influence on the politics of the nation." To the city, Senator Platt's effort to get the police under state control is perhaps the most important phase of the affair; and as the legislatures of Massachusetts, Pennsylvania, Illinois, Missouri, and several other States are making encroachments on the home rule of the large cities within their borders, the fate of this police bill will mark an important defeat or victory for this class of legislation. The people of New York City make up half the population of the State and pay two thirds of the taxes, but control only thirty-eight per cent. of the legislature. To the State, the refusal of the governor to indorse Senator Platt's plan may mean considerable. A large number of papers believe that it may mean that Governor Odell will overthrow Mr. Platt as "boss," and take the reins himself. Says the Boston *Herald* (Ind.), "Platt seems to think that he still owns the legislature. If he does, he will yet crowd the governor into a corner. If he doesn't, he will cease to be of much account in New York politics. A boss must control something. When he does not, he is no longer boss." To the Republican Party and to the nation, the retirement of Mr. Platt as a power in politics would of course be of considerable moment; and the "arrival" of Mr. Odell in national politics would be unquestionably interesting. Some of the papers are already talking of him as a "presidential possibility."

The story of the disagreement is thus briefly told by the New York *Sun* (Rep.):

"For several weeks Senator Platt has been reiterating for publication that a police bill would be introduced, passed and signed by the governor, altho the latter had openly and with more than ordinary emphasis committed himself to a contrary policy. If the senator had deliberately determined to humiliate the governor in the public eye and to exhibit his own personal mastery over him, he could not have made his purpose more clear or less doubtful.

"Why this has been done is beyond us to explain. We fail to understand its philosophy, and, not understanding it, incline to think that it is not sound.

"By all appearances the Republican organization is opposed to the proposed legislation. Certainly, public sentiment is opposed to it. And for the last quarter of a century the state court of appeals has been opposed to it as constitutionally inadmissible.

"Why the issue of its passage should be forced upon the governor over these obstacles we can not explain."

The senator and the governor have both given out statements denying that there is any ill-feeling between them, but both statements make it clear that the senator is determinedly in favor of the police legislation, and that the governor is firmly opposed to it. Says Mr. Platt: "While I have decided views about police legislation, the governor is an honest and capable man, whose only desire is to do what he believes to be best, and no difference of opinion about any question of policy can disturb the relations which have existed between us for so many years." Governor Odell, similarly, after declaring that he will "decline to approve such a measure" as Mr. Platt is insisting upon, says: "That men may differ is self-evident, but that such differences should mean the sundering of friendships which have covered a long period of years is ridiculous." It is remarked, however, that, as both can not win, one must eventually give way, and that the other will then be plainly the master in New York Republican politics. And many papers freely predict that it will not be the governor who will give way. "The old man must climb down," says the Springfield *Republican* (Ind.).

"The Decline and Fall of Platt" is the way the Boston *Tran-*

*script* (Rep.) heads its editorial on the topic, and it goes on to remark that "it seems to be about time to begin to gather the materials for a political obituary notice." The New York *Evening Post* (Ind.) notes that most of the men who have received federal appointments from New York State—Ambassadors Choate, White, and Porter, Secretary Root, and Assistant Secretary Sanger—are not "machine" or "Platt" Republicans; and it openly declares its belief that the power of the senator is gone, and calls him the "boss emeritus."

Other papers turn their attention to the growing prominence of the young governor. "No governor from George Clinton, the first, to B. B. Odell, Jr., governor now," says the Brooklyn *Eagle* (Ind.), "ever had a finer chance for an issue of manhood against machinehood, or ever availed himself of it more wisely, more promptly, and more courageously." The New York *Press* (Rep.) declares that "his action gives the first guaranty for years that the Republican organization of New York must cease to be an institution for blackmail and private gain or go out of business"; and the New York *World* (Ind. Dem.) observes that "he evidently sees the truth that his one hope of success lies in seizing the machine, deposing the boss, and making himself the state leader." Of the papers "up the State," the Troy *Record* (Rep.) says that "the honest and independent people of the State, regardless of party, will applaud Governor Odell for the stand he has taken," and the Utica *Press* (Ind.) agrees that "the better class of Republicans all over the State are sick and tired of Platt and Plattism, and they will hail with delight any opportunity that is not too dangerous to throw off the yoke, even tho it be to take on another." The Rochester *Post-Express* (Rep.) calls the governor's position "highly honorable," and says that he "stands to-day far higher in the estimation of the people of this State than he ever stood before"; and the Syracuse *Post-Standard* (Rep.) says: "The Empire State is honored in Governor Odell to-day. He has saved his party from disaster, his State from a national reproach. His career of honored political leadership is but now fairly begun."

Senator Quay's organ, the Philadelphia *Inquirer* (Rep.) believes the whole affair "is only a tempest in the teapot," and the Brooklyn *Standard-Union* (Rep.) says: "Between Senator Platt and Governor Odell there is no personal difference at all. It is purely difference of opinion as to what course is best to pursue in the interests of the whole people, and will doubtless be adjusted along lines of wisdom and continued party harmony."

## AN ADVERSE VIEW OF MR. CARNEGIE'S GIFT TO NEW YORK.

THE opinion that Mr. Carnegie's gift of $5,200,000 to New York City, to establish sixty-five branch public libraries, is as wise as it is generous is so widely entertained and expressed that only the exceptions to it are notable. Such an exception is found in the New York *Sun*, which says:

"If a man offered to give you a costly carriage on the condition that you bought a two-thousand-dollar pair of horses and supported in perpetuity a commodious stable and a coachman and a groom, you might on reflection conclude that, after all, the offer was not so advantageous to you as it might have seemed at first sight.

"Mr. Carnegie offers to give New York $5,200,000 to put up the buildings for sixty-five libraries, provided the city furnishes the sites for them and pays for the libraries and their maintenance. The average cost of such sites is estimated by the Controller at $20,000 each, or $1,300,000 in all, and, according to the estimate of Dr. Billings, the books for the libraries will cost about $650,000, or $10,000 for each library. The cost of maintenance Mr. Rives estimates at $500,000 a year, and another estimate is $600,000, a sum representing the annual interest on twenty millions of bonded indebtedness.

"It will be seen, therefore, that if Mr. Carnegie's offer is accepted, his $5,200,000 will increase rather than diminish the now heavy financial burdens of the city. The amount of money proffered is insignificant proportionately to the cost of satisfying for all time the conditions imposed by the giver. That is, Mr. Carnegie proposes a new plan of public expenditure, toward which he offers to pay merely a part of the original cost of a library plant which must be supported by great and permanent public expenditure.

"It is bad manners, as the proverb tells us, to look a gift horse in the mouth, but when acceptance of a gift involves a costly

IF GENERAL WOOD IS UNPOPULAR WITH CUBA, WE CAN GUESS THE REASON.

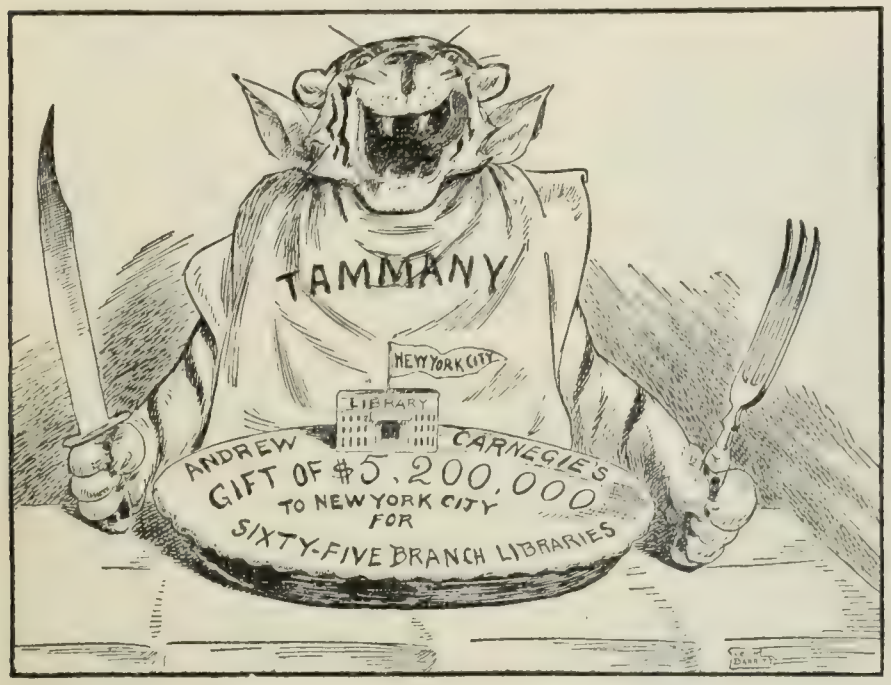
—*The Minneapolis Tribune.*

CAN'T LET GO.

—*The Minneapolis Journal.*

EFFECTS OF THE CUBAN OCCUPATION IN CARICATURE.

change in the public policy such considerations as we have suggested must arise in reasonable minds. Are sixty-five more libraries the one great need of New York? As Mr. Rives has said, this practical question must first be settled by public opinion before it is expedient to assume financial obligations so great for that single purpose. As it is, the city is unable to pay for all



IT EXPECTS TO DO THE CARVING.
—*The New York Tribune.*

the schools it would be desirable to have, and, of course, before people can read the books of the libraries they must have learned to read. New docks, new pavements, new bridges and other needed public improvements are prevented or delayed for the same reason; and if the financial burdens of the city are increased in this one direction, the prospects of getting the rest will be diminished still farther. . . . . .

"Mr. Carnegie's impulse to make his vast fortune of direct benefit to the public instead of keeping it as a means of gratifying his own tastes and ambitions merely is a noble impulse; but in his method of dispensing it he shows no originality. He simply follows a beaten path the end of which is doubtful, so far as concerns true public advantage. Moreover, in the instance of his proposed gift to New York he would impose on the public the cost of keeping in operation a cut-and-dried plan chosen by himself. The question his offer raises, therefore, is whether the public expenditure required by his conditions is the most expedient use to which the public money shall be put, when there are demands on the city treasury for so many other outlays for improvements as to the absolute need of which there is common agreement."

The New York *Evening Post* says in reply:

"Of course, it may be that the city needs other things more. Possibly free baths, an endowed theater, a subsidized newspaper, or other form of benefaction would in the opinion of various enthusiasts have met a more pressing need. This it does not lie with us, nor with Mr. Carnegie's critics, we may say, to determine. The city does need libraries, can afford to support them, and now, through Mr. Carnegie's generous initiative, will have them soon. What more can we ask? If nothing were to be given to the city until it had been settled by the editorial writers in conference just what form of benefaction was most imperatively necessary, the Carnegies of our time might indeed despair of dying in honorable poverty."

Mr. Miles O'Brien, president of the city board of education, proposes that a number of the public-school buildings be used as libraries. "Here in New York," *The Daily News* reports him as saying, "we have all these fine school buildings which are only used five hours a day five days in the week. I believe that they can be put to good practical use every waking hour of six days in the week." In this way Mr. O'Brien expects the schools to Americanize the children during the day and the parents in the evenings. *The News* says of the plan: "It is to have a trial, and if it proves successful it will be elaborated upon and eventually, it is expected, the major portion of the public schools will also be utilized for that purpose. The libraries will not be for the use of the school children, but for the working men and women who have not the time to patronize the larger free libraries. At first eight school buildings—four on the far east side and four on the far west side—will be equipped with libraries. The schools will be selected where the population is greatest and of a cosmopolitan character."

## INCREASE OF BURGLARY, AND THE REMEDY.

IN the midst of the growing tendency toward a tender treatment of lawbreakers comes a strong article from Robert Anderson, assistant commissioner of police in London, urging that habitual criminals, instead of being sentenced to five, ten, or fifteen year terms, be locked up in jail for life. Commissioner Anderson is the author of books on "The Gospel and its Ministry," "Human Destiny," and other religious topics, and is a Commander of the Bath and a Doctor of Laws. One of his official duties is to keep a register of habitual criminals, and one of the results of this work is his discovery of the startling fact that "while crime in general is diminishing, *professional* crime is on the increase." And this is just the kind of crime, he points out (in *The Nineteenth Century and After*, London), that is the most to be feared. Murders for revenge or hatred need not cause alarm, for most of us are not the objects of those passions. "In contrast with this, take the case of a commonplace burglary. Never a night passes that some crime of this kind is not committed in the metropolis. No one can be certain, as he shuts his door and lies down to sleep, that the sanctity of his home will not be thus outraged before morning. And in every instance there is a real element of danger to the occupants, for the burglar is generally ready to resort to violence if disturbed in the commission of his crime." During the last thirty years crimes against property in London, he finds, have decreased from 22,083 a year to 16,149, while the population has been increasing from 3,500,000 to 6,500,000. In the same thirty years, however, burglaries have actually increased from 345 a year to 447.

There are two sorts of burglars, says Mr. Anderson, "those who are so utterly weak or so hopelessly wicked that they can not abstain from crime," and "others who pursue a career of crime deliberately, with full appreciation of its risks." We are too harsh with the first class, he believes, and too easy with the second. "If the convicted prisoner," he argues, "be a poor wretch who, begotten and born and bred in crime, has not the moral stamina to resist when opportunity for theft presents itself, then, instead of the brutality which now obtains of treating such an offender as a deliberate professional criminal of the other type, let him be sent to an asylum prison, where his life can be spent in useful labor, with every reasonable alleviation of his lot. And if it can be established that the offender is a criminal in the sense in which some men are artists or architects —in other words, that he is a criminal by profession, and habitually uses his liberty to prey upon the community—let him be deprived of the liberty he thus abuses."

The motive for this life incarceration is not punishment. "That rests with a higher Power," said Sir John Bridge, and Mr. Anderson quotes the remark with approval. The jail is merely a wall between the criminal and the community, and instead of releasing the habitual burglar at intervals of a few years to renew his raids on society (as is done on both sides of the Atlantic) Mr. Anderson would keep him on the far side of the bars. He says:

"When, after repeated warnings, a man has proved himself to be a moral leper, an outlaw, a criminal in character and habitual practise, to set him at liberty is quite as stupid and as wicked as

it would be to allow a smallpox patient to go at large in the community. . . . . .

"A single prison would suffice to hold the entire gang of known criminals who now keep the community in a state of siege, and a single wing of any one of our jails would more than suffice to provide for the band of outlaws who may be described as the aristocracy of crime in England. But while we are ready to sacrifice any number of valuable lives on the battle-field, to attain results that are often doubtful and sometimes worthless, the inalienable right of these human beasts of prey, not only to life but to liberty, is maintained with all the blind fervor of a religious superstition.

"If some small share of the labor and cost successfully expended upon keeping cholera and the plague from our shores, or even in stamping out rabies among dogs, were diverted in this direction, organized crime might be abolished in a single decade. The task would be a far easier one than that which sanitary science has accomplished. For while the germs of disease are subtle and secret, the criminals are known and easily detected. And there can be no crimes without criminals: no really bad offenses without really bad offenders; and 'really bad offenders might in a very few years be made as rare as wolves.'"

## MR. BRYAN ON MR. CLEVELAND.

LAST week, for the first time, the difference of opinion between Mr. Cleveland and Mr. Bryan reached the point of personal attack. Ever since last November Mr. Cleveland has been advocating the return of the Democratic Party to the principles it held before 1896, and in a recent letter to the Crescent Democratic Club, of Baltimore, he repeated the same counsel by saying: "I am convinced, however, that if our party is to gain its old prestige and become again a strong and vigorous organization, feared by its enemies and inspiring the active devotion of its rank and file, it must first, of all things, itself become truly, honestly, and consistently Democratic."

The common interpretation put upon these letters and interviews that Mr. Cleveland has been giving out is that he invites the party to show Mr. Bryan the door. He does not say exactly that, however, and Mr. Bryan asks him to be more specific. Mr. Bryan says, in *The Commoner*:

"Since *The Commoner* circulates almost exclusively among 'the rank and file,' it seems proper that this paper should give the distinguished ex-Democrat an opportunity to suggest plans and specifications for a Democratic structure which would be commodious enough to afford a place of refuge for him and at the same time allow standing room for real Democrats.

"A reward, therefore, of five dollars is offered for a written statement, not to exceed five hundred words, signed by Mr. Cleveland, applying Democratic principles, as he understands them, to at least five of the questions now before the country. The offer is open to him or to any one who can secure such a statement from him. If the statement does not cover five questions, a proportionate reward of one dollar will be given for each question covered.

"An additional reward of one dollar will be given for a written statement, signed by Mr. Cleveland, explaining why he considered his opinion on public questions as of no importance during the recent campaign, but regards such opinion as important now. When the battle was on between a republic and an empire—between a democracy and a plutocracy—between bimetalism and monometalism—he refused to say a word or lift a hand in behalf of 'the rank and file' for whom he now expresses such an affectionate solicitude. He knew that a Republican victory meant an indorsement of an imperial policy, with its wars of conquest; he knew that it meant trust domination and the reign of monopoly, as well as a commendation of a financial policy never approved by a Democratic national convention, and yet he remained silent. As soon as the election was over, he came forth from his seclusion and made the air vocal with his suggestions.

"Assuming to be inspired by a purer Democracy and boasting of a superior virtue, he began to offer unsolicited advice to the party to which he once belonged. He is like the soldier who was described as 'invisible in war and invincible in peace.' To desertion of the party organization and betrayal of the principles of the party, he adds ostentatious pretense of interest in the plain people, while he conceals his ideas in ponderous and platitudinous phrases. If he will clearly and candidly define the Democratic principles about which he is so prone to talk, the people can decide for themselves whether he is the same Mr. Cleveland who turned the treasury over to a foreign financial syndicate and intrusted J. Pierpont Morgan with the combination of the government vaults, and then supported the Republican ticket because his administration was not indorsed—the same Mr. Cleveland who denounced trusts in his messages but failed to enforce the law against them—the same Mr. Cleveland who condemned imperialism and then gave passive support to an imperialistic President, or whether he has repented of his folly and is ready to accept the Democratic creed."

## SAVING BOYS FROM CRIME.

THE process of making good citizens out of bad ones, transforming society's liabilities into assets, is a work that always commands attention; and when the work is among children, it seems to have an additional claim upon human sympathy. The record in this line that has called out the most remark, perhaps, is the boast made by the Children's Aid Society, of New York City, that of the boys it has taken from the streets of the metropolis and placed on Western farms, two have become college professors, twenty-two lawyers, twelve clergymen, nine physicians, two railroad managers, two governors, one a member of Congress, and a number members of state legislatures. Another interesting work that has progressed far enough to make a report is the juvenile court in Chicago, established in 1899, and described in our issue of August 19 of that year. Before it are tried all cases of children, dependent, neglected, or delinquent, under the age of sixteen. The court was patterned after a similar one in Massachusetts, and its record of a year and a half of existence has been warmly praised. Mr. Carl Kelsey, writing in the current *Annals* of the American Academy of Political and Social Science of Philadelphia, says:

"Appreciation of the value and importance of the court grows steadily. The judge had few precedents when he began and had to feel his way. To-day he is the enthusiastic advocate of the court. The other circuit judges who have acted as supply judges have become much interested in the court. Venerable Judge Tuley said: 'The juvenile court is the greatest work of the kind ever undertaken in Illinois. More can be done in ten years in the juvenile court to suppress crime than can be accomplished in fifty years in the criminal court.' The state's attorney has said that the expenses of the criminal court have materially decreased because of the operation of the law. Before the enactment of the law there were constantly from forty to fifty boys in jail awaiting hearing. During the last year only thirty-seven boys were held for the grand jury from the juvenile court. . . . . .

"If possible the judge will put the boy on parole unless home conditions are too bad, and if the record of the boy is fairly good. How successful this work of probation may be it is hard to say. Massachusetts seems satisfied with her experiment and other States are following her lead. Much has been accomplished in Illinois, tho the probation officers are overworked. Imagine successful and satisfactory work with one hundred boys paroled to one officer in addition to his other duties! Out of 1,339 delinquent boys before the court during the year ending June 30, 1900, 1,095 were paroled, and of these only 203 were returned to the court. There were also released from the city reformatory on parole 256 boys, of whom but 23 were remanded."

In New York City, in addition to the Children's Aid Society, the Gerry Society, and other similar organizations, a novel adjunct to the court of special sessions was started about three months ago and is being carried on by David Willard, a young man who is devoting himself to "settlement" work among poor

boys in the lower East Side, and who is also a teacher in the Tombs prison. The judges in this court have great confidence in Mr. Willard's judgment in the cases of boys and young men, and they parole all offenders between the ages of sixteen to twenty-one for one month in his custody. "While the prisoners are on parole," says a writer in the New York *Evening Post*, "Mr. Willard inquires into the antecedents and environments in each case, and submits a report of his findings to the judges. When the date of the boy's parole expires, Mr. Willard appears in court. If he thinks that the boy is not inherently bad, or that he can be reclaimed, he so reports, and asks that the prisoner be released under suspended sentence. The chances are that Mr. Willard may be able to report that he has secured employment for the offender; at all events the judge knows that a careful watch will be kept on the boy in future, and he almost invariably releases the prisoner as requested." Mr. Willard has investigated between seventy-five and one hundred cases so far, and in the vast majority has requested that the boys be given a chance to reform. The writer continues:

DAVID WILLARD.

WILLIAM R. GEORGE.

"Mr. Willard's work is done without salary. Besides his investigating work he has a little house on Chrystie Street which he has fitted up with eight small bedrooms, where he houses eight friendless orphan boys. As soon as he can find work for one of his 'family,' as he calls them, and the boy is self-supporting, he must 'hustle' for himself and make room for another boy.

"When he has room, Mr. Willard sometimes takes some of his paroled prisoners into his house, but he does not often have room. The house is supported by voluntary subscriptions. Sometimes the subscriptions do not come as numerously or as largely as are necessary, and then, as Mr. Willard expresses it, 'we have to "hock" some of our goods at the nearby pawnshop until things look brighter. We have dark days as well as bright ones in my family.'"

HOUSE OF REPRESENTATIVES OF THE GEORGE JUNIOR REPUBLIC IN SESSION.

The charter revision commission has recommended that a children's court be established in New York City, and it is not unlikely that this will soon be done; but as such a court will have to do only with children under sixteen, Mr. Willard's labors will not be affected by it.

The parole system, however, whether in a juvenile court or in the court of special sessions, puts the boy back on the city's streets, and, as Dr. D. L. Pierson says in an article on the George Junior Republic in *The Missionary Review*, "the city's streets are the devil's kindergarten." Another recourse is to place the boy in some charitable institution; but this plan sometimes proves worse than the other. In his last annual report the secretary of the Children's Aid Society says:

"It is an interesting fact that the children who have been most successful in their after-careers were not the well-trained children from institutions as one might suppose, but were mostly boys who had received their early training on the streets and were removed to better environment before they were twelve years of age. On the other hand, the very small number who were arrested for crime or sent to reform schools were in most cases children who came from institutions. The petty crimes they committed were largely due to want of worldly experience—a difficulty in distinguishing right from wrong."

Mr. William R. George, in his now famous "George Junior Republic," just referred to, believes that he has found the path out of this dilemma. Mr. George started the little republic in July, 1895, and it now has about a hundred citizens, one fourth of the number girls. Every citizen is paid for his work in tin coins, which he exchanges at the Republic store and hotel for the necessities, comforts, and luxuries of life, or deposits in the Republic bank. The citizens make their own laws, elect their own president, congress, judges, and other officers, and choose their own policemen, who lock up in their jail the citizens who break the laws. The plan has proved so successful that the Massachusetts State Reformatory has adopted its principle, and two other Junior Republics have been started, one in Reddington, Pa., and the other in Washington, D. C. Mr. George's little democracy is located at Freeville, N. Y., about eight miles north of Ithaca. A writer in *The Puritan Magazine* remarks that the Freeville Republic "for its simplicity, its decency, and its self-respect, may some day repay the study of the legislators of the larger democracy." Like Mr. Willard's work, the Republic does not

seem to be embarrassed by an unmanageable surplus of funds, and all its leaflets announce that contributions of money, materials, clothing, or household articles will not come amiss, and will aid in extending the usefulness of the work. The Republic's last leaflet records the interesting fact that since the work began not one of the citizens has been dismissed as incorrigible, and of the 119 who have left the Republic not one has gone astray. Says the report:

"Of the 119, 61 were considered by Mr. George positively bad when they entered the Republic. Many of them had been arrested and had served one or more terms of imprisonment in some institution of a reformatory character; others had committed thefts that would have sent them to a reformatory had they not been given the alternative of going to the Republic. Not one boy or girl who has left the Republic has been, up to date, in any difficulty with the public authorities since leaving. So far as Mr. George can learn, every one is at some honest labor."

## SUFFRAGE RESTRICTIONS IN MARYLAND.

MARYLAND'S new election law, passed in an extra session of her legislature, is expected to disfranchise about 26,000 negroes and 18,000 white men by imposing upon them an educational qualification. Under the provisions of the new law, the voter is required to mark a ballot without party emblems or division of the candidates into party groups. Instead of such arrangement, the candidates for each office are placed together in alphabetical order, and the voter, without assistance, must put his mark against the names of the candidates he favors. A similar plan has already been adopted in Arkansas, Massachusetts, Connecticut, and other States, and, as the Philadelphia *Times* (Dem.) remarks, if any educational qualification at all can be justified, a simpler one than this could hardly be imagined. The Democratic advocates of the measure point out that grave abuses have resulted from the present system of allowing illiterates to be assisted in recording their votes, and that the secrecy of the ballot has been practically destroyed. In a recent message to the legislature Governor Smith declared that the existing system of voting in Maryland "practically puts a premium on the purchasable votes." "It enables men most susceptible to the influence of money," he said, "to be approached, corrupted, and silenced by the price in their pocket, paid with absolute certainty that the bribe has secured the vote."

On the other hand, the Republican papers claim that the measure was introduced by the Democratic Party simply for the purpose of more firmly intrenching its political position in the State and gratifying Mr. Gorman's senatorial ambitions. "Had they (the Democrats) gone to work in the proper way to bring about an educational qualification for suffrage," says the Baltimore *American* (Ind.), "they might have gained the support of many of their own party who are now their most severe critics. The path they have chosen can end in but one way. It will mean worse defeat in the future than their party has met with in the past." It continues:

"There are, in round number, 26,000 colored illiterates in Maryland, most of whom are Republicans, and 18,000 white illiterates, most of whom are Democrats. The colored illiterates are eager to learn to read and to distinguish the names on the ballots, nor have they, for the sake of receiving instruction, any hesitancy in coming forward and confessing their illiteracy. The case with the white illiterates is entirely different. New as is this agitation, it has been already demonstrated that the whites resent the imposition of an educational qualification, and that they will lose their votes rather than confess their inability to properly distinguish the names on the ballots. In view of this, it is indisputable that, while striving for a mean partizan advantage, the Democrats are daily shaping the proposed new election law after the manner of a boomerang, which in the end will turn and strike them that threw it."

The Baltimore *Herald* (Ind.) describes the law as "the crime of taking the vote from some forty or fifty thousand citizens of this State for the sole purpose of restoring Gorman to the Senate." The Baltimore *News* (Ind.) has also been a vigorous opponent of the measure, but the Baltimore *Sun* (Ind.) thinks it will be "a gain on the whole," and will promote a higher education among both whites and blacks. The law does not find wide support even in the Democratic press. "Maryland has not honored Democratic principles by passing laws aimed to deny equal rights to equal citizens," says the New York *World* (Ind. Dem.); "whether they are contrary to the Constitution is for the federal court to decide, but that they are contrary to Jeffersonian principles is as certain as it is deplorable."

The Chicago *Times-Herald* (Rep.) thinks that the time has come "to call a halt in this kind of legislation." It continues:

"The remedy for these violations of the spirit of the Constitution is plain and adequate. Under section 2 of the Fourteenth Amendment Congress is given power to reduce the representation in Congress and in the electoral college of any State which deliberately disfranchises any portion of its male citizens over twenty-one years of age. The provision is so definite and plain as to leave no doubt concerning the powers of Congress in this direction. If the Southern States continue to disfranchise large portions of their citizens in the interest of party supremacy, Congress should not hesitate to apply the remedy provided by the Constitution."

The Maryland law does not seem to have any feature like the "grandfather clause" contained in the Mississippi, Louisiana, South Carolina, and North Carolina franchise measures. By the "grandfather clause" no man of voting age in these States is barred from the polls if he or any of his ancestors was entitled to vote previously to 1861. The practical effect of this is to bar nearly all the blacks from the ballot without barring any of the whites. In Maryland, however, it seems that the white man must be able to vote intelligently or not vote at all.

## TOPICS IN BRIEF.

WHAT shall we do with our ex-President?—*The Chicago Evening Post.*

MR. CARNEGIE must be the mysterious Santa Claus.—*The Atlanta Constitution.*

*The Commoner* is to take advertisements. A Bryan want column will sound rather familiar.—*The Washington Post.*

HOW did it happen that Mr. Carnegie's employees didn't get their just share of the profits as they went along?—*The Detroit News.*

WE fail to notice any particular difference between the empire and the republic. Kansas City's streets are just as dirty as ever.—*The Kansas City Journal.*

THE record of the woman visitor who keeps her host meeting trains for a week before she arrives has been beaten by Peace in the South African affair.—*The Atchison Globe.*

AS a thaw can not be much longer delayed, we may expect a new movement for the reorganization of the Democracy as soon as the ice moves out of Salt River.—*The Pittsburg Times.*

THE time has arrived when the council of foreign ministers at Peking might reasonably discuss the propriety of establishing a closed season for peaceful Chinese villagers.—*The Detroit News.*

"BOBS" says that the way to conquer the Boers is to take their arms from them. The first step in carrying out this suggestion is to induce the Boers to quit taking the arms from the British.—*The Kansas City Journal.*

"DON'T you think the republic is in danger?" asked one politician. "Of course it is," answered the other. "If it wasn't in danger how could we statesmen come forward every election and save it? And we're going to keep on coming forward and saving it until the end of time."—*The Washington Star.*

"SOME of your punishments are very peculiar," said the stranger in Asia. "Do you think so?" responded the Chinese statesman distantly. "Yes; take for instance all this nonsense about yellow jackets and peacock feathers and self-inflicted death." "Some of your modes of censure impress me as peculiar, too," was the grave reply; "for instance, that strange practise of humiliating an official who offends by taking him before a tribunal and whitewashing him."—*The Washington Star.*

## LETTERS AND ART.

### A NEW ESTIMATE OF MARK TWAIN.

SEVERAL recent events have concurred to call American attention anew to Mr. Samuel L. Clemens, among them being his recent return to this country after a prolonged absence, the publication of a uniform edition of his works, and his almost continuous appearance in the public eye through his various literary and social activities since his return. For these reasons, Mr. W. D. Howells finds fresh occasion for an examination of Mark Twain's literary personality. He says (in *The North American Review*, February):

"Now that Mark Twain has become a fame so world-wide, we should be in some danger of forgetting, but for his help, how entirely American he is, and we have already forgotten, perhaps, how truly Western he is, tho his work, from first to last, is always reminding us of the fact. But here I should like to distinguish. It is not alone in its generous humor, with more honest laughter in it than humor ever had in the world till now, that his work is so Western. Any one who has really known the West (and really to know it one must have lived it) is aware of the profoundly serious, the almost tragical strain which is the fundamental tone in the movement of such music as it has. Up to a certain point, in the presence of the mystery which we call life, it trusts and hopes and laughs; beyond that it doubts and fears but it does not cry. It is more likely to laugh again, and in the work of Mark Twain there is little of the pathos which is supposed to be the ally of humor, little suffusion of apt tears from the smiling eyes. It is too sincere for that sort of play; and if after the doubting and the fearing it laughs again, it is with a suggestion of that resentment which youth feels when the disillusion from its trust and hope comes, and which is the grim second-mind of the West in the presence of the mystery. It is not so much the race-effect as the region-effect; it is not the Anglo-American finding expression, it is the Westerner, who is not more thoroughly the creature of circumstances, of conditions, but far more dramatically their creature, than any prior man."

MARK TWAIN AND HIS EMPIRE—A LAUGHING WORLD.
Courtesy of *The Commercial Advertiser*.

Mr. Howells deems Colonel Sellers and "The Connecticut Yankee" to be Mark Twain's greatest achievements:

"Both 'Huckleberry Finn' and 'Tom Sawyer' wander in episodes loosely related to the main story, but they are of a closer and more logical advance from the beginning to the end than the fiction which preceded them, and which I had almost forgotten to name before them. We owe to 'The Gilded Age' a type in Colonel Mulberry Sellers which is as likely to endure as any fictitious character of our time. It embodies the sort of Americanism which survived through the Civil War, and characterized in its boundlessly credulous, fearlessly adventurous, unconsciously burlesque excess the period of political and economic expansion which followed the war. Colonel Sellers was, in some rough sort, the America of that day, which already seems so remote, and is best imaginable through him. Yet the story itself was of the fortuitous structure of what may be called the autobiographical books, such as 'The Innocents Abroad' and 'Roughing It.' Its desultory and accidental character was heightened by the cooperation of Mr. Clemens's fellow humorist, Charles Dudley Warner, and such coherence as it had was weakened by the diverse qualities of their minds and their irreconcilable ideals in literature. These never combined to a sole effect or to any variety of effects that left the reader very clear what the story was all about; and yet from the cloudy solution was precipitated at least one character which, as I have said, seems of as lasting substance and lasting significance as any which the American imagination has evolved from the American environment.

"If Colonel Sellers is Mr. Clemens's supreme invention, as it seems to me, I think that his 'The Connecticut Yankee' is his greatest achievement in the way of a greatly imagined and symmetrically developed romance. Of all the fanciful schemes in fiction it pleases me most, and I give myself with absolute delight to its notion of a keen East Hartford Yankee finding himself, by a retroactionary spell, at the court of King Arthur of Britain, and becoming part of the sixth century with all the customs and ideas of the nineteenth in him and about him. The field for humanizing satire which this scheme opens is illimitable; but the ultimate achievement, the last poignant touch, the most exquisite triumph of the book, is the return of the Yankee to his own century, with his look across the gulf of the ages at the period of which he had been a part and his vision of the sixth-century woman he had loved holding their child in her arms. It is a great fancy, transcending in esthetic beauty the invention in 'The Prince and Pauper,' with all the delightful and affecting implications of that charming fable, and excelling the heartrending story in which Joan of Arc lives and prophesies and triumphs and suffers."

On the whole, the qualities in Mark Twain that most impress Mr. Howells are his common sense and his serious grasp of human life. "The exceptional observer must have known from the beginning," the writer remarks, "that he was a thinker of courageous originality and penetrating sagacity, even when he seemed to be joking. . . . The fact is thrown into sudden and picturesque relief by his return to his country after a lapse of time long enough to have let a new generation grow up in knowledge of him." The projection of his reputation "against a background of foreign appreciation such as no other American author has enjoyed," remarks Mr. Howells, has little or nothing to do with his acceptance by his countrymen as a prophet. It is by his strong handling of great questions of the day, as seen in his "Following the Equator," that he has won his claim to be heard in a public manner, and has "won the odd sort of primacy which he now enjoys."

### HOW TO WRITE A NOVEL FOR THE MASSES.

THE one thing necessary in the modern "historical romance," says Mr. Charles Battell Loomis, is not history, but "romance." The ordinary novel reader is "a dull bird, who knows little—and cares less—about the facts of history, the cut of a coat, or the geography of a particular country." To him, indeed, "anachronisms do not exist, because he would not know one if he saw it in a cage." "Of course," Mr. Loomis explains, "I don't mean you, dear reader; but you must admit that the vast majority of the reading public is made up of dull, unthinking people." Mr. Loomis then proceeds (in *The Atlantic Monthly*, March) to show "how it ought to be done." The following is his first draft of a great new "historical romance," that is to be heralded by blare of trumpets and to sell by the hundred thousand while the volumes are still warm from the press:

"'It was dawn of a clear spring morning. Guy le Cormorant set forth from his father's castle with never a sou in his pocket, a large credit at his banker's, and the whole world before him.' Here chuck in some reference to the '"Provençal robins" that during the reign of the good Louis sang with such surpassing

sweetness.' If you wish to, run in a few Breton peasants, and dot the meadow with sheep, and fill the fields with Lyonnaise potatoes. The public won't know or care whether you are right or not.

"Now it's time for your first adventure, for you are nearing the end of the second page, and a successful romantic novel should yield an adventure to every ten pages, and stop at the 300th page:

"'Around the corner of the Louvre' (never mind what or where the Louvre is; the public will think it is a river or a field) 'came the wicked seneschal, Vignon de Morimont. His fat horse jogged along lazily, and from the corners of his treacherous eyes he looked at the brave young Guy.'

"Now have Guy accuse him of having murdered his (Guy's) grandmother in 1560. 'When my father told me that my grandam' ('grandam' has a good sound always, like a great oath) 'had been murdered by de Morimont of Morimont Castle, I swore that the murder should not go unavenged. All this morning have I sought thee; now have I found thee. Prepare for an awful doom.' Now let them draw their broadswords, and then say something about Richelieu having issued an edict against the carrying of broadswords by gentlemen. Start in as if you were going to be very dry over it, but cut it short quickly. That will make the reader like you. Then have Guy fly at the wicked seneschal, and spit him on the broadsword, and toss him into a plane-tree. A plane tree is better than the most ornate tree that your reader is likely to know about. If a man thinks that you know something that he doesn't know, he suspects you of knowing other things of which he is ignorant, and his respect increases.

"Having tossed the seneschal into the plane-tree, let Guy mount his horse and continue on his way. Adventure number one is over, and he has won out easily; but it will be a mistake to let him win every round with as little effort. In a story, a dead-sure thing is not exciting. It is now time to bring in more singing of birds, as a sort of contrast. If a shepherd is handy, let him pipe up a little, so as to put Guy into good spirits, as the stabbing of the seneschal is on his nerves a bit. Guy might toss the shepherd a sequin or a groat. The public has heard of both coins, but doesn't know where they grow."

After the public has thus had a chance to recover its nerves, it is high time, says Mr. Loomis, to bring the heroine, Blanche de Boisgobey, upon the scene:

"You may have her poor, but of good family, or you may make her a rich runaway, fleeing from the unpleasant attentions of Prince de Joinville; but have her family good, by all means, and she herself must be absolutely unspotted. The great public will not stand for a tarnished woman in the rôle of heroine of one of these romantic novels. Describe her clothes, but in this you'll have to be careful; for while the men won't know anything about it, the women will catch on if you make any flagrant error. I guess you'll have to take the trouble to read up the clothes, unless you have a sister who is up on garments. You might dress Blanche in the fashion of to-day, and say that she was fond of being ahead of her time. But if you drop a hint of another adventure, not far off, you can draw it mild on the clothes business."

It would take too long to follow all the engrossing adventures of Mr. Loomis's hero and heroine. There is an exciting combat with a wolf in France, in which Guy, the wolf, and the horse go down in a "grand mix-up." The valiant hero is saved, however, by Blanche's pinching the tail of the "vulpine beast"; and Guy fortunately comes out of the scrimmage with only a scratched face. Blanche, of course, faints at the sight of blood, and then falls in love with the hero. Then, while he goes to sleep, weak from his loss of blood—the horse in the mean time cropping the grass and Blanche plucking ox-heart daisies—the villain rides in at an easy gallop upon a steed that saw service at Cressy or Sedan—either one will do, Mr. Loomis assures us—and Blanche is carried off. Mr. Loomis's plot ends here for the present with a splendid knightly conflict—not to be the final one, however, for there are still several hundred pages to fill—between Guy and the villain, Henri.

## A DRAMATIZATION OF HOMER'S "ODYSSEY" BY STEPHEN PHILLIPS.

THE "Odyssey" has sometimes been called the earliest of novels. Therefore, in a day when novels have scarcely come forth from the press before the "dramatic rights" are disposed of, it seems fitting that this long-deferred privilege of dramatization should be accorded Homer's ancient "historical romance." *Literature* (London, March 9) announces that the task has been undertaken by Mr. Stephen Phillips, who as the author of "Paolo and Francesca" and "Herod" is now widely looked upon as the most promising of modern British playwrights. *Literature*, comparing this new dramatic venture with the dramatization of the Rubáiyát—which, it is announced, is to be undertaken for Mr. Richard Mansfield—says:

"The difficulties are almost as great, tho in a different way. It is, perhaps, apter to remember that Mr. Gilbert Murray has already set the example of returning for dramatic inspiration to Greece, the fountain-head of so many streams which flow into the broad current of modern culture. If the stage can recapture for us 'the glory that was Greece,' it will do much to retrieve its rather damaged credit. But the dramatization of old-world legends is an exacting task in modern days. Greek fairy tale is certainly more cheerful and more varied than Celtic legend; but while the Dublin stage makes it its object to preserve the Celtic 'glamour,' we can hardly hope to catch across the footlights that true Homeric spirit the essence of which lives only in the simple epic narrative. The 'Odyssey,' as a whole, does not, of course, lend itself to the close-knit drama of our modern requirements. It belongs more to the picaresque type of story which revives in Don Quixote, Gil Blas—and, we may add, in Pickwick. Many of its incidents would remind the gallery too forcibly of the conjuror, or of the clown in the harlequinade. It is a string of stories round one character, which if related by the modern novelist would probably be reviewed side by side with Captain Kettle or Sherlock Holmes—two heroes who have much in common with Odysseus, the one in virtue of his wanderings, and the other in virtue of his cunning. But, told as Homer told it, the story is transformed into the highest poetry, and, to appreciate its beauty it is quite unnecessary to read into it, with medieval interpreters, a moral allegory, or, with some modern scholars, an astronomical fable. Into the web of Oriental romance and Greek myth of which it is composed Homer has imported an abundance of intense human interest. Johnson, in his sledgehammer way, condemned the Homeric drama: 'We have been too early,' he said, 'acquainted with the poetical heroes to expect any pleasure from their revival; to show them as they have already been shown is to disgust by repetition; to give them new qualities or new adventures is to offend by violating received notions.' This is very superficial, and would cut at the root of all the familiar plots on which dramas of the highest merit have been founded. The pathos and the humor of the 'Odyssey' both find an echo in every age. Bentley said that the 'Iliad' was written for men, the 'Odyssey' for women—a tribute, at any rate, to its emotional quality. How truly human it is appears from its perennial popularity. Its episodes—Scylla and Charybdis, Circe, the Sirens, and the rest—are familiar even to the unlettered moralist for whom

MR. STEPHEN PHILLIPS.

Homer is but a name. It is a favorite hunting-ground for the modern artist—Turner recurred to it over and over again; and pictorially it offers much attraction, perhaps too great attraction, to the stage manager. Almost every episode would make a foundation for a play. The age of the Stuarts produced two Homeric plays—Lord Lansdowne's 'Heroic Love' and Rowe's 'Ulysses,' and both these writers in the spirit of their day foisted into Homer modern sentiment or intrigue. One can hardly doubt that the beautiful close, the recognition by Penelope, is what attracts the modern poetic dramatist. Yet, perhaps, after all, the final 'curtain' should be one for which Homer does no more than give a hint. Dante records the death of Odysseus at sea. Tennyson leaves him still yearning for 'some work of noble note,' and determined

> To sail beyond the sunset and the baths
> Of all the western stars until I die.

Perhaps Odysseus should, in accordance with the legends of the Middle Ages, pass away from his recovered wife into the unknown, spurred once more by the old lust of travel to seek, like Arthur parting from Guinevere, 'death, or I know not what mysterious dooms.'"

*Literature* adds that the new Homeric drama will be produced by Mr. Beerbohm Tree at the end of next September. It is interesting to remember, it remarks, that the late Prof. G. C. W. Warr, of King's College, London, wrote a dramatic masque in 1883 called "The Tale of Troy," founded upon certain episodes in the "Iliad." This, with "The Story of Orestes," was set to music by Sir Walter Parratt and others. At the time of his death about a year ago, Professor Warr was also interested in the proposed performance of a cycle of Greek plays translated into English, to have taken place this year.

---

## MAXIMILIAN GORKI: RUSSIA'S "TRAMP-NOVELIST."

ONE of the most singular literary prodigies of Europe is Maximilian Gorki, a common tramp by profession and preference, who several years ago suddenly surprised Russia by coming forward as the author of books which, from their absolute freshness and novelty, met with tremendous popular success. M. Ivan Strannik, in the *Revue de Paris* (January 15), with some apparent extravagance asserts that "they have not been equaled by any Russian writer since the first romances of Tolstoy," and that they have "to a certain extent revolutionized Russian literature." A translation of this article, considerably abridged, appears in the New York *Bookman* (March), by Mr. Arthur Hornblow, from whom we quote most of the following. He writes:

"Gorki was born of very humble parents in Nizhni-Novgorod, a government of middle Russia, in 1868 or 1869—Gorki himself is not quite sure which—and became an orphan when still a child. He was apprenticed to a shoemaker, but, disliking the sedentary life, he ran away. He likewise deserted from an engraver's office, after which he entered the studio of a painter of religious pictures. Next he was a scullery boy and then assistant to a gardener. He tried all these modes of life, and was content with none of them. When he was fifteen, he could barely read, altho his grandfather took some pains to make him spell out words from an old family Bible. These early studies, however, only filled him with disgust for learning until the day when, assistant cook on board a steamboat, he was initiated by the chief cook into the joys of French romance, which fired his imagination and filled him with a ferocious desire to educate himself. He went to Kazan and tried to obtain free tuition in one of the schools, but this he found impossible. Disillusionized, he took a situation as baker's boy at the wages of three rubles a month, but soon tiring of this and longing for the fresh air of the open country, he deserted the bakery and became a common country tramp, fraternizing with every ragged vagrant he met on the road, but always reading and neglecting no opportunity to educate himself. A few months later he was back in the city, acting as watchman, and afterward he peddled kvass, a kind of sour beverage, in the streets. Then came the opportunity that was to give him his first foothold in the path of literature. Chance brought him into relations with an advocate, who took interest in him and helped him in his education. Then, just as this new life seemed to be developing his genius, his natural restlessness again asserted itself and once more led him to resume his nomadic existence. He tramped all over Russia on foot, exercising every possible calling to eke out an existence, including henceforth that of a man of letters. . . . . .

"Gorki's real *début* dates from 1893. He made about that time the acquaintance of Korolenko, the writer, and with his assistance published another [his second] story, entitled 'Tchelkache,' the success of which was tremendous. From then on Gorki threw aside every convention and strove to give frank and direct expression to his own views of life. As until then his life had been spent in the company of vagrants and he was himself a vagrant, he decided to devote his muse to singing the 'Song of the Tramp.' His favorite form is the short story. During the last seven years he has written thirty, which by their expressive brevity sometimes recall the methods of Guy de Maupassant. The plan of these stories is extremely simple. Often there are not more than two characters—an old beggar and his grandson, or a couple of workmen, or a tramp and a Jew, two companions in misery. The interest of these stories is not in the development of a complicated plot. They are rather fragments of life or bits of biography from one date to another. . . . . .

"All that Gorki relates he has seen. All the scenes on land and sea that he describes, says M. Strannik, he has observed during the course of his adventurous career. Each detail of his *mise-en-scène* recalls to him some bitter or happy memory. The life of the vagrant he depicts has been his own life. The tramps have been his comrades. He has loved them or hated them. This explains the striking fidelity of his characters to life. He does not idealize the tramp; the sympathy he has for their courage and love of liberty does not blind him. He does not seek to conceal their faults or condone their vices. He paints the reality, but without exaggerating its ugliness. He does not avoid painful or coarse scenes, but even in his most realistic passages he never shocks the reader, because one feels that he is striving only to present the truth as it is, and is not seeking to create a sensation by cheap methods. He merely states things as they are and insists that they can not be changed, as they depend on immutable laws. Gorki sees in his characters only the spectacle of life. He sees passion convulse them as the wind raises the crests of the waves, and laughter pass over their souls as the sunlight pierces the cloud. He is, in the best acceptation of the word, a realist."

Indeed, according to M. Strannik, Gorki appears to be not only a realist but a good deal of a pessimist. We quote direct from the *Revue de Paris:* "His [Gorki's] invincible pessimism rests on his conviction that life does not admit of a logical solution. It has not for its definite aim happiness nor any regular ordering, such as the moralists seek for, but the disorder is essential and the sorrow can not be eliminated." What remains then to do under these conditions? It is first needful, according to Gorki, for humanity to turn from vain searchings to a moderate happiness. The best solution of the problem, therefore, consists in giving up the useless battle of life and in taking what mother nature or fate will provide—sufficient unto the day is the evil thereof. There is in the world a class of men to whom this philosophy appeals with intense force—the tramps—and Gorki's mission in literature, according to M. Strannik, may be summed up in saying that he was born to be their painter and apologist.

It has lately been announced from St. Petersburg that Gorki has destroyed the chapters of his new book "The Moujiks," and has suddenly gone back to his old vocation as a tramp, drawn, it is said, by his longing for the unfettered life of the fields and highways. M. Strannik thinks that he will some time reappear as suddenly as he went away, bringing with him more material to add to the store of human documents that have already made him famous.

## WHITMAN AS A REPRESENTATIVE "SPIRITUAL ANARCHIST."

IN an article from which we have already quoted (February 23, page 222), Mr. H. F. Carlill, an English critic, took the ground that Walt Whitman's writings possess a transcendent claim upon literary attention, and that "an essay on the merits of the author ought to be constituted the diploma-work of every one who aspires to write criticism." Another writer in the same journal (*Literature*, February 16), Mr. S. K. Ratcliffe, takes issue with Mr. Carlill's judgments. "Whitman is essentially an extra-literary phenomenon," he writes, "counting, if at all, as a personal force rather than a literary influence." Whitman has not invented any new literary form, since at bottom there is no appreciable difference between his verse and "the irregular rhythm of nearly all primitive literatures." Further, says Mr. Ratcliffe, Whitman has no system of ideas, as his admirers claim:

"His one irrepressible idea is merely a restatement of the individualism, the spiritual Anarchism, which seems indigenous to the United States—finding expression in her men of genius, her Emersons and Thoreaus, as much as in the numberless sects and communities which are continually and fruitlessly setting out for the ideal life of absolute freedom from external law. So far from Whitman's 'hymning of the ego' and his glorification of splendid savagery being the annunciation of a new democratic gospel for the age to come, it is in effect simply the final outburst of rejoicing in the ample freedom of a great new nation just emerging into self-consciousness. Equally misleading, I submit, is it to say that Whitman invents his language. He borrows, of course, from foreign tongues or from any jargon that can furnish him with the word he needs. But the attentive reader would have little difficulty in showing that the effect of Whitman's appropriated words is for the most part to add absurdity to passages already absurd enough; and that whenever his imagination triumphs over his theory he relies on the gift, shared with every other master of speech, of endowing common words with the fresh significance and beauty that come of unexpected use.

"It is argued further that accepted canons of criticism do not apply in Whitman's case. He denies the premises. Be it so. Let us try him strictly by his own test: 'The proof of a poet shall be sternly deferr'd till his country absorbs him as affectionately as he has absorb'd it.' Whitman sent his book forth as the harbinger of a new race of national poets, 'orbic bards,' 'sweet democratic despots of the West.' They have not appeared. He has no poetical offspring. The impulse and direction which he conceived himself to have given to a new literary form, or a new literature without form, ceased with himself. If it be true that Whitman's chosen manner is, as his latest critic affirms, the only possible form for his philosophy, it is also true, apparently, that it is a possible form for no other philosophy of poetry or life. The old forms which he wished to cast off from literature are capable of infinite use. It is as easy for an original poet to be original in them to-day as it was a century or three centuries ago. But the writer who adopts Whitman's method is foredoomed to Whitmanese. The tentative and ineffectual experiments of his few avowed disciples have produced only feeble, and mainly foolish, echoes of himself. Moreover, it must be remembered that Whitman could not have used the traditional forms however he may have wished to do so. On the one or two occasions when he tried to move in what Cobbett called 'the gewgaw fetters of rime,' he failed almost pitiably. 'Captain, my captain' is to 'Come lovely and soothing Death' as an official ode to the 'Adonais.'

"And, once more: It can not be conceded that in order to discover and understand the merits of 'Leaves of Grass' as poetry it is necessary to formulate fresh standards of criticism. If we grant that Whitman's theory of literature or his attitude toward life in general demands a readjustment of the intellectual vision, it must still be maintained that his literary product does not. And we may note that the very critics who plead for the adoption of a new standard are unable to abide by their own conditions. When, for example, they would enumerate the literary virtues of their supreme poet they point, like Symonds, to his 'countless clear and perfect phrases,' or, like Mr. Carlill, to the faultless and noble sadness of his tone when he speaks of the dead. Both criticisms are entirely justified; but they mean that when Whitman's elemental struggle after self-expression issues for a godlike moment or two in a glimpse of pure serene, he writes literature, and may quite simply be tried by the accepted canons of poetry. His utterance becomes rhythmic; his style attains a fine level of passionate directness and simplicity; he approaches even the measured and regular expression of the 'unregenerate' singers whom in his polemic mood he despises; and we judge him necessarily according to the sincerity and depth of his emotion, the rightness and beauty of the language in which his imagination takes shape. There is no other way, for Whitman or any other."

Yet Mr. Ratcliffe admits that altho in his opinion Whitman has not succeeded in giving adequate expression in letters to his high ideal of "the evangel-poem of comrades and of love," he has yet "impressed himself upon a great page of his nation's history by living that evangel-poem in his own person":

"The doctrine of fellowship is as old as religion itself, but the men in whom the spirit of fellowship is incarnate are the rarest examples of our race. It is Whitman's especial praise that he is one of these, and that the passion of humanity which inspired his whole being has in some degree got itself compressed within his inchoate and exasperating rhapsodies. They will endure, no doubt, as a quite unique revelation of a powerful and original character and as a spiritual influence strangely vivid and salutary. But that they can ever be recognized as fulfilling the enormous claims made by them as the inspired scriptures of a revolution in literature is not to be believed for a moment. 'Undifferentiated literary protoplasm' is the description applied to 'Leaves of Grass' by the critic whose plea for their consideration I have endeavored to pass in review. The phrase is a condemnation in itself. The product even of a great poetic temperament—tho it be rich and abundantly receptive, as Whitman's unquestionably was—remains undifferentiated, protoplasmic, so long as it is not molded by the creative force of an intellectualized imagination."

## NOTES.

MANY surmises as to the possible authorship of "An Englishwoman's Love Letters" have been made. Cable despatches from London have said that the mystery is solved and that one Laurence Housman, an artist and literary man, is the true author. In a recent number of the London *Academy*, a writer undertakes to show that Mr. Housman must be the author, reasoning from the similarity which passages of the book bear to former work by him. But now Mr. Housman positively denies that he wrote the book.

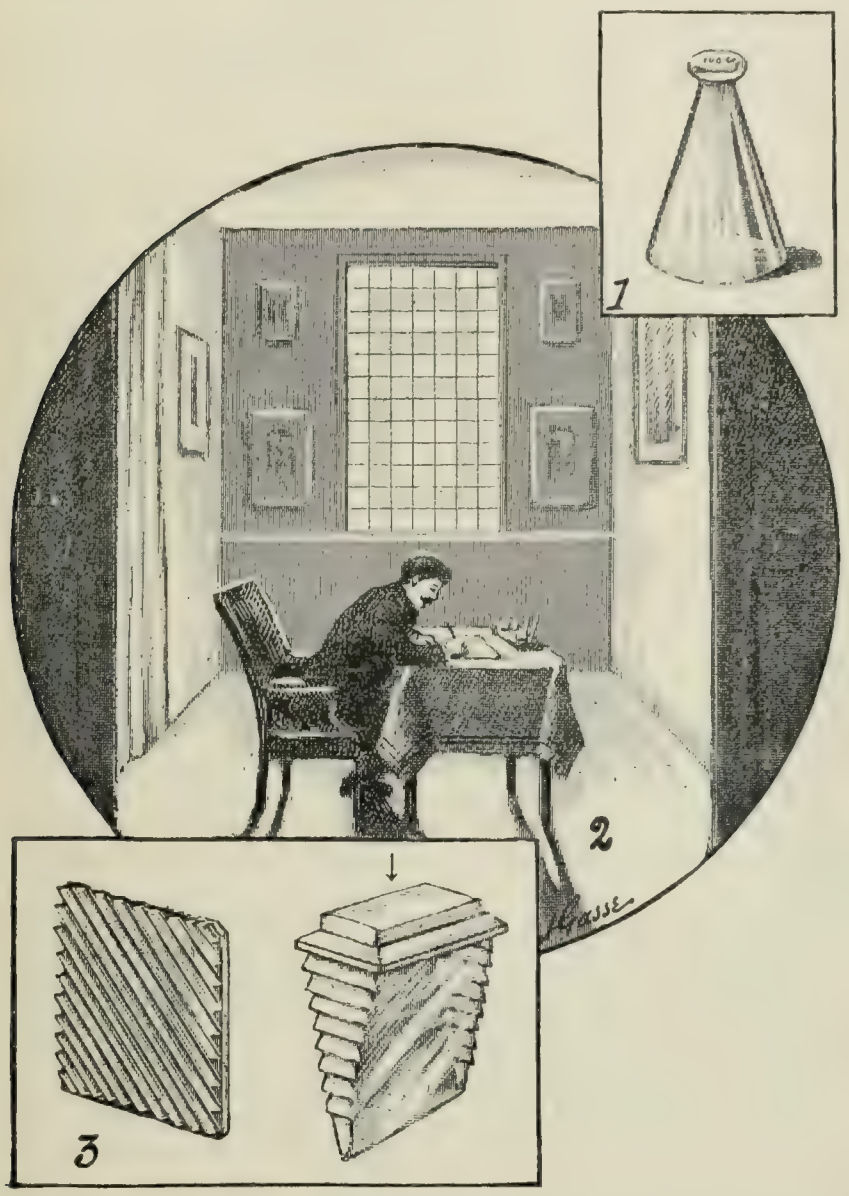
THE death of Ignatius Donnelly, of Shakespearian "Cryptogram" fame, adds interest to a recent surmise in the Donnellian field This is no less than an argument in favor of Shakespeare's authorship of the Bible. In a late number of the London *Answers*, a writer claims that in the name "Shakespeare" lies the key to this wonderful cryptogram. He says: "The spelling 'Shakespeare' was the nom-de-plume of the great poet, while 'Shakespere'—an evident change of 'Shakespear'—was his real name. Each of the two latter spellings contain ten letters—four vowels and six consonants. By combining these figures the number 46—the key to the mystery—is obtained. Take up your Bible, turn to the forty-sixth psalm in the Revised Version, and you will find that the psalm is divided into three portions, each one ending with the word 'selah.' Now count forty-six words from the beginning of the psalm and you will read the word 'shake' in the first portion. Then count forty-six words from the end of the psalm and you will reach the word 'spear.' There you have the word 'Shakespear" as plainly as the letters can make it."

A REMARKABLE find has lately been announced from Munich. Herr Rosenthal, an antiquarian of that city, has discovered a hitherto unknown edition of the doubtful fifth book of "Gargantua and Pantagruel," printed in 1549, during the life-time of Rabelais. *Literature* (London) says of this important find: "The earliest known edition of the book is dated 1564, eleven years after Rabelais is supposed to have died. Not many years later it was asserted that it was not the work of Rabelais at all, and the controversy has raged through the centuries. Paul Lacroix made a great discovery in 1840—that of a manuscript of this fifth book, written, apparently, 1550–1560, and lying in the Bibliothèque Nationale at Paris. . . . On the whole, Lacroix, despite the fact that the editions contained a good many things which did not appear in his manuscript, accepted the fifth book as genuine. The majority of these critics are on his side; but there are not wanting those who see in the book the work of an inferior imitator clumsily piecing together fragments from the Rabelaisian table. Now, if Herr Rosenthal is right, we shall see what Rabelais really intended the fifth book of his great work to be like, and what is its relation to the manuscript of Lacroix."

## SCIENCE AND INVENTION.

### SOME NEW USES OF GLASS.

GLASS, which is one of the most fragile of materials when thin, is in some respects one of the strongest and most resisting when made thick or cast into blocks. Among the many new uses of this substance, a large number are based on this property, so that glass may cease to be a synonym for fragility. Our descendants may not be able to understand the proverb about "those who live in glass houses, for they may themselves be living in houses of glass that are more substantial and lasting than our present stone dwellings. So at least we are told by



USES OF GLASS.

1, Glass weight; 2, apartment lighted with prisms; 3, prisms and prismatic block.

M. F. Fardiau, who writes on the subject in *La Science Illustrée* (February 23). He says:

"About ten years ago, M. Vinterhoff, of Cologne, devised a method of replacing lithographic stones by plates of glass from which proofs of extraordinary fineness were obtained by a secret process. The method does not yet seem to have been very successful, however, notwithstanding its cheapness.

"It has also been proposed to replace the copper sheathing of ships by glass plates. An Italian vessel thus protected put in at Marseilles several times in 1882. Here, too, the success of the plan does not seem to correspond with the advantages claimed for it, among which are freedom from oxidation and wear, and the absence of those incrustations which, accumulating in the course of long voyages, end by impeding the vessel.

"We should also mention here the glass casks for the manufacture of which Hubert took out a patent in 1860. They have, aside from their fragility, which makes them unfit for transportation, incontestable advantages over wooden casks—neatness, ease of cleaning, and transparency, which last quality enables the owner to see exactly how much wine or beer they contain at any given time.

"Among interesting minor uses we should note that of glass bearings for machinery of small power. These support a light, rapidly rotating axle very well; they heat little, do not wear, and need little lubrication. Notwithstanding all this, it would seem that they are not perfectly safe in all circumstances.

"Complaint is made continually of brass weights when used in kitchens. These complaints have been met in Switzerland by the governmental authorization, in 1897, of weights made of a special kind of glass, almost unbreakable. They are conical and end in a knob on which the value is engraved. . . . . .

"It is well known that the developing fluids used in photography spoil very soon in contact with the air, and that they can therefore be preserved only in full bottles. It is thus necessary to decant them as fast as they are used into a series of smaller and smaller bottles. M. Gaumont, head of the well-known firm, has devised a plan by which glass balls are put into the bottle, one by one, to keep it full.

"In electricity, the uses of glass are of prime importance. It is commonly employed as an insulator, and in spite of its faults has great advantages. Of it are made the plates of the electrostatic machines of the laboratories, Leyden jars, jars for batteries, globes for arc-lamps, bulbs for incandescent lights, the plates of condensers, electric rheostats, etc. In London blocks of glass have been used to insulate the third rail on electric railway systems.

"In the United States glass ties have even been used on railroads to replace the ordinary wooden ties.

"Glass-cotton, which consists of very flexible, fine fibers, obtained in the Bohemian glass-works, serves to make filters which are much used in laboratories, for they are unalterable and may be used indefinitely if washed and dried after each operation. Glass-cotton can also be used to handle caustic liquids used in surgery, like nitrate of silver or tincture of iodin.

"But it is in our dwellings that the uses of glass have multiplied in recent years.

"Glass window-panes, which represent the chief domestic uses of glass—also the oldest, since they are found in Pompeii—are being somewhat modified. We are beginning to use perforated glass, which ventilates the room without drafts. The holes, which are about 15 cm. [6 inches] apart, are conical; the little end of the hole is toward the outside; the air enters the room in diverging currents.

"In shops and stores and for the roofs of glazed courts, protected glass is now often used, that has a metal network embedded in it. This network is placed in position by pressing it between two plates of hot glass. Altho nearly as transparent as ordinary glass, this protected glass has an enormous resisting power to shock, pressure, and fire; it can not be cut with a diamond and is not to be removed by ordinary means without making a noise, which makes it a valuable protection against thieves.

"Apartments on lower floors, in narrow streets, receive only an insufficient amount of light through their windows. To obviate this inconvenience prismatic glass has been devised, which is placed in the windows or in inclined screens. The light ray that strikes it is deviated, and instead of reaching the sidewalk it is diffused through the apartment.

"As for the illumination of basements below the ground level, that is obtained by the aid of prismatic cubes that project the light into the remotest corners of the room. The hygienic dwelling of the future will have its walls covered with malleable glass, in which nails may be embedded. A cloth impregnated with a solution will suffice for its disinfection.

"The time is not far distant when the house may be built entirely of glass. Garchig's glass-stone or ceramo-crystal, made like Reaumur porcelain by devitrifying glass débris and then agglomerating it by pressure and heat, has the first rank among materials of construction, including granite, for resistance to crushing, shock, usage, cold, and chemical action. It can be readily colored and molded, and has already begun to play a great part in building-construction.

"Mention should also be made of hollow glass bricks, hermetically sealed to prevent the access of dust to their interior. These bricks have already been tested in building with excellent results.

"As for the glass house itself, it has already been seen in Japan and in the United States. Even at Paris, during the recent Exposition, we had a palace of glass, which was a wonder."—*Translation made for* THE LITERARY DIGEST.

## A PIANO THAT CAN BE PLAYED IN TUNE.

IT is known to every musician, altho not generally to the public, that a keyboard instrument like the piano or organ is never in perfect tune. This arises from the fact that in such an instrument each black key does duty for two distinct tones, which are nearly, but not quite, the same. For instance, C sharp and D flat are the same note on the piano or organ, but in true intonation they differ slightly. The tuning of a keyboard instrument is therefore a compromise, and the constant use of such an instrument is considered by many authorities to be disastrous to the musical ear. An eminent authority once expressed the opinion that the invention of the piano has been a distinct obstacle to musical progress. Many attempts have been made to construct a keyboard that should enable each note to be given at its actual pitch, but all have been too complicated for ordinary use. Now, however, Mr. S. A. Hageman describes in *The American Journal of Science* (March) what he calls a "just intonation piano" of such simplicity that, as he claims, its use can easily be learned, and there is no reason why it should not generally be employed.

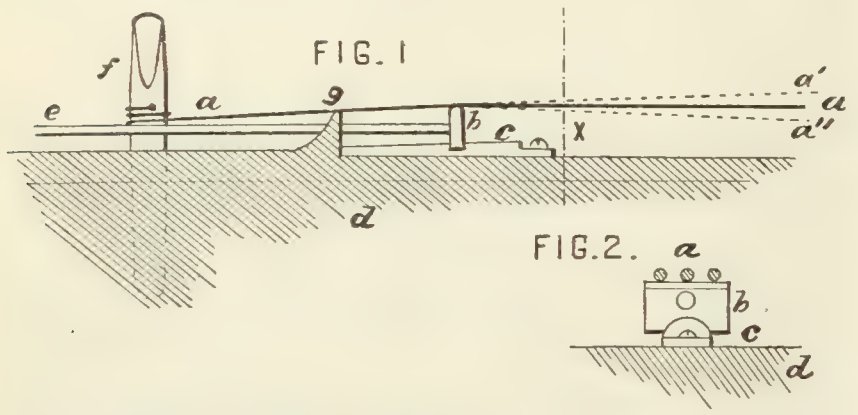


FIG. 1. Longitudinal Section of Piano Wire.
FIG. 2. Cross Section of Piano Wire. *a*, Group of strings giving one note; *b*, movable bridge, with concave bearing fitted to convex surface of track *c*, on which it slides; *d*, sounding board; *e*, rod actuating movable bridge; *f*, pin; *g*, agraffe or fixed bridge.

We quote below such portions of Mr. Hageman's paper as do not go into the details of acoustical mathematics. He says:

"During the past century a number of efforts have been made to construct keyboard instruments such as the organ so as to meet the requirements of just intonation.

"The problem has been considered an extremely difficult one especially as regards the piano, and the unsatisfactory mechanism heretofore devised has in every instance been practically rejected by the musical public, tho every true musician would willingly sacrifice much to regain the inestimable beauty and purity of just intervals.

"Helmholtz, Blaserna, and Taylor, and a long line of able and eminent writers, have appropriately set forth the defects of tempered intonation, its tendency to obscure theory, and its blighting effects upon the essential beauties of music. But no instrument has been brought forward that seemed so attractive as the piano, with the licentious freedom of its tempered scales—and not a few have even grown into a cultivated disregard of its really great defects. But the tempered piano does not quite take rank among the best musicians. It is denied a place in the orchestra, and the most eminent vocalists and violinists accept it reluctantly for purposes of accompaniment. One writer even contemplates its final abandonment, along with tempered intonation, apparently never dreaming that its faults were capable of being remedied. Had it not been that it was already installed in almost every household, it is quite probable that even the complicated and cumbersome just-intonation organs that have been offered would have won the day, and tempered intonation, the reproach of music, would have been at this moment only an unpleasant memory.

"It would be foreign to the scope and purpose of this paper to enter into any extended discussion of the merits or demerits of tempered intonation, but it is freely granted that—tho through long and dreary years, while voice and violin and orchestra were alone struggling for truth—music has on the one hand certainly suffered from its use, it has at the same time, tho in an imperfect manner, filled a gap of some two centuries of almost hopeless waiting for better things.

"And yet it has been by the piano and organ that the priceless gems of musical masters from Bach to Wagner have been brought, tho in unworthy attire, into our daily lives and made our common property. Their rehabiliment in fitting garb has been the cherished desire of the writer and the results attained are indicated in this paper.

"It has been fully realized from the very first that such a work as the construction of a just-intonation piano must deal very gently with existing methods and mechanism. It must change nothing, take nothing away, impose little or no additional exertion upon the player, be free from mechanical defects and intricacies—and last, but not least, make light demands upon the purse.

"The ordinary piano has, therefore, been taken as a foundation for the new, and, without taking from the player his familiar instrument, he is enabled instantly to substitute, for its tempered harmonies, mathematically just intonation in twelve keys based on the twelve tempered chromatic intervals of the octave."

Mr. Hageman's device is still something of a compromise. The same note still does duty for both C-sharp and D-flat so long as the player keeps within one key, but when he changes, for instance to the keys whose key-notes are these two notes respectively, they are different. Transposition from one key to another is effected by means of pedals that shift the bridges on which the vibrating wires rest, and so alter the resulting tones. The accompanying diagrams will explain how this is effected.

By an ingenious mechanism the movable bridges on which the wires rest are all shifted together by a proportional amount and to the exact degree corresponding to the pedal that is pressed. Each key has its pedal, so that any desired transposition can easily be made. The author says:

"The entire just-intonation mechanism including the eighty-eight bridges is made up of only two hundred and fifty movable parts, is not expensive nor difficult of construction, nor in any manner readily susceptible of derangement, but is durable and reliable to the last degree. . . . . .

"The results summed up give one hundred and fifty-six tones to the octave, or eleven hundred and forty-four in the compass of seven and one-third octaves, against eighty-eight in the ordinary piano.

"The changes of tonality are practically instantaneous and can succeed each other in any order with great rapidity, if it were necessary, but the resources of a single key are so great that even in the most intricate music the pedal changes will be quite few. . . . . .

"While any composition is greatly enhanced in beauty, there runs through all—even bits of melody, simple chords, or scales—a restful, satisfying effect that could hardly be conceived without the actual experience.

"It is the profound conviction of the writer that just intonation in music is of the greatest importance.

"Persons listening to the best orchestras often imagine that they are hearing it in its perfection. This is far from being true. Temperament has leavened it also, as is capable of abundant proof.

"As Helmholtz remarks—few modern musicians have ever heard tone intonation, and consequently its superiority over temperament is greatly underrated."

---

**The White Rhinoceros in Africa.**—We have all heard of white elephants, but few know that there are also in existence white rhinoceroses, constituting a distinct species. These are almost extinct, and probably not more than a dozen or so are left. The *Revue Scientifique* (Paris, February 23) prints an account of a recent meeting with a small herd of these animals in Natal. Fortunately they are strictly protected by law and, fortunately also, the party that met the animals included the governor of the colony, otherwise the species might have been now more nearly extinct than ever before, for hunters are not very scrupulous in such matters. Says the writer of the note just mentioned:

"They [the rhinoceroses] were moving at a slow pace toward a

jungle and easily allowed the observers to approach. The party came within fifty yards of the huge quadrupeds, which were cropping the grass on the plain. The rhinoceroses apparently were not at all disturbed. The horsemen dismounted and approached yet nearer, stopping about twenty yards from the herd. During a minute or two the animals seemed to pay no attention whatever to the human beings who were watching them . . . and kept on browsing. Soon they began to sniff the air, as if they had discovered something disquieting or disagreeable, yet, curiously enough, they seemed not to see their visitors, altho the latter were not hidden. After a time, during which they showed a sort of vague preoccupation, they withdrew, first walking and finally trotting. Doubtless it is very seldom that these animals may be seen for so long at such short range. . . . . .

"The herd was composed of four adults (one, a powerful male) and of one animal about three quarters grown. The same day a herd of three other rhinoceroses was seen, one male, one female, and a young one. Thus eight individuals were seen, and probably these comprise all that is left of the species in the region, except perhaps one or two animals. It is estimated that there may be ten altogether. It is believed that there are also a few in the Ubombo chain, but this is doubtful. . . . The white rhinoceroses are as strictly protected as possible. It is absolutely forbidden to hunt them on penalty of a fine of $250 to $500 or imprisonment, and the governor himself can not give permission to kill them. This is very wise, for even if there remain as many as twenty white rhinoceroses in the world, there are certainly no more. And it is rather late to take up the work of preserving this interesting species."—*Translation made for* THE LITERARY DIGEST.

---

## THE PSYCHOLOGY OF INTOXICATION.

THE question of the nature and genesis of the impulse which leads to the use of intoxicants appeals to all who are concerned with the vital problems of modern society. Can these students and workers find in psychology any helpful analysis of the motives which underlie conduct? In the *Zeitschrift für Psychologie und Physiologie der Sinnesorgane* (January) appears a review of an article entitled "Studies in the Psychology of Alcohol," by G. E. Partridge, published in *The American Journal of Psychology*, which is a comprehensive scientific treatment of this important problem. The author has attempted to determine these two things: (1) The cause and nature of the intoxication impulse; (2) the actual effect of small doses of alcohol upon the ability to perform muscular and mental work.

From the two periodicals we glean the following summary of Partridge's results:

"Among primitive peoples, the use of intoxicants, altho not quite universal, is so general that exceptions are noteworthy. Intoxication seems to have originated in connection with the religious and social life in the effort to heighten the religious and social consciousness. Probably the use of fermented drinks originated in this way, and the use of them as beverages came at a later stage. A rather careful examination of the anthropological literature leads to the conclusion that taste was not much concerned at first. On the whole, primitive man is not a steady nor habitual drinker. He drinks alcohol occasionally to secure intoxication; his drinking is likely to be periodic, and in general it is characterized by great excesses and uncontrolled excitement.

"The drugs which are commonly used for intoxication purposes are all stimulant-narcotics; that is to say, when taken in small doses, or as an initial effect of large doses, they stimulate the nerve-cells. It is true of most if not all of these drugs that . . . they produce first a stage of increased excitability followed by a stage of lessened excitability. The mental effects are analogous—a stage of exhilaration is followed by a stage of depression. The pleasurable stage of intoxication is due in part to the widened range of emotional tone; the normal limits of both pleasure and pain are passed: the feeling of personal safety and self-confidence is largely increased. The increased social feeling evidently depends upon these changes, for the two important conditions of social comfort are self-confidence and (perhaps as a result of this) freedom from suspicions in regard to others."

A detained personal examination of sixty-five cases of inebriety, most of them confirmed drunkards, brought out the fact that in fifty-eight of these cases "there is no evidence of a conscious craving for alcohol." From the data obtained from these cases, Mr. Partridge enumerates the motives which lead to intoxication as follows:

"First, a desire for excitement, experience, and abandon, to increase companionship, to put off reserve in the presence of others. This desire to heighten the social feeling is probably the most prominent cause of drinking. Many drunkards would regard it as a disgrace to drink in any other way than socially. Secondly, to kill pain, to calm moral distress, to overcome fatigue, a desire for temporary relief from poverty or monotony, to increase courage or overcome self-consciousness, to steady the nerves for work or unusual strain."

The historical importance of intoxication, says the writer, is shown by the deep impression it has made upon literature and language. Nothing except the sexual relationship has made a deeper impression. It has been exceedingly prevalent at times of rapid development. In the individual habits of intoxication are most likely to be formed during adolescence, and during this period they are more difficult to overcome than later in life.

The various theories, theological and scientific, of the intoxication impulse and the craving for alcohol are briefly summarized as follows: (1) sin; (2) desire for relief from pain, nervous weakness, or weariness incident to the struggle for existence; (3) diseased appetite, the effect of an alcoholized protoplasm, a pathological perversion of physiological cell-action in the cerebral cortex, a specific craving which can be cured by a specific remedy; (4) a physical craving, an animal lust; (5) an acquired taste; (6) an organic appetite, made so by ages of indulgence, that is, a "secondary instinct"; (7) an instinct to intensify consciousness, to make wider variation in the mental life; (8) a desire to change the relation of common sense to individual sense; (9) an instinct which is a by-product of mental evolution. The author concludes that the alcohol craving stands in close relationship to normal mental development, and is to be regarded as a form of expression of the general instinctive tendency to seek intense states of consciousness, and not as an independent impulse which has become instinctive by reason of centuries of indulgence, nor an instinct which has grown up as a by-product of mental evolution.

In the second part of his paper, Mr. Partridge publishes the results of an experimental investigation of the effects of small doses of alcohol. Extended tests of the power of doing muscular work as recorded upon the ergograph showed that with one subject, 60 grams of 33⅓ per cent. alcohol, taken just before work began, decidedly decreased the working power; with the writer himself, 45 grams "produced a slight but steadily progressive stimulating effect." Ninety grams also failed to effect the writer's total amount of work in the hour, but the curves showed "an increase in the amount of work done during the first half-hour on the alcohol days, and a decrease during the second half-hour. The effect of 90 grams upon the work done during the second hour after the alcohol was taken was to decrease the amount, which was less for each period during the hour."

In tests of mental processes, 90 grams of alcohol were found to produce in arithmetical addition (mainly an associative process) "a slight quickening which lasts nearly to the end of the second hour, and in reading and writing (which involve more muscular action) an effect resembling that found with the ergograph, namely, a period of quickening followed by a period of retardation."

---

**Improvement of the Nile.**—The long-planned improvement of the bed of the Nile at Assuan, for the purpose of insuring a more regular and copious supply of water to the fertile valley of the Lower Nile, is well under way, says the *Centralblatt*

*der Bauverwaltung*, and one third of the great dam at Assuan is built. Meanwhile, however, the failure of the Nile overflow this year has led the Egyptian Government to begin at once the improvement of the White Nile, the Bahr-el-Gebel, which, formerly a stream a quarter of a mile wide and sixteen feet deep, has become choked within the past fifty years by an accumulation of floating papyrus and other plants that extends over a distance of one hundred and fifty miles. We quote as follows:

"The bed of the stream is no longer able to carry off the water, which overflows a large area about the confluence of the river with the Bahr-el-Gazel. Schweinfurth first pointed out the necessity of clearing away this growth, or 'sudd,' in order to secure a regular and abundant flow in the Lower Nile. He estimated that in this way an annual increase of 18,000,000,000 cubic meters of water might be obtained. Even a tenth part of this would be of immense benefit to Egypt.

"In the latter part of 1899 W. Willcocks laid before the Egyptian Government a plan for the regulation of the Upper Nile, in pursuance of which the perforation of the sudd in the White Nile was commenced at once and pushed so rapidly that latitude 8° 25′ N. was reached in March, 1900. To keep the course of the Victoria Nile clear, it has been thought best to confine the water to a single channel, and for this purpose the Bahr-el-Zaraf is considered better than the Bahr-el-Gebel, as it is shorter and its 'sudd' extends for only eighteen miles. So the Bahr-el-Gebel and its numerous branches are to be dammed and the entire efflux of Lakes Victoria and Albert forced to go through the Bahr-el-Zaraf, the bed of which is 1,600 feet wide. Its flow in summer will, it is estimated, amount to 200 cubic meters per second. This is sixty per cent. more than was expected from the Assuan dam, and by improvements at the lake outlets it may be doubled or tripled. Furthermore, a navigable stream of pure water will be at once secured as far as latitude 5° N. The sum of $100,000 has been appropriated for the perforation of the 'sudd,' and the rest of the work will require $3,000,000, the appropriation of which will extend over ten years. But the enterprise would be remunerative if the expense were ten times as great. The greatest gainer will be the Sudan, which has been acquired with so much difficulty and the whole value of which depends on the Nile overflow."—*Translation made for* THE LITERARY DIGEST.

## IS OUR GOLD SUPPLY INCREASING?

THE world's supply of gold is to be quadrupled in forty years by the use of dredging-machinery, so Professor Shaler, of Harvard, announced recently in a lecture in Sanders Theater, Cambridge. Alluvial deposits, river mud, and the sandy bed of the ocean in many localities hold gold in workable quantities and of enormous aggregate value. The material can be rapidly lifted on to a ship, the gold cheaply extracted by a new method, and the worthless material dumped overboard. The process will be continuous and nearly automatic. Says the Philadelphia *Record* in a report of this lecture (March 8):

"The lecturer stated his belief that, as a result of the increase of production, gold would become much cheaper than it is at present and that prices must rise greatly in consequence. He even went so far as to say that the fall in the value of gold would reinstate the relative price of silver to the old ratio of 16 to 1, and that possibly silver might prove to be the most stable standard of exchange. . . . He [Professor Shaler] is probably the most competent authority of the day on questions of metallurgy and mining, but in predicting the stability of the price of silver he seems to us to be going too far. Economy of production resulting from scientific discoveries and improved mechanical methods is sure to affect the price of all metals except possibly tin, which is not widely distributed and is found only in comparatively limited quantities. Our prediction was based on the possibility of mining low-grade ores at a profit in large quantities, and the new method of extracting gold from mud, if found profitable and extensively introduced, will close many mines now producing, thereby diminishing the yearly supply. Furthermore, with all due deference to the professor's superior knowledge, there is a vast difference between a process that works perfectly in the laboratory and the same process submitted to the rough handling of practical work on the large scale.

"But it would certainly be the irony of fate if, after the English have pacified South Africa and seek to recoup their losses by working the gold-mines and diamond-fields, it should turn out that one chemist had invented a method of extracting all the gold the world needs from the mud of the Ganges and another had invented a method of making diamonds out of charcoal at the rate of a bushel a day, and so rendered the entire country valueless except as a hunting-ground and a sheep-pasture. The unexpected frequently happens."

## BACTERIA IN CITY MILK.

IS it possible and advisable for the health authorities of cities to protect the public from infection through milk, by testing the latter for bacteria and prohibiting its sale when more than a specified number are present? This question is asked by H. W. Park, of New York City, in a paper read before The American Society of Bacteriologists at Baltimore. The author concludes that such a test is both easy and useful and should be performed by boards of health. His paper, in the summary given by *Science* (March 1), runs as follows:

"During the coldest weather the milk in New York City averages about 250,000 bacteria per cubic centimeter [$\frac{1}{16}$ cubic inch], during cool weather about 2,000,000, and during hot weather about 5,000,000. The milk in other large cities is, from all accounts, in about the same condition. The above statement does not apply to the special milks which contain only from 5,000 to 20,000 bacteria at the different seasons of the year. In answer to the question whether these enormous numbers of bacteria found in milk during the hot weather are harmful, reference need only to be made to the universal clinical experience that a great number of children in cities sicken on the milk supplied in summer; that those who are put on milk that is sterile, or contains few bacteria, as a rule, mend rapidly, while those kept on the impure milk continue ill, or die. We probably have as yet insufficient knowledge to state just how many bacteria must accumulate to make them noticeably dangerous in milk, but it is a safe conclusion that no more bacteria should be allowed than it is practicable to avoid. Any intelligent farmer can use sufficient cleanliness and supply sufficient cold, with almost no increase in expense, to supply milk 24 to 36 hours old which will not contain in each c.c. [cubic centimeter] over 100,000 bacteria, and no milk poorer than this should be sold. The most deleterious changes which occur in milk during its transportation are now known to be due to the changes produced by bacterial growth and activity. These add to the milk acids and distinctly poisonous bacterial toxins to such an extent that much of the milk, by the time it is used in summer, has become decidedly injurious to invalids and infants."

The tests for bacteria, says Mr. Park, are comparatively easy, and yet health authorities, while guarding milk in various ways, entirely fail to prevent the sale of milk rendered unfit by an excess of bacterial products.

## SCIENCE BREVITIES.

THE brother of Andree, the missing aeronaut, despairing of his brother's return from the Arctic regions, has finally opened his will. The tenor of it shows that the explorer hardly expected to return.

"IN the state archives at Rome," says *Electricity*, "it has been found that the *x*-rays may successfully exhibit the writing on manuscripts concealed in old book covers whenever this writing is done in red lead, ultramarine blue, or cinnabar. They are being used also in attempts to detect forgeries of paintings and in efforts to discover signatures of old masters in paintings alleged to have been produced by them." The same paper also reports that Professor Ottolenghi, of the University of Siena, has discovered that while it is easy to apply the rays to the lungs of a person who is alive or in a trance, it is extremely difficult, indeed practically impossible, to apply them to the lungs of a person actually dead. "The reason was that some intervening obstacle prevented the rays from penetrating into the body. Over and over again he made a test of this kind, and in each case the result was the same. He suggests that as this test can easily be made by any physician, it should in future be employed in all cases where doubt exists of death."

# THE RELIGIOUS WORLD.

## A RUSSIAN AUTHOR'S TRIBUTE TO JUDAISM.

"ISRAEL is a desert; the Aryan world a flower-garden. Semitism is arid, monotonous, abstract, opposed to nature; and Christian civilization is radically at war with it." This is the thesis maintained by D. Merefkovsky, a Russian critic and novelist, the author of a historical romance, "Julian, the Apostate," recently translated into English. His view is vigorously combated by one of the leading philosophical writers of Russia, V. Rosanov, who confesses that some years ago he held the same view, and who now defends Judaism against what he declares to be a general prejudice. Curiously enough, he selects the rabidly anti-Semitic *Novoye Vremya* as his medium for a plea in behalf of the religious-ethical philosophy of the Jews. The Bible, he says, is pervaded with the Semitic spirit, and it is essential to understand this spirit and to do it justice in order to promote fusion between the Semitic and Christian peoples. Is it true, he asks, that the Semites reject nature, beauty, variety, and material progress? Why is there not a single description of nature in the Bible? There is no landscape, no reference to the sounds of the forest, the colors of the waters of the sea. Why not? And what are we to conclude? Rosanov starts out with this illustration:

"Closing my eyes, perhaps deprived of sight, I put my hand on a human body. I feel its warmth. I see nothing, but the heart beats under my hand, and I receive the effects of the pulsation. And all the mysterious, unknowable, electric, magnetic, vital properties, whose origin and nature can not even be investigated, are imparted to my own body. I take away the hand, step to one side, open my eyes: a totally different spectacle! The warmth is gone, but the complex form is revealed. I seize a brush and reproduce a fine shape. I imitate what I saw, and the drama appears, the theater is called into existence. I make 'art,' and the whole long history of the arts is thus originated. Here we have the two relations to nature—the Semitic and the Aryan."

Applying this illustration, Rosanov contends that under the Mosaic law, in Palestine, the Jews always looked through nature and humanity to God. Matter, form, substance, were only the habitations of the spirit. It was necessary to penetrate and pierce them to reach that spirit. "We, the Aryans, are reproducers of the external; they, the Jews, are anatomists. We take the world as a spectacle, a landscape, without the pulse; they realize that behind the material substance is the living sacred vacuum, and in that apparent vacuum is God. Of course *there is* God." The Jews had art, and lived a beautiful life; but the consciousness of the Eternal was ever present to them:

"Oh, how well we understand this furious resistance to the dull invasion of a Titus or Vespasian! But it was not understood in Rome or Byzantium, and it is not understood by many scholars of to-day, who, tho educated under freedom of thinking, are still being nourished on the dried fruit of Greco-Roman culture. There is a difference between a cellar and a garden. Zion is the garden; Europe has despoiled it, having been unable to produce anything similar, and has sold it in tin cans."

But Rosanov, realizing that he may be asked for definite proof of his assertion that Israel lived in holy communion with nature as the manifestation of God, and has preferred *vacancy*, filled by the spirit, to the tinsel and trappings of so-called religious art, undertakes to furnish proof by recalling the ceremonial in the temple built by Moses and Aaron in the wilderness, by emphasizing the attitudes of the ancient Jews toward animals, by pointing to the Hebraic treatment of the Sabbath, and so on. He points out that the Jewish Sabbath has not the slightest resemblance to the Christian Sunday. Going to the synagog is secondary; the home is converted into a temple, and the whole family into priesthood. A magic circle, as it were, divides the week-days from holy Sabbath, and it is truly God's day. For this reason, all participate in its observance, *even the animals*. For no animal may be put to work on that day. "Is not this real unity with nature?" asks Rosanov. Another beautiful and significant law, he finds, is that regarding the "firstlings." The first fruit on every tree, the first product of every crop—the first cherry, the first berry, apple, grape—belongs to God. The whole nation must send these firstlings to Jerusalem. What an acute sight and sense of smell this law implies, and what a reverent view of God's relation to nature and humanity! "Even to-day this attitude toward the subhuman world is preserved by the Jews. Animals may not be killed; they may be 'sacrificed,' and the 'sacrificed' may be eaten; but the sacrifice must be made under certain ritual and religious rules, and by a man specially consecrated for the purpose. This is the meaning of the 'kosher' requirement in meat."

The conclusion of the whole article is that the charges made by closet philosophers against the Jews are unfounded. They are not hostile to nature, beauty, and art; but they see in all the essence, the moral and religious meaning. And the prophecy, Rosanov says, will be fulfilled—"all Israel will be saved."—*Translation made for* THE LITERARY DIGEST.

## A DEFENSE OF JOHN CALVIN.

THE personal character of Calvin, which was assailed so vigorously by Dr. W. C. Gray, editor of the Chicago *Interior* (see THE LITERARY DIGEST, March 16), is defended in two articles in the same Presbyterian journal (February 28 and March 7) by the Rev. Dr. A. J. McKelway, editor of *The Presbyterian Standard*. The jury has been prejudiced against Calvin by his views on infant damnation, says Dr. McKelway, and people would as soon believe good of him, the supposed condemner of infants' souls, as they would of Herod, the slaughterer of infants' bodies. The writer prefaces his article with several extracts "without comment" from Calvin's works, apparently to prove that Calvin, while shown by Dr. Gray to be a believer in the eternal damnation of *non-elect* infants (whether baptized or non-baptized), taught that *elect* infants would be saved by Christ's grace even tho unbaptized. The same distinction, which is a subtle one and not always made by the average writer, has also been pointed out by Dr. H. L. Singleton in an article from which we have quoted (September 29, 1900, page 378) and appears simply to indicate that while the Roman Catholic Church and most Protestant bodies taught that *unbaptized* infants are not "saved," altho all baptized infants are, Calvin believed that all *elect* infants (including those not baptized) would be saved, and that all non-elect infants (even tho baptized) would be damned. A still different view was held by Servetus, against whom the excerpts from Calvin's works given below are partly directed, and who held that all infants, even tho baptized and even tho of elect parents, were damned, a doctrine too strong for Calvin. The following are Dr. McKelway's excerpts:

"Servetus flatters himself that he has framed an irrefutable syllogism: 'Every one who does not believe in the Son of God remains in the death of Adam and the wrath of God abideth on him. Baptized infants do not believe in the Son of God, therefore they remain in the death of Adam. That they can not believe is plain because faith cometh by hearing.' Before I may untie this Gordian knot I can oppose it with a contrary syllogism: 'Whomsoever Christ blesses He exempts from the curse of Adam and the wrath of God. But infants it is known were blessed by Him. Therefore they are exempt from the wrath of God.' Moreover, the solution of the syllogism is easy, since Christ does not summon infants as accursed to the tribunal of God, but only denounces judgment on the contumacious who re-

ject the teachings of the Gospel which they have heard."—*Refutatio Errorum Michaelis Serveti, Opera, tom. viii.*

"Meanwhile he adjudges them to death and hell. If one may here reason after the manner of Servetus, will not there be a plausible complaint against God, who pardons the impious and criminal, but in a manner less than human deprives wretched and innocent infants of all remedy? That he is even cruel who gratuitously condoning the crimes of his enemies, has not rescued from death his own most innocent images.—*Ibid.*

"If they must be left among the children of Adam, they are left in death. For in Adam we can only die. On the contrary, Christ commands them to be brought to Him. Why? Because He is life. To give them life therefore he makes them partakers of Himself. While these men by driving them away from Him adjudge them to death. For if they pretend that infants do not perish even tho they are considered as children of Adam, their error is abundantly refuted by the testimony of Scripture. For when it pronounces that in Adam all die, it follows that there is no hope of life but in Christ."—*Institutes, book iv., chap. 16.*

"Suffer children. He declares that He wishes to receive children, and at length, taking them in His arms, He not only embraces but blesses them by the laying on of hands. From which we infer that His grace is extended even to those who are of that age, and no wonder. For since the whole race of Adam is shut up under the sentence of death, all, from the least even to the greatest, must perish, except those who are rescued by the only Redeemer. To exclude from the grace of redemption those who are of that age would be too cruel."—*Harmony of the Gospels, vol. ii., pp. 390–391.*

"'Suffer little children to come unto me.' Nothing can be plainer than that He intends those who are in a state of real infancy. And to prevent this from being thought unreasonable He adds, 'of such is the kingdom of heaven'; and if infants be necessarily comprehended, it is beyond all doubt that the word 'such' designates both infants themselves and those who resemble them."—*Institutes, book iv., chap. 16.*

"We are nowhere informed of His having condemned one (believer) who had not yet been baptized. Moreover, they sentence all infants to eternal death by denying them baptism, which according to their own confession is necessary to salvation. Let them see now how well they agree with the language of Christ which adjudges the kingdom of heaven to little children."—*Ibid.*

Dr. McKelway claims also that Calvin was all his life an eminent believer in religious toleration. He quotes the following passage from Calvin's *Institutes* (volume and page not cited):

"Should a man, even of set purpose and with deliberate hostility, assail the truth, seeking to destroy the Gospel, to annihilate the name of God and to resist the Holy Spirit, a sin which can never be forgiven, yet can we so rarely be sure of this, if it can ever become known, that it is far better for us to await the day of revelation than to anticipate the judgment of God. We surely ought not to allow ourselves a freedom in judging which might seem to limit the power of God and to prescribe limits to His mercy, which, if it were His will, could change the most wicked into the most holy. Even when some are so wicked that we can not avoid judging them severely, still we must commend them to the hand of God and hope for something better than we see. And tho it is not lawful to hold communion, either outward or inward, with the excommunicated, yet ought we by admonition, teaching, gentleness, brotherly kindness, and prayer to God, strive to lead them back to communion. And not only should we thus treat our erring brethren, but even Turks and Saracens and other enemies of the Christian faith. Far from us be the method which many have employed, performing to them no duty of humanity and pursuing them with the sword."

Dr. Gray has stated his belief that Presbyterians labor under a great disadvantage in bearing the name of "Calvinists"; but Dr. McKelway thinks that this is a better name than that of most other reformers:

"Arminius [on whose doctrines Wesleyan Methodism were partly based] in his disputes with Gomar furnished the finest example of *odium theologicum* that can be found in literature. Wesley lived after Calvinism had won its battles for freedom of conscience. Lutheran is a more distinctively national name than Calvinist, which in turn is broader than Presbyterian. As to Luther and Calvin, it is well known that some of Luther's controversial writing will not bear printing to-day. He was in some respects greater than Calvin, but not in the particular points to which this article is attempting to reply. Read Calvin on Luther. In a letter to Bullinger he says:

"'I hear that Luther assails not only you but all of us with horrible abuse. I wish, however, that the following may be clearly understood; in the first place how great a man Luther is, by what extraordinary gifts he is distinguished. I have already often said that if he were to call me a devil, I should still continue to venerate him as a chosen servant of God, uniting with extraordinary virtues some great failures. I beg you, therefore, bear it in mind that we have to do with one of the first servants of Christ.'

"Luther, on the other hand, said that no church of Christ should commune with the Swiss, called the Zwinglians heretics and reprobates—'nor ought any more prayers to be offered up for those who are soul-consumers and murderers.' In spite of the expression of more tolerant views, Luther said to Philip of Hesse that it was lawful to inflict capital punishment on heretics, urging that this should be done when the heretic denied the divinity of Christ. It is known that many Anabaptists were put to death in Saxony, and when the Wittenberg theologians asked Luther whether it were lawful to punish them with the sword, he wrote his assent in his own hand, 'Placet mihi Luthero.' Nor have the Zwinglians so much the advantage, for Zwingli said concerning the afore-mentioned Servetus, having heard that argument with him was useless: 'This must not be endured in the church of God, therefore do what you can to prevent the blasphemy from getting abroad to the injury of Christianity.' . . . . .

"Calvin might have abolished the rack in the trial of criminal cases. But it was used universally and in Geneva for 150 years after Calvin's death, the custom coming into disuse there first of the cities of Europe. . . . *The Interior* admits that the apology for Calvin's severity would have merit if it were true that he represented the spirit of his age. Before meeting the proof that he did not we call attention to facts whose bearing on this question the veriest tyro in history must see. Calvin died in 1564. The massacre of St. Bartholomew occurred in 1574, and the Pope proclaimed the year of jubilee. Bloody Mary had died in 1558. Francis I. of France, Philip II. of Spain, and the Duke of Alva were also contemporaries of Calvin. There was never a year of Calvin's life when his fellow Protestants did not perish by hundreds and thousands. In 1601 Nicolaus Krell was put to death by the Lutherans in Dresden, for no other crime than teaching the doctrines of Calvinism. A hundred years after Calvin died Claverhouse was hunting to death the poor Covenanters in Scotland. Why is it that Episcopalians can talk so glibly about Servetus and forget so conveniently Margaret, drowned by the tide at Wigtown a century after Servetus died? . . . . . .

"We do not condone the burning of Servetus. But it is the rankest injustice to hold Calvin responsible for not possessing the theories of a later age as to the right of the magistrate to punish offenders against religion. The Catholics had already condemned Servetus to the stake and carried out the sentence on a waxen image before the other sentence was executed. Bucer, the great reformer, exclaimed from the pulpit, 'Servetus deserves to have his entrails torn from his body.' Even the mild and gentle Melancthon wrote to Calvin:

"'Honored man and most beloved brother, I have read your letter, in which you excellently confute the horrible blasphemy of Servetus, and I thank the Son of God who has been the umpire and director of your conflict. The church of Christ will also both now and in all future times, own its gratitude to you. I am wholly of your opinion, and declare also that your magistrates, the entire proceedings having been conducted according to law, acted quite justly in condemning the blasphemer to death.'"

---

**The New Bishop of London.**—The appointment of the Rt. Rev. Arthur Foley Winnington Ingram, for some years past suffragan-bishop of Stepney, to the great London see in succession to the late Bishop Creighton, has elicited widespread satisfaction in England and America. The Stepney district is in the East of London, almost wholly made up of the "slums," and the new bishop has therefore had an excellent novitiate in one important part of his new task. The appointment is the first Epis-

copal selection made under the new reign, and it is reported that King Edward insisted on Bishop Ingram rather than some greater scholar who would not so well comprehend the needs of the working classes. *The Church Standard* (Philadelphia, March 16) says:

"London has been truthfully described as 'the most populous and the most perplexing diocese in the world'; and, at the present time, when the ritual disorders are in their most critical state of tension in that diocese, it is of the first importance that the man to be placed at its head should, from the outset, have the confidence of all reasonable churchmen. Dr. Ingram himself is said to be a High Churchman; it is therefore doubly satisfactory to know that on Sunday last Archdeacon Sinclair declared, 'with much eulogy,' in a sermon in St. Paul's Cathedral, that 'the whole diocese of London would rejoice to be guided and ruled by one so single-minded, self-devoted, eloquent, and humorous as the new bishop, who already, at the age of forty-three, had endeared himself, as bishop-suffragan of Stepney, to West and East London alike.' The appointment seems to be universally popular."

## A CHURCH ON A HUNT FOR A NAME.

ONE of the most important questions which will come up for discussion in the General Convention of the Protestant Episcopal Church in San Francisco next autumn relates to the name of the church, and church papers just now contain much on this topic. Members of this body point out that the present name is in many ways inappropriate and offensive. It does not properly describe the church, for the Methodist Episcopal Church is both Protestant and Episcopal. Besides, according to Anglican and Catholic theology, every true part of Christ's historic church *must* be episcopal, so that this part of the name is tautological. As for the designation "Protestant," it is pointed out that the present is a time when everything tends rather to a minimizing of Christian differences and antagonisms rather than to their assertion. In fact, the more advanced school of High-Church Anglicans repudiate the designation "Protestant" altogether, call themselves "Catholics," and look upon their church as a national branch of the one Catholic Church of Christ, together with the national Orthodox churches of the East and the Roman Catholic Church. The word "Protestant," they say, had its origin in modern religious controversies, which form only an incident in the historic life of the apostolic church.

Several names have been proposed as a more proper designation. Among these the name "American Catholic," first proposed by the late Bishop Coxe, is looked upon favorably by many as combining patriotism with theological precision. Those persons, however, who reject the historic designation "America," used so largely here and abroad from the foundation of the republic, as a proper designation of this country, object to the word "American" as including the whole continent. Another name proposed is "The Anglo-Catholic Church in the United States," to show its affiliation with the Church of England and the Anglican churches of Canada and the other British colonies.

The trend of opinion, however, appears to be strongly in the direction of choosing no new words for the church's name, but of merely striking out the two objectionable adjectives from the present legal designation ("The Protestant Episcopal Church in the United States of America"). The new name would then read, "The Church in the United States of America," and this communion as a body would be briefly referred to as "The American Church," while its members would call themselves "American Churchmen." While this name is opposed by many persons as being "pretentious" and "exclusive," since the Anglican body in the United States is only the ninth in numerical strength, it is argued by advocates of this designation that mere numbers have never in religious history been regarded as essential to the validity of church claims; that the Jews claimed to be the one nation and church of God in the world for many centuries, altho but an insignificant fraction of humanity; and that the same claim was made by the Christian Church even at a time when all its members could be assembled in the upper chamber at Jerusalem.

While not a few churchmen desire no change whatever, yet the present movement includes large numbers of leading men in all parties, both High, Low, and Broad, together with a large majority of the bishops; and it is believed that some change is inevitable sooner or later, altho it may be delayed yet for a few years.

## IS THE CHURCH FALLING BEHIND THE COLLEGE AS A SOCIAL INFLUENCE?

IN the recent discussions about the alleged decline in church attendance, attention has largely been centered upon the numerical features of the case, and little has been said of the deeper but very striking changes that have taken place in the public estimate of the church and its ministers in our own time, as compared, for instance, with its great prestige in colonial New England, or even forty years ago. An editorial writer in the Boston *Evening Transcript* (March 2) calls attention to the fact that the college and its officers are rapidly taking the place formerly held by the church, both as the chief object of public benefactions and of public esteem. Commenting on the course of lectures entitled "The Message of the College to the Church," now being given in the Old South Church, Boston, by the presidents of Bowdoin, Yale, Williams, Amherst, and Dartmouth colleges, the writer says:

"Both in England and in this country now the tide of benevolence on a large scale sweeps toward the college rather than toward the church. It is some years now since any of the theological seminaries, missionary boards, or local churches of any of the Protestant denominations in this country have had gifts that startled the public by their size. The total amount received annually by such agencies now no doubt is larger absolutely than it was a decade or two ago, but it is relatively smaller than it was, when the increase of national wealth is considered.

"A like change is apparent in the standing in the community of the educator and the clergyman. Whereas formerly the clergyman's place of precedence was undisputed, it now often happens that within a given city or State there is no clergyman at all comparable in influence or esteem with the head of its leading educational institution. The personal equation enters into this as well as the official standing, but it does not account for the fact. More of it is due to the popular conviction that somehow the college president is the product of a severer preliminary test of fitness for his position, and that the methods of enlightenment for which he stands are more intelligent and durable than those of the clergyman. Again, the representative of the college to-day, as he addresses men, is generally deemed to be speaking a language more up to date, to be setting forth a theory of the universe and of life more in harmony with the known facts than the average clergyman puts forth. It will be instructive therefore to see just what these administrators of colleges have to say to the church at large, as they stand in a pulpit now notable for freedom of thought and speech. They will have to report, what would not have been the case twenty years ago, that at college and university centers materialism is dead, philosophically considered; that teachers of philosophy and ethics are burning with an idealism which the world at large has not yet begun to feel and which the church will be recreant if it does not imitate. But with all his idealism as a basis of his fundamental thought the college man of to-day is a realist in the sense that he insists always on a reality of expression and life which make antiquated creedal forms and institutions quite impossible for him to tolerate so soon as they are meaningless or inefficient.

"In family life it often happens that a daughter becomes wiser than a mother, and as candid as wise, tho to be candid to one's mother is not an easy, tho often a high, duty. Precisely this is the situation to-day of the universities and colleges, which tho they long since ceased to be controlled by ecclesiastics as denominational institutions are nevertheless the offspring of the early

churches of New England and still draw most of their students from Christian families. The colleges and the universities have an idealistic philosophy which the clergy need to underpin their theology, a new psychology and pedagogy to make preaching and teaching in Sunday-school more rational and effective, and a scientific, experimental method in facing the facts of life, including religion, which the church needs."

## DR. PARKHURST AND "THE DEVIL'S HIGH-SCHOOL" IN NEW YORK.

DR. CHARLES H. PARKHURST is rather celebrated for his epigrammatic and forceful style of invective; but in the first of his series of articles, "The World, Religious and Secular," he seems to outdo himself in his almost lurid indictment of New York City's government, especially in the incalculable defilement of young children which he says it permits and directly encourages. When a man is inhaling a fetid atmosphere, he remarks, "its peril is not so much in its poison, in itself considered, as in the power which that poison has so in all stealthiness to insinuate itself into the system as to prevent the victim from realizing that the deadliness of its power is present and swiftly at work." Something like this is the peril menacing New York at present. It is not so much that "we are having our moral vitals pecked out of us, day by day, by a flock of foul birds, filthy harpies, who live by the blood they drink from the dying, and fatten on the carcases of the dead; but that our vitals have been for so long and in such a sly, insinuating way gnawed into that we have no distinct consciousness of the depth into which their beastly maws have plowed." He continues (in *The Christian Work*, March 14):

"We have so long and so constantly breathed the filth-laden atmosphere exhaled from the lying, stealing, lecherous mob of unconscienced creatures who call themselves the government of the City of New York, that we are losing, and have to a considerable degree already lost, the power to feel sharply and passionately the daily and momently outrage that is being perpetrated upon us. We are morally benumbed to the hateful significance of it all. We know that we are being ruled by a lot of brigands, but we have been in this situation for such a length of time that we have forgotten how to be tremendously moved by it. We are losing our talent for indignation. This league of conspirators that we call our municipal administration have been for such a term of years systematically slaughtering our material interests, making merchandise of individual rights, making spoil of the comfort, the prerogatives, and even the lives and the virtue of men, women, and children, that we have grown numb to the fact. We have learned to treat all this as a matter of course. That this city should, for instance, have as chief of police a man reputed to be a coarse, hoggish, guzzling, lecherous vagabond, has lost its power to stir up even the Christians in a passion of irrepressible moral revolt. We read the Commandments every Sabbath in our churches, and yet we understand that every day of the week and every hour of the day our municipal destiny is in the hands of men with whom the principles of the Decalog count no more, practically, than they do with the impish oligarchy that administers government among the damned. And yet men, good men, pious men, Christian laymen, elders, vestrymen, rectors, pastors, priests, go about their daily performances as quietly and serenely as tho New York were being governed by a mayor and a chief of police and subordinate officials commissioned directly from on high."

The one element of the situation which may perhaps yet wake the comfortable citizen "who says his prayers at night" and "drops off into dreams of heaven, but not of hell—certainly not the one we have here," is "the Devil's High School" which New York is maintaining for the express purpose of corrupting little innocents, of labeling them and despatching them "by quick express hellward, almost before they are old enough to distinguish intelligently between righteousness and sin." He exclaims:

"I know of no such specimen of glaring and brainless stupidity as to be spending hundreds of thousands of dollars in this city every year in maintaining Sunday-schools, missions, clubs for boys and girls, and all the paraphernalia of gospelizing effort, and yet to be deliberately tolerating in our midst veritable schools of Satan, which if not taught by the Devil himself are run by his understrappers on Fourteenth Street, which amounts to the same thing; and which are certainly putting an infernal taint upon more souls every three months than with all our gospel machinery we are saving to God and decency in an entire year. And then, what more flamboyant style of idiocy can our churches and missionary boards devise than to raise millions for the conversion of poor sinners in India and Japan, and yet to be making no desperate effort to close up those mills of Satan that are grinding out their hellish grist here in our own streets and under the droppings of our own sanctuaries? . . . . . .

"I could wish that for one year all our churches might be closed, all our Sunday-schools and missions suspended, and all our evangelizing money and effort withdrawn from the usual channels, if in their place could be substituted, uptown and down, a campaign of moral enlightenment sufficient to convince parents, Protestant, Catholic, and Hebrew, that so far as the children are concerned, this city, as now administered, is the foreporch of hell, and Satan's recruiting-ground from which to fill up the ranks of the damned. I know of nothing more appalling just now than the inactive interest with which a host of parents are at this moment contemplating the moral situation with which we are confronted. Capitalists are sensitive to the financial urgency and are growling about the taxes; politicians are awake to the political exigencies and are putting down no end of underground wires terminating at the November polls; but why are not fathers and mothers combining to put in some underground work or overground work that shall connect with the same crucial epoch? In particular, why do not New York mothers arouse to the horrible seriousness of the crisis? They have an indefinite idea of what is going on; why do they not get a definite idea? I once said to a lady in this city, 'Why do you not study into the case and do something?' She commenced studying into the case, but gave it up after a little, saying, 'It is too horrible; I can't.' If the situation is a little too horrible to study into, isn't it a good deal too horrible for young souls to wade into and rot in? Mothers, why not move in the matter and find out just what the perils are? Why not associate yourselves with other mothers whose children are hanging between heaven and the pit, and come to the front and fling your concerted challenge to the official vultures that are growing fat on the bodies and souls of the boys and girls that have just as much natural right to be found at last in the company of the redeemed as you have?"

## RELIGIOUS NOTES.

PROFESSOR HAECKEL has often been called a materialist. The London *Academy*, in speaking of his recent book, "The Riddle of the Universe," places him in this class, and mentions Spinosa, the founder of modern Pantheism, as one of the thinkers swept aside by Haeckel. The London *Literary Guide* (Free-Thought, January 1), however, points out that Haeckel repeatedly asserts the identity of his doctrines with that of "the God-intoxicated" philosopher, and that from the first chapter of his book he explains that he is not a materialist.

MOST Americans would be likely to find the signature of an English bishop puzzling. None of the prelates writes his name in full, but instead uses either his first name or the initials of his Christian name, followed by the abbreviated Latin designation of his see. Thus the Archbishop of Canterbury, Dr. Frederick Temple, writes his name "F. Cantuar"; and it is related that an American who had received a letter from him with this signature directed his answer to "F. Cantuar, Esq." The following are the signatures attached to the recent Anglican encyclical, including the names of all the incumbents of sees except that of the late Dr. Mandell Creighton, of London (whose signature was "M. London") and the bishops of Southampton and of Sodor and Man:

"F. Cantuar, R. Llandaff, Willelm Ebor, J. Manchester, B. F. Dunelm, Edgar Newcastle, Randall Winton, John Norvic, Watkin Bangor, W. Oxon, G. W. Bath & Wells, E. C. Petriburg, G. F. Bristol, W. B. Ripon, John W. Carlisle, Edward Roffen, F. J. Cestr, John Sarum, Ernest R. Cicestr, J. W. Alban, Alwyne Ely, A. G. Asaph, C. J. Gloucester, J. St. Davids, J. Hereford, George Southwell, Augustus Lichfield, John Truron, E. Lincoln, G. R. Wakefield, F. J. Liverpool, J. J. S. Worcester, Herbert E. Ryle, Bishop Elect of Exeter."

As to the last signature, Dr. Ryle, had he at that time been the actual incumbent of the see, would have writen his name "H. E. Exon." Among Anglican bishops in America only one, Dr. William Doane, follows this usage, and is almost as celebrated for his signature "William of Albany" as he is for his use of the knee-breeches, apron, and shovel hat which form the street garb of all English bishops.

# FOREIGN TOPICS.

## BRITISH COMMENT ON PRESIDENT McKINLEY'S SECOND INAUGURATION.

THE chief interest for Europe of Mr. McKinley's message, says *The Scotsman* (Edinburgh), lies in its "plain and emphatic indorsement by the Republican Party of the 'expansionist' policy which has brought the United States into more intimate relations with the great nations of the world." Comment of European journals is for the most part confined to this phase of the subject. British papers generally contain tributes to our national growth during the past four years. *The Morning Post* (London) hopes that, in view of our great national progress, "achieved principally under the Republican régime," the President will succeed in inducing his party to regard the control of the annexed and protected regions as something outside of ordinary political conflict. The President's attitude regarding the independence of Cuba, declares this journal, is creditable to his self-respect. *The Daily Chronicle* (London) says that, while Mr. McKinley has "a constitutional aversion to plain speaking," on the question of Cuba he has been more than usually explicit. With regard to both Cubans and Filipinos, *The Chronicle* observes:

"No civilized power finding itself where the United States now stands could lay down its obligations and return to the position that it occupied before the war with Spain. Time in its progress creates burdens for us all, and to ignore them is not to annul them. America definitely, tho perhaps unconsciously, embarked on an expansionist policy when she declared war on Spain, and to-day she only recognizes, through the mouth of her President, the logical outcome of her own acts."

The President's "stirring address," declares *The Daily Telegraph* (London), "may be summed up in three words: 'No looking back.'" "Cheering generalities which contain nothing that is not familiar," is the comment of *The Times* (London). *The Daily News* (London) deplores the spirit of greed that has induced the President and his party to break faith with Cuba. It says:

"The Filipino war has been bad enough in all conscience, but the enslaving of Cuba after all the moralizing and the promises given would be an act utterly unworthy of the American people."

Why, asks *The News*, should not the Republican Party, having discovered that imperialism does not pay, "trump the Bryanite card and come out against the unfruitful expansionist policy?" American commercial authorities are saying that "the islands will never pay for their keep even were the miserable war over." Even if humane and ethical reasoning fail, that argument should appeal to the "great business party" of America. *The News* concludes as follows:

"If the American people as a whole are not eager for more expansionism in regard to the possessions they have acquired, still less are they anxious for military displays in behalf of those who sit in darkness, as Mark Twain has put it. They are not very proud of the recent Chinese expedition. They do not intend to play the part of Huns under a German field-marshal any more. In objecting to any other expedition into the interior of China the Washington Cabinet is undoubtedly expressing the general sentiment of the people. The American missionaries have on the whole given sensible advice, and the people are not so mad as to suppose that trade is to be promoted by robbing and killing your customers. The raucous strains of 'The White Man's Burden' no longer attract the American mind. The jingo pulpit, which has been such a pernicious force, is more quiet, the yellow press has been found out, and a portion of it has taken on quite another hue. In a word, the silly imperialist fever has greatly subsided, and the cold, clear gray of dawn has succeeded to the orgies of the night. . . . The Americans have had their bout, and like Agathon's companions, they are feeling the effects, so they now propose a more reasonable course. No people in the world learn so quickly as they, and consequently when they find that the course on which they embarked three years ago leads to grave constitutional problems, to immense expenditure, to complications with foreign powers, that it does not mean one dollar's worth more trade, and that it does mean a serious loss of self-respect, we may feel certain that this path of thorns and briars will not be trod much longer."

In the inaugural address, says *The Saturday Review* (London), "we are told that Cuba and the United States are to become 'fast friends.' This bodes ill for Cuban independence, which is clearly a political impossibility. That is why the encouragement given to the idea by the United States has been so fatuous as well as dishonest."

Continental journals generally content themselves with giving their readers the news of the inauguration and message accompanied by more or less strong disapproving comment on the "imperialistic policy." European comment on our Cuban relations will be treated in a separate article later on.

## GERMANY'S FOREIGN POLICY.

AN "omnibus" answer to a series of interpellations in the German parliament as to the foreign policy of the empire, particularly its relations with Great Britain and Russia, has been given by Chancellor von Bülow. The substance of Count von Bülow's speech was as follows:

The visit of the Emperor to England was neither a political move nor a matter of court etiquette. It was a purely human act, and the friendly, grateful feeling of the English people is perfectly explicable and perfectly proper. If, beyond these entirely human feelings, the desire was manifested on this occasion in England, and responded to in a measure by the Kaiser, to cultivate pacific and friendly relations with Germany, there is, from even a political point of view, no reason to take anything amiss. We desire that it may be vouchsafed to Germany and England to cooperate in peace and to labor for the promotion of peace. No doubt there are many sources of friction between Germany and England; but if His Majesty the Emperor, by his sojourn and conduct in England, has cleared the path for the

COUNT VON BÜLOW: BISMARCK NO. 2.
—*Simplicissimus.*

continuance of the former normal and good relations between the two countries, that can be only for the advantage of both peoples and the peace of the world. The change in the occupancy of the throne of England has involved no change in the relations between the two nations. And this I regard as a good sign for the future. As to the attempt to establish an intimate connection between the Emperor's visit to England and the refusal to receive President Kruger in Berlin, I declare that there is no possible connection. The contemplated journey of President Kruger to our capital was ostensibly designed to force us, in an unusual way, to intervene in the South African troubles, while the visit of His Majesty to England had nothing whatever to do with the South African war. The Emperor had a perfect constitutional right to bestow the order of the Black Eagle on Lord Roberts, and, moreover, Lord Roberts not being a political personage, his decoration can have no political significance.

I am thoroughly convinced that it is one of the first duties of our policy to cultivate the most friendly and neighborly relations with Russia. On most points, German and Russian interests pursue parallel paths, and there is no point where, with good will on both sides, these interests need clash. There has been some discussion regarding an article in a Russian journal [this article, which appeared in the St. Petersburg *Journal of Commerce and Industry*, and was presumably inspired by Minister de Witte, threatened reprisals on the part of Russia if the German Government should raise the import duties on grain] which dealt with our future tariff bills. All I can say in reply is that economic, like all other relations between great countries, can only be satisfactory on a basis of mutual compromise. Our foreign policy now and ever is not determined by love or hatred, by dynastic considerations or family connections, but solely by the interests of the state, calmly and coolly weighed.

KAISER WILHELM. "Now, how is the sculptor to combine all my many phases of genius?"
—*Amsterdammer.*

The German papers seem disappointed that the Chancellor did not express himself more decidedly, particularly as to Anglo-German relations. The *Kölnische Zeitung*, which usually reflects official opinion only and must not be taken to represent the preponderance of German popular sentiment, says of these relations:

"Throughout the period of our existence as a state, we have not met much love or friendship from our British cousin. When we were small, he would like to have made us smaller, and when we showed signs of growing great he would fain have tripped us up. It is only now, when we really are great, that he begins to treat us in a more friendly way. What ought we to do? That is the question around which controversy has been raging during the past few months with such violence that the links that bind the Government and the people seem almost in danger of being severed. Even Scripture says 'an eye for an eye and a tooth for a tooth.' In our case the widespread desire to give our cousin across the Channel as good as we got is, humanly speaking, the more intelligible in view of the fact that, in addition to the dregs of this historic bitterness, a good deal of envy has accumulated —envy excited by the spectacle of British prosperity."

Now, when the British empire is on the point of depriving the Boers of their freedom and independence, says the same paper, this feeling of the Germans is naturally exhibited. The "essence of German policy" is set forth by the *Neueste Nachrichten* (Berlin) as follows (we condense):

Keep on friendly terms with England, first, in order to avoid becoming dependent on Russia, and, secondly, in order to prevent too close a *rapprochement* between England and France. We are now engaged in operations in China. But we have not a single naval base that we can call our own between Bremerhaven and Shanghai. We therefore must not alienate the strongest sea-power which commands this long sea-route and most of the stations on the way. In East Asia we need open markets to enable the increase of our population (800,000 souls annually) to earn its bread. We must, therefore, look to those powers which primarily aim at freedom of trade and not at extension of empire in those regions. It is only the powers which aim solely at extension of empire that find Germany as a superior colonizing power in their way in East Asia. This accounts for the attitude of the Russian press toward us. And yet, so long as Russian policy deliberately pursues the course of refraining from turning the embarrassments of England to account, there is certainly no reason why Germany should unnecessarily alienate England.

The English journals compliment Count von Bülow for his diplomacy. The Chancellor "appeased the malcontents by sheer genial common sense," says *The Standard* (London). Says *The Times*:

"We have no fault to find with the Chancellor's treatment of this somewhat delicate subject. Indeed, we feel that our own Foreign Office could hardly do better than to follow out, on parallel lines, the policy he lays down for the guidance of his own people. The somewhat inopportune inquiries with regard to the political significance of the German Emperor's visit to this country were met by Count von Bülow with dignified reserve. It was actuated, as everybody understood here, by kindly feeling which it would have been supposed the Germans, who make so much of family life, would have been the last to subject to an ungenerous and carping criticism."

The French journals confine their comment to that portion of the Chancellor's speech referring to Russo-German relations. He was not definite enough, says the *Temps* (Paris). There can be no doubt, declares the *Journal des Débats* (Paris), that the German Kaiser's visit to England and his friendly conduct there have done more to estrange Germany and Russia than even the imposition of higher grain duties by the Reichstag. Italy has shown less of the spirit of antagonism to Great Britain's course in South Africa than the other European states have shown, but the *Tribuna* (Rome) is not pleased with recent developments in Germany, especially the treatment of President Kruger. It says:

"The attitude of the German Chancellor has shown that practical interests more and more take the place of idealism in politics. But this may be carried to excess, as Germany may find to her cost. Alliances are based upon something more than mere sordid interests; but how can Germany expect her allies to be enthusiastic if it is known that nothing but the most selfish considerations move her?"

The *Independance Belge* (Brussels) thinks the Emperor's at-

titude toward President Kruger, whether dictated by mere selfishness or by consideration for England, may cost him dear. It says:

"The truth is, William II. is about to encounter the opposition of his people. Since the Jameson raid, since the Kaiser's famous telegram to President Kruger, the German press has never ceased to be enthusiastic about the Boers, whom they regard as the only Germanic race able to resist the encroachments of Britain in South Africa. German volunteers have joined the Boers in largest numbers, and German subscriptions figure as the most considerable for Boer ambulances. The movement has been so popular that Chamberlain has been at great pains to explain that popular demonstrations need not necessarily affect the attitude of a government."

But many French papers declare that Germany has lowered her own prestige by her recent course. In the *Éclair* (Paris) Alphonse Humbert says:

"Does von Bülow think his policy of treachery can be excused on the score of 'German interests'? Let him ask Germany, not the noisy, sentimental Germany, but thinking Germany. A mass-meeting in Munich, at which most of the university professors were present, passed the following resolutions: (1) A protest against the English atrocities in South Africa; (2) a demand for intervention on the part of the powers; (3) the wish that the Kaiser and the Reichstag may retrieve the wrong done to President Kruger; (4) that all German cities be asked to participate in this agitation. That, then, is the answer to von Bülow. Germany knows well enough that it is not to her interest to stand dishonored before the civilized world. Germany also knows that it is not to her interests to deliver one half of Africa over to England."

"Altho their own Czar makes no move in the interest of the Boers, the Russians continue to abuse Germany," remarks the *Züricher Zeitung*. Indeed, the Russian papers are not gentle in their treatment of von Bülow. "Never were the weak more brutally treated by the strong," says the St. Petersburg *Sviet*. The *Novoye Vremya* predicts that England will requite ill the services which von Bülow has rendered her. The *Birshewya Viedomosti* (Moscow), however, thinks the German Government will adopt a very different attitude as soon as the German fleet is built. In Great Britain most papers trust to the jealousy of the powers, which will prevent them from combining against England. The London *Times* admits that there is an "apparent want of consistency" between the Kaiser's present attitude and the position he took up in 1896. "But," adds the paper, "the Emperor is too strong a man to trouble himself about superficial consistency."—*Translations made for* THE LITERARY DIGEST.

## THE UNITED STATES AND THE DANISH WEST INDIES.

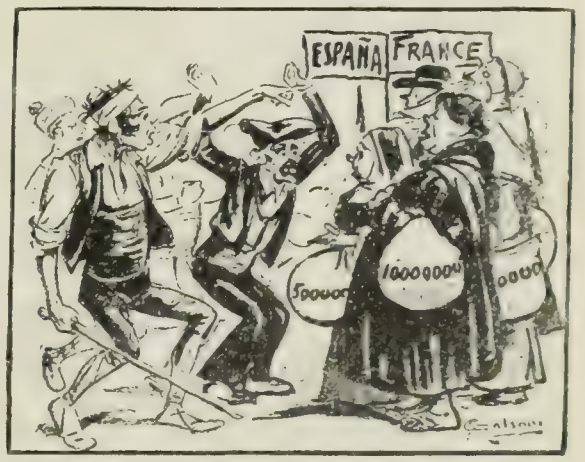
THE report (denied in both Washington and Copenhagen) that the United States has officially warned the Danish Government that it will not permit the transfer of the Danish West Indies to any other power, is the subject of an article in the *Lotze* (Hamburg). This journal disclaims any intention on the part of the German Government to acquire the Danish West Indian possessions, and explains the origin of the persistent rumor that Germany wants these islands. Says the *Lotze* (we condense):

The first of these attempts to draw Germany into the affair was made in the 30's, when the Mexican Government tried to play Prussia against the United States. Prussia was offered extensive territory in Texas and California. It was hoped that not only the German emigrant but the Prussian Government itself would become a strong ally for Mexico against the Yankees. But the Prussian Government had no intention of entering into so adventurous a policy, and its agent in Mexico was directed to announce that such offers were not welcome in Berlin. Shortly after this, land speculators in Texas and the Central American republics endeavored to interest the lesser German princes, but with no satisfactory result. When Prussia emerged a victor from her internal and external struggles, she was again credited with colonial plans in America. In the 60's it was said that she wished to obtain the island of St. Thomas, then report declared it was Curaçoa, then Santo Domingo, then parts of Cuba. Prussia was always prompt with denials. Yet the rumors were persistent and were made, evidently, with the idea of attracting the attention of the United States. Since the war with Spain, the American imperialists regard all the West Indies as their particular domain and want to drive all Europeans from these islands. The object is to win the government and a popular majority for an aggressive policy, and, with this end in view, Germany, now so busy extending her colonial empire, provides a handy means to incite the populace against "European interference." That Germany does not really think of extending her power in the West Indies ought to be evident to every thinking person. More valuable to Germany than all the West Indies put together is the friendship of the United States.

Mr. Niels Grön, the most prominent agent of Denmark for the sale of the islands to the United States, declares (in the New York *Times*) that negotiations were almost concluded for the transfer, for $5,000,000, when the war with Spain began. "Then it became impossible for the Danish Government to sell, as that would have been a diplomatic discourtesy to Spain."—*Translations made for* THE LITERARY DIGEST.

## POSITION OF THE REPUBLIC IN FRANCE.

DISCONTENT with the French republic appears to have spread extensively, and, besides the monarchist plots, to which France has by this time grown somewhat accustomed, a tone of defiant opposition to the republic is noticeable in the Paris press. The Third Republic is now more than thirty years old. France's comparative decline since 1870, it is generally admitted, is due rather to the rapid advance other nations have made than to actual loss on her own part; yet many Frenchmen still regard world-rule by France as a possibility, and blame the republican régime for not using the means it has to regain supremacy in Europe. The monarchist organs, of course, lead in the attack, closely followed by the socialist journals. The *Gaulois* (Paris), the leading organ of the monarchist party, in an article with the sarcastic title, "Down with the People," gives a summary of the discontent with the republic. In its thirty years of existence, says the *Gaulois*, "the republic shows two culminating points: Panama and Dreyfus. While it may appear to be a government of the people, it is certainly not for the people. This journal continues:



THE SPANIARDS DON'T WANT THE FRENCH "CONGREGATIONS."

"Why don't you welcome us? Don't you see what treasures we carry?"

"If you are trying to save these treasures from the French, you certainly don't intend to present them to us. You will probably soon be trying to rob us of ours!"

—*Fischietto, Turin.*

"How much duty is the workingman made to pay on his miserable wine at 30 centimes a liter, and how much the millionaire on his Château-Yquem at 20 francs a bottle? Exactly the same amount. The republic has now existed for thirty years, and has yet found no time to put a stop to this scandal. . . . Free, public, non-sectarian, compulsory education—is not that, or should it not be, a popular institution, one from which the people should receive the advantage? Ask this question of the municipal ad-

ministrators, and their replies will show you that this non-sectarian, free instruction is, in the end, nothing but the instruction of the rich paid for by the poor. In reality, there is no form of instruction so expensive as 'lay instruction,' which is paid for by the majority of the taxpayers—the poor people. Turn which way you will, regard the matter from whatever point of view you may, you will find in the republican régime nothing for the people save unhappiness. It increases their demands, corrupts their hearts, excites their envy, and means for them the single word, 'suffer.'"

The Government, continues the *Gaulois*, has announced its intention of suppressing the *prévoyants de l'avenir*, the voluntary financial associations of the workingmen. The nature of these associations it explains as follows:

"Twenty years ago a certain number of workmen conceived the idea of establishing a fund for future generations of workmen, by means of contributions (each man to contribute a franc a month) which, it was agreed, were not to be touched for twenty years. Then the capital thus accumulated was to be used, not precisely for the creators of the fund, since many of them would no longer be alive, but for succeeding members. What has happened to these *prévoyants?* At the end of twenty years they are more than 200,000 in number, they possess 36,000,000 francs [$7,000,000], and, by virtue of their connection with similar societies, they form a league of 700,000 men. These are men enlightened by their own experience, or by that of their predecessors, as to the hard realities of life, who never hope to reach independence and repose themselves, yet they take thought for their brothers of to-morrow, for the workmen of the future, who will one day have to suffer as they suffer to-day, and they care for their unborn comrades as a thoughtful father provides for his children. But what has the republican government done? It is suspicious of the work of the *prévoyants*. It has announced its intention of confiscating the results of their twenty years work and devotion for its own benefit."

The government organs, it should be here stated, deny that there is any intention to interfere with these workmen's societies.

A writer in the *Tägliche Rundschau* (Berlin), who is evidently very well informed upon French politics, declares that "if the present bourgeois republic can be overturned, no other democratic rule will take its place." We quote from his article:

"Déroulede's 'plebiscitory republic' is merely an introduction to dictatorship, and the rule of the socialists promises anarchy, for the majority of Frenchmen will have none of it. The present republic is strong because there is no strong candidate for the monarchy. The Duke of Orleans merely amuses by his proclamations, and the sons of Jerome Bonaparte keep quiet. Yet things are being prepared for a *coup-d'état*. It would be foolish to suppose that the French people in general, and the Parisians in particular, are pleased with the republic. The 'king in a dress-coat' does not impress them. The memories of the glories of France still live in the hearts of the people and there is the hope of new glories and new greatness. How little republican the modern Frenchman is may be seen by the wonderful success of such plays as Rostand's 'L'Aiglon.' The people receive these Napoleonic legends with a joy that should cause the adherents of the republic to stop and think. France has not been successful in her foreign policy since 1871; but the French regard the past thirty years as a period of decadence. The army is not friendly to the republic. It wants a leader, and this leader may come from the Bonapartists. Louis Napoleon is regarded by many as the coming man."

WHERE *is* MANCHURIA?
—*Punch.*

This writer regards as "impossible" the idea that the Waldeck-Rousseau cabinet "has been won for the Napoleonic movement," and pooh-poohs the rumor that attempts have been made to gain support for the monarchy from the German Government. On the latter point he remarks:

"A French *imperator* could only hold his own by a successful war with Germany. To regain the lost provinces, France would be willing to forgive Fashoda and make common cause with the hated Briton. Germany, therefore, has every reason to stand well with the republic, and to regard with suspicion all pretenders."

The socialist organ, the *Petit Sou*, announces a Bonapartist plot, in which, it declares, the present Government is implicated. The object is not to put the Pretender, Prince Victor, upon the throne, but to make his brother, Prince Louis Napoleon, who, by the way, is a general in the Russian army, president of the republic. The *Petit Sou* explains that the capitalists of France, being naturally afraid of and inimical to the socialists, and realizing that their "policy of repression" during the past twenty years has not produced desired results, have tried to bring matters to a focus by using M. Waldeck-Rousseau. The premier astutely attempted to gain over the socialists by taking some of them—notably M. Millerand—on board the ship of state. The capitalists, we are told, are now looking for a Cæsar who, "supported by the great bankers, would be able to rule with an iron hand, without fear of opposition from the army, because "the advent of a Napoleon means war, and war means promotion and decorations for the army." For the great capitalists war is "an abundant harvest while the struggle lasts, and a yet more abundant harvest afterward in repairing the ruins." The present ministry, we are told, is "in reality a ministry of Bonapartist defense." The Napoleonic campaign, concludes the *Petit Sou*, is carried on in a noiseless and very skilful manner. "The object of the leaders of the movement is to create a state of public opinion similar to that which rendered possible the *coup-d'état* of September, 1851."

The *Temps*, on the other hand, declares that "by the philosophy of history, the republic has been proven the best government for France. It has for the past hundred years lasted longer than any monarchic régime, in spite of the most bitter opposition and the most audacious and best conceived attempts to overthrow it."

The heaviest responsibility of our modern history, says the *Journal des Débats*, referring to the proposed law excluding the religious congregations from France, rests upon the present ministry. If we lose the right to protect Catholicism throughout the world, we shall suffer not only politically, but also commercially. Suppose we do drive out the religious orders. "How will our protectorate abroad be exercised when we no longer have any one to protect or when the proportion of Frenchmen engaged in Catholic works shall have been reduced to nil?"—*Translations made for* THE LITERARY DIGEST.

---

A CORRESPONDENT of the London *Times* calls attention to the fact that, beginning with January 19, Queen Victoria not only surpassed every other English monarch in the length of her reign but also in the length of her life. Commenting on this, at the time, *The Westminster Gazette* observed: "It is probable that no monarch in the history of the world can rival her Majesty in length of years and length of reign combined. The Queen has yet to surpass Louis XIV. in the latter respect; for he reigned seventy-two years, but he died at the age of seventy-six. William I., Emperor of Germany, is the most remarkable instance of longevity among sovereigns, for he attained the age of ninety-one; but his reign was comparatively short.

THE CHRISTIAN RELIGION AND SUICIDE.

In Europe forbidden. In China requested.

"A Short Introduction to the Literature of the Bible."—Richard G. Moulton. (D. C Heath, $1.00.)

## CURRENT POETRY.

### The Enemy.

By WILLIAM WATSON.

Unschooled in Letters and in Arts unversed;
Ignorant of Empire; bounded in their view
By the lone billowing veldt where they upgrew
Amid great silences; a people nursed
Apart, the far-sown seed of them that erst
Not Alva's sword could tame; now, blindly hurled
Against the march of the majestic world,
They fight and die with dauntless bosoms curst.
Crazed, if you will; demented, not to yield
Ere all is reft! Yet, mad tho these may be,
They have striven as noblest Englishmen did use
To strive for freedom; and no Briton he
Who to such valor in a desperate field
A knightly salutation can refuse.

—*London Daily News.*

### A Golf Elegy.

By S. E. KISER.

Beneath these rugged elms, that maple's shade,
Where heaves the turf in many a moldering heap,
Each in his last, eternal bunker laid,
The rude forefathers of the hamlet sleep.

Oft to the harvest did their sickle yield,
Their furrow oft the stubborn glebe has broke—
Ah, but they had no mashies then to wield.
They never learned to use the Vardon stroke.

The poor old souls, they only lived to toil,
To sow and reap and die, at last, obscure;
They never with their niblicks tore the soil—
How sad the golfless annals of the poor!

The pomp of power may once have thrilled the souls
Of unenlightened men—to-day it sinks
Beneath the saving grace of eighteen holes!
The paths of glory lead but to the links.

Perhaps in this neglected spot is laid
Some heart that would have quickened to the game;
Hands that the lovely baffy might have swayed,
To Colonel Bogie's everlasting shame.

Full many a hole was passed by them unseen,
Because no fluttering flag was hoisted there;

# New Fiction

## Dwellers in the Hills.

By MELVILLE D. POST. Author of "The Strange Schemes of Randolph Mason," "The Man of the Last Resort," etc, $1.50.

A remarkably appealing story of boyhood as recalled by the grown man. It is a romance of life in the old-time West Virginia cattle country—to most readers a strange life and an unknown land. The book merits reading by all who care for good work.

## Another Englishwoman's Love Letters.

By BARRY PAIN. Cloth, $1.00.

An unusually amusing parody, and also a clever satire on certain methods of promoting publishing booms.

## Dupes.

By ETHEL WATTS MUMFORD. Cloth, $1.25.

An enjoyable yet tartly satirical tale of New York "Society" life—the "Dupes" being the smart set who fall under the spell of a quasi-theosophical propagandist. The book is sparkling and picturesque throughout.

## The Forest Schoolmaster

By PETER ROSEGGER. Authorized translation by FRANCES E. SKINNER. $1.50.

Probably the best work of Austria's most popular novelist.

"To those who care for literature of the best and truest sort the book will be a delight."—*Pittsburg Post.*

## Love and Honour.

By M. E. CARR. $1.50.

The career of a moral coward, who lived in the years when Western Europe was devastated by the Revolution and Napoleon.

**G. P. Putnam's Sons**

"A great and timely book."—*Pacific Advocate, San Francisco.*

"There is not a dull page in it."—*Christian Advocate, Nashville, Tenn.*

"A very readable and interesting book on a great subject."—*Christian Index, Atlanta, Ga.*

"This is one of the best books on Christian evidences that has been published for a long time."—*Christian Guardian, Toronto, Canada.*

"This is a strong book. It is the work of a Christian scholar familiar with the literature of the subject, who has thought himself through on broad and comprehensive ground."—*Zion's Herald, Boston, Mass.*

**Price, $1.25.**

the Baker & Taylor Co., 5 and 7 E. 16th St., New York.

**WANTED**—Active, educated men to represent us; weekly salary or guarantee paid. In replying give age and references. DODD, MEAD & COMPANY, New York City.

Full many a smooth and sacred putting green
They tore up with the plow and didn't care.

Some village Taylor who, with dauntless breast,
Could wang the flail or swing the heavy maul;
Some mute, inglorious Travis here may rest,
Some Harriman who never lost a ball.

Far from the eager foursome's noble strife
They leveled bunkers and they piled the hay,
Content to go uncaddied all through life,
And never were two up with one to play!

No further seek their hardships to disclose,
Nor stand in wonder at their lack of worth;
Here in these bunkers let their dust repose—
They didn't know St. Andrews was on earth!

—In *Golf.*

### The Golden Days.

By JOSEPHINE DODGE DASKAM.

I wonder where the Fairy-book can be,
The book from which she read to you and me,
While the warm sunlight shifted down the tree?

*And the brown eyes turned downward to the leaf,*
*Tear-spotted by two tiny people's grief,*
*When Death bound one more princess in his sheaf.*

I wonder where the Rocking-horse has run
Who carried us before the day was done,
To all the lands that lie beneath the sun?

*And the dear lips of her we loved so well*
*Kissed us more sweetly than our tongue could tell,*
*When the two daring riders swayed and fell.*

I wonder where the crimson peaches grow
We caught together when she threw them, so,
And ran with her to hide them, laughing low?

*And her light feet were swifter yet than ours,*
*And her soft cheeks were like two rosy flowers—*
*Ah, Time and Death, ye too malignant powers!*

—In March *McClure's.*

## PERSONALS.

**General Harrison's First Appearance.**—When he was but twenty-one years old, the late ex-President Harrison made his first appearance in court as a pleader. One of his biographers relates how in a dim-lighted court-room he rose to speak, carefully prepared notes held in his hand, to which he constantly referred, leaning toward a flickering candle-light by his side. The scene is thus described:

"What should he do? There was dead silence throughout the dusky room. His voice, sharp, clear, penetrating was being heard to the farthest corner. The audience was already in sympathy with him. The situation was embarrassing. He referred to his notes. He wished to be absolutely correct. He shifted the candle. He turned the pages to every angle. It would not do. The penciling refused to come out. Then, in desperation, he flung the notes away. To his own amazement he found his memory perfect. Best of all, he found he could think and speak upon his feet flash-like and coherently. There were not only words at command, but the right words, enabling him to express himself exactly. He found, too, the pleasure there always is in the faculty of speech, with freedom superadded. Confidence came with the discoveries. From that day to this, whether addressing himself to court or jury, or the vaster audiences who furnish the delight of oratory on the platform or stump, he has been an impromptu speaker."

**Christian De Wet.**—The stories that have found their way from time to time into the newspapers about the cruelty of the Boers are false, writes Richard Harding Davis in *The Independent.* The Boers are true soldiers fighting bravely in a war where the odds have been terribly against them,

# All About Wild Animals

## The New Natural History

by RICHARD LYDEKKER, F.R.S., assisted by a score of the ablest naturalists in the world, is the latest and best work of its kind

It is a fascinating Wonder-Book, telling about all the marvels of the Animal World (such as the one illustrated above, for instance), many of which have been but recently discovered. It is strictly scientific, yet written in a style that is so pleasing and simple that children can read and understand it as well as grown folks.

All the different sorts of animals are described and compared down to the smallest bugs and insects: How they are related to each other; how they come to differ so widely from one another; how they protect and care for their young; how and where they make their homes; how they rule their communities; the different part of the world that each sort inhabits; their methods of moving about; their migrations from place to place; the mechanism of their bodies; the uses of their odd limbs and singular faculties; their wonderful intelligence in their own ways of life; what they eat and their wise ways of getting it; how they quarrel and battle amongst themselves; how they shrewdly defend themselves against their foes; how they are hunted and trapped; how they serve man with food, shelter, clothing, finery, and other useful and beautiful things; all these interesting matters and many more are fully told about.

The work is in six royal octavo volumes of over 500 pages each. They are beautifully but substantially bound in half-morocco, with gold backs.

## Magnificent Illustrations

There are over **2,200** illustrations, making the most magnificent set of animal pictures ever published.

Many of them are **full-page colored plates** in from ten to sixteen colors, being exact reproductions of paintings of the living animals themselves. They are the finest colored animal plates in existence; nearly all of them being from originals by Kuhnert, Specht, Smit, Mutzel, and Wolf, those famous German painters who have devoted their lives to the study of animal portraiture.

Lions, tigers, baboons, leopards, elephants, porcupines, foxes, eagles, macaws, herons, tortoises, lizards, chameleons, sharks, butterflies, beetles, cuttlefish, lobsters, electric eels, sea anemones, bears, porpoises, alligators, and hundreds of other animals are shown exactly as they appear in their native wilds; and there are numberless drawings showing their bony and fleshy structures, and how closely they really resemble familiar domestic animals with which we are all acquainted.

## Special Offer
## Half-Price and Little Payments

We have made a special arrangement with the publishers of the **New Natural History**, by which we are permitted to form a club for the taking of a limited number of sets of the work at ***one-half*** their regular selling price.

If you apply at once, you can secure a set by paying $1.00 down and $2.00 a month for fifteen months, the first dollar being the only payment required before the complete set is sent to you.

Or, if you prefer, you may deduct the amount of one monthly payment from the total, and pay all cash at once.

This offer will remain open only so long as our supply of sets shall last. You will therefore avoid a possible disappointment by sending in your application for club membership at once.

## Send the COUPON at once

If you want more details before ordering, clip off the coupon at the right of this space and send it to us promptly. You will receive, in return, FREE OF COST, a beautiful sample-page book, containing specimens of the colored illustrations, samples of the text-pages, and a fuller account of the nature of the work.

Cuprigraph Co., 68 N. Green St., Chicago

If afflicted with sore eyes, use **Thompson's Eye Water**

and never descending to the level of that brutality, accounts of which have recently been set afloat. These reports "seem very foolish things," says Mr. Davis, "to any one who has held the hard, strong hand of Christian De Wet—to any one who, as enemy or friend, has looked in the man's calm eyes and has read the temper of the soul behind them." He it is who has given the one amusing story of the war, which is thus told by Mr. Davis:

"Three scouts of the Yeomanry came prisoners before the Boer commander. They had been captured before. They were English scouts. Being captured appeared to be an affliction chronic with them. Christian De Wet looked them over—gravely, thoughtfully—his clear eyes searching them through and through. He was their judge, stern or merciful they could not tell; all they could do was hope.

"'My men,' said General De Wet at last, 'will you take a message from me to your general.'

"They accepted, in rejoiced surprise, and were entrusted with a large sealed package. When they reached General Rundle's camp, they announced that they were the bearers of papers from General De Wet, negotiating for peace. General Rundle was delighted. He tore open the envelope. He read the letter. It said:

"'DEAR GENERAL RUNDLE:
'This is the fourth time I have captured these raging devils of yours. Please chain them up. They annoy me. DE WET.'

"Men like this don't run away; they fight. When they surrender, they surrender like gentlemen. When they die, they die bravely."

## MORE OR LESS PUNGENT.

**He Wanted to Know.** UNCLE GEEHAW (from Hay Corners, at grand opera): "What's that man got over there?"

CITY NEPHEW: "Why, that's the score."

UNCLE GEEHAW (brightening up): "The score? Well, by gum! I wish you'd ask him who's ahead!"—*Puck.*

**A Very Good Reason.** A certain junior counsel was on one occasion bullying a rather innocent-looking witness. The witness bore it meekly, but at last he rather smartly got even with his tormentor.

COUNSEL (to witness): "Was your wife with you on the occasion referred to?"

WITNESS: "No, sir."

COUNSEL: "You are quite sure? Remember, you are on your oath."

WITNESS: "I am quite sure."

COUNSEL: "Was she present with any one else?"

WITNESS: "No, sir."

COUNSEL: "Did you tell her that night?"

WITNESS: "No, sir."

COUNSEL: "Or at any subsequent time?"

WITNESS: "No, sir."

COUNSEL: "You said nothing to her whatever?"

WITNESS: "Not a word."

COUNSEL (getting angry): "Now, state to the court the reason or reasons why you did not consult your wife regarding the important events which occurred on the occasion mentioned."

WITNESS: "Because I haven't got a wife."—*Tit-Bits.*

**All He Wanted to Know.**—A middle-aged man, dressed like a tramp and without an over-

MACBETH'S "pearl top" and "pearl glass" lamp-chimneys do not break from heat, not one in a hundred.

They are made of tough clear glass, clear as crystal.

They fit the lamps they are made for. Shape controls the draft. Draft contributes to proper combustion; that makes light; they improve the light of a lamp.

Our "Index" describes *all* lamps and their *proper* chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address MACBETH, Pittsburgh, Pa.

CANTON

Incandescent Gasoline Lamps. Lighted Instantaneously with one match.

coat, walked up to the ticket-office at the station the other day and hesitatingly inquired:

"What—what is the fare—to—to——?"

"To where?"

"To—to—— Well, that's funny! The name of the place has slipped from my memory. Let's see!"

"How far is it?"

"I don't know."

"Is it on the main line?"

"I—I can't remember."

"Do you have these spells very often?" asked the booking-clerk.

"Not very often. It's very embarrassing, I assure you. Strange how a man will lose his memory."

"Is it a big town?"

"Oh, yes."

"Do you mean Manchester?"

"Yes, yes—that's the place—Manchester. How could I have forgotten it?"

"And you want a ticket to Manchester?"

"Oh, no. I just wanted to know what the fare is. I always walk when I go, but I want to put it down on my expense account as so much cash saved. What did you say it was?"

The long, stony stare of the ticket man's eye did not kill him dead, and if that booking-clerk had had his way the tramp would have gone off limping in both legs.—*Tit-Bits.*

**A Recipe.**—

From the tomes of ancient sages,
Roosting high upon your shelves,
Take the first attractive pages
Into which your fancy delves.
Then, your midnight oil igniting,
Boil them gently to a stew,
Mix with ink, and spread in writing
Firmly fixed 'twixt covers new:
And this modern thought transference
Makes a dramatist of you. —*Life.*

## Current Events.

### Foreign.

CHINA.

March 18.—The relations between British and Russian troops at Tien-Tsin continue very strained, and clashes take place between the soldiers of both nations; the arbitration of Count von Waldersee is refused.

March 21.—Lord Lansdowne announces in the British parliament that by agreement between the British and Russian governments the danger of bloodshed at Tien-Tsin has been averted by each side agreeing to withdraw the troops from the disputed territory, leaving the merits of the controversy to be settled by the two governments.

SOUTH AFRICA.

March 19.—Mr. Chamberlain announces in the House of Commons that General Botha has rejected the terms of peace offered to him by Lord Kitchener, and that the other Boer leaders joined with him.

March 21.—Three Boer soldiers, tried and condemned on charges of treason and train-wrecking, are shot by order of Lord Kitchener; Philip Botha, brother of the Boer commander-in-chief, is killed in battle.

March 22.—The parliamentary papers giving peace negotiations between Generals Kitchener and Botha are made public; military operations in the Orange River Colony result in the capture of several Boer prisoners and large supplies.

March 23.—There is a renewal of guerilla war-

# JOSEF HOFMANN

**Becomes a PIANOLA ENTHUSIAST and orders one of these instruments for his own use.**

*New York, March 20, 1901.*

*The Aeolian Co.,*
*18 W. 23d St., City.*

*Gentlemen: I am completely won over to the vast possibilities of the Pianola, which I have seen to-day for the first time. You can take my order for an ebony Pianola, to be delivered as soon as you can to my apartment in the Gilsey House, to be attached to my Grand Piano, and later to be sent to Berlin.*

*I anticipate much pleasure from learning to play this exceedingly ingenious device which reproduces with such astonishing accuracy the masterworks of music.*

*Very truly,* **JOSEF HOFMANN.**

TO the endorsement of the Pianola by Paderewski, Sauer, Rosenthal, De Pachmann and Moszkowski, is now added that of Josef Hofmann.

THERE is no instrument in the history of music which has attracted so much attention as the Pianola. It has won its way in the face of the universal opposition of musicians to their universal approval.

IT has revolutionized formerly accepted pianistic standards, and has made *possible* that which was considered *impossible*, namely, artistic piano playing, irrespective of musical training, with the expression still regulated by the player.

THE Pianola performs that part of the playing which was formerly allotted to the human fingers.

THE popularity of the Pianola in the home is evidence of the promptness with which its value has been appreciated by the general public. Thousands of piano owners have increased the usefulness of their pianos a hundred fold and have added to their own pleasure, by simply increasing their repertory through the aid of *the Pianola.*

IF you are the owner of a piano, the "Pianola question" is a personal one, and you should, therefore, personally investigate this much discussed instrument. Visitors welcome.

The Pianola being placed in position to play upright piano. The Pianola does not injure the piano in any way. Its felt-covered fingers rest upon the piano keys and strike the notes in the proper relation one to another as indicated on the music-sheet. With its aid any member of your household may play upon the piano even if he or she literally does not know one note from another—not only one or two selections, but every piece of music ever written for the piano-forte. Grand and light operas, Lizst's Rhapsodies, Sousa's marches, and the latest rag-time hits are practically "on your fingers' ends." You have all the pleasure of hand playing because you control the expression, which is the soul of music. Estimate for yourself the profit and pleasure the Pianola would bring you in a single year.

**PRICE, $250.**

Can be bought by moderate monthly payments if desired.

If unable to call we shall be pleased to send you our pamphlet entitled "Music in the Home." It will tell you what the Pianola will do for you and what you can do with the Pianola.

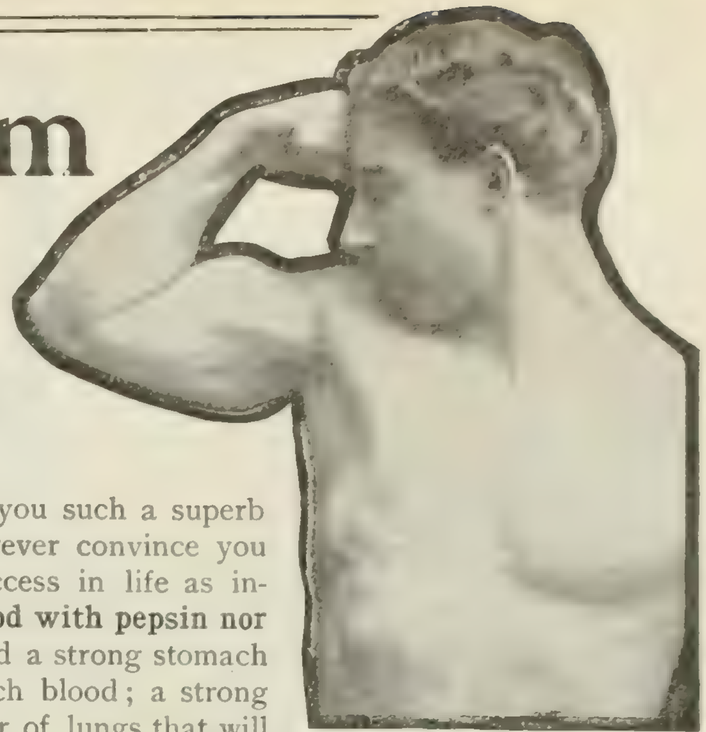
# *The* Swoboda System

## *Restores to Health, Strengthens the Heart*

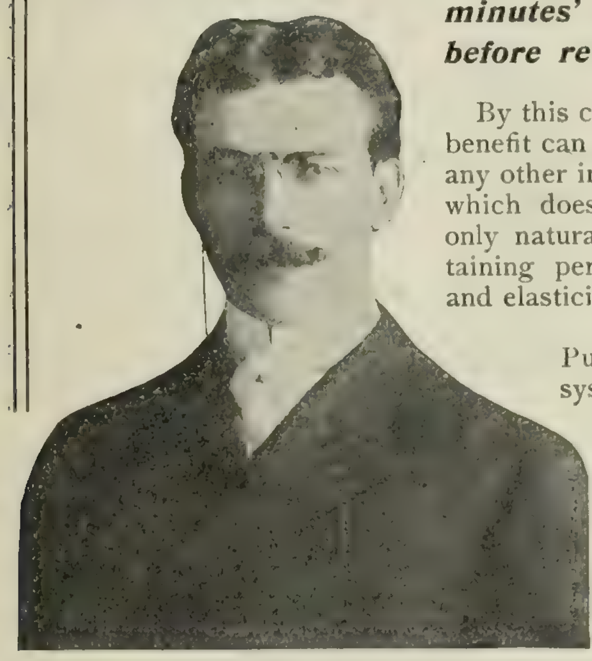


ALOIS P. SWOBODA
Originator and Sole Instructor.

**I am teaching intelligent men, brain workers, the ideal principles of attaining and preserving perfect health. It is not a problematical theory, but a system of physiological exercise, based upon absolutely correct scientific facts.**

And if you will follow my instructions for a few weeks I will promise you such a superb muscular development and such a degree of vigorous health as to forever convince you that intelligent direction of muscular effort is just as essential to success in life as intelligent mental effort. **No pupil of mine will need to digest his food with pepsin nor assist nature with a dose of physic.** I will give you an appetite and a strong stomach to take care of it; a digestive system that will fill your veins with rich blood; a strong heart that will regulate circulation and improve assimilation; a pair of lungs that will purify your blood; a liver that will work as nature designed it should; a set of nerves that will keep you up to the standard of physical and mental energy. I will increase your nervous force and capacity for mental labor, making your daily work a pleasure. You will sleep as a man ought to sleep. You will start the day as a mental worker must who would get the best of which his brain is capable. I can promise you all of this because it is common-sense, rational and just as logical as that study improves the intellect.

***My system is taught by mail only and with perfect success, requires no apparatus whatever, and but a few minutes' time in your own room just before retiring.***



By this condensed system more exercise and benefit can be obtained in ten minutes than by any other in two hours, and it is the only one which does not overtax the heart. It is the only natural, easy and speedy method for obtaining perfect health, physicial development and elasticity of mind and body.

**An Appreciative Testimonial from the Contracting Freight Agent of the Chicago, Rock Island and Pacific Railway Co.**

KANSAS CITY, MO., December 22, [illegible].

MR. ALOIS P. SWOBODA, Chicago, Ill.

*My Dear Mr. Swoboda:*—Although it is less than two months since I first commenced work at your system of physiological exercise I am most thoroughly convinced that your system is a decided success. A comparative statement of my measurements will show you what I have accomplished in the short period of less than two months.

MEASUREMENTS:

| | At beginning. | In 60 days. |
|---|---|---|
| Chest normal | 33 | 38½ |
| " contracted | 31¾ | 31¾ |
| " expanded | 34½ | 39½ |
| Waist | 29 | 29 |
| Neck | 13¼ | 14 |
| Biceps | 10¾ | 13¾ |
| Forearms | 9⅝ | 10¾ |
| Weight | 137 | 150 |
| Height | 5 8½ | 5 8½ |

In addition to this large increased muscular development my general health is decidedly improved. Thanking you for what you have done for me, and with best wishes for your continued success, I am,

Very sincerely,
T. O. JENNINGS, Contg. Fgt. Agt.

Pupils are both sexes, ranging in age from fifteen to eighty-six, and all recommend the system. Since no two people are in the same physical condition, individual instructions are given in each case. Write at once, mentioning THE LITERARY DIGEST, for full information and convincing endorsements from many of America's leading citizens.

**ALOIS P. SWOBODA**

**51 Washington Street, CHICAGO**

The new Pacific steamship *Korea* is launched at Newport News; she is the largest vessel ever launched in this country.

President Hadley of Yale delivers an address on "Government by Public Opinion" at the Charter Day exercises of the University of California.

March 24.—Governor Odell confers with Senator Platt and the Republican leaders, in New York, and the announcement is made that no police bill will be introduced at Albany for the present.

AMERICAN DEPENDENCIES.

March 18.—*Philippines:* The Civil Commission decides to make a separate province of the Island of Marinduque, in the Philippines.

March 22.—An engagement in Cavité province, Luzon, results in the capture of many Filipino officers and men.

March 23.—General Funston, with a few officers and a company of scouts, engages in a daring attempt to capture Aguinaldo, who is believed to be in hiding in Isabella province, Luzon.

Payment for Cagayan, Sulu, and Sibutu is made to the Spanish Minister by Secretary Hay, and these islands become the property of the United States.

Very many solvers failed to get the solution of these problems because they didn't look far enough. Concerning 541, the key moves relied upon were Q x R P ch, B—Kt sq, ch. In each case R x Q or B *check*. The other move is Kt—Kt 6, with the intention of cutting off the R, and mating by B—Kt sq, or if R x Kt, then Q x R P mate. But this is stopped by P—K 4. The R must go to the Q R 5; then if P—K 4, 2 Kt—B 5, mate.

A number of solvers sent (542):

1. R—K 2 / Kt—B 7  2. Kt—B 7 / Any  3. Kt—K 5 mate. This is stopped by 2. ..... / Kt x P.

In addition to those reported, Dr. J. H. S., got Mackenzie's end-game. A. G. Beer, Ashland, O., 537 and 539.

Twenty-seven States and Canada represented by our solvers this week.

ERRATUM.

Problem 544 is unsound.

### Problem 546.

# Stranger Than Fiction

## A Remedy Which has Revolutionized the Treatment of Stomach Troubles.

The remedy is not heralded as a wonderful discovery nor yet a secret patent medicine, neither is it claimed to cure anything except dyspepsia, indigestion and stomach troubles with which nine out of ten suffer.

The remedy is in the form of pleasant tasting tablets or lozenges, containing vegetable and fruit essences, pure aseptic pepsin (government test), golden seal and diastase. The tablets are sold by druggists under the name of Stuart's Dyspepsia Tablets. Many interesting experiments to test the digestive power of Stuart's Tablets show that one grain of the active principle contained in them is sufficient to thoroughly digest 3,000 grains of raw meat, eggs and other wholesome food.

Stuart's Tablets do not act upon the bowels like after-dinner pills and cheap cathartics, which simply irritate and inflame the intestines without having any effect whatever in digesting food or curing indigestion.

If the stomach can be rested and assisted in the work of digestion it will very soon recover its normal vigor, as no organ is so much abused and overworked as the stomach.

This is the secret, if there is any secret, of the remarkable success of Stuart's Dyspepsia Tablets, a remedy practically unknown a few years ago and now the most widely known of any treatment for stomach weakness.

This success has been secured entirely upon its merits as a digestive pure and simple because there can be no stomach trouble if the food is promptly digested.

Stuart's Dyspepsia Tablets act entirely on the food eaten, digesting it completely, so that it can be assimilated into blood, nerve and tissue. They cure dyspepsia, water brash, sour stomach, gas and bloating after meals, because they furnish the digestive power which weak stomachs lack, and unless that lack is supplied it is useless to attempt to cure by the use of "tonics," "pills" and cathartics which have absolutely no digestive power.

Stuart's Dyspepsia Tablets can be found at all drug stores and the regular use of one or two of them after meals will demonstrate their merit better than any other argument.

These trade-mark crisscross lines on every package.

# R·I·P·A·N·S

I can strongly recommend R·I·P·A·N·S Tabules as the best to my knowledge of any patent medicine for family use In fact I rather find it a difficult task to state what ills during the four years of their use in our family they have not cured. We have used them for severe cases of dyspepsia, biliousness and constipation with wonderful results. My wife had suffered for years with indigestion of the worst form, having tried many of the so-called patent medicines with no positive results. The late Dr. Siglinger, of Coral and York Streets, frequently recommended the use of R·I·P·A·N·S Tabules, and, thanks to him as well as to the Ripans Chemical Company, we have at last solved the problem, and I am pleased to state my wife no longer suffers with a complaint that was not only an annoyance but one which made her blush to be in society. I am never without them myself, and always find them a great relief for sour stomach, headache or heartburn. I give you full permission to publish the above and shall at all times be pleased to state in person their true worth to all who seek it. JACOB ATKINSON, 2001 Orleans St., Philadelphia, Pa., Feb. 28, 1901.

There is scarcely any condition of ill-health that is not benefited by the occasional use of a R·I·P·A·N·S Tabule, and the price, ten for five cents, does not bar them from any home or justify any one in enduring ills that are easily cured. A family bottle containing 150 Tabules is sold for 60 cents. For children the chocolate coated sort, 75 for 25 cents, are recommended. For sale by druggists.

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### THE CAPTURE OF AGUINALDO.

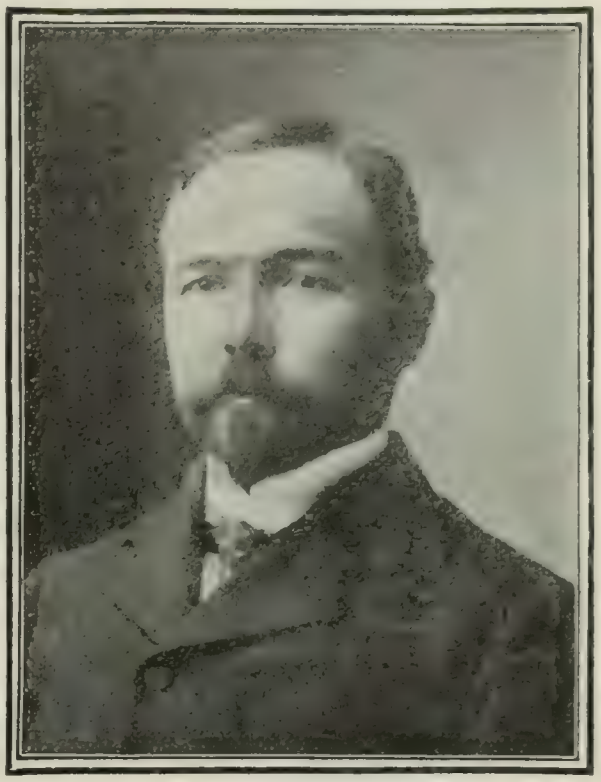
THE trap set for Aguinaldo by General Funston and his four American comrades, and successfully operated with the aid of seventy-eight faithful Macabebe allies, and five ex-insurgent officers who consented to betray the cause for which they had formerly fought, has not only brought Aguinaldo to Manila as a prisoner of war, but has brought practically all the American press, anti-expansionist as well as expansionist, to the conclusion, as expressed by Admiral Dewey, that this "means the end of organized resistance." The great majority of the papers recommend that Aguinaldo be sent to Guam, and heartily approve Funston's promotion. Secretary Long remarks in a newspaper interview that he considers the cooperation of the Filipinos in the capture of Aguinaldo "a significant evidence that the insurrection had lost its vitality among the people themselves"; and an Associated Press despatch from Manila reports that "as the news of Aguinaldo's capture spreads through the archipelago the insurgents are becoming disheartened, and there is a marked increase in the number of individual surrenders." General MacArthur cables as follows concerning General Funston's exploit:

"The transaction was brilliant in conception and faultless in execution. All credit must go Funston, who under supervision General Wheaton, organized and conducted expedition from start to finish. His reward should be signal and immediate. Agree with General Wheaton, who recommends Funston's retention volunteers until he can be appointed brigadier-general regulars.

"I hope speedy cessation hostilities throughout archipelago as consequence this stroke."

Wheaton, who was a brigadier-general, has been promoted by the President to be a major-general, and Funston, who was a brigadier-general of volunteers, has been promoted to be a brigadier-general in the regular army.

This latest deed of daring by the picturesque little Kansas general is generally conceded to outrank even his former achievements, and his mother, at her home in Iola, Kan., told a reporter that altho she "never lost faith in Fred's lucky star before," she "had a feeling this time that he was risking life and everything on a high stake and that the end would be disastrous." This feeling was shared by the Kansas City *Journal* and several other papers, and when the little party returned from their perilous trip into wilds of Northeastern Luzon without the loss of a man and with the native leader in their possession, the reports have it that Kansas "went wild with joy." Some have expressed disapproval of the stratagem employed in the capture; but the New York *Evening Post*, a leader of the anti-expansionist press, says that "if there are those who regret that deceit and trickery and the use of traitors were necessary to capture Aguinaldo, we must point out to them that this is a legitimate part of warfare, which legalizes nearly every practise that is regarded with abhorrence among civilized men in time of peace."



BRIGADIER-GENERAL FUNSTON.

General Funston's party penetrated to Aguinaldo's headquarters by pretending to be a party of insurgents with five American prisoners. The plan was a complete success, and Aguinaldo, learning of their approach, actually sent them provisions on the way, and allowed them to come into his presence, where they easily routed the native guard and made prisoners of Aguinaldo and two of his principal staff officers. The first to seize Aguinaldo was Hilario Placido, a former insurgent major, who was wounded in the lung by the fire of Funston's regiment at Caloocan, and who surrendered and swore allegiance to the United States. Funston's expedition was absent from Manila three weeks.

The papers which have seen nothing good in Aguinaldo before do not revise their opinions now. The New York *Tribune* (Rep.), for example, calls him "a vain, deceitful, cruel, tyrannical adventurer, who has betrayed all who have trusted him and who has sought to aggrandize himself by means of systematic murder and arson"; and the Philadelphia *Press* says:

"It is impossible to forget, even now that he is a helpless prisoner, that he directed the burning of Manila and the assassination of all Americans, without distinction of sex. He has urged a disguised and clandestine warfare against sentries and outposts which a less merciful rule would have quenched in blood.

If he was at last captured by a ruse, it is because his warfare for a year has been only a network of ruses. He has also shown a personal courage, skill, persistence, address, and capacity for maintaining revolt, all used to the hurt and harm of his own people, which stamp him as a partizan leader of ability, capable of gaining and keeping confidence. Any power but England and the United States would execute him in a few hours."

Neither do the anti-expansionist papers desert the Filipino leader in his hour of defeat. The Philadelphia *Times* (Dem.)

EMILIO AGUINALDO.
From a photograph taken at his headquarters in the latter part of 1900.
Courtesy of *Collier's Weekly*.

declares that "as Americans, while we may think Aguinaldo mistaken and wrongheaded, we have no right to denounce him for his effort to assert what he believed to be the American principle of self-government." The Boston *Transcript* (Ind. Rep.), similarly, recalls that "the treaty which made those islands our territory had not been ratified when his army made its famous assault on General Otis's outposts," and says that "therefore, it would be a most draconic stretching of the law to put Aguinaldo on trial for treason." The Philadelphia *North American* (Ind. Rep.), too, remarks that "there is no warrant for holding Aguinaldo a traitor, for he never owed or acknowledged allegiance to the United States, and never admitted Spain's right to sell him for $2.50 on the hoof"; and the Buffalo *Express* (Ind. Rep.) says: "We can not close our eyes to the fact that we Americans would have considered it a virtue in any white race to have done in the same circumstances what Aguinaldo and his followers did, if the revolt was directed against any nation but our own." "Does not Aguinaldo a prisoner," asks the New York *World* (Ind. Dem.), "bring home freshly to the American people the blistering truth that for the first time in their history they are called upon to rejoice at the discomfiture of a man and a people fighting for liberty?" The New York *Evening Post* (Ind.) says of the captured leader: "History can show few brighter examples of patient endurance, intellectual resource, and high principle. We feel sure that such virtues will stir the admiration of every lover of liberty in the world, and that the name of Aguinaldo will find a place eventually in all American hearts."

In connection with this topic, it is interesting to note that the Philippine Information Society, in its last pamphlet, announces its belief that the Filipinos began the war, a point that has been the subject of much heated controversy. It says:

"The editors would say that after careful study of all the accessible evidence they find that according to the most authoritative statements the outbreak occurred as the result of a trespass by four armed Filipinos on territory admitted by the Filipino in command to be within the jurisdiction of the United States. The action of the Filipino trespassers seems to have been an instance of bad discipline in the insurgent army. Certainly it was not ordered on that date by the insurgent leaders, altho the indications are that the leaders had planned to attack in a few days. The claim that our forces instigated the attack for the purpose of securing the votes necessary to ratify the treaty is absolutely unsupported by any evidence which has come to the attention of the editors."

---

**Another Coal Strike Averted.**—Thanks to friendly conference and discussion, the threatened coal strike in the anthracite region seems to have been averted, and, as the New York *Commercial Advertiser* remarks, this will be "welcome news to the public at large, and, no doubt, to the miners." The officers of the United Mine Workers wanted their union recognized by the operators; but, as the officers are not in the employ of the operators, the operators considered them "outsiders," and refused to recognize them. This threatened trouble. "Father Philips," however, pastor of St. Gabriel's Church, of Hazleton, came to New York and saw Mr. Pierpont Morgan; President Mitchell of the union restrained the temper of his brother officers; Mr. Morgan promised concessions; and, as Father Phillips expresses it, "a basis for future harmony between operators and miners has been reached without the least friction to mar the beautiful horizon of peace." The statement of the executive committee of the miners' union states the result more explicitly, as follows:

"The representatives of the operators listened attentively to the presentation of our arguments, and while they would not agree to meet in general joint conference with the miners this year, they did agree that the notices which were posted continuing the advance in wages until April 1, 1902, and agreeing to take up and adjust with their mine employees any grievances they might have, should be interpreted and construed to mean that such grievances should be considered and adjusted with representatives or committees of the mine-workers, and they held out the hope that if, during the present year, the mine-workers demonstrated their willingness and ability to abstain from engaging in local strikes, full and complete recognition of the organization would unquestionably be accorded at a future date.

"While your committee regret to report that they were unable to secure all the concessions we hoped for and believe we are justly entitled to, we are of the opinion that the willingness of the various coal companies to receive committees representing

mine workers for the adjudication of grievances records an important advance step in the right direction and presages more harmonious and equitable relations between employers and employees than have prevailed in the anthracite region heretofore."

## NEW PRESIDENTIAL APPOINTMENTS.

THE reported selection of Mr. P. C. Knox, of Pittsburg, for Attorney-General, to succeed Mr. Griggs, who has resigned, brings out some criticism from the opposition press, which point to Mr. Knox's connection with the Carnegie Steel Company as another evidence that the Administration has surrendered to the trusts, especially to the steel trust. Says the Philadelphia *Times* (Dem.): "Mr. Hanna has now been taken formally into the great combine, and simultaneously it absorbs the Department of Justice. The Senate was annexed some time ago, and if Mr. Morgan sees anything else in the Government that he wants he will doubtless ask for it, and get it. The campaign fund ought to be easy of replenishment next time." The Pittsburg *Commercial Gazette*, however, comes to Mr. Knox's defense as follows:

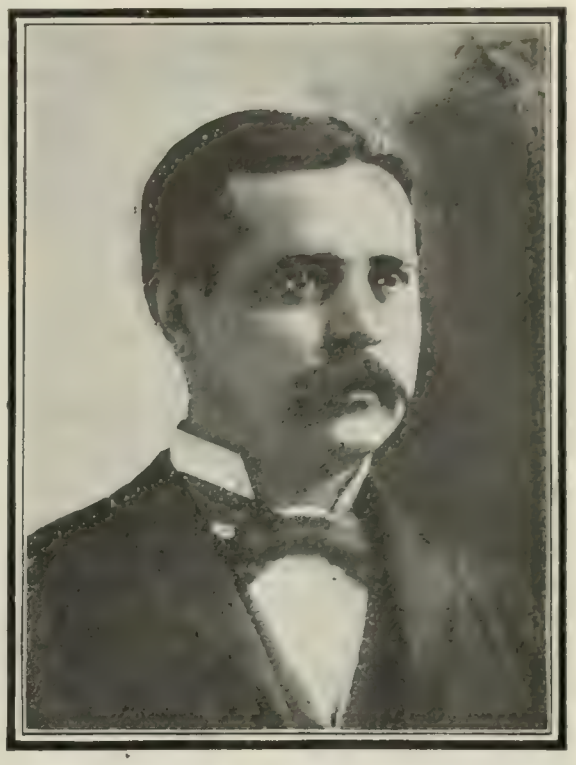
"It is true that he is the legal representative of many great corporations; but in his large and extensive practise it has been his lot oftener to contend for the rights of individuals as against corporations, than for those of corporations against individual citizens. The reason why he is the counsel for so many corporations is simply because of his great legal ability. Corporations are the natural outcome of modern business conditions. All large business affairs, and many small ones, are managed under the authority of our corporation laws. The very newspapers which inveigh so vigorously against the corporation lawyer are for the most part themselves incorporated. The lawyer who does not keep himself informed on this branch of law is not fit to be entrusted with any important legal business; and we venture to say that if Mr. Bryan himself had been elected President it would have been impossible for him to have selected an attorney-general who had not been to a greater or less extent a representative of corporations in his home practise.

"But whatever may have been the trend of Mr. Knox's practise in the past, those who know him well, and who are conversant with his personal and professional integrity, will realize that he will look after the interests of the Government with the same zeal and fidelity he has always displayed in the conduct of his private practise. Heretofore he has had many clients, hereafter he will have but one, and to the extent of his learning and ability he will protect the interests of that one client against all wrongdoers, whether corporations or individuals."

Another recent appointment that is encountering considerable criticism is the President's selection of William A. Rodenberg, of East St. Louis, Ill., as Civil Service Commissioner. About a year ago Mr. Rodenberg, then a member of the House of Representatives, voted to strike out of an appropriation bill the item providing money for the support of the commission, and some papers think they see in this an evidence of his unfriendliness for its work. The New York *Press* and several other Republican papers, in addition to the New York *Evening Post*, *Times*, and *World*, the Springfield *Republican*, the Philadelphia *Record* and many other Independent papers, have expressed the hope that the President will withdraw the appointment.

The advertised sale of the Philadelphia *Record* (Ind. Dem.) recalls to mind the interesting fact that the Government has actually been running the paper as an anti-administration organ. *The Record* fell into the hands of the Treasury Department as part of the assets of the defunct Singerly Bank of Philadelphia, and, as it was running prosperously as an Independent Democratic paper, the Treasury Department directed the receiver to continue it as such. *The Record* says of the Rodenberg appointment: "One of two things President McKinley must certainly do. He must either recall his appointment of Civil-Service Commissioner Rodenberg or take in his civil-service sign."

PHILANDER C. KNOX.



WILLIAM A. RODENBERG.

## THE FAR EASTERN WAR-CLOUD.

THE "ancient friendship" between Russia and the United States, which is always alluded to in the Russian communications to our State Department, does not seem to be indulged in just now by the American newspapers, whose sympathies are frankly and openly with China in the Manchurian affair, with Japan in the rivalry for Korea, and with the rioters and malcontents in the Czar's home dominions. Few of the newspapers doubt that war between Russia and Japan is "in sight," and many of them believe that the sooner it begins the worse for Russia. Observers of the situation have been saying for several years what the first secretary of the Japanese legation in London said last week, that the question is merely whether Japan is "to fight Russia now or to fight her later on," and the New York *Journal of Commerce*, in an enlightening editorial, tells why. The Japanese archipelago, in population, in area, and in progressive spirit, strikingly resembles the British Isles. Like Great Britain, too, Japan has to import foodstuffs, and as the population is increasing at the rate of 400,000 a year, the people must of necessity turn to manufacturing, and as the manufacturing increases, the more pressing becomes the demand for a foreign market. This triple demand, for a source of food-supply, for an outlet for surplus population, and for a foreign market, is met by the kingdom of Korea, and next by Manchuria. But on the north and west the Russian is crowding hard upon Manchuria and Korea, and "the question is," says *The Journal of Commerce*, "whether it shall be the destiny of Korea to be counted as a Russian province or an appanage of Japan, and it is becoming every day more probable that this question will not be settled except by the arbitrament of war." Manchuria would be Japanese territory to-day had not Russia, France, and Germany stepped in at the close of the Chinese-Japanese war and compelled Japan to accept cash instead of territory as indemnity; and it is remarked that the irony of history is shown in the fact

that Russia herself is now trying to take the province that she so sternly saved to China half a dozen years ago, and that Japan may prevent it with her new navy that was built with the cash indemnity.

As to the Russian side of the contention, *The Journal of Commerce* says that "obviously, with the whole of Korea in Japanese hands, the overland connections between the Russian base on the Pacific and that in the Gulf of Pe-chi-li would never be safe"; but, it continues, "it need hardly be added that, with Korea in Russian hands, there would be nothing to prevent the government of the Czar making another Finland of Japan."

"Bismarck once said," remarks the Springfield *Republican*, "that if war was to come sooner or later, he preferred to have it later; the Japanese may conclude that if war must come with Russia sooner or later, it were better to have it sooner." This view is explained by the New York *Mail and Express*, which says:

"With her Transsiberian railroad incomplete, with her forces acting among a remote and hostile population and overmatched by those which Japan has to hand, and with her Asiatic fleet outclassed, Russia would have the same ugly problem to handle that proved too weighty for Napoleon when he reached across Europe to attack Moscow. Now, if ever, is the time for Japan to vindicate her claim to the leadership of the yellow man. What Russia contemplates in North China is merely an embarrassment to us and something more to Europe; it is a matter of life and death to China and of only less import to Japan."

Russia has a far greater army and greater navy than Japan, but so large a part of both arms of the service is tied up in Europe and European waters that Japan seems to be, on the spot, more than a match for the forces of the Czar. If France should join Russia, however, the balance would be the other way. The United States and Great Britain have joined Japan in protesting against the Russian absorption of Manchuria, and many papers think that these protests have nerved the Chinese officials to their refusal to assent to the spoliation; but no one seems to believe that our Government will resort to force, even if Russia disregards our wishes. Russian absorption of Manchuria might mean the loss of our trade in that rich province, however, and the Providence *Journal*, the Washington *Star*, and other influential papers urge that every protest that our Government can make, short of actual force, should be made.

The Boston *Transcript* thinks the powers ought to interfere to prevent a Russo-Japanese war and the defeat, which it thinks would follow, of Japan. It says:

"The story of David and Goliath has always been an interesting one, but repetitions of it have not all had as satisfactory endings as the original. . . . Certainly the other powers have some responsibility in the matter of preventing such an unequal struggle as is here threatened. They can not stand by, unless the whole world has become brutalized at once, and see this new civilization extinguished in its first blossoming. The peace and progress and welfare of the world depend upon its fruitage. It should be guided and nurtured, and, if necessary, even restrained, that it may not be destroyed by such a cataclysm of world-combats. It is the child of a new century, and to see it cut off as it just comes upon the stage of being would indeed be cause for world-bereavement. Better that a dozen Manchurias should be Russianized than that such a tragedy should occur."

## IS REVOLUTION IN RUSSIA NEAR?

THE leading part that Russia has played in international affairs during recent months has had the effect of largely diverting attention from her internal problems. Recent events, however, indicate that, as the Baltimore *News* puts it, "Russia is the same old Russia, with a large percentage of its population perpetually under arms to keep down aspirations among the dumb masses, who support the burden of the state." "While the Czar, conscious of the power of his people," adds the same paper, "has been reaching out for dominion over Asia, an enemy has appeared at his very throne which threatens to drag him down and pull his powerful system in ruins about his ears." The students' rebellion at the government universities, resulting in the arrest and imprisonment of several hundred young men and women; the recent riot in St. Petersburg in which more than a hundred workmen were killed and wounded by Cossacks; the assassination of M. Bogoliepoff, Minister of Education, and attempted assassination of M. Pobiedonostzeff, Procurator of the Holy Synod; the frequent plots on the Czar's life, and the threatening letters received by the members of the cabinet, have all combined to create a veritable "reign of terror" for the high officials in St. Petersburg, and are regarded in many quarters as portending a coming revolution in Russian society. "It is quite possible," observes the Brooklyn *Standard-Union*, "that this depressing influence has had something to do with Russia's reported withdrawal of some of the demands upon China anent Manchuria and the agreement with England to submit the Tien-Tsin dispute to the arbitration of Field-Marshal Count von Waldersee." On the other hand, the opinion is expressed in several papers that Russia intentionally magnified the Tien-Tsin dispute in order to draw attention away from her home troubles.

The immediate cause of the disturbances is generally recognized to be the attempt of the authorities to suppress free speech. Says the Boston *Transcript*:

"In Russia the stu-

dents and the educational authorities have been more or less in conflict for decades. That there are grievances on both sides nobody doubts who has studied the situation. It must none the less be emphasized not only that the pupils of the Russian universities are denied the rights of corporate existence and of public meeting, save as these may be conceded by the rector, but that they are subordinated for disciplinary purposes not, as in Western Europe, to the university itself, but to the civil authorities outside. The result of this arrangement is to subject them to almost continual interference at the hands of the police and military, as well as on occasion to bring down upon them the punishment of actual physical chastisement, administered frequently within the walls of the university itself.

"For decades, then, the authorities were confronted with the simple problem of student insubordination; and when the Cossack's whip failed to reduce the recalcitrants to order, it was customary to add a few days' imprisonment, or to dismiss the offenders from the university, and therefore from all further professional opportunities whatsoever. But in recent years there has been a change, both in the aspect of the problem and in the character of the forces arrayed against each other. The students are no longer alone in their struggle. The growth of industry has brought to their side a class which, tho new in the empire, already promises to have an important bearing on its political development. Finding in this class a new field for political propaganda, the students have not hesitated to render it their help on the occasion of numerous strikes; and this help the artisans now return whenever there is trouble between the students

and the authorities. Instead, therefore, of mere 'illegal assemblies' within the university grounds, or demonstrations in front of churches, the authorities have now to deal with formidable disturbances on a large scale, in which the armed rioters are led with determination against trained troops."

"Is it surprising, under such circumstances, that Nihilism should flourish among the Russian educated classes?" asks the St. Petersburg correspondent of the New York *Times*. "If the mind were free in Russia," continues the New York *World*, "there would be no revolt among students. If speech were free, the Czar would learn of the wrongs done to his people of which he is now probably ignorant. If justice were even-handed, there would be no talk of anarchy. The trouble in the archaic autocracy of Russia is that they are trying to repress the irrepressible. When gunpowder and fire meet, there is bound to be an explosion."

Much speculation is rife as to the outcome of present tendencies. "At any moment," remarks the Philadelphia *Telegraph*, "the world may be furnished with a startling illustration of the traditional definition of the Russian form of government—a despotism tempered by assassination." The Atlanta *Journal* adds, in equally alarmist tone, that "it would not be surprising to see the flames of revolution burst forth in Russia at any time." In the opinion of the Philadelphia *Inquirer*, however, "there can be no revolution until the masses are ready for it, and that will not be for many a long year yet"; and the Denver *Republican* thinks that even if the Czar desired to inaugurate constitutional reforms, the influence of his immediate counselors is such that he would be utterly powerless. The New York *Tribune* says:

"The nature of the present agitation is not yet clearly revealed, and it would be scarcely judicious to approve it as a laudable seeking for constitutional freedom or yet to denounce it as purely criminal Nihilism. There are in it symptoms of both qualities, and it may be that both exist. It is to be noted that the students are conspicuous in it. As a rule, students are constitutional reformers rather than Nihilists, tho they sometimes adopt the violent processes of the latter. . . . With aspirations of the Russian people toward constitutional reforms and liberal institutions the world will cordially sympathize. For plots for blowing up palaces or otherwise murdering the Emperor and his ministers it can have nothing but detestation, no matter by whom they are made. And if constitutional reformers in Russia are resorting to the methods of Nihilists, the sooner they mend their ways the better it will be both for them and for their cause."

The Nihilist point of view is well summed up in the following words of M. Winchevsky, himself a Russian by birth and a well-known Social-Democrat, at a recent mass-meeting on the East Side of New York: "If a thief or murderer came to attack you and either robbed or attempted to kill you, no jury in a court would adjudge you guilty of any crime should you kill him. Now, the Czar of the Russias is killing hundreds of his people. If those people—or rather, the survivors—rise up and kill him, will the jury in the case, which is the whole civilized world, declare them guilty?"

---

**"Criminal" Forms of Insurance.**—An original suggestion is made by the New York *Evening Journal* to counteract what it calls the "criminal" insurance that "makes it unnecessary for the owner of a dangerous building to see to it personally that it shall not burn down." "No man," it says, "should be allowed on any pretext whatever to insure himself by fire in the case of a building which, if burned, would endanger the lives of others." It continues:

"There are in New York various theaters and hotels generally known to be dangerous fire-traps. The owners of these hotels and theaters are the individuals who run the least risk on account of their dangerous qualities. The buildings are insured fully, usually for more than they are worth. If one of them should burn down, it might mean the loss of hundreds of lives, but to the proprietor it would mean no loss at all and possibly a profit. He would receive the full value for his defective building and be able with his insurance money to put up a modern and more profitable structure on the old site. . . . . .

"Recently the Windsor Hotel burned in this city and destroyed a great many lives. It was owned by an enormously rich man. It was fully insured. This owner, whose wealth runs into the millions, could with perfect ease have made his hotel fireproof.

"Everybody knows that he would have made it fireproof—had he been forbidden by law to insure it.

"With his building fully insured he ran no risk, and therefore year after year he risked the lives of hundreds of men and women without danger to himself. Ultimately the burning of his property gave him a large comfortable sum in cash in place of an antiquated building, and at the same time burned up many men and women and children.

"The laws should absolutely forbid insurance on hotels, theaters, tenement-houses.

"If the law did forbid such insurance, you would see fewer

fires, and the owner of a dangerous theater or hotel would be found at least once a day looking to his property, watching the water connections, employing non-combustible material so far as possible, and at the first opportunity erecting a fireproof structure."

## VERTICAL GROWTH OF NEW YORK CITY.

THE transformation, in a few years, of the flat, low-lying city that New York used to be into the castellated town shown in the accompanying illustration is considered a remarkable evolution. *The Scientific American* calls the view "one of the most marvelous spectacles in the world." Chicago began the building of "skyscrapers," but New York has far outstripped the Western metropolis, and now leads the cities of the world in the number and height of its tall buildings, altho some of them are more notable for height than for beauty. Says *The Scientific American:*

"Architecture of the composite steel-and-masonry type has helped to solve the most difficult problem with which New York City is confronted. The shape of the island is such that a business center such as that represented in our engravings has no possibility of enlarging its borders, being shut in by the broad waters of the Hudson and East rivers. If room was to be found for the rapidly multiplying financial interests which gravitate to the district lying between City Hall Park and the Battery, it could only be secured in a vertical direction by building story upon story and utilizing that free space to whose occupation there was no limit except such as might be imposed by conditions of a structural and operative kind. The limit to the height of these buildings has been determined indeed far more by the conditions of their operation than by any difficulties of a structural kind; since it would be perfectly practical to construct office buildings 500 or 600 feet in height, if there were any advantage in so doing. It was found, however, that the space occupied by elevators became so great, when a building exceeded a certain number of stories in height, as to reduce very seriously the available office floor space, and by common consent it seems now to be agreed that the limit of economic height lies somewhere between sixteen and twenty stories."

**Increasing Number of Immigrants from Southern Europe.**—The changing character of European immigration to America, to which attention was directed in THE LITERARY DIGEST of November 10 last, is still further emphasized by the figures published in the Government "Statistical Abstract of the United States" for 1900. From this report it appears that 114,847 immigrants came to this country last year from Austria-Hungary alone—more than double the total of 1899, and about 35,000 greater than the highest number ever before recorded. Italy contributed 100,135, as compared with 77,419 the preceding year and 76,055 (the previous highest record) in 1891. Portugal sent more than ever before, and Rumania's tide of emigration has risen from 494 in 1886 to 6,459 last year. Russia (exclusive of Poland), geographically northern, but ranking with the Southern countries in the character and financial standing of its emigrants, also broke its previous record with a total of 90,787. Immigration from Northern Europe, on the other hand, has shown very marked decline during the past ten years. From Great Britain last year came but 48,287, as contrasted with a yearly average of about 125,000 from 1886 to 1893. From Germany came only 18,507, as compared with 130,758 in 1892. The total number of European immigrants last year was 424,700, and of these about 230,000 came from the Southern European countries.

# LETTERS AND ART.

## ZOLA'S LATEST NOVEL AND THE LITERARY FUTURE.

NEW forms and tendencies in literary art are being predicted by distinguished novelists, including Marion Crawford and Zola, tho no one has undertaken to describe the nature of the probable change. In a recent symposium in the Paris *Figaro*, Zola expressed his ideas on the literary situation and admitted that he had lost some of his early "illusions," tho in his own work he intended to remain consistent and true to his fundamental ideas of what the novel should be and what it should seek to do for humanity. Referring to the salient characteristics of the past century's art and letters, he said among other things:

"We—nineteenth-century writers—are wholly the product of the thought of the eighteenth century. The influence upon us of that thought has been all-pervasive. The two sources, which in their onward flow developed during the century into mighty streams, are Diderot and Rousseau. At intervals they tend to combine, as in Flaubert or in our own day. How shall we define these two great currents? Call them reality and imagination, if you will.

"The romanticists represented the latter. They had no sense of reality, no concern for it. Only in so far as the effort after 'local color' went did they, even superficially, care for reality. Moreover, the artistic side was with them ever paramount. It is not that they rejected observation; they simply declined to penetrate into the depth, the soul of things.

"Victor Hugo sprang from Rousseau. On the other hand, Stendhal, the irreproachable observer who saw things in their true light and distorted nothing, is to be traced to Diderot. From Stendhal we come to Balzac, who literally grew up in the shade. With his first work Balzac established the principles of the social novel, in connection with the determining conditions of the environment and society, the formulation of which relation was the special work of Taine. Since Balzac, we have marched forward and fought for truth and reality. The sentimentalists and artificial romanticists have disappeared, and they will hardly be remembered. Their defeat by the realists, naturalists, and so on, is complete and decisive.

"And yet these names, these external designations of schools, really signify very little. They are banners, standards under which men gather, quarrel, fight. Oh! we were vain in our youth. . . . But each generation makes its step, its contribution. I have faith in advancing humanity—in literary as well as in social progress. Humanity is moving somewhither, making three steps forward and two backward, but at any moment leaving some positive result behind. Having arrived at truth, reversion to error becomes impossible. Literature has its own conquests and safe acquisitions. Men of letters are soldiers, and we shall keep what they have gained for us.

"The realistic novel, the novel based on observation, on study, on the larger truth, is the novel of the future, and any return of idealism will be temporary and partial. Art hereafter must be truthful, social."

In view of this retrospect, with its hopeful conclusion for the main purpose of his school, Zola's new novel, "Work," already published in France and Russia, and forthwith to be brought out in an English translation, presents an interesting subject for analysis. One of the foremost Russian critics, V. Bourenin, compares it, not only with Zola's other novels, but with the more "modern" writings of D'Annunzio and the decadents, and declares it worthy of the highest praise, in spite of its faults. Zola, according to Bourenin, is a true representative of the "sixties"—a time of clear, definite, rather crude ideas, when much was expected of "science" and the experimental method in art. He is still the sociologist, the student of large social aggregates, environments, and conflicts. He troubles himself little with internal and subtle questions of individual psychology, but institutions, customs, interests, and great changes, however caused, always attract his attention and afford him material. Bourenin continues, with special reference to the new novel:

"The work is more like Zola's former productions than 'Fécondité.' It opens with a large and gloomy picture that is hellish both in its nature and the destination of the product which the workmen figuring therein are making—for it paints one of those terrible factories where weapons are manufactured for the 'legal' destruction of human beings. In this picture there is, perhaps, too much detail, too minute and photographic or 'documentary' a study of the scene—something which takes Zola clean over to the other side of real art. But nevertheless the picture is clear, intelligent, and profoundly shocking.

"Alongside of this picture there is another, on the same large scale and of the same impressive nature, the picture of the plutocratic proprietors of this factory, the exploiters of labor who are outwardly so contented and complacent and inwardly so decadent. In these two pictures the old master of the 'Rougon-Macquart' series is fully revealed to us, with the whole might of his convincing realistic art, the whole energy of his effective protest against the sickening horrors of modern social organization, modern industrial iniquity, modern inhumanity in the relations between masters and men. He protests with external calmness against the evils of present reality, without hysteria, sentimentality, phrasemaking, and tearfulness, but with characteristic power and austere concentration. He remains objective, but he does what it is the duty of every honest artist to do—compels us to look into the precipice which threatens society; he warns us, he shows us what we are."

Bourenin confesses that the critics of naturalism would rather have the power, honesty, candor, and real knowledge of life of the writers of the Zola school—the men of the sixties—than the affectation, pettiness, egotism, obscurity, and verbiage of the modern romanticists, symbolists, decadents, etc.—*Translation made for* THE LITERARY DIGEST.

## CRITICAL ENGLISH VIEWS OF MR. MABIE'S SHAKESPEARE.

THE appearance, in sumptuous form, of Mr. Hamilton Wright Mabie's "William Shakespeare, Poet, Dramatist, and Man," brings out some favorable comment in the English literary journals. The praise, however, is largely for its external form and cautious spirit. The highest commendation that *The Athenæum* has to bestow upon it is that it is a "safe performance." This journal says (January 26):

"Little that is known concerning Shakespeare is omitted from its pages: the treatment is pleasingly and effusively appreciative, and conjecture, especially ribald conjecture, is all but banished from its pages. That Shakespeare poached is conceded by his latest biographer. A stray shaft or two finding it way to the squire's or the queen's deer is not likely to be regarded as an unpardonable offense in a country in which, to the best of our knowledge, there are as yet no gamekeepers. It is granted, then, that such evidence as is obtainable when 'taken as a whole . . . seems to confirm the poaching tradition.' That Shakespeare's married life was unhappy our author, in common with some other writers, takes leave to doubt. The journeys to London took place, it is assumed, by the High Wycombe and Oxford route, and there is even an illustration from an excellent old print of the Crown Tavern at Oxford, now no longer existing, at which, according to tradition, the poet used to stay. That this inn was kept by John d'Avenant, that mine hostess's superior charms tempted the wayfarer, and that the relation of godfather in which Shakespeare stood to young William d'Avenant was, as the future author and manager was not averse from hinting, emblematic of a closer tie—all this is not mentioned, altho the authority for it is as good as that for many other so-called facts in the life. All that Mr. Mabie cautiously and prudently says is that 'the Crown Inn, which stood near Carfax, in Oxford, was the center of many associations, real or imaginary, with Shakespeare's journeys from the Capital to his home in New Place.'

"'This is wholly characteristic of the manner in which Mr. Mabie's task has been executed."

*Literature* (February 23) takes a rather similar view, but is somewhat severe upon Mr. Mabie for some alleged shortcomings:

"Within strictly defined limits, his volume has considerable merits. It is well arranged and well proportioned, and the author shows skill and judgment in selecting those aspects of the plays which throw light on the dramatist's life, thought, and art. His style is luminous, and has a dignified, rhythmical movement, tho certain words like 'poise' occur with somewhat irritating frequency. He is at his best in discussing some of the wider aspects of his subject, as in the chapter on 'The ethical significance of the tragedies.' Thus the following passage contains an illuminating generalization, never, as far as we are aware, more tersely and convincingly expressed:

"'Shakespeare's ethical view of life was rooted in realities and had the large vigorous vitality of an elemental order, spacious enough to admit of the full, free, and normal development of the human spirit on all sides. . . . Into the region of pure spiritual impulse and ultimate spiritual relationship Shakespeare did not penetrate; in that fact lies his limitation. If to his other gifts had been added the spiritual insight of Dante, he would have been not only the foremost but the ultimate interpreter of the life of the race.'

"Much insight and mastery of apt phrase are shown in some of the short appreciations of Shakespearian characters. Thus of Falstaff it is truly said:

"'It would be as absurd to apply ethical standards to him as to Silenus or Bacchus; he is a creature of the elemental forces; a personification of the vitality which is in bread and wine; a satyr become human, but moving buoyantly and joyfully in an immoral world.'

"Where he errs grievously and inexcusably is in the frequent inaccuracy of his references to the literature contemporary with Shakespeare's works. No one can hope to interpret the dramatist adequately without a closer familiarity with Elizabethan literature as a whole than Mr. Mabie has acquired. Thus he repeats the superficial statement that 'Love's Labor's Lost' 'betrays the influence' of Lyly's 'Euphues.' Now it has often been shown that the play has nothing to do with the distinctive peculiarities of the Euphuistic style, of which Mr. Mabie has evidently a very hazy conception. The statement that 'the poets of his own time—Drayton, Brooke, Weever—were under the spell of his genius' is mere rhetoric; Drayton's praise of Shakespeare in his poetical epistle to Reynolds is curiously cool, and his sonnets are more likely to have influenced those of his great contemporary than *vice versa*. Mr. Mabie's knowledge, indeed, of Elizabethan sonnet literature is very superficial. He seems to think that all Shakespeare's predecessors in this branch of poetic art used the same sonnet-structure as himself, not realizing that Wyatt, for instance, adopted the Petrarchian model save for the introduction of a final couplet. Nor is he better versed in Elizabethan prose. He speaks of Greene's 'unmistakable reference' to a lost play on Hamlet, being evidently unaware that this all-important allusion occurs not in Greene's 'Menaphon,' but in Nash's prefatory epistle to that romance. These and similar blunders render Mr. Mabie's work of comparatively little value to Shakespearian scholars."

*The Saturday Review* (March 16) says:

"His endeavor has been to summarize, and in summarizing to popularize; to write a smooth narrative, meant for those who run and read, from which some notion might be gained of Shakespeare's work and of that conjectural personality which has gradually built itself up as the real Shakespeare. This he has done; his narrative is clear, almost elegant, based on a sound acquaintance with the best authorities; at times its literary criticism is singularly happy. He can write with point and pungency of epithet, as in the sentence which defines Falstaff: 'Shakespeare created a kind of English Bacchus at a time when every kind of fruit or grain that could be made into a beverage was drunk in vast quantities; and sack, which was Falstaff's native element, was both strong and sweet.' Always lucid and explicit in his account of the manners and influences of the time, he is sometimes novel and ingenious in his explanations, as in this significant note on the absence of scenery from the stage. 'This absence of visible scenery imposed on the dramatist the task not only of creating the plot and action, but the background of the play; and much of the most exquisite poetry in our language was written to set before the imagination that which the theater could not set before the eyes. The narrow stage with its poor devices was but the vantage-ground from which the poet took possession of the vast stage, invisible but accessible, of the imagination of his auditors; on that stage alone, in spite of modern invention and skill, the plays of Shakespeare are adequately set.'"

## THE BEAUTIES OF FRENCH AS SPOKEN BY SARAH.

MME. SARAH BERNHARDT is now upon the Pacific coast, enchanting the lovers of drama and French by her brilliant interpretations of Rostand and Shakespeare. Her presence there forms the occasion for some pensive reflections on foreign languages by Mr. Jerome A. Hart, a San Franciscan who in his youth "learned French," but who in his later years "learned that he had not learned French." He then went to work to learn *some* French. But, he says, "if it be difficult to learn to speak French without an accent, it is not easy to understand it without a break. I have for years had a good reading knowledge of French. I have read many of the standard novelists like Balzac, Hugo, Dumas the father, and Dumas the son. I have read scores of dramas by such playwrights as Sardou, Scribe, Labiche, and Augier. I have read numbers of opera librettos by Halévy and Meilhac." And yet, says Mr. Hart, "to my shame be it spoken, I can go to the French play and yet fail to understand it." Indeed, he has often wondered whether the average individual is in the habit of telling the truth about his knowledge of French. Says Mr. Hart (who is editor of the San Francisco *Argonaut*, and writesin that paper):

CARTOON OF MME. BERNHARDT AS "HAMLET."
Drawn for *La Rampe* by C. Léandre.
—*The Critic.*

"This has been borne in upon me all the more strongly since the Bernhardt engagement. Ordinarily truthful persons tell the most astounding legends concerning their knowledge of French. Gray-haired mothers and fathers, who dawdled over Ollendorf half a century ago, proudly assert that their 'French is a little rusty, *but*——' Their grown-up daughters, who pored over Fasquelle twenty years ago, serenely say 'Yes, I am not so well up in French as I used to be, *but*——' The youngest generation, which is still poring over the contemporaneous French grammar, whatever it may be, says, blithely, 'Yes, we finished our French course with Mme. Unetelle last term and understand most of what Bernhardt said, *but*——'

"But, but, but—*mais*, *mais*, *mais*. 'Sentez-vous tout ce que ce *mais* veut dire?' as Bernhardt says in her impassioned speech in the second act of 'L'Aiglon' (and I wonder how many American hearers understood it all—I did not for one).

"Probably I am wrong, and most people did understand it. Possibly I was the only person in the theater who did not understand it. Or it may be that I am only more frank than the other two thousand, for I admit most candidly that I did not. . . . . .

"I do not mean to say by this that I understand nothing at all. That is not my meaning. At the 'L'Aiglon' performance on Monday night, I understood most, if not all, of what Bernhardt said when she was reciting the verse slowly and sounding the mute *e*'s. When she spoke more rapidly, I understood about half

what she said. When she went off—as she frequently did—like an alarm-clock, I understood nothing at all. For the rest, I understood a great deal of what Coquelin said—probably three fourths. When he grew rapid and humorous, I understood a little more than half. Metternich's enunciation was most distinct; I understood all that he said. Of the two history tutors of the duke, I understood perfectly the one who played Obenaus; his speech sounded to me like Metternich's. I understood about half of what Marie Louise said. As for the 'Quelques belles dames de la cour,' I understood them not at all. The Countess Camarata seemed to me entirely unintelligible; she imitates Bernhardt in her alarm-clock delivery with great success. As a whole, therefore, it is probable that I understood perfectly about one half of the spoken words; under favorable conditions about three fourths.

"The dialogs going on around me at a French play discourage me. They show plainly that my neighbors understand everything, while I understand almost nothing. This dialog, for example, went on behind me the other night:

"He—Well, you understand it pretty well, don't you?

"She—Oh, yes, I understand her perfectly. Her French is so Pareezhun, you know.

"The Other He [*on the other side of* Her]—Yes; I understand her better than I understand the other woman—the—er—the what's her name—the—er—you know.

"She—Yes, I know, you mean Marie Louise [*looking at her libretto*].

"The First He [*doubtfully*]—Is that Marie Louise? Why, I thought that she was the one in the big hat.

"She—Oh, no; Marie Louise wouldn't have a hat on, you know. She would be *receiving*. The other ladies would. But of course you understand what she says?

"The First He—Oh, yes, pretty well. You see, I don't *speak* French much, but I studied it when I was a boy, and I *understand* it better than I speak it. You see, even if I don't catch all the words, I sorter—kinder—get the drift, as it were—you understand?

"The Other He—Yes—kinder—sorter—follow it, as it were. Yes, I understand you.

"This remarkable conversation actually went on behind me. Were they honest or are my faculties becoming clouded? Sarah had full steam on at the time, and was blowing off steam at the exhaust. What they professed to understand sounded to me like this:

"Quand je quitte mon père, Alexandre, Annibal . . .
br—r—r—r—r—r—r
br—r—r—r—r—r—r
*comme ça — br —r—r—r*
*br r — r —r—r—r—r*
TOUJOURS!—BR—R—R—R
BR—R—R—R—R—R—R
JAMAIS! BR—R—R
BR—R—R—R—R—R—R
BR—R—R—R—R—R—R
*br r r—r—r—r—r*
br—r—r—r—r—r—r
Lève les yeux au ciel—et vois passer un aigle!"

"It was magnificent, but I didn't exactly know what it was about. . . . . .

"Mince matters as I may, the fact remains that I do not understand the French play. I know that this admission is a fatal error. I know that I am a marked man. My relatives will cease to speak to me; my friends will cut me; strangers will point at me the finger of scorn. But now that I have made my confession I feel easier. A great weight has been lifted from my mind.

"Yet I feel that I am utterly alone. As I toil on through the pathway of life, whether it be short or long, I can not look forward as other men do to an honorable burial. I know that the French-speaking corpses will not permit me to be laid in close proximity to them. Intelligent cadavers will shrink from contact with my ignorant remains. Fortunate shall I be if my pitying relatives do not blazon forth my shame on my tombstone: '*He could not understand the French play.*' And the best that I can hope for at the end of my ignominious existence is merely that I shall not be buried in the Potter's Field."

**College Journals and their Management.**—The Literary Digest lately sent inquiries to a number of representative college journals, East and West, asking for information as to some of the practical details of their editorial management. Replies have thus far been received from nineteen papers, including the Amherst *Student*, the University of Chicago *Weekly*, the Columbia *Spectator* and *Morningside*, the Cornell *Daily Sun* and *Widow*, the Harvard *Lampoon*, the Princeton *Tiger*, the Williams *Lit.*, the Vassar *Miscellany*, and the Yale *Daily News*. Judging from the replies received, college faculties nowadays have almost nothing to do with the conduct of college journalism, and the process of filling staff positions through election by the editorial board seems wellnigh universal. Of these nineteen college papers, only two, the University of Pennsylvania *Red and Blue*, and the Wesleyan *Literary Magazine*, consult the faculty in filling their editorial chairs. In almost all, editors are chosen chiefly from the upper classes, after various competitive tests; and this system seems to give general satisfaction. So far as reported, the method of competition adopted by the University of Chicago *Weekly* is the most stringent, and in effect, tho not altogether in detail, approaches the nearest to the methods of daily journalism. Appointments are made on the basis of merit as shown in a six-months' competition among the reporters, to which position any student is eligible. Twice each year, in June and September, a valuation is made of the amount and quality of work done by each reporter and each editor. The seven whose work is most satisfactory become the editorial board for the ensuing six months, and the others are given places on the waiting list. The decision rests with a merit board made up of the managing and assistant-managing editors and a member of the English faculty of the university. Since the inauguration of this method, a little over a year ago, great improvement is said to have taken place in the paper.

## MR. E. A. ABBEY AND THE CORONATION PICTURE.

The general opinion appears to be that a great honor has been paid to American art in the recent choice of Mr. E. A. Abbey as the painter of the coming coronation scene, to take place in Westminster Abbey next year. It is said that in securing Mr. Abbey, King Edward is sure of a brilliant piece of work, which in color and composition will rival the most famous coronation scenes of the past. The Hartford *Times* (March 20) thus sketches Mr. Abbey's career:

MR. EDWIN A. ABBEY.

"Edwin Austin Abbey is a native of Philadelphia, where he was born in 1852. His wife was a daughter of Frederick Mead, of New York. He was educated at the Pennsylvania Academy of Fine Arts and won his first reputation as an artist by his work as an illustrator for the publishing firm of Harper & Brothers. It was the Harpers who sent him to England in 1878, with the result that he has since spent most of his time there. Many years ago he and other American artists made a home for themselves at a place called Broadway, near Stratford-on-Avon. His first oil painting was not exhibited at the Royal Academy in London until 1890, when he made a great success with his 'A May-Day Morning.' In 1894 he had another distinguished success with 'Fiammetta's Song.' His reputation chiefly rests on

his large decorative panels, including those for the Boston Public Library; Richard III. and Lady Anne, shown at the Royal Academy in 1896; Hamlet in 1897, and King Lear's Daughters in 1898.

"Mr. Abbey's name appears as the illustrator of many books, including beautiful editions of Herrick's poems, comedies of Shakespeare, and 'Old Songs.' His latest success raises him to the highest rank as an artist, and shows that King Edward can be depended upon to recognize genius without regard to nationality. Mr. Abbey is, perhaps, now almost as much an Englishman as an American, since nearly all his active life has been spent in England, but he has not turned his back upon his native land, and the number of his friends and admirers on this side of the Atlantic is very large."

The Brooklyn *Eagle* (March 20) thinks that the selection of Mr. Abbey illustrates "the power and influence of the American colony in England":

"There was a time when such a choice, however suitable it might be on artistic grounds, would have raised a protest from Englishmen, who would have called it un-English and unpatriotic. There was an earlier time when all England would have laughed at the idea of any American being a good enough painter for such an exalted subject. That time has long gone by. Mr. Whistler, Mr. Abbey, and Mr. Sargent have put American painting in the first rank in London, as they and several other artists have done in Paris. Still, the selection of Mr. Abbey for this work is both a personal and national compliment."

## MOST POPULAR BOOKS OF THE MONTH.

THE latest reports from booksellers and librarians in the chief cities of the United States (sent to *The World's Work*, April) give the following results:

BOOK-DEALERS' REPORTS.

1. Alice in Old Vincennes—Thompson.
2. Eben Holden—Bacheller.
3. The Life and Death of Richard Yea-and-Nay—Hewlett.
4. Eleanor—Ward.
5. Stringtown on the Pike—Lloyd.
6. An Englishwoman's Love Letters—Anon.
7. In the Palace of the King—Crawford.
8. Monsieur Beaucaire—Tarkington.
9. Rostand's L'Aiglon—Parker.
10. Uncle Terry—Munn.
11. The Cardinal's Snuff-Box—Harland.
12. Napoleon, the Last Phase—Rosebery.
13. The Mantle of Elijah—Zangwill.
14. Quincy Adams Sawyer—Pidgin.
15. The Master Christian—Corelli.
16. Elizabeth and her German Garden—Anon.
17. The Voice of the People—Glasgow.
18. More Fables in Slang—Ade.
19. The Lane that Had no Turning—Parker.
20. The Redemption of David Corson—Goss.
21. The Life of Phillips Brooks—Allen.
22. Tommy and Grizel—Barrie.
23. That Mainwaring Affair—Barbour.
24. Mrs. Clyde—Gordon.
25. Life and Letters of Thomas Henry Huxley—Huxley.
26. The Stickit Minister's Wooing—Crockett.
27. L'Aiglon, par Rostand.
28. The Reign of Law—Allen.
29. Love Lyrics—Riley.
30. The Conscience of Coralie—Moore.

LIBRARIANS' REPORTS.

1. Eben Holden—Bacheller.
2. Alice of Old Vincennes—Thompson.
3. The Master Christian—Corelli.
4. Eleanor—Ward.
5. In the Palace of the King—Crawford.
6. The Cardinal's Snuff-Box—Harland.
7. Stringtown on the Pike—Lloyd.
8. Rostand's L'Aiglon—Parker.
9. The Reign of Law—Allen.
10. The Life and Death of Richard Yea-and-Nay—Hewlett.
11. Elizabeth and her German Garden—Anon.
12. Napoleon, the Last Phase—Rosebery.
13. When Knighthood Was in Flower—Major.
14. To Have and to Hold—Johnston.
15. The Gentleman from Indiana.—Tarkington.
16. Unleavened Bread—Grant.
17. Wanted, a Matchmaker—Ford.
18. The Riddle of the Universe—Haeckel.
19. Life and Letters of Thomas Henry Huxley—Huxley.
20. The Redemption of David Corson—Goss.
21. The Life of Phillips Brooks—Allen.
22. Tommy and Grizel—Barrie.
23. David Harum—Westcott.
24. The Hosts of the Lord—Steel.
25. The Sky Pilot.—Connor.
26. Richard Carvel—Churchill.
27. Bob, Son of Battle—Ollivant.
28. Black Rock—Connor.
29. Oliver Cromwell—Roosevelt.
30. Janice Meredith—Ford.

Of these, "Eben Holden," "Alice of Old Vincennes," "The Life and Death of Richard Yea-and-Nay," "Eleanor," "Stringtown on the Pike," "In the Palace of the King," "L'Aiglon," and "The Cardinal's Snuff-Box," are among the first twelve of each list, and are probably the most widely read books of the month. All but the third, fourth, seventh, and eighth are by American writers—unless Mr. Henry Harland, who was born in St. Petersburg of American parents, educated in Paris, Rome, and at Harvard, and who has edited *The Yellow Book* in London for fifteen years—can be put down as an American.

In England the following, according to the London correspondent of the New York *Bookman* (April), are the most popular books, all of them by British writers:

Life of Irene Petrie. By Mrs. Carus-Wilson.
The Master Christian. By Marie Corelli.
The Master Sinner. By a well-known author.
An Englishwoman's Love-Letters.
Hosts of the Lord. By F. A. Steel.
With Christ at Sea. By F. T. Bullen.
Queen Victoria: A Personal Sketch. By Mrs. Oliphant.
Rue with a Difference. By Rosa N. Carey.
Private Life of the Queen. By one of H. M. servants.
Brass Bottle. By F. Anstey.
Eleanor. By Mrs. Humphry Ward.
The Cardinal's Snuff-Box. By H. Harland.
Many Cargoes. By W. W. Jacobs.

## WAS KEATS "SNUFFED OUT BY A REVIEW"?

A NEW volume of "The Works of Lord Byron," edited by Mr. R. E. Prothero, and containing some of Byron's letters written in 1820, shortly before the death of John Keats, forms the occasion for some comment on the literary relations of these two poets. Byron, who was then staying at Ravenna, had asked Murray, his English publisher, for some of the newest books; and when, in reply, he had received the last volume of Keats, he wrote back: "No more Keats, I entreat—flay him alive; if some of you don't, I must skin him myself; there is no bearing the driveling idiotism of the Mankin." In another letter he calls Keats "this miserable Self-Polluter of the human Mind," and adds: "I don't mean he is indecent, but viciously soliciting his own ideas into a state which is neither poetry nor anything else but a Bedlam vision produced by raw pork and opium."

In commenting on these letters, the literary critic of the New York *Tribune* (March 3) says:

"In short, Byron was given over body and soul to the idolatry of Pope, and by the very quality of his genius would seem to have been debarred from apprehending what kind of poet Keats really was. His remarks about him are as fatuous as they are brutal. But if the old bones of this ancient enmity are worth stirring at all it is that one may witness the genuine sorrow with which Byron wrote of his young contemporary's unhappy end. He was amazed to gather from Shelley that the virulent attacks in *The Quarterly* had helped to kill Keats. To the author of 'Adonais' he wrote with perfect candor. He could take back nothing. He reserved his right to disapprove of the poems. But, he adds, 'tho I differ from you essentially in your estimate of his performances, I so much abhor all unnecessary pain, that I would rather he had been seated on the highest peak of Parnassus than have perished in such a manner.' There is no mistaking his sincerity in these words, nor in those which he sent to Murray on the same subject: 'I would not be the person who wrote the homicidal article, for all the honor and glory in the world, tho I by no means approve of that school of scribbling which it treats upon.'

"The fact is that there were fundamental differences of character between Byron and Keats which perhaps made it impossible for the former to understand the latter. Even in his sorrow over the poet's tragedy he finds it hard to understand why *The Quarterly* should have had any hand in it. Speaking of his own early experience, and the review which moved him to write 'English Bards and Scotch Reviewers,' he observes: 'Instead of bursting a blood-vessel, I drank three bottles of claret, and began an answer, finding that there was nothing in the article for which I could lawfully knock Jeffreys on the head, in an honorable manner.' How could this pugnacious man of genius understand another man of genius with whom pugnacity was an un-

known quantity? The point to be noted is that the naturalness and sincerity of Byron come out in the letters regarding Keats as they do in every other document in this volume. One regrets the hard words, but one does not blame Byron. The transparent good faith of that tempestuous soul is curiously persuasive."

The fact that other writers, English and American, have from time to time taken a similar view of Keats, not only as a man "with whom pugnacity was an unknown quantity," but as a weakling to be "snuffed out by a review," attracts some attention from better-informed writers, as a singular instance of the perennial nature of literary myths. It has been pointed out that whatever may have been Byron's and Shelley's suppositions (the former never knew Keats, and the latter met him only once or twice, at Leigh Hunt's house), all competent writers on Keats have known for years that neither assertion is true. Mr. Sidney Colvin, in his recent authoritative life of Keats in "The Dictionary of National Biography," says, quoting the opinion of Keats's brother George and his other school-fellows:

"He is described with one consent as a lad of extraordinary mettle, vivacity, and promise. Cowden Clark says he was the favorite of all, 'like a pet prize-fighter, for his terrier courage,' and no less for 'his high-mindedness, his utter unconsciousness of a mean motive, his placability, his generosity.' Holmes dwells on the generosity and daring of his character and the extreme beauty and animation of his face. . . . During the first three or four years of his life at school his bent was all toward fighting and frolic."

Indeed, says Mr. Colvin, even so late as his twenty-second year Keats thrashed a stalwart young butcher at Hampstead in a stand-up fight. And, in referring to the two insulting criticisms in *Blackwood's Magazine* (April, 1818) and in *The Quarterly Review* (September, 1818), Mr. Colvin remarks:

"We know from Woodhouse that at the first sting he expressed a momentary purpose of giving up literature and 'trying what good he could do to the world in some other way.' But he very quickly recovered himself, and in his letters gives the attack its true place as 'a mere matter of the moment,' adding, 'I think I shall be among the English poets after my death,' and saying that his own domestic criticism had given him pain without comparison beyond what *Blackwood* or *The Quarterly* could inflict. In this manly and dignified temper he remained as long as he was at all himself. . . . . .

"Between the period of the poet's death [1821] and the publication of Lord Houghton's 'Life and Letters' [1848] there came to prevail a one-sided view of his character, founded partly on what was known of his last sufferings, partly on the signs of excessive emotional sensibility in some of his work, partly on the language of Byron in 'Don Juan,' and most of all on the impassioned expression of Shelley's pity and indignation in 'Adonais.' . . . When his brother George declares, 'John was the soul of manliness and courage, and as like the Holy Ghost as *Johnny Keats'* (the puling 'Johnny Keats' of Byron's epigrams and of public sympathy), he expresses in a nutshell a view which is confirmed by the testimony alike of Bailey, Reynolds, Brown [youthful friends of Keats] and all those who were his daily companions before his breakdown."

Mr. Swinburne, in the article on "Keats" in "The Encyclopedia Britannica," Mr. Buxton Foreman, the leading modern editor of Keats's works, Mr. Hamilton Wright Mabie, in his interesting article on Keats in "Essays in Literary Interpretation," and many other writers during the past fifty years have called attention to the same facts, that Keats was preeminently a man of spirit and courage, and that he died of consumption, not of a literary review.

---

**Is City or Country More Favorable to Genius?**—It is often said that the most successful authors, as well as the leading politicians, lawyers, and business men, come from the country, and that city life is not a favorable environment for genius, at least in youth. Mr. Charles W. Super, in *The Conservative Review*, finds that the facts do not warrant this view. He says:

"The importance of environment is confirmed by the birthplace of noted French littérateurs. Out of 5,233 such men 1,229 were born in Paris, 2,664 in other large cities, 1,265 in other localities, and 93 in country seats. Of women the proportion falling to cities is much larger, rising as high as eighty-four per cent. of the entire number, while about one half were natives of the capital. The testimony of these figures bearing upon the predominating influence of what are called the 'centers of civilization' is further corroborated by similar data taken from other countries. Of fifty-five eminent Italian literati, twenty-three were born in large cities, and most of the remainder in small municipalities; tho, strange to say, not one had Rome as his birthplace. Of the fifty Spaniards who are generally regarded as holding the highest rank in the literature of Spain, sixteen were born in Madrid, and a large proportion of the remainder in cities of the first rank, several of which contain universities. The coryphei of German literature seem at first sight to make an exception to the conclusions that naturally spring from the above-stated facts. The great writers are quite evenly distributed over what now constitutes the empire and Switzerland. Three large cities are the birthplace of three great writers each; two, of two each, while the rest have produced but one each. This calculation embraces about thirty who stand confessedly at the head; yet if we increase the number the results are not widely different. Here, again, the importance of the environment is strikingly made prominent. During the last five centuries Germany has had a large number of capitals, many of which the reigning monarch tried with more or less success to make centers of art and literature."

---

## NOTES.

In an editorial praising Andrew Carnegie for his "library benevolence," *The Witness* (Montreal) points out that, thirty years ago, "what he is now doing was anticipated by the government of old Canada when it established mechanics' institutes throughout the country. These were a great power in their day as centers of culture for people who had no other means of literary culture, and it is not too late for the provincial governments, aided by that of the Dominion, to extend and improve on the foundation then laid."

In our issue of March 23 (page 346), an error was made in printing the last line of the table giving the estimated number of people speaking various languages at different dates. The table should read thus:

| Date. | English. | German. | Russian. | French. | Italian. | Spanish |
|---|---|---|---|---|---|---|
| | Millions | Millions | Millions | Millions | Millions | Millions |
| 1500 | 4 | 10 | 3 | 10 | 9½ | 8½ |

Mr. William T. Totten, secretary of the "Yankee Christmas Club" (1100 Green Street, Philadelphia), in a plea for one of the most deserving and practical of charities, asks readers of The Literary Digest to contribute their discarded periodical literature to the various "Shut-Ins" for whom the club tries to provide. It is the province of the club to make sunshine for worthy people from Maine to California and even beyond the sea. Innumerable ways are offered by the club to make "golden hours" for these "Shut-Ins," among the more important being the regular gift of current literature. Sixty-nine of our readers responded to one appeal in behalf of the club last year. From what we have learned of the experience of some of these, we judge that they have in this way proved the truth of a well-known saying about giving and receiving, and that in the sometimes unique relations established between these givers and the "Shut-Ins," they have found some of their happiest hours.

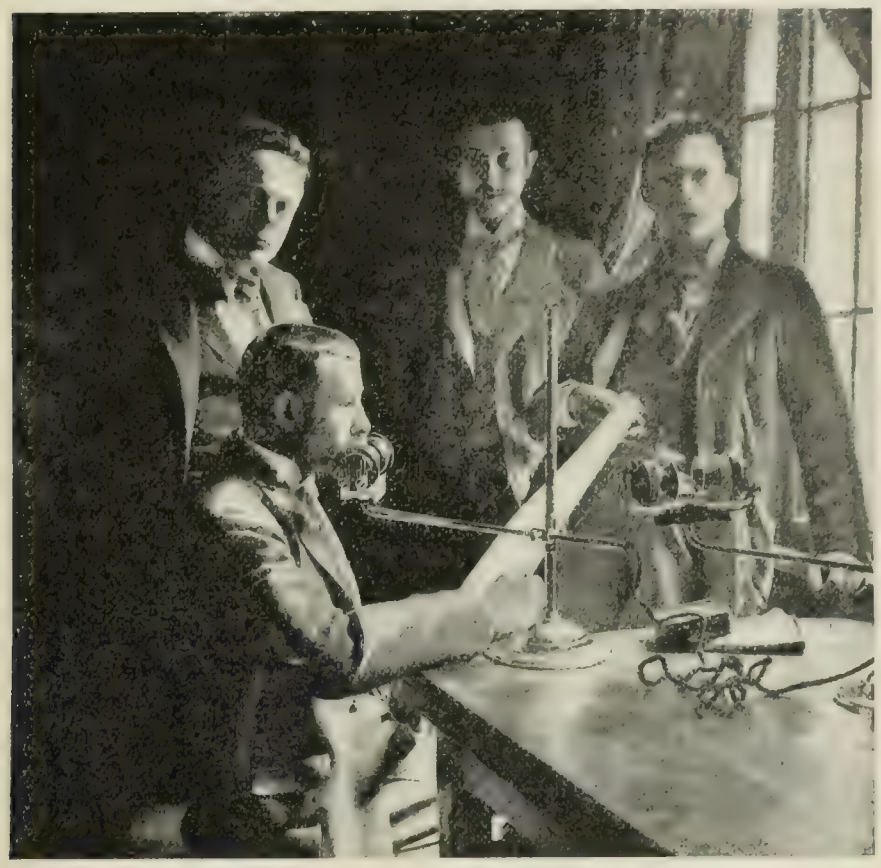
An English translation of the book entitled "Norway," which attracted such attention at the Paris Exposition, has just been issued in England. In a long review of this book, the Boston *Journal* gives the following condensation of the chapter on printing in Norway: "The fact is worth repeating that, with the exception of Turkey, Norway was the last European country to adopt the art of printing. The first newspaper was printed in Christiania as late as 1763; and it was not until 1819 that the first newspaper with a political complexion appeared. Perhaps the most extraordinary feature of the history of journalism in Norway is that the first newspaper established, the *Norske Intelligenssedler*, consisted from 1763 until 1890 almost exclusively of advertisements. The provincial press has a hard row to hoe. In former times, it seems, many of the newspapers had scarcely 100 subscribers; and printer, salesman, and editor were, and still are, in a few cases, united in one person. The most northerly town in the world, Hammerfest, has two papers. Magazines have always led a miserable existence in Norway. They generally die before their tenth year. Sometimes the state takes pity on the valuable scientific periodicals and inoculates them with a subsidy. On the whole, the newspaper profession in Norway is extraordinarily unattractive, the chief characteristic of the members of the profession being self-sacrifice."

## SCIENCE AND INVENTION.

### THE HUNGARIAN TELEPHONE-NEWSPAPER.

THE "telephone-newspaper" of Budapest, which is not a newspaper at all, but simply a system of supplying news at stated intervals by telephone, has already been described in these columns. An article in *The World's Work* (April), by Thomas S. Denison, gives additional data about it, and some interesting pictures, some of which we reproduce herewith. Says Mr. Denison:

"I went to Budapest last May, expecting to find this unique 'newspaper,' of which I had heard so much, rather a fad for a few score of people who had sufficient interest to keep it as a



THE "STENTOR" READING THE DAY'S NEWS TO 6,200 SUBSCRIBERS.

passing diversion. To my surprise I found a great journal with all the equipments of a first-class paper in a very lively city of nearly 600,000 people—all the equipment, that is, except presses, paper, and printer's ink. *Telefon-Hirmondo* has 6,200 subscribers. The staff consists of a business manager, an editor-in-chief, four assistant editors, and nine reporters."

The company, we are told, owns its own plant and has the same right to place wires that is enjoyed by the telephone and telegraph companies. A reader who is called a "stentor" talks into a double receiver, and the subscriber has two ear-pieces like those used by the telephone clerks. The sound of the reader's voice is greatly strengthened by the machine. Says the writer:

"It is most interesting to follow the actual 'issue of the paper.' A complete program is tacked to the wall above each subscriber's receiver, and a glance at this tells just what may be expected at any hour, every day, except Sundays and holidays, having the same program. The issue begins at 10:30 A.M. and ends about 10:30 P.M. unless a concert or some other night event is being reported, when it keeps on till later. . . . . .

"The mechanical processes of the paper are about as follows: "The news (telegraphic, exchange, specials, and locals) is secured by the ordinary methods known in all newspaper offices. The reporter who has finished his assignment writes out his matter in ink and submits it to his chief, who signs it on the margin of the printed form. The signature fixes responsibility. A clerk then takes the copy and carefully copies it with lithographic ink on long galley slips. These are transferred to the stone so as to appear in parallel columns about six inches wide and two feet long. Two pressmen take several impressions on a roller-movement hand-press. Common printing-paper is used. Each sheet is submitted to an assistant editor, who, with the aid of a copy-holder, exactly as in proofreading, verifies its correctness. This sheet constitutes the file, and a duplicate is cut up into convenient strips for the use of the stentors. Each sheet comprises a certain part of the program, and the whole number of sheets, with hour dates, constitute the day's file.

"The stentors are six in number in winter, when the paper is likely to be crowded with important matter, four for duty and two alternates. In summer four suffice. The stentors have strong, clear voices and distinct articulation, and the news comes from the receivers with remarkable strength and clearness. When all six stentors are present, they take turns of ten minutes each; if for any reason only two are on duty, a half-hour is the extreme required of one reader."

The "newspaper" not only furnishes news to its subscribers, but regales them with music, and possesses a regular concert-room and salaried performers for this purpose, rather a novelty for a newspaper staff. Mr. Denison concludes:

"*Hirmondo* is at present trying an experiment with 'penny-in-the-slot' machines. The coin used is a 20-*filler* piece, worth about two cents in our money. Music by telephone, whether vocal or instrumental, still leaves something to be desired. The telephone timber must be got rid of before music can be transmitted satisfactorily. The report of news, however, is highly satisfactory.

"So far as a stranger can judge, who is wholly ignorant of the language of the country, the enterprise is distinctly a success. The paper is so well known and has accomplished so much that it appears to be beyond the stage of experiment so far as Budapest is concerned. One strong point in its favor is its early reports. In this respect the paper has a strong hold, for it is able to issue an 'extra' at any hour of the day. Moreover, invalids and busy people may get as much news as they want with little effort. Indeed, the plan has so many advantages, that we shall probably soon see it in operation on this side of the ocean, with the improvements that Yankee ingenuity will be sure to devise."

### THE CENTURY'S WORK OF EXTERMINATION.

WHILE the nineteenth century has witnessed no less splendid work in zoology than in other branches of science, it has also seen the wanton extermination of many animal species, and the reduction of many others to such a point that they now exist chiefly in captivity. Of course, earlier centuries have the same deeds to be laid to their charge. The seventeenth century saw the extinction of the dodo, the crested parrot, and the *geant* (a huge Mauritian bird), while the eighteenth witnessed the extermination of the great northern sea-cow, the giant tortoise of the island of Réunion, and the South African blaauwbok. Of some of the species that last saw the light in the century that has just passed, Mr. Lyddeker, the English naturalist, writes as follows in *Nature* (London, January 10):

"The great auk is a bird whose loss we owe to the carelessness of the naturalists of the middle of the nineteenth century, for there is little doubt that if protective measures had been taken in time it might have been alive at the present day. From the American side of the Atlantic it probably disappeared somewhere about the year 1840; while the summer of 1844 witnessed the destruction of the last European pair of this remarkable bird, the last British representative having been hunted to death in the neighborhood of Waterford Harbor ten years previously.

"One of the most sad stories of extermination, and that, too, at a comparatively recent date, is revealed in the case of the South African quagga. According to Mr. H. A. Bryden, who has devoted a great deal of attention to the subject, the extermination of this zebra-like species in the Cape Colony took place between the years 1865 and 1870, and probably between the latter year and 1873 in the Orange River Colony, which was its last stronghold. The extermination of this species may be attributed entirely to the pernicious trade of hide-hunting, for in the first half of the century it was to be met with in thousands on the grass *veldt*, and formed the staple food of the Hottentot farm

laborers of the Graaf Reinet and many other districts. What makes the matter still more melancholy is that specimens of the animal could easily have been procured in any numbers, both for our menageries and our museums, but that (probably owing to the circumstance that naturalists were ignorant of its impending fate) no steps were taken in the matter. In the year 1851 a female was purchased by the Zoological Society of London, while seven years later a male was presented to the same body by the late Sir George Grey. The latter survived till 1872, and was thus one of the last survivors of its race. Altho the fact of the practical accomplishment of the extermination of the species at that time appears to have been unknown in London, the skin of Sir George Grey's specimen was luckily preserved, and may now be seen mounted (albeit in a somewhat worn and faded condition) in the British Museum as the solitary representative of the species. . . . . .

"Mention has already been made of the extermination of the giant land tortoise of Réunion during the eighteenth century; and in the early part of its successor four other species became extinct in the neighboring islands of the Mascarene group. . . . It has likewise been considered probable that the thin-shelled tortoise (*T. abingdoni*), of Abingdon Island, in the Galapagos group, is also no longer existing, altho it was certainly alive as recently as 1875.

"Of the birds that have disappeared during the century, in addition to the great auk, reference may first be made to the black emeu (*Dromæus ater*), of Kangaroo Island, South Australia. When this island was explored in 1803 by a French expedition, these birds were abundant, and three were sent home to Paris, where a pair lived till 1822. . . . Some years after the visit of the French expedition (to which Péron was naturalist) to Kangaroo Island, a settler squatted there and forthwith set to work to make a clean sweep of the emeus and kangaroos—a task in which he was only too successful.

"Before the middle of the century another large bird appears to have made its final exit from this world. When Steller discovered the northern sea-cow in the islands of Bering Sea, he also brought to the notice of science a new species of cormorant, which was especially interesting on account of being the largest representative of its kind, and likewise by the bare white rings round its eyes and the brilliant luster of its green and purple plumage. Stupid and sluggish in disposition, Pallas's cormorant, as the species is commonly called, appears to have been last seen alive about the year 1839, when Captain Belcher, of H.M.S. *Sulphur*, was presented with a specimen by the governor of Sitka, who also forwarded other examples to Petersburg. Captain Belcher's specimen is preserved in the British Museum, and three other skins are known to be in existence elsewhere."

Among other fowl that last saw the light during the hundred years just past are the great white water-hen of Norfolk Island, the Tahiti rail, the New Zealand quail, the so-called Holland pigeon, several species of parrots, the pied duck of our Atlantic coast, the last example of which was killed in 1852, the pied starling, and the gorgeous sicklebill of Hawaii, whose black and gold plumage was too eagerly sought by the native chiefs for their cloaks.

Mr. Lyddeker closes his article with an extract from Professor Newton's "Dictionary of Birds," referring to two instances where species may have perished within the century without direct notice from ornithologists. After stating that one Ledru accompanied an expedition despatched by the French Government in 1796 to the West Indies, the professor says that this explorer gives a list of the birds he found in the islands of St. Thomas and St. Croix:

"He enumerates fourteen kinds of birds as having occurred to him then. Of these there is now no trace of eight of the number; and, if he is to be believed, it must be supposed that within fifty or sixty years of his having been assured of their existence they have become extinct. . . . If this be not enough we may cite the case of the French islands of Guadeloupe and Martinique, in which, according to M. Guyon, there were once found six species of *Psittaci*, all now exterminated; and it may possibly be that the macaws, stated by Gosse and Mr. March to have formerly frequented certain parts of Jamaica, but not apparently noticed there for many years, have fallen victims to colonization and its consequences."

It is sad to think that other interesting and valuable species are probably doomed to a like extinction during the century that has just opened, in spite of our tardy efforts to protect them and to preserve them in zoological gardens and parks.

---

## A THUNDER-STORM FROM THE INSIDE.

AN interesting account of a thunder-storm, as observed while passing through it in a balloon, is contributed to *Knowledge* (London, March 1) under the title "Exploring the Thunder-Cloud," by Rev. John M. Bacon. The balloon ascension of which he writes was made by Mr. Bacon on July 27 last from Newbury, England. It was a typical day of summer storms, but the "clearing shower" had apparently just taken place when the start was made. Says the writer:

"In scarcely more than twenty minutes from the start a sudden and surprising change took place in our circumstances. Our environment, which had appeared absolutely calm and clear, began changing with the rapidity of a transformation scene. Below us the few hundred feet that separated us from earth began filling in with a blue haze, quite transparent, but growing palpably filmier, while ahead, as also right and left, the horizon at the level of our eye and higher opposed a dense fog barrier of an ashen hue. Overhead, of course, the sky view was entirely hidden by the huge silken globe. At this period of time we were being swept along on our course, which remained sensibly unaltered in direction, at a speed which we were subsequently able to fix at approximately forty miles an hour.

"To ourselves the full significance of these circumstances was not immediately apparent, but the onlookers at our point of departure—the town gas-works, now some five miles in our wake—clearly detected the approach of a heavy thunder pack, and, as they reasonably asserted, coming against the wind. It towered above the balloon, now seen projected plainly against its face. It came on rapidly and assumed formidable proportions, and there was then the following state of things: the balloon flying due west at the high speed just recorded, and, at apparently no great distance overhead, the thunder-cloud progressing at a moderate velocity not accurately determined, but due east or directly opposed to the surface current.

"And now with a whistle a blinding sheet of hail attacked the aeronauts, stinging their faces so sharply as to give the idea that the stones were falling from a great height, and immediately afterward from all sides and close around flashes of lightning shot out with remarkable frequency and vividness. We were, in fact, fairly embosomed in the thunder-cloud. Other and near observers narrowly watched the phases of phenomena now in progress. These were the countrymen, who became interested spectators, and who presently came to our assistance. They seemed to have imagined that the balloon must be infallibly struck, inasmuch as it appeared to them completely encircled with lightning. It was indeed the worst storm the countryside had known for many years. At Devizes, only a few miles ahead, it lasted for five hours continuously; a little way on our right a house was struck and burned to the ground, and on our left a couple of soldiers were killed on Salisbury Plain."

The writer calls attention to the fact that tho the storm progressed, it also appeared to lag behind the wind that bore it along. He also lays stress on the further fact that it did not seem to advance as a whole, but gathered about the balloon, forming itself out of what a few moments before had appeared mere empty and transparent air. Mr. Bacon regards this gathering storm-curtain as largely due to the sudden chill which was very manifest in the air, and which obviously had its origin from above. In the depth below there was no evidence of any special disturbance, and a parachute dropped from the car about this period floated to the earth steadily and with no divergence. He goes on to say:

"All this may be taken to lend confirmation to the theory that

associates thunder-storms with sudden and considerable alterations of temperature in contiguous masses of air. . . . . .

"This reverberation of the thunder is worthy of a little consideration. It is to me intelligible enough when it is remembered that the source of sound lay between the balloon and the earth, in which case it only resembled the artificial thunder which I have often evoked by explosions of guncotton. In our own experience just cited, however, the lightning flashes which appeared to course between cloud and cloud rather than between cloud and earth were like typical mountain-storms, followed only by a single short report, and in this resembled phenomena twice observed by Mr. Wise in America. This observant aeronaut on two separate occasions speaks of thunder as 'rattling like small-arms without any of the rolling reverberations that are heard below.' But another significant observation was made by Mr. Wise in both his experiences just referred to. 'The thunder pack itself developed uprising cloud columns whose motion resembled that of ebullition in a vast cauldron from whence electric flashes were discharged.' With almost the same language he describes the effect presented to him on each occasion when he approached from aloft the neighborhood of a thunder-storm; and Mr. Green, in his Newbury ascent already alluded to, uses words that are hardly dissimilar. . . . . .

"Neither of the above bygone aeronauts describe to my knowledge any occasion when they have actually found themselves in the heart of a thunder-storm, and, in our own case, had there been but fair warning, I think there would have been but little difficulty in avoiding the storm by simply rising above it; but, as I have already sufficiently explained, we were practically without warning from the peculiar manner in which from our restricted point of view the thunder-cloud seemed to develop about us out of thin air."

## MAN'S INFLUENCE ON THE WEATHER.

HOW far can the action of man affect the weather? This question has been studied by Dr. Wilhelm Trabert, who has reported his conclusions to the Société Météorologique, Paris. His answer is that such influence is slight and largely involuntary, tho there are cases where voluntary influence may be exerted. Dr. Trabert's article is thus summarized in *Cosmos* (Paris, February 23):

"Involuntary influence exists without doubt; it is exercised, for instance, by deforestation and by the resulting alteration of conditions of soil, which modifies the flowing of streams and increases inundations; and also by the development of industrial activity, as Russel has shown in the case of London fogs, which augment considerably with increased consumption of coal.

"The considerable increase of the number of thunder-storms, which has doubled since 1870, leads us to believe that in this case also there is an effect due, in part at least, to industrial activity; for it is difficult to attribute an increase so considerable to the sole action of sunspots.

"An attempt has been made to explain the increase in the number of storms by the abundant production of steam by industrial engines. Dr. Trabert can not accept this explanation, for he calculates that the quantity of steam thus produced in the whole of Germany would scarcely represent an evaporation of 0.0025 millimeter of water to the square kilometer [$\frac{1}{10000}$ inch to the square mile]. But it is quite different with particles of dust scattered in great abundance throughout the air by the incomplete combustion of a quantity of coal equal to 200 kilograms to the square kilometer [1,140 pounds to the square mile]. This considerable increase of atmospheric dust should exercise an action on the production of rain. When moist air passes the state of saturation, condensation takes place on particles of dust. The more there are of these, the more drops are formed; thus, for a given quantity of vapor condensed, the drops are necessarily smaller. Now the tension of saturation on a convex surface increases with the curvature of the surface, that is to say, with the smallness of the drops. An increase of the quantity of dust in the air will therefore tend to favor the supersaturation of the air, and consequently to produce thunder-storms and abundant rains.

"It is much more interesting, however, to know whether we may voluntarily act upon the weather.

"To this kind of action belong the attempts made successfully in France, on a large scale, to prevent nocturnal frosts by the production of artificial clouds. But when we come to the artificial production of rain, success is much more doubtful, as all attempts, so far, have proved. In the production of any phenomenon, it is always a question of the equivalent transformation of one kind of energy into another, and we must inquire whether the necessary amount of energy is at our disposal. Now Trabert calculates that to bring to saturation a cubic kilometer [one quarter cubic mile] of air at 40 per cent. relative humidity requires no less than 1,400 kilogrammeters of work [10,000 foot-pounds]. This scarcely allows us to think of the possibility of artificial condensation. Such a thing would appear to be possible only if the conditions necessary to condensation already existed, and if we had only to put latent forces into action.

"Finally, to this voluntary action on the weather belongs the method, used in the Austrian Alps since the time of the Emperor Joseph II., of making numerous explosions to ward off a hail-storm, a process that, as is well known, has been developed and systematized by M. Steger at Wandisch-Feistritz, in Southern Styria, with great success."—*Translation made for* THE LITERARY DIGEST.

## BILE AS AN ANTITOXIN.

THE antitoxic action of the liver is generally supposed to be a modern idea, arising from the latest investigations and experiments of physiology; but a writer in the *Revue Scientifique* (Paris) asserts that the natives of Bengal have not only known of this fact for centuries, but are accustomed to apply it in the treatment of hydrophobia. A letter from a traveler in India, published in the *Gazette Hebdomadaire de Médecine*, relates the following facts:

"About three months ago, a mad dog bit six or seven persons, among whom were two of my porters. I ordered bits of iron to be heated white-hot for cauterizing the wounds; but the natives said to me with a laugh, 'Oh, Sahib, that is nothing; we have an excellent remedy for hydrophobia; you shall see.'

"The mad dog approached again; one of the natives took a club and killed the animal. Another opened its body, took therefrom the palpitating liver, cut it into small bits, and gave them to the wounded men, who ate them raw. 'There is no more danger,' they said to me.

"As I remained incredulous, they brought to me a young man who bore large scars on his legs. He had been bitten five years before by a mad dog, but had eaten a raw piece of the animal's liver and had felt no ill effects.

"These events took place in March, and it is now July 3. The wounds are cured and all the men continue to do well. Our natives even assert that their remedy will cure a man after he has been attacked by the disease."

Commenting on this, the *Revue Scientifique* says:

"It is unnecessary to go to Bengal to see this experiment. . . . M. Phisalix has shown that cholesterin has a very marked immunizing effect on viper's venom. In the interior of France, the peasants have used bile as a remedy for the viper's bite from time immemorial. . . . . .

"This property of the liver seems on the point of leaving its empirical phase to enter on one of rigorous science. M. Neufeld has recently published in the *Zeitschrift für Hygiene* a series of very curious experiments, which show the destructive power of the bile over certain microbes.

"When one tenth of a cubic centimeter of rabbit's bile is mixed with one or two cubic centimeters of a culture of pneumococci in bouillon, it is found, on examination of the mixture under the microscope, that the number of pneumococci diminishes very rapidly, that their contours become less and less clear, are blurred, and finally disappear completely in the liquid. . . . This process of dissolution is ordinarily over in the space of three or four minutes, but sometimes it requires fifteen or twenty minutes.

"These bacteriolytic properties of bile exist as well in the healthy as in the sick rabbit. The rapidity with which the solu-

tion of the pneumococcus takes place varies, within certain limits, with the consistency of the bile (taking place more slowly when it is thick), and with the quantity of the culture (bile can dissolve three hundred times its volume of pneumococci).

"The bile of man, the monkey, the guinea-pig, the dog, the cat, all have this faculty of dissolving pneumococci, but the rapidity is less with these animals than with the rabbit.

"It may be asked whether the dissolution of pneumococci in the bile is accompanied by the destruction, or only by the dissolution, of their toxins. Experiments to test this have shown that a subcutaneous injection of bile in which pneumococci have been dissolved makes the guinea-pig and the rabbit immune to infection.

"Altho the bile of the rabbit has such intense bacterium-destroying properties, the serum of the same animal is completely without them. On the other hand, the bile of the rabbit or of man does not exert the least bacteriolytic action on the cholera vibrio, the bacillus of Eberth, the diphtheria bacillus, etc. But bile seems to have an influence, as Valée has already shown, on the virus of hydrophobia.

"According to the author's investigations, the active part of the bile, or that to which its bacteriolytic effect must be attributed, must be cholic acid, a non-nitrogenized substance formed by the hepatic cells."—*Translation made for* THE LITERARY DIGEST.

## MENTAL FATIGUE IN SCHOOL-CHILDREN.

IT has been for a long time generally supposed that the work done by children in school during a session makes them less able to perform mental labor after that session—that, in other words, the child becomes mentally fatigued by the long hours and hard tasks of the schoolroom. To what extent this supposition is based on fact has been made the subject of a considerable body of research on the part of psychologists in recent years. The latest results, those of Dr. Thorndike (*Psychological Review*, November, 1900), are unexpected and rather startling. He finds that mental fatigue as a result of school work has no existence. To quote the author's own words in an introductory paragraph:

"The present research aims to settle the question of how much less able to work the child is, after having done the work of half or the whole of a school-day, than he was at start. The results . . . are unanimously in favor of the answer, 'He is just exactly as able.' If these results were legitimately obtained, they prove that the work in the case of the schools tested did not decrease one jot or tittle the ability of the scholars to do mental work."

The method used in obtaining the results was to give some sort of a test, usually either a multiplication or spelling test, early in the school-day, and then again a similar test to the same students late in the day. It was found that the work was just as well and as quickly done in the late as in the early test. What, then, is the reason for the fact—which every teacher knows—that children do not work so well in the afternoon, or late hours of the session? Dr. Thorndike says:

"The fact that the children can work as well does not at all mean that they do work as well, or that measures should not be taken for their relief. It does mean that the argument for shorter hours and longer pauses, so far as based on alleged incompetency to work under present systems, was a false argument and its measures for relief ill-considered. . . . The more appropriate remedy would be not to give the student less to do, but to make it worth while for him to work, to make the work interesting."

Ninety-five per cent. of the decrease in mental work during the day is due, the writer says, to a feeling of boredom on the part of the student, and good teaching is the cure for it. He adds: "The great burden of the child (and of many of us grown children) is not doing things that are hard, or that hurt, but doing things that are stupid and sickening and without worth to us."

**Altitude and Nutrition.**—To what are the beneficial effects of a stay among the mountains due? It is generally believed that the purity of the air is the chief factor; but some have attributed it directly to the fact of decreased atmospheric pressure. In a recent series of investigations, Mr. Jaquet, of Basle, comes to the conclusion that the latter belief is the correct one. His results, which are published in full in the *Archives des Sciences Physiques et Naturelles* (December), are thus summarized in the *Revue Scientifique*:

"M. Jaquet . . . concludes that the chief, if not the only, factor in the action of altitudes is diminution of pressure, which acts by chemical modification of the blood. . . . The temperature is without evident effect on the blood, and light plays no more active part. It is the diminution of pressure which acts, and this is proved by the fact that the same beneficial results can be obtained in the laboratory under lessened atmospheric pressure, as by living on a mountain."

But a chemical modification of the blood, of the kind observed by this experimenter, requires the addition of new material. Whence does it come? Careful experiment shows that it is due to an alteration of the nutritive processes, more nitrogen than usual being retained in the blood; but this retention of nitrogen ceases as soon as the subject returns to normal pressure. The benefits of mountain life, then, are due to better nutrition, which in its turn depends on decreased atmospheric pressure.—*Translation made for* THE LITERARY DIGEST.

**Candy or Whisky?**—Those who do not wish to give up their alcoholic beverages are fond of reminding us that there may be intemperance in eating as well as in drinking. Candy comes in for special condemnation. The issue thus made has been met in an investigation into the relative value of sugar and alcohol to the organism, made by M. Chauveau and reported by him to the Paris Academy of Sciences, January 21. He fed a dog for fifty-four days on meat and sugar. Altho the animal ran over a course of thirty-four miles daily, he had gained at the expiration of this period one fifteenth of his weight. When one third of the sugar ration was replaced with alcohol, the dog's condition began to grow poor. He had to be urged to run by his trainer, altho he had lost only an ounce or two in weight. The two rations (sugar and part alcohol) were then alternated, each being used for a week, and the corresponding gain and loss of energy were very evident. Alcohol, M. Chauveau concludes, is not a strength-giving ration. Those who eat a reasonable quantity of pure sugar candy daily can then afford to give odds to those who take their glass of wine with equal regularity.—*Translation made for* THE LITERARY DIGEST.

## SCIENCE BREVITIES.

"THE Chinese physician," says *Modern Medicine*, "receives a salary from his patients as long as they are well, but as soon as they get ill his pay stops. Some American families, not disdaining to learn something from the other side of the world, have partially adopted the same plan; that is, they pay the salary whether they are sick or well; and it is, of course, to the interest of the doctor to keep them well as far as he can, to save himself the trouble of attending them. When the Chinese method, or the American modification of it, comes into general practise, it will be to the interest of the physician who has charge of a family to study each member of it physically, mentally, spiritually; to prescribe for them correct environment, proper diet, and healthful habits; and to labor with the view of inducing them to keep in touch with all these."

"I OFTEN think," says Tecumseh Swift in *The American Machinist*, "how we ought to pity the poor inventors of the days that are gone for the stern restrictions imposed upon them in the scope of their accomplishment. It must have been in the olden time a bitter task for the inventors, altho they may not have realized the bitterness of it, to curb their imaginations to travel within the limitations of the mechanical possibilities of the times. In the days of antiquity there must have been lots of things that they could not dare to allow themselves to invent, and antiquity is not far away. How pitiable, for instance, would have been the plight of an inventor if to him had come, say only fifty years ago, a complete conception of the modern bicycle. It would have been as impossible then to produce as perpetual motion, and the vision of it would have been a nightmare. Just think of it. No mild steel or the things that we make of it, no steel tubing or the steel rod for wheel-spokes, no chain and sprocket, no rubber tires, no balls for bearings, no tools, and no knowledge of the means of making any of these things as we now make and use them."

# THE RELIGIOUS WORLD.

## FREDERIC HARRISON AND THE "RELIGION OF HUMANITY."

"POSITIVISM," says its greatest living exponent, Mr. Frederic Harrison, "is at once a philosophy, a polity, and a religion, all three harmonized by the idea of a supreme humanity, all three concentrated on the good and progress of humanity." In other words, positivism, first enunciated by the French philosopher Auguste Comte some sixty years ago, is a system of ethical culture rather than a metaphysical creed. Hitherto every religion perhaps, except Confucianism, has dealt chiefly with transcendental themes, such as the Godhead and life after death, and has laid the main stress upon these. Positivism, on the contrary, turns from the transcendental, without, however, *denying* spirit, immortality, or Deity. It *affirms* that while they may have a legitimate place in our religious conceptions, this place is an incidental or subordinate one. Religion does not depend upon a belief in immortality or Deity, which we can know if at all only dimly, but upon the one thing we do know, our self and the larger self, Humanity. We shall find quite enough, Positivism says, to engage our utmost yearnings and endeavors in the problems of the present life and in our duty to Humanity and self; and we may safely exchange elaborate cosmologies and metaphysical systems for a *positive* knowledge founded on science.

MR. FREDERIC HARRISON.

In the whole history of religion, Mr. Harrison asserts, no religion or philosophy has ever proposed itself to man with a complete scheme of social amelioration combined with a complete scheme of religion. Philosophies have been content to deal with a part of man—his reason—while religion has been content to deal with his emotions or imagination. On the other hand Positivism addresses itself to the whole nature of man, intellectual, emotional, and social, and insists that the failure of all past systems to win the world has been due to their attempt thus to treat man's nature in sections. In *The North American Review* (March) he thus tells what Positivism is:

"The problem before Positivism is threefold; each side being practically equal in importance and also in difficulty. It seeks to transfer religion from a supernatural to a scientific basis, from a theological to a human creed; to substitute in philosophy a relative anthropocentric synthesis for an absolute, cosmical analysis; to subordinate politics, both national and international, to morality and religion. No doubt, in these three tasks the religion is the dominant element. The change in its meaning and scope is the most crucial in the history of human civilization. The change involves two aspects, at first sight incompatible and even contradictory. The one involves the surrender of the supernatural and theological mode of thought; the other is the revival, or rather the amplification, of the religious tone of mind. Positivism thus, with one hand, has to carry to its farthest limits that abandonment of the supernatural and theological field which marks the last hundred years of modern thought, and yet, with the other hand, it has to stem the tide of materialism and anti-religious passion, and to assert for religion a far larger part than it ever had, even in the ages of theocracy and sacerdotalism. The vulgar taunt that Posivitism is anti-religious arises from ignorance. The constant complaint of Positivism is that religion, in all its Neo-Christian phases, has shrunk into a barren formula. The essence of Positivism is to make religion permeate every human action, thought, and emotion. And the idea of humanity alone can do this. Deity can not say, '*Nihil humani a me alienum.*' Humanity can and does say this; whereas, in logic, the formula of theology—the formula in which it glories—is '*Omne humanum a me alienum.*' Omnipotence, as such, can have no concern with the Binomial Theorem, or a comedy of Molière, or female suffrage, or old-age pensions, or a Wagner opera—that is, with ninety-nine parts of human life and interest. The result is that theological religion has less and less to do with human life. If religion is ever to be supreme, it must be anthropocentric.

"But, on the other hand, an age so ardently materialist and scientific as our own is antipathetic to the idea of religion presuming to interfere at all. The ordinary agnostic or skeptic, if he abstains in public from Voltairean mockery, systematically treats religion, even the religious tendency or tone of mind, as an amiable weakness and negligible quantity. He is little concerned to attack it, for he finds it every day more willing to get out of his way, and to wrap itself up in transcendental generalities. This is the temper which Positivism has to subdue. But it finds the scientific and positive minds scandalized at the suggestion of any revival of religion, whilst the religious world is scandalized by the repudiation of theology. A movement, having aims apparently so little reconcilable, can only find prepared minds here and there to accept it. Yet its strength lies in this: it is the only possible reconciliation of two indestructible tendencies, equally deep-rooted in the human mind—the craving for the assurance of demonstrable realities, and the craving for faith and devotion as the supreme control of human life. . . . . .

"Auguste Comte, the founder of Positivism, a professor at the École Polytechnique, died in Paris about forty-three years ago, having put forth his system of philosophy about sixty years ago, and having completed his system of Polity and Religion about forty-five years ago. There are now organized bodies of men, holding and teaching these ideas, in most of the parts of Europe and also of the transatlantic continent. Speaking for England, for which only I am entitled to speak, the English groups, not very numerous bodies in London and in five or six principal towns, prefer to present the Positivist synthesis in somewhat different aspects, but do not disagree in any essential principle. Some of these groups choose to insist on the strictly religious side of the Positivist scheme, regarding it as a church in the ordinary sense of the term, and attempting to put into ceremonial practise the cult described in the fourth volume of Comte's 'Politique.' This neither Comte himself ever did, nor has his direct successor and principal disciple done so, nor have Comte's own personal friends in France."

After devoting some space to showing the practical work of social amelioration in which British Positivists have been engaged during the past forty years, partly in the organization of trades-unions, partly in behalf of more enlightened international relations and the abolition of war, he says of Positivism in conclusion:

"Denouncing, as it does, the insolent folly of Atheism, and also the arid nullity of Agnosticism, it is yet difficult to convince the religious-minded that Positivism can be anything but a new attack on Christianity and on Theism. Comte said: 'The atheist is the most irrational of all theologians, for he gives the least admissible answer to the insoluble problem of the Universe.' Neither in open controversy nor in private meditation does the true Positivist hold the belief that the Infinite All came about by chance or made itself. But the orthodox controversialist perversely confounds him with those who do hold the atheistic creed, and this becomes the source of rooted antipathy and prejudice. The Positivist neither denies Creation with the atheist, nor is he satisfied, with the agnostic, to boast that he knows nothing as to the religious problem. He simply says that, whatever higher paths may yet be known, the historic conception of

Humanity and its practical providence offers all the essential elements of a religious faith. . . . . .

"The human type of religion must radically differ from the theological type, for it can have nothing of the violent, ecstatic, sensational character which is inherent in monotheism. Positivism is an adult and mature phase of religion, primarily addressed to adults, to men and women of formed character and trained understanding. It is a manly and womanly religion, full of manly and womanly associations and duties. Hence it must grow gradually, work equally, and be marked by endurance, reserve, good sense, completeness, more than by passion, fanaticism, and ecstatic self-abandonment. . . . Instead of being a thing of transcendental hopes and fears, stimulated on Sundays and occasional moments, but laid aside, if not doubted, for the rest of man's active time, religion will be a body of scientific convictions, poetic emotions, and moral habits, in close relation with all our thoughts, acts, and feelings, and naturally applying to everything we do, or desire, or think."

Positivism has some followers in America, tho far fewer than in England. Mr. Harrison's recent officiation in Chicago at a ceremony of "Presenting to Humanity" a two-year-old child—the Positivist analog for the Christian and ancient pagan baptism—has attracted much attention. The New York *Outlook* (March 9) thus describes it:

"It is called by Positivists 'The First Sacrament'; it was performed in the Chicago Auditorium, and was the first rite of that kind ever conducted in Chicago. Mr. Harrison read the presentation hymn, composed by Judge Lushington, of London, addressed a brief prayer to Humanity, and pronounced a discourse on the presentation of infants. Both prayer and discourse among Positivists always take the form of high resolve, strengthened by effort after communion with the noblest spirits among the dead, as in George Eliot's 'Oh may I join the choir invisible.' After the parents and sponsors had made their formal promises, they signed a register, which will be deposited at the headquarters of the Positivist Society in London."

## A SECT IN SEARCH OF A HOME.

COUNT TOLSTOY'S protégés, the Doukhobors, called also the Doukhobortsis or Russian Quakers, do not appear to find their new home in Canada much to their liking, and are already, according to a late telegraphic report from Montreal, in search of a new refuge. This sect, besides being Protestant dissenters from the Orthodox Church of Russia, are communistic anarchists of the peculiar Christian type represented by Tolstoy, and hold a form of land-doctrine similar to that held by Nekhlúdoff, the knight-errant hero of "Resurrection." After constant friction with the Russian Government, and even, it is claimed, many persecutions, they accepted an invitation from the Dominion Government to come to Canada. Free transportation was provided them by Canada. Count Tolstoy also turned over to them all the proceeds derived from the sale of "Resurrection." Now, however, their religious beliefs and, it is said, their impracticable spirit and absence of tact have brought them into conflict with their neighbors and with the Canadian Government. A special despatch to the New York *Times* (March 12) says:

"The first trouble was over the land regulations. They objected to taking up land individually on the ground that private ownership of land is opposed to the law of God, and they asked to have a tract of land set apart for their brotherhood in the same manner that the Government apportions the Indian reserves, the title of the whole tract to be vested in the sect and not in the individual members of the community. The Government was willing to meet them by agreeing that after the land was earned the patents could be transferred by the individuals to the community, and pointed to a provision in the land act by which they were permitted to perform their homestead duties while living in community. To this the Doukhobors wrote a long reply, declining to accept any concession, on the ground that their consciences would not allow them to go through forms in which they did not believe. For a man to secure a homestead patent in his own name, even if he afterward transferred the land to the sect, constituted ownership and was a sin.

"The marriage laws of Canada are another stumbling-block to these people. They do not believe a civil or any other ceremony is necessary to constitute a marriage, and they consider it a violation of the law of God to be compelled to take out a marriage license and pay $2 therefor. They also object that under Canadian law a divorce can be obtained only in the courts, and that if a person should remarry without a divorce he is liable to imprisonment for many years. This is opposed to their free-love ideas, and they can not conscientiously submit to it. They object also to the law requiring all births and deaths to be registered, on the ground that the Creator knows who is born and who dies, and does not require to have it recorded in a register. Mr. Maude, the English Quaker who was instrumental in bringing the Doukhobortsis to Canada, sought to pacify them by advising them to comply with the formality of taking out a marriage license, and pointed out that if married people desired to separate and each live with some one else, there was no law in Canada to punish them therefor, provided there was no second marriage; but they would not listen to this. Compliance with the laws they regarded as equivalent to the 'denunciation of the power of the law of God and human conscience.' So now the Doukhobortsis have issued an appeal to the nations of the world asking for a haven where they can live their lives untrammeled by man-made laws."

Comment on this latest phase of the Doukhobor pilgrimage is general in the daily press, and, so far as we have observed, far from complimentary to them. The New York *Times* (March 14) says:

"Judging from the nature of the complaints made against the Canadian Government by the Russian sectarians who crossed the ocean in search of religious freedom, they will have much trouble in finding any civilized country where they can develop their peculiar ideas, social and economic, without interference. The Doukhobortsis are evidently an impracticable lot of ignorant and obstinate fanatics, and it is not much wonder that Russia treated them with severity and was extremely glad to get rid of them at the first opportunity."

The Philadelphia *Times* (March 19) fears that they will have to move far to get out of the reach of such tyranny as the Canadian Government imposes. "The only real asylum for the Doukhobors," it remarks, "would be an uninhabited island," and even there it is likely that the law-imposing animal, man, "would soon appear on the scene."

**A Modern City Church.**—It takes a book of 326 pages to tell the story of the multiform activities of a single New York church—St. Bartholomew's—during a single year. The year-book published recently by this church gives an excellent picture of what a modern "institutional church" is. Besides the rector, this church maintains five assistant clergymen, several lay readers, and a large number of lay workers, variously employed in the Swedish mission, the German congregation, the Chinese gild, and the Oriental mission, with their affiliated clubs and associations. Says the New York *Evening Post* (March 2):

"Eight important missionary and benevolent societies include their annual reports in the volume. Still more striking are the reports of the employment bureau, tailor-shop, loan association, and penny provident fund. Not content with all this, there is besides a clinic which treated 7,651 new patients and furnished 15,140 prescriptions to the sick. That there is a fresh-air fund, too, goes without saying. And, of course, St. Bartholomew's is but one of many churches which now interpret their mission and their opportunity in this broad fashion. The change from older conceptions of both clergyman and church work is vast. Nowadays the head of a great church must be an expert organizer and business man, or know how to avail himself of the best business advice. As for the parish, it has become a free-school system, a university extension movement, a charitable and benevolent institution, which strives more and more to minister to its members outside of chapel or church walks. This is so evidently a

benefit to those who fall under its influence that it would seem as tho the wider sphere must in time have its broadening and freeing effect upon the teachings of the pulpit. In any case, no one can deny that an awakening sense of the church's responsibility for the progress or decadence of the community as a political and social body is in more than one place noticeable, and everywhere it must be welcomed as a potent factor in the regeneration of our municipalities."

## A GERMAN DIPLOMAT ON THE MISSIONARIES IN CHINA.

A RECENT article on "China and the Missionaries," by Herr M. von Brandt, German minister to China from 1875 to 1894, is regarded as an important contribution to this much-debated subject. The writer, aside from his diplomatic position, has had almost uninterrupted acquaintance with various portions of China and the far East since 1863, and is pronounced to be an exceptionally accomplished man, of great intellectual force. The Hon. George F. Seward, former United States minister to China, who thus characterizes him, says that his article is notable for five things: "its tone, which is moderate; its veiled criticism of the missionaries; its suggestions that they should be confined to treaty ports; its silence as to the circumstances leading to the German occupation of Kiao-Chau; and its assertion that Germany has no purpose to occupy more territory." Writing from Berlin in the New York *Independent* (March 14), Herr von Brandt says:

"I have been attacked from many countries for the criticisms that I have had the courage to express concerning religious missions and missionaries in China. Those criticisms are based on the experiences of a lifetime spent in Eastern Asia, many years in the intimate, authoritative position of a diplomat. If my adversaries would quote my utterances fully and isolate their main points with fairness, it should be seen that my objections are not directed against spreading the Gospel of Christ amongst the Chinese, but against the *manner* in which propaganda is too often undertaken. I was able to be useful to the German-speaking missionaries of both Protestant and Catholic institutions, and on retiring from my post as German Resident in Peking seven years ago I received warm words of thanks for my efforts in their behalf. And why could I do this? Because the Swiss-German missions in China, and Catholic missions generally, are under a strong discipline and in compact organization, so that the fanatic zeal of individual missionaries, whether patriotic or religious, is constrainable; while the persons selected to be sent out as propagandists in the first place appear to have proceeded from a severer and more discriminating experience than in the case of the missionary representatives of English and American religious bodies."

Herr von Brandt refers to various statesmen in America and England who are in a position to know the facts of the case, in support of his argument, and continues:

"Lord Salisbury gently commented in 1900 in a speech on the fact that missionaries may not feel nowadays as in ruder centuries that they take their lives in their hands; they know that they take the lives of other parties (by calling forth indirectly military protection). Dr. Edkins (in 'Religion in China') attributes the Taiping rebellion to missionary work, and the recent Boxer troubles have been claimed to be the outcome of the undermining of missionaries in favor of Western political and social ideas; two uprisings that have cost the blood of millions of natives!

"A great deal more universal culture is needed in the persons at the heads of such boards, a culture with less one-sided theology and more ready intellectual sympathy. Lord Curzon directs attention (in 'Problems of the Far East') to this want in missionaries generally, the majority of whom bear an inappeasable animosity toward every native Asiatic religion and code of ethics, spurning the study of them, without considering the restraining hold the belief in them may exercise over the people. Lord Curzon's book, in fact, is a support to my judgment of the need of a discriminating temperance in missionary zeal; and if voices from the ranks of missionaries themselves are desired to the same effect they may be heard in the writings of the Rev. G. T. Candlin, Rev. J. Ross, and the Rev. R. H. Cobbold.

"Not the quantity of missionaries sent to China should be regarded, but the quality of the men sent. Furthermore, these should be established for the next immediate future in the treaty ports. The missionaries who have fled from out of the interior have either left converts behind them who can further the work of conversion, or they have failed to do so, which is a proof that immense sums of money have been contributed at home in vain. A restriction of missionaries to the treaty ports is advisable because the measure will relieve the powers of the need of continuing to wield the sword of the flesh, and will give the Chinese people time for recovering calmness of mind. Stress has been laid for so long a time upon the one admonition of Jesus to His apostles to go and preach the Gospel that His further orders have been quite forgotten. These are to flee into another city when they are persecuted in one city (Matt. x. 10, 23), and to shake off the dust under the feet for a testimony against whosoever shall not receive nor hear (Mark vi. 11). The advice and divine order may not be relished by the strenuous Western spirit prevailing in missionaries and home laymen alike; but there is no doubt of it being the duty of governments to enforce it."

## SOME CHINESE SCRIPTURES PRIOR TO CONFUCIUS.

IT is known to students of comparative religion that Confucius, like most if not all the world's great religious teachers, was an eclectic in his philosophy, and derived the body of his religious maxims almost wholly from the manifold wisdom of former ages and peoples. In China the "Records of the Royal Sages, Yau and Shun," are supposed to have been in existence as early as 2300 B.C., and the patriarchal teachings of King Tu-hsi are believed to be even a millennium earlier in date. The following digest of these early religious teachings, by Major-General J. G. R. Forlong, of the British army, is given in a late number of the Toronto *Secular Thought*:

"1. Give your confidence to the virtuous, discountenance the artful; let none come between you and men of worth.

"2. Good is not only good in itself, but leads to good fortune: to neglect doing good is wicked, and leads others badly.

"3. Study well all you purpose and by the light of reason, and go not against the right, tho it make thee unpopular; nor yet needlessly oppose any to gratify thine own desires.

"4. Make use of the ability and experience of those around thee; and cultivate also men of worth, tho foreign and distant, as well as the wisdom of ancient peoples.

"5. Seek not enjoyment in idleness, nor in any excesses. There are virtues and vices common to mankind, yet every one seeks, till corrupted, to be virtuous. Neither goodness, evil ways, nor words can be long hidden; let all be impressed with thy search for and love of virtue.

"6. The restless mind is prone to error, and has but a weak affinity to right. Oppress not the helpless, nor neglect the weak and poor, and observe the laws and customs of thy country.

"7. If thou art a ruler, then caution men with firm but gentle words, yet correct when necessary with all the majesty of law: tempering judgment with mercy and forbearance, and, when doubtful, pausing: for it is better that the wicked should escape than that the innocent should be injured.

"8. While punishment must not extend to heirs of criminals, rewards may be handed down to many generations. Pardon readily all inadvertent faults, yet punish purposed crimes, however small, but with judgment. Do not act on unsubstantiated words, but prove all things.

"9. Virtue and humility will move heaven. Pride brings loss. Combine affability with dignity; mildness with firmness; straightforwardness with gentleness and discrimination; boldness with sincerity, and valor with righteousness.

"10. There is no stable model of virtue nor perfect type of goodness, but the uniform consciousness regulating its purity.

"11. Put away selfish thoughts, and seek not thine own ease; speak not in excess of the truth, and ever encourage a spirit of

harmony. Live but to labor for the enduring good of the people; and be not ashamed of faults, nor go on until they become crimes.

"12. It is not the *knowing* that is difficult, but the *doing*. In learning be humble, but always earnest. With learning will come virtue, tho unperceived. It is man, not Heaven, who shortens life and brings misery. . . . . .

"19. Knowledge and study will in the end purify thee, yet 'is there no wise man who is not also stupid?' A flaw in white jade may be ground away and be forgotten; but not so a flaw in thy speech. For it, naught avails. Words are indeed your own, but can not be flung about with impunity: each will find its answer, as every deed will meet its reward.

"20. Say not, This place is private; none can see me: but be free from shame in thine own chamber, as in public.

"21. Look not for horns in the young ram; but know that all effects are but conditions of their causes."

---

## ARE CHRISTIANITY AND ADVANCED SOCIALISTIC IDEAS COMPATIBLE?

THE younger pastors of the French Reformed Church have been manifesting a closer sympathy of late for Socialistic ideas, and a special committee appointed by their organization has addressed the following two questions to leading Protestant pastors and laymen of France: 1. Can the principles taught by Jesus Christ be reconciled with the socialistic principles of the present times? 2. To what degree and in what department and under what conditions can there be a cooperation between the socialist and Christian workers? Is such a cooperation possible and beneficial?

The *Chronik* of Leipsic, which reports the replies in detail, states that these are characteristic enough to cause a sensation, especially as many of the pastors declared in favor of a public ownership of utilities. Some, and among them the influential Pasteur Gounelle, of Roubaix, declare boldly for a socialism after the program of Marx and Guesde. He says:

"My Christian conscience has for years not given me any rest. My inner unrest has forced me into socialism. It is now a duty of the hour to reorganize a badly organized social world and convert it into a rule of righteousness based on the Sermon on the Mount and on the parables of Christ, on the solidaric dogmatics of a St. Paul and on the 'Capital' of Marx. For what did the prophets and Christ come to establish? A kingdom of righteousness on earth. Not only the salvation of the individual, but also the salvation of society, which is sick and sore at heart. I, for one, do not see what it is in Christianity that forbids the transfer of individual possessions into property of the community, the change of competition into cooperation, the substitution of the principle of love for that of selfishness. On the contrary, consistent evangelical principles lead inevitably to socialism."

Similar ideas are advocated by Paul Passey, the director of the Écoles des Hautes Études in Paris, who says in substance:

Christians must unhesitatingly return to the original fountains of their faith and must discard all the impurities which the centuries since Christ have heaped upon the church. You must go beyond Luther and Calvin, even beyond Peter and Paul and John, and go to Christ Himself. You must become the genuine followers of those fishermen of Galilee and those tentmakers of Corinth who in the simplicity of their faith declared, to all who would hear, the joyful message of the Divine Son of the Carpenter.

Francis de Pressensé, the editor of the *Aurore*, answers the two questions in this way: 1. I am firmly convinced that the teachings of Jesus Christ and modern socialistic ideas can be fully harmonized. 2. The Christians of the present day, as members of certain churches, assume an altogether false position against socialism. The church has entered into an adulterous relation with the state and the capitalistic world, and its salt has lost all savor. Christians will do their full duty only when they ally themselves with socialism.

Answers of a different tone are the exception. As a sample, we quote that of Fournière, who says:

In order to reconcile the Gospel with socialism, it will be necessary, by the omission of essential elements, to distort the former in such a way that the sacred book will become a caricature. A Protestant can perhaps become a socialist, but a socialist can never become a Protestant.

In Germany, social reformers in the church are actually joining the ranks of the Social Democrats. The fact that Pastor Blumhardt, the head of the famous pietistic church institutions in Bad Boll, in Würtemberg, has become a Social Democrat has aroused a widespread discussion in church circles. This example has been followed by Pastor Paul Göhre, for years a leading representative of "Christian Socialism," who has laid down his office as a Christian minister in order to labor for the cause of socialism. In the program of the "Free International Social Conference" of Germany, to be held in Stuttgart in April, the leading topic will be: "Can a Christian be a Social Democrat and can a Social Democrat be a Christian?" The question of Luther's relation to the socialistic system will also come up for discussion, it being maintained that he, especially in his "Deutsche Messe," or Church Order, of 1526, taught the communistic principle. This interpretation of Luther's position is denied by the *Alte Glaube*, which says: "Luther did not in his 'Messe of 1526' think of a communistic cooperative system after the model of modern socialism, but only of a union of forces within smaller communities and congregations."

The official leaders of both the Protestant and Catholic churches in Germany do not regard Christianity and modern socialism as reconcilable. In the *Theologische Rundschau* (No. 1) there is a lengthy discussion of this subject, and from it we extract the following conclusions:

Both great churches consider a union of workingmen with the Social Democratic Party as equivalent to a separation from the church. For this reason both churches have endeavored to bring the labor organizations under their influence by the organization of Christian *Arbeitervereine*, or workingmen's unions. According to latest reports, there are 359 Protestant societies of this kind with a membership of 76,998; 790 Catholic societies with an enrolment of 152,969; while undenominational yet strongly Christian trades-unions report a membership of 55,661. Harnack, in his famous "Wesen des Christentums," plainly declares that Christ had no social program and that modern socialists have no right to appeal to Him or His teachings.—*Translations made for* THE LITERARY DIGEST.

## RELIGIOUS NOTES.

IN the death of the venerable Mr. Woodhouse, the last of the twelve Apostles of the Catholic Apostolic ("Irvingite") Church, this interesting body is left without its chief institution, the Apostolate. It is not believed, however, that the adherents will abandon their beliefs, even tho the Lord has not returned as was expected.

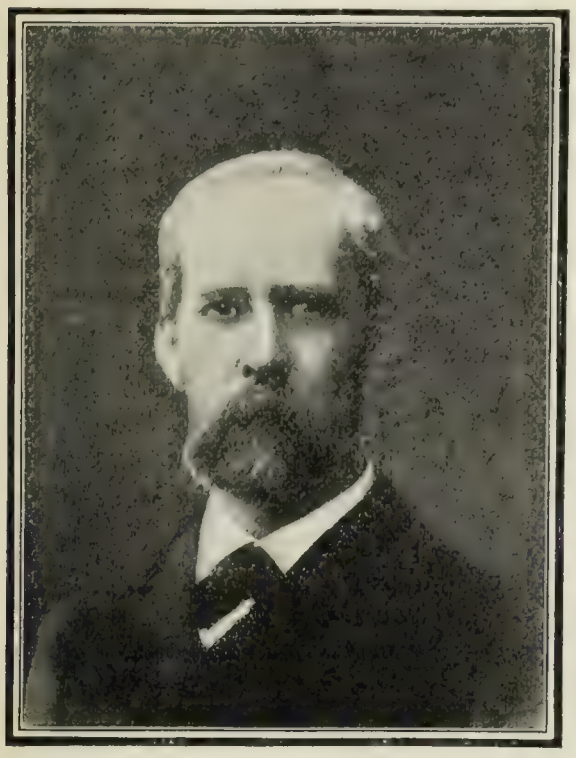
APROPOS of the processes now under way for eventually canonizing the late Bishop Neumann, of Philadelphia, this possible saint is referred to by many Protestant journals, and even by the Baltimore *Catholic Mirror*, as "the first saint ever granted by the Holy See to America." In denial of this, *The Sacred Heart Review* (March 9), which evidently does not accept the historic use of "America" to designate this country, points out that the American continent already possesses St. Rose of Lima, St. Turibius, archbishop of Lima, St. Philip of Jesus, patron of the City of Mexico, and St. Francis Solano of Peru, who was canonized in 1726.

THE Protestant Episcopal Church is sometimes accused of ecclesiastical exclusiveness in referring to itself as "the Church" and to other denominations as "the sects." Dr. Leonard Woolsey Bacon, who writes in *The Christian Work* (March 11), appears to view the church field in another perspective. Toward the end of a lengthy article on tendencies toward assimilation in the American denominations, he dismisses Anglicans in this short paragraph: "I do not forget that in two of the minor sects, the Unitarians and the Episcopalians, there are powerful tendencies to divergence and division. These are comparatively unimportant eddies in the current of contemporary Church history. They draw attention to the general direction of the current."

## FOREIGN TOPICS.

### THE STORM-CENTERS IN RUSSIA.

THE riots among the students of the universities of Kief, Moscow, and St. Petersburg (resulting in the assassination of the Minister of Public Instruction and the proclamation of a state of siege in Moscow), the formal excommunication of Count Tolstoy from the Orthodox Church, the discovery of several new plots to murder the Czar, the severe repressive measures which are being taken for the "Russification" of Finland and Ruthenia, and Russia's semi-defiance to the other powers in the matter of Manchuria—are all, in the opinion of the Liberal press of England and Germany, indications that the Russian masses are being "stirred profoundly by the spirit of progress." The St. Petersburg correspondent of *The Standard* (London) declares that the present disturbances in the empire are more serious than any since the death of Alexander II.—so serious that they are forcing the hand of the Government, compelling it, when unready, to court war abroad solely for the sake of weakening a rebellion at home and creating a popular reaction in favor of the Government.



M. BOGOLIEPOFF,
Russian Minister of Public Instruction, Recently Assassinated.

The student riots began at about the same time in both Kief and St. Petersburg, but from quite different causes. In January the Russian Government published an official communication to the effect that one hundred and eighty-three undergraduates of the University of Kief had been sentenced by a special administrative commission to compulsory military service as privates for one, two, and three years respectively. Owing to the censorship, it is impossible to learn the facts from Russian journals; but *Free Russia* (published in London, "in the interests of liberal Russian thought and progress") presents a "statement of fact" issued by "the Society of Friends of Russian Freedom," from which we quote:

"One of the students of the University, having committed what his fellows regarded as a base and immoral act, which appeared to reflect on their whole community, the students' brotherhood assembled to the number of about one thousand in one of the lecture-halls to discuss the event and to try the miscreant. But the university authorities ignored the moral impulses of the young men, and viewed the whole incident from a purely disciplinary point of view: meetings being prohibited, those who met must be punished. On December 18 it was officially announced that five of the students would be incarcerated, while thirty-two would be reprimanded. This looked very much like punishing the youngsters for their desire to maintain purity in their midst. The repulsive effect of the measure was still more intensified by the fact that punishment by incarceration in a penitentiary cell had never before been inflicted in the Kief University. The step only led to diverting the ferment from its original channel into that of the defense of the students' old traditions and rights as a corporation. Two of the five sentenced declined to submit to incarceration, preferring to leave the university altogether—a measure put before them as an alternative to submission. They were ordered to leave the town, and naturally received an enthusiastic ovation from their comrades on the following day as their train left Kief.

"On December 20 another meeting was held, at which about 500 were present. After discussion, it was resolved to ask the rector of the university to meet the students for the purpose of receiving the following demands: (1) That the punishment by means of the penitentiary cell should be abolished; and (2) that the two undergraduates expelled from the town should be reinstated in the university. The rector, however, refused them audience."

The students, we are told, resolved to wait in the university building till the rector should comply with their request. In the evening the commander of the city police, the provincial governor, one hundred armed Cossacks, a company of armed infantry, two hundred irregular cavalry, and a detachment of mounted police arrived, and all except those on horseback entered the university auditorium. The chairman of the meeting tried to preserve order and asked for the rector, who finally consented to appear, but who refused the demands of the students. The names of the undergraduates were taken. Several weeks afterward the sentence of compulsory military service (university students have been exempt from service during their undergraduate life) was announced. This punishment, declares *Free Russia* editorially, is atrociously disproportionate and cruel. "The physical hardship is the mildest part; far heavier is their doom to be henceforth in the power of blind discipline, half-drunken non-commissioned officers, or mediocre bullies. They will have to face foul language, be eye-witnesses of the 'teaching with the fist,' and stifle their best feelings of revolt. One chance word, one impulsive gesture, may lead to their being court-martialed and shot!"

What the Russian Government is doing, says *The Guardian* (Manchester), is the deadliest thing that any government can do to its people. "It is stifling the educated and intelligent classes, on whom, in the end, every civilized government depends to carry on the life of the nation. It is no wonder that such educated Russian opinion as survives is beginning to be stirred."

*Free Russia* declares that several universities in France and Italy have officially expressed their regret at the stand taken by the University of Kief. A letter has been sent to all the professors of Russian universities, signed by many prominent Frenchmen, including Anatole France. Its import is shown in the following translation which we quote from *Free Russia*:

"The maintenance of order in universities belongs in all countries to the universities themselves. Whatever be the political *régime* of the country, that privilege seems to us to be necessary for the fulfilment of the high moral functions of education: we have not only to communicate knowledge, we have also to build up character. According to the powerful expression of M. Léon Bourgeois, 'the university is the incarnation of a nation's conscience.' Consequently, it is difficult to us to understand the attitude assumed by our Kief colleagues.

"The undergraduates have taken up an incident of no importance and purely of a university character—every one recognizes that. Cossacks and soldiers have penetrated into the university and spoke as masters of the place. The professors have accepted that intervention. Some of them have even solicited it. The undergraduates have not shown any resistance, yet they were treated as rioters. Very grave punishments, the character of which has nothing to do with universities, have fallen on one hundred and eighty-three of them. These punishments have been decreed by an administrative commission, which put aside in its proceedings all judicial forms, and acted in the absence of the indicted persons, whose defense was not heard. And professors took part in the sittings of that commission side by side with military men and police agents.

"It seems to us that it is the duty of the universities throughout the world to state with all possible speed that they decline all solidarity with colleagues who have thought it proper to ac-

cept and sanction such a jurisdiction. The moral authority of the professors—the only one which supports education—will be ruined, if we adopt such compromises."

A "sympathetic strike" of students has taken place in Moscow, which has consequently been declared in a state of siege.

The troubles in St. Petersburg, according to the correspondent of *The Times* (London), arose as a protest against the revival of antisemitism by "the well-known Jingo," Souvorin, editor and proprietor of the *Novoye Vremya*, who has written an anti-Jewish play called "The Children of Israel." In the riots which followed, students of both sexes participating, M. Bogoliepoff, Minister of Public Instruction, was shot by a student, who, it is reported, was incited to the deed by reading Tolstoy's works. This report, declares *The Standard* (London), is absurd upon the face of it, when we remember what Tolstoy stands for:

"It is quite within the probable, however, that the uprising among the students, representing as they do the progressive ele-

RUSSIAN CHURCH: "I hurl my thunderbolts at you."
TOLSTOY: "Well, this is good weather for my seed-planting."
*Humoristische Blätter, Vienna.*

ment in Russia, has been caused by resentment at Tolstoy's recent excommunication from the established Russian church. There is no occasion for surprise that this act by the government priesthood should incite to some vigorous form of disapproval from Russians whose thinking rises above the limitations of a narrow creed. Tolstoy himself has apparently accepted the action of the state church with passive indifference, and there is every deductive reason for assuming that he would not encourage any violent demonstrations on account of sympathy toward himself."

*The Daily Witness* (Montreal) observes:

"The fact that the students dishonored the church in which masses were being said for the soul of a minister of education who had been assassinated for his tyrannical repressions, and that they actually insulted the eikons, reveals an extraordinary attitude of the educated class toward religion, as represented by priests and images. The fact that the name of Tolstoy was a war-cry shows that there was no revolt against, but rather on the side of, a real religion. The outbreak is an explosion of the sentiments of honor and virtue, manhood and womanhood, on the part of the best thinking elements of Russian society—those elements whose support is the best reliance of any government—against church and state—the church as represented by a tyrannical, corrupt, immoral priesthood whose weapons are the dungeon, Siberia, and the whip, and the state as represented by a bureaucracy of the same sort, whose myrmidons are a secret police with whom villainy is a virtue."

We smile, says *The Chronicle* (London), "to read of Pobiedonostseff and the Metropolitans describing such a man [as Tolstoy] as a sinner, and calling for mercy upon him. It reminds us of so many other stages of Christian history from the very earliest of its days, and we do not suppose it will disturb the great man's equanimity in the illness which all the world deplores."

The severe repressive measures employed by General Bobrikoff, Governor-General of Finland, culminating in the abolition of the Finnish constitution and the proposed transfer of the Finnish archives from Helsingfors to St. Petersburg, are ascribed by a Finnish writer (F. W. Lönnbeck) not so much to the general centralizing policy of the empire as to Russian designs on Scandinavia. Mr. Lönnbeck (writing in *The Anglo-Russian*, London, which claims to be "the voice of Russian public opinion condemned to silence in the country itself") quotes Dr. Anton Nyström, a well-known Swedish politician, and a member of the staff of the Stockholm *Aftonbladet*, as follows:

"It is known that Peter the Great exerted himself to gain access to the Baltic in order that Russia might become a European state and cease to be an Oriental one. The Baltic, however, was at the commencement of his reign a Swedish inland sea, and so, to get his desired 'window toward the west,' Peter must needs somewhere make a break in the Swedish possessions. He succeeded, owing to the foolhardiness of Charles XII., laid the foundations of his new capital at the outlet of the Neva, and erected for its protection the fortress of Cronstadt. By and by, during his reign, the Swedish provinces of Livonia, Esthonia, and Ingermanland, with a portion of Finland, were brought under his sway, and thus a large part of the Baltic shores became Russian. But here Russia has been compelled to stop short, and all her efforts to acquire in the south the fervently desired 'window' toward the Mediterranean—Constantinople—have been in vain. To be sure, Russia has an outlet from Archangel through the White Sea, and from Port Catherine in the farthest north, to the Polar Sea and the Atlantic; but these ports are either not navigable during the long winter months, or, as in the case of the latter one, almost totally cut off from communication overland. The immense empire has thus, for all practical purposes, only one marine outlet to the west—through the Baltic—and this too would probably be closed to her in case of war. In fact, the position of Russia is becoming critical in this quarter, so long as her policy aims at conquests. The nearest peril for her in Europe is evidently the enormous increase of the German navy, which last year numbered 96 war-ships, including 19 large ironclads, in addition to 140 torpedo-vessels. The German fleet, already formidable, is growing more powerful every year since the Reichstag, in June last, voted the necessary money for doubling the war squadron in seven years. The estimates for this increase amounted last year to 168,000,000 marks [$42,000,000]; in 1907 they will be 266,000,000.

"The German navy has for some years already been numerically stronger than the Russian in the Baltic; besides, it is in a far superior condition. That it would be able in case of war to prevent the Russian fleet from leaving the Baltic is a fear which for some time back has haunted Russian politicians. And more keenly than ever do they feel the want of an ice-free naval port outside the Baltic waters. But where is such a port to be found?

"There can be no doubt that for a long time past the splendid *Ofoten Fiord* (lat. 68° N., long. 16° E.) in Norway has been the dearly coveted place.

"An old Swedish politician, late member of the First Chamber, told me, in support of this, that, during a conversation with a Russian minister in Stockholm he was told by the latter that the Russian general staff actually had prepared a plan of invasion of northern Norway from Sweden. When Archangelsk has been fortified, he frankly admitted, and some other strategic preparations carried out, the time would perhaps have come for

action, and Sweden be confronted by the outlook of having its northern frontier removed down to the river Lulea. . . . . .

"The unprovoked coercion of Finland proves unquestionably that the Russian Government hopes, by goading the Finns into acts of disloyalty, to gain a pretext for flooding the country with troops. And what will happen when some border dispute with Sweden and Norway, or some other cause for interference, has been arranged—and Russia is an old hand at this sort of game—is easily conceived."

The Finns are not the only people in Russia who are threatened with the extinction of their nationality, language, and literature. A graphic account of the "Russification" of the Ruthenians, or "Little Russians," is given by Roman Sembratowycz, in the *Allgemeine Zeitung* (Munich). We condense his article as follows:

The Ruthenians are a Slavic people who have played a great rôle in history. It was they who protected Europe against the Asiatic hordes during many centuries. Late in the seventeenth century, under Bogdan Hmielnitski, they voluntarily united with the Russian empire, and the Czar guaranteed to them, by a special covenant, autonomy and the integrity of their language. Almost at once, however, Peter the Great began a systematic campaign of Russification. He tried to suppress the schools and crush out the literature. The Ruthenians rebelled, but their leader, Mazeppa, was speedily humbled. Catharine II. continued the work of suppression by introducing the serf system and converting what had hitherto been an independent state into a Russian province. All Ruthenian schools were abolished, and to the present day teachers are compelled to give all their instruction in Russian, translating to the children in Ruthenian. In 1876 an ukase was issued prohibiting the publication of any books, plays, or any other literature in Ruthenian throughout the entire empire. Public addresses also could not be made in that language. Books and papers in Ruthenian published in foreign countries must not be brought across Russian boundaries. This ukase was reaffirmed in 1882, and again a few months ago. Yet Russia's efforts in this direction will fail, as they will fail in Finland, as they have failed in Poland.—*Translations made for* THE LITERARY DIGEST.

## BRITISH COMMENT ON THE REJECTION OF THE CANAL TREATY.

THE tone of British comment on the rejection of the amended Hay-Pauncefote canal treaty is one of polite and conciliatory firmness. We simply could not accept it, says *The Times* (London), and we are confident that our manner of stating the fact will commend itself to the justice and fair play of Americans as well as Englishmen. If further overtures are necessary, the Washington Government must initiate them. It continues:

"Notwithstanding all that has occurred, those overtures, if made, will doubtless be entertained by us in the same amicable and reasonable spirit in which we considered and accepted Mr. Hay's original draft treaty. But until they are made we simply drop the question which was raised, not by us, but by the United States, and we take our stand on the rights incontestably assured to us by the Clayton-Bulwer treaty. We shall be ready to assent to reasonable modifications of its clauses when we are asked to do so and when there is a fair probability that the Senate will accept our concessions in the spirit in which they are offered. Until that time arrives, we have no grounds for dissatisfaction with our existing legal position, a position which we do not intend to abandon except upon terms which have been concerted in a friendly manner with ourselves."

"It would be contrary not only to our own interests, but to the interests of the whole world," says *The Guardian* (Manchester), "to abandon the claim that the canal, if ever constructed, should be neutralized like the Suez Canal." *The Standard* (London) reads a lecture to Senator Morgan for his "fire-eating anglophobia," and concludes:

"Fortunately, these thunders have left the majority of Mr. Morgan's countrymen quite undisturbed, and have drawn down well-deserved rebukes from the most influential organs of the press. We have felt far too much confidence in the American sense of justice and legality to suppose for a moment that the repudiation of the Clayton-Bulwer treaty could be regarded as a serious possibility. The 'denunciation' of a solemn international compact, by one of the parties without the consent of the other, would be a discreditable and dishonorable act. Between civilized powers a treaty can not be thrown over merely because its provisions happen to be found irksome. The Americans, who yield to no people in their strict respect for the sanctity of private contracts, will assuredly not permit their politicians to hurry them into any such a cynical breach of public morality. If the convention of 1850 is abrogated, it must be by mutual consent, not by the arbitrary and extra-legal act of one of the signatories. We shall consider it valid until it is regularly repealed, and we shall confidently expect that, so long as it is in force, no attempt will be made to invade the rig ts secured to us under its provisions."

Why, asks *The Daily News* (London), should not the Clayton-Bulwer treaty be quietly abrogated by the consent of both parties? It continues:

"Apart altogether from any question of a lack of diplomatic delicacy on the part of the Senate in the wording of the amendments—and a government that includes Mr. Chamberlain in its list of trusted negotiators ought to be the last to complain on this score—we are disposed to think that the rights reserved to us under the Clayton-Bulwer treaty are not at the present day and in the altered circumstances of the case of overwhelming importance to Great Britain. Nobody doubts that we have those rights, and no sane person can maintain that a mere resolution by the Senate can override them. Obviously it was not easy for Lord Salisbury's government to submit to the somewhat arbitrary and dictatorial methods of the Senate. If, however, America is still anxious to spend her money in constructing and fortifying a canal (and in making herself to that extent more vulnerable), there seems to be no reason of sound policy why Great Britain should cast obstacles in her way."

An English writer (John G. Leigh) in *The Westminster Review* (London, March) quotes a number of American congressional resolutions, public speeches, and press opinions in proof of his contention that, even if the United States should build, police, and control the canal, it would still be, "in reality open to the entire world." He says:

"No country can fairly seek or claim from America anything more than adherence to the authoritative and unequivocal avowals to which we have referred; and we decline to believe that if properly approached, the legislature or people of the United States would for a moment hesitate to embody these in the form of a great international compact. The Americans are practical business people, and, as such, may be safely trusted to well weigh the comparative advantages of a canal dedicated to extreme Monroeism and protection and one considered as a public work available to the commerce of the world."

Canadian papers generally regard the rejection of the treaty as a slap at the Senate, not at the American people. The Senate, says *Events* (Ottawa), wanted everything in sight, and proceeded to grasp at everything it could think of. "This rebuke should teach that body international manners for all time to come."

Americans will learn international manners some day, *The Daily Witness* (Montreal) believes. "The United States is not an old-established nation, and has not had dealings with other nations sufficient to accustom its people to the dignified relations of European nations, and consequently some of the people—not all of them—think that it is a sign of power and dignity to demand as a right what is a concession."

*The South American Journal* (London), organ of British capital invested in South America, declares that, had Great Britain accepted the treaty in its amended form, it would have dealt "a very severe blow to international good faith." It is of great importance, says this journal, that steps of some sort should be

taken "to mitigate the detrimental results of the construction of a canal under exclusive American control. It has been suggested that the British Government should, with this object, interest itself in the completion of the Panama Canal, and certainly we think that the suggestion is one which might well merit prompt attention in this country."

## POSITION OF FRANCE IN INTERNATIONAL COMMERCE.

FRANCE'S present position in international commerce has been the subject of considerable discussion in the reviews since the close of the Exposition. In an article in *The International Monthly* (March), André Lebon, the Paris economist, declares that "the fact can not be denied—France is little by little being distanced by her competitors." Assuredly, he hastens to add, "she is not losing ground, but other nations are advancing more rapidly than she, and her relative value in international commerce is declining almost continually." Is this an accidental fact, he asks, or a phenomenon governed by imperious economic laws? His answer is that it is both. We condense his argument:

France has at all times been principally an agricultural country. The love of the land is innate in the blood of the race. The land is very diversified, very generous in its products; but the struggle for its possession is so eager and the law of succession (requiring that each heir shall receive an equal share) so rigorous that the separate holdings are almost infinitesimal, less than one per cent. of them containing more than 100,000 acres. For this reason, it is almost impossible to apply modern machines to the cultivation of the cereals, while, at the same time, there is still the necessity of making a large outlay in order to keep up the fruitfulness of the soil. For the same reason, a large cattle industry is out of the question. Consequently France produces at such a cost price, or in such minimum quantities that she would never dream of laying down the law in the markets of the world. The wheat of the United States and Russia and the herds of the Argentine are always ready to run her out. The necessity for costly treatment of her hard-worked soil and the appearance of new vigorous lands in the market as wine-producers has threatened France's supremacy in this direction also.

For great industry, M. Lebon declares, France is not favored by nature. She has very little coal. She has iron of an excellent quality, it is true, but the ores are relatively distant from the charcoal and coke necessary to work them. She does not produce enough silk for her looms, and she must buy wool of Australia and cotton of India and the United States. She imports the raw materials in large quantities, those she produces herself being either insufficient in quantity or badly distributed geographically. The French ports are too distant from her manufacturing centers, says M. Lebon, her rivers are not adapted for rapid transportation, and there is not sufficient competition among her railroads to make the land-carrying business cheap and effective.

French politics also "hang with heavy weights upon the present generation and upon the financial conditions of industry."

"Since the fatal struggle of 1870–71, France has not only had to pay the enormous indemnity of war demanded by Germany, but she has also been obliged to restore her armaments, her fortifications, and her fleet; and since scientific progress exerts its influence in this direction also, she has been constrained to begin all over again, on several occasions, this labor of Penelope; she has maintained a standing army, and prefers the eventual formation of a line of reserve troops as she has never before done; she has been forced to incur great expenses in her public works, as she was delayed by her railroads, her canals, and her ports; she has multiplied throughout the country public schools of all grades and kinds, which had been so neglected since the institution of universal suffrage in 1848. In order to meet these various but simultaneous demands, it was necessary to increase the taxes, and so to increase the debt."

Moreover, says M. Lebon, the French, by their very nature, do not take easily to the "new ways of international negotiations."

"In politics there is hardly another nation more revolutionary in their words and more conservative in their deeds. In their private life, there are assuredly none more temperate in their ambitions and less audacious in their undertakings. So ardently as the Frenchman caresses the most improbable conceptions in his dreams, so easily, in the ordinary course of his life, does he yield himself to the mediocrity of existence. Surely we can not say of the Frenchman that he has no needs; he has many and of various kinds; for many centuries of culture have refined his nature and opened his mind to various luxuries as yet indifferent to a number of civilized nations. But each one of his needs is of a medium proportion; he does not love activity for itself, and, for example, does not exercise his strength in business for the sole pleasure of working; he does not willingly exile himself, because from his birth he is told, in the words of the old saying, that his nation 'is the most beautiful kingdom next to the heavenly one,' and of this he is profoundly convinced; and he has no taste for adventures, danger, or the unforeseen, and asks just enough for his material life of whatever is indispensable for allowing his imagination to accomplish the flights he will take very good care not to perform in person. He is not a speculator by temperament, and is willingly contented with a modest but regular income, which will bring him without mishap to the time when, having succeeded in dowering his children, he will have, through mere saving, a sufficient sum to spend his old age in peace, and then with his neighbors to devise general doctrinaire schemes and philosophical ideas which he has never known but in the limited field of his own personal experience. In a word, he seeks ease rather than a fortune."

Long credits are not easy to obtain from French business men, we are told, and this hampers their international trade. Protection, this writer holds, has done great things for France. It has developed her interior trade and helped her to get a footing in the markets of the world. Then manufacturing, as she does, articles of taste and solidity rather than cheapness and popularity, French industry is more stable than that of other countries.

*Translations made for* THE LITERARY DIGEST.

## CORRESPONDENTS' CORNER.

### Stephen Phillips and Marlowe.

*Editor of* THE LITERARY DIGEST: In looking over again your valued periodical for the past few months I came across a review of Stephen Phillips's "Herod" in the issue of November 24, 1900. Among other things THE LITERARY DIGEST says: "In the same context the king has a vision of Mariamne in which

> The red-gold cataract of her streaming hair
> Is tumbled o'er the boundaries of the world

an image worthy of Marlowe."

The first line of this quotation from "Herod" embodies a thought that I presume is as old as the hills. The idea of comparing the hair or the beard even to a torrent or a cataract is not original with any one, unless it be with some one of the Stone Age poets whose writings on the cave walls have not been preserved. To instance: in 1895, Dodd, Mead & Co., of New York, brought out a book called "Poems" by me, and in a piece entitled "The Bar Sinister" the following description of the lady in the case is given, in part:

> For tall was she, and graceful as an elm,
> And robed in white, with lilies at her throat;
> Wind-blown her hair, that like a torrent fell
> Full to her feet a cataract of bronze.

Mr. Phillips never saw my stuff, and as for the figure of water and hair I also call attention to my friend George Horton's fine lines on Walt Whitman, published long before "Herod":

> His beard broke on his breast
> In venerable flood."

I know nothing about the classics, but I imagine that they used the figure, those old bards of early times, and if Shakespeare has not given it in some way, it is very strange. Mr. Phillips is undoubtedly a poet; but as for this image anent Mariamne it was old when Mr. Phillips and even Marlowe himself had not appeared on the literary horizon.

CHICAGO. ERNEST MCGAFFEY.

[The remark to which exception is taken by Mr. McGaffey was not ours, but the London *Spectator's*. Unless we are mistaken, the remark was called forth by the second rather than the first of the two lines quoted from "Herod."—*Editor* THE LITERARY DIGEST.]

# The Literary Digest European Party

Three Tours in One

73 TO 87 DAYS

Total Cost $575 to $660

NO EXTRAS

## A Party of Literary Digest

readers traveled through Europe last summer under the management and personal escort of Henry Gaze & Sons. The tour was especially arranged for the readers of this paper and their friends. Since the party returned the expressions of pleasure have been many and emphatic. In a letter printed March 23, Miss Ella F. Keyes of Fall River, Mass., characterized the trip as **"One series of happy hours from the time we left New York in July until our return in September."** Read the other letters below. Another delightful tour has been arranged for the coming summer, also limited to LITERARY DIGEST readers and their friends. **Book now.** The itinerary is carefully laid out and will take the party through **Italy, France, Switzerland, Germany, Austria, Holland, Belgium, and England.** It is divided into three sections and will occupy from 73 to 87 days. The total cost will be from $575 to $660. Send at once for the illustrated program and full details.

### SOME OF THE PLACES THAT WILL BE VISITED

GIBRALTAR, NAPLES, POMPEII, ROME, FLORENCE, BOLOGNA, VENICE, MILAN, BELLAGIO, ITALIAN LAKES, CONSTANCE, FALLS OF THE RHINE, LUCERNE, THE RIGHI, INTERLAKEN, GRINDELWALD, CHAMONIX, MONT BLANC, GENEVA, MUNICH, ZURICH, BRUNIG PASS, BALE, STRASSBURG, HEIDELBERG, PRAGUE, WIESBADEN, COLOGNE, THE RHINE, AMSTERDAM, THE HAGUE, ANTWERP, VIENNA, DRESDEN, BERLIN, POTSDAM, BRUSSELS, WATERLOO, STRATFORD-ON-AVON, CHESTER, LONDON, PARIS, ETC., ETC.

**All Expense is included** in the price of the tour. There will be no extra charge for meals, traveling fees, or fee for visiting sights mentioned; no fees at hotels, no fees for porters, no tips, no transfer expenses. Carriage rides are included in the various cities wherever mentioned in the program, and the numerous incidental expenses which are constantly occurring are foreseen and included in the program. The services of experienced conductors and business managers are also included.

**Everything High Class.** Every important detail will be carried out in a liberal and high-class manner, and all things necessary to the comfort of the party are anticipated, provided for, and included. The Atlantic steamers are high-class; the hotels selected are invariably good, and in many instances the very high est class; the railway travel will be second-class, the almost universal mode of railway travel among the better classes in Europe.

### Letters from those who traveled in our Tours last Summer

**Miss Ella F. Keyes,** Fall River, Mass., writes: "I am perfectly willing for you to publish my opinion, in regard to the tour of 1900, as given in my letter to you (see THE LITERARY DIGEST of March 23) and will further add to what I have already said, that I have traveled quite a little throughout the United States, have been connected with ten different excursion parties, and think your party of 1900, composed of readers of 'THE LITERARY DIGEST,' the *very pleasantest* and *most congenial one* it ever has been my pleasure to be with, and hope I shall have the pleasure of enjoying another at some future time."

**The Misses Katherine and Jennie Moore,** Philadelphia, write: "Our expectations were more than realized while members of the tour, which was so admirably carried out under your direction. You succeeded in assembling a most congenial party, and procured for us gentlemanly, painstaking couriers, and saw that the program was carried out even to the most minute detail."

**Mrs. W. W. Allen,** 2 West 88th St., New York City, writes: "In view of my recent three months' trip with the Philadelphia-Paris Exposition party it gives me pleasure to say that it was in every way a most complete and enjoyable trip, and entirely free from all care and responsibility. I can heartily endorse all arrangements made by Henry Gaze & Sons, which are so faithfully carried out."

**Mr. Howard E. Yarnall,** Philadelphia, writes: "Our summer tour was a complete success, the itinerary having been carried out in every detail; the party never missing a train at any point. Much of the pleasure of the party was due to the efficient conductors furnished by Henry Gaze & Sons, and to the personal oversight and untiring energy of those in charge to see that all were as comfortable as possible. I can cheerfully recommend to any one contemplating a sight-seeing trip, who wishes to see the most in a short time and be relieved of the cares of baggage and the many inconveniences of traveling abroad, to join one of your parties."

**Sign and Send this Inquiry Blank Now**

# New Summer Suits and Skirts

OUR new Spring and Summer Catalogue is the most attractive which has ever been issued. It illustrates an exquisite line of fetching styles in suits and skirts for this season's wear—new, exclusive designs which will not be found elsewhere. Every garment is perfect in fashion, shape and workmanship—*made to order* from the model and materials selected from our Catalogue and Samples, which we will send *free* upon request. Our Catalogue illustrates:

**Tailor-Made Suits, $8 up.**
**Visiting Costumes lined throughout with fine quality taffeta silk . . . $15 up.**
**Skirts . . $4 up.**
**Wash Dresses, $4 up.** **Wash Skirts, $3 up.**
**Rainy-Day Skirts, $5 up.**
**Traveling Suits, Golf Skirts, Taffeta Jackets, Etc.**

***We Pay Express Charges Everywhere.***

Write to-day for Catalogue and Samples of the materials from which we make our garments; they will be sent *free* by return mail. Order what you desire; if the garment does not please you, send it back and *we will refund your money*.

**THE NATIONAL CLOAK COMPANY,**
**119 and 121 West 23d St., New York.**

**BEST & Co**
LILIPUTIAN BAZAAR

# Boy's Sailor Blouse

**Of Basket Weave Cotton Cheviot, in pink, light blue and white, trimmed with wide row of white and sailor knot.**

***Sizes, 3 to 10 Years,***

**98c.**

*By mail, postage paid, 4 cents extra.*

Our catalogue, in new form, listing nearly
**2,000 Articles for Children,**
more than half of them illustrated, sent on receipt of this advertisement and 4 cts. postage.

**ADDRESS DEPT. 18**
**60-62 W. 23d St., New York.**

**100 VISITING CARDS** Post paid **35c**
name and address, latest style. Order filled day received. Not obtainable elsewhere at twice the price. Special inducements to Agents. Booklet "CARD STYLE" FREE!
E. J. SCHUSTER PTG. & ENG. CO., DEPT. 10, ST. LOUIS, MO.

## CURRENT POETRY.

### Maurice Thompson.

Just before his last illness, the late Maurice Thompson sent to *The Independent* a poem which, as the editor says, "illustrates his love not for nature alone, but for the eternal youth of Greek genius." The following is the poem:

SAPPHO'S APPLE.

Οἷον τὸ γλυκύμαλον ἐρεύθεται.

"A dreamy languor lapsed along,
And stirred the dusky-bannered boughs;
With half a sigh and half a song
The crooning tree did nod and drowse,
While far aloft blush-tinted hung
One perfect apple maiden-sweet,
At which the gatherers vainly flung,
And could not get to hoard or eat.

"Reddest and best," they growled and went
Slowly away, each with his load
Fragrant upon his shoulders bent,
The hill-flowers darkening where they trode;
"Reddest and best; but not for us;
Some loafing lout will see it fall;
The laborer's prize—'twas ever thus—
Is his who never works at all!"

Soon came a vagrant, loitering,
His young face browned by wind and sun,
Weary, yet blithe and prone to sing,
Tramping his way to Avalon;
Even I it was, who, long athirst
And hungry, saw the apple shine;
Then wondrous wild sweet singing burst
Flame-like across these lips of mine.

O, ruby-flushed and flaring gold,
Thou splendid lone one left for me,
Apple of love to filch and hold,
Fruit-glory of a kingly tree!
Drop, drop into my open hand,
That I may hide thee in my breast,
And bear thee far o'er sea and land,
A captive, to the purple West.

James Whitcomb Riley has written a poetical tribute to Mr. Thompson's memory which is published in the Indianapolis *News*. The following are some of the stanzas:

MAURICE THOMPSON.

Perchance—with subtler senses than our own
And love exceeding ours—he listens thus
To ever nearer, clearer pipings blown
From out the lost lands of Theocritus.

Or, haply, he is beckoned from us here,
By knight or yeoman of the bosky wood,
Or, chained in roses, haled a prisoner,
Before the blithe Immortal, Robin Hood.

Or, mayhap, Chaucer signals, and with him
And his rare fellows he goes pilgriming;
Or Walton signs him, o'er the morning brim
Of misty waters 'midst the dales of spring.

---

### The Sepulchre in the Garden.

By JOHN FINLEY.

What tho the Flowers in Joseph's Garden grew
Of rarest perfume and of fairest hue,
That morn when Magdalene hastened through
Its fragrant silent paths?

# Pears'

Soap in stick form; convenience and economy in shaving.

It is the best and cheapest shaving soap in all the world.

All sorts of people use Pears' soap, all sorts of stores sell it, especially druggists.

# KNOX'S GELATINE

is **granulated**—measure it with a spoon, like sugar. If you have struggled to get the proper amount of "shredded," you will appreciate this point.

**I WILL MAIL FREE**

my book of seventy "Dainty Desserts for Dainty People," if you will send the name of your grocer. If you can't do this, send a two-cent stamp.

For 5c. in stamps, the book and full pint sample.

For 15c., the book and full two-quart package (two for 25c.).

Pink color for fancy desserts in every package.

**CHAS. B. KNOX,**

**Krementz & Co.,** 68 Chestnut St. Newark, N. J.

She caught no scent of budding almond-tree ;
Her eyes, tear-blinded still from Calvary,
Saw neither lily nor anemone –
Naught save the Sepulchre.

But when the Master whispered "Mary," lo!
The Tomb was hid ; the Garden all ablow ;
And burst in bloom the Rose of Jericho—
From that day "Mary's Flower."

—In April *Harper's Magazine.*

## PERSONALS.

**The Capturer and the Captured.**—Gen. Frederick Funston, who planned and executed the capture of Aguinaldo, was born in Ohio in 1866 and spent most of his youth near Iola, Kans. He attended the Kansas University at Lawrence, entering when he was eighteen years old. From his earliest years he showed the instincts of a fighter. This tale has been told of him by William Henry White :

"He is not afraid of anything that can walk. Once the town's 'bad coon' tried to run over Funston. The darkey weighed pretty nearly two hundred pounds and was a 'scrapper' with a razor record. Funston was five feet three, and weighed about ninety-five. He 'bluffed' the colored brother to a 'standstill' and went for a warrant, and marched the boss bully through the main streets of Lawrence at the point of a gun."

General Funston's career, as told in the New York *Herald* and other papers, may thus be summarized :

In 1887, he became city editor of the Fort Smith *Tribune*, which was a Democratic paper. Funston, being left in charge at one time, turned it into a Republican sheet, which enraged the people, who threatened to tar and feather him.

His next exploit was as conductor on the Santa Fé Railroad, where he had an exciting time with a cowboy, who at the time, being one of his passengers, began shooting holes in the ceiling of the car. Funston kicked the revolver from his hands, threw him from the car, and chased him for quite a distance.

In a government scientific expedition, he next went to Dakota, to Death Valley in Nevada, and thence to Southern California. After that he went to Alaska for the Government, collecting botanical specimens, and he won some renown as an Alaskan traveler.

Next he appeared as a coffee planter in Central America, and soon after he accepted a position in the Cuban army, where he served under Garcia. When war with Spain was declared, Funston offered his services to President McKinley, and was commissioned colonel of the Twentieth Kansas. He fought through the war and, returning to Kansas, was married. Six hours after, he was ordered to Manila. His greatest move thus far has been his latest—the capture of the will-'o-the-wisp Aguinaldo.

Aguinaldo, according to the New York *Sun*, is twenty-nine years old. He was born in the village of Imus in the province of Cavite, and is said to have Chinese blood in him. He was educated in the college of St. Jean Lateran, and was afterward sent to the University of St. Tomas at Manila. In the latter institution, it was said that he had the most obtuse mind among the students. Throughout his college career, his family was in poor circumstances, and it was a struggle to keep the boy at his studies.

Until 1893, Aguinaldo tilled the soil ; then the Philippine League was established, and he became one of its members. In 1896, he was made mayor of Cavite, and became prominent in a rebellion that broke out in that year. The year 1897 found him fighting against Spain ; but on December 27, 1897, he suddenly surrendered, on consideration of

a payment by Spain of $400,000 and a promise of more. On June 12, 1898, after Dewey's victory, Aguinaldo proclaimed himself dictator of the Philippines, and has ever since practised jungle warfare.

---

**Madame Melba and Gounod.**—Madame Melba, the world-famed prima-donna, has had many and varied experiences during her professional travels. Royalty has honored her, cities have lauded her, and audiences have spent twenty minutes at a time cheering her. Her success is interestingly told by herself in *The Saturday Evening Post* (Philadelphia).

Her studies have been made under the great composers whose operas she so well interprets. In this way she became intimate with Gounod, while studying the rôles of Marguerite and Juliet. She writes:

"A dear old man he was, almost a recluse, surrounded by reminders of his faith and of the past. He was so wonderful, so full of life and animation, singing every rôle in the opera, and acting with fire and spirit. One moment he would be Faust, the next Mephisto, and again Romeo or the nurse. He not only showed how his music was to be sung, but the action that should accompany it. I acted Marguerite, as he directed me to. 'Marguerite,' he used to say, 'is a timid, retiring, bashful girl. Juliet made love to Romeo.' I think of his words whenever it is said that I am cold in the Garden scene. . . . Only ten days before he died, Gounod sent for me to come to see him. One thing or another came in the way. I put it off and put it off, and I did not get there until it was too late. I shall never forgive myself for it. In Romeo and Juliet there is the phrase that says: 'Let all dance. Those who do not dance have secret troubles.' With the utterance of those words I can see Gounod now, dear old man. He would put his hand up mysteriously and say, 'They have corns.'"

---

**The Reason He was Sure.**—In a provincial court recently Farmer A. sought to recover from his neighbor, Farmer B., the value of certain sheep alleged to have been worried by B.'s dog.

For the defense it was contended that the dog which worried the sheep belonged not to B., but to A., and the following dialog took place:

COUNSEL FOR DEFENDANT: "You admit that the defendant's dog and yours were alike?"

PLAINTIFF: "Yes, they wor as much alike as two peas."

COUNSEL: "When you saw the dog worrying your sheep where were you?"

PLAINTIFF: "About a hundred yards away."

COUNSEL: "One hundred yards! And you mean to say that at that distance you were near enough to swear the dog was defendant's and not your own?"

PLAINTIFF: "Yes!"

COUNSEL: "Wonderful! Now, do you mind telling the court what made you so sure on the point?"

PLAINTIFF: "Not a bit! Ye see, ma dog had be n dead two days!"

Verdict for plaintiff.—*Tit-Bits.*

## Current Events.

### Foreign.

CHINA.

March 25.—The Chinese minister in London appeals to the British Foreign Office to bring pressure to bear on Russia to prevent the compulsory signing of the Manchurian treaty by China.

It is announced that China has repudiated Russia's proposals regarding Manchuria, by failing to sign the treaty within the prescribed time.

March 30.—The Japanese Government is reported to be much exercised over the political complications arising over the Russo-Chinese Manchurian convention; two Russian war-ships arrive at the Korean port of Chemulpo.

SOUTH AFRICA.

March 25.—The British General Babington inflicts a severe defeat on the Boer General Delarey in the Transvaal, capturing many burghers and their supplies.

March 26.—General French reports recent captures of 1,200 Boer prisoners and guns and cattle.

March 30.—The British War Office receives advices from Lord Kitchener reporting the capture of seventy-two Boers in Orange River "Colony."

Three hundred armed deserters from the British West African Regiment threaten to loot Cape Coast Castle; troops have been sent to suppress the revolt.

OTHER FOREIGN NEWS.

March 25.—Charlotte Mary Yonge, the authoress, dies at Winchester, England.

March 26.—A plot against the life of the Czar is discovered at St. Petersburg, and a mine of explosives is unearthed beneath his palace.

Arthur Chamberlain, brother of the Colonial Secretary, receives an award of £200 damages in a suit for libel against the London *Star.*

March 27.—Riots among the Russian students continue, and the Government decides to adopt more lenient measures.

Three thousand miners go on strike at the town of Almsdovar del Campo, Spain, and the mines are flooded.

March 28.—A speech made by Emperor William to troops, hinting at a revolutionary rising and threatening stern repressive measures, causes great surprise in Berlin.

PATENTED "Prophylactic" Tooth Brush

# Bright's Disease and Diabetes in Life Insurance.

Thousands of men unbeknown to themselves are suffering from these diseases. This may easily be proved by asking the medical advisers of any Insurance Company. Every year an enormous number of men are terrified on applying for life insurance by learning that they are so afflicted.

The stealthiness of these diseases is terrible. The symptoms are so numerous and so variable that it would be useless to attempt to describe them here. To most people the discovery comes as a shock and surprise, but these diseases are curable.

The Tompkins-Corbin Co's. Bright's Disease Cure and their Diabetes Remedy (two distinct medicines) have brought permanent cure to numbers, mainly persons of culture and education, whose testimony makes doubt impossible.

MR. J. W. CORBIN,
New York City.

*Dear Sir—*

I was not aware that I had any kidney trouble until August, 1896, when I found it out by accident. At that time I made application to the Massachusetts Mutual Life Insurance Company for a policy. The medical examiner in making his examination discovered that I had a very pronounced case of Bright's disease. I immediately placed myself under treatment, lasting for some six months with indifferent results; in fact, I was getting worse, was advised to stop work, and was told that I could not get well if I did not. About that time a friend advised me to try your cure. He could not say enough in praise of it, having known of several remarkable cures being made by your medicine. I at once placed myself under your care, and gained rapidly, faithfully following your instructions. In December, 1897, I made application to the New England Mutual Life Insurance Company for a policy of Insurance, telling them I had been refused by the Massachusetts Mutual Life Insurance Company in August, 1896, and telling them the reason why I had been refused. I asked them to have the Company's Medical Examiner look particularly for traces of Bright's Disease. He made some eight or ten examinations, but failed to find any trace of the disease. In March, 1898, the Company issued me a policy.

I cannot speak too highly of what your Cure has done for me. I have never enjoyed better health than I have for the past eighteen months. I am very truly yours.

(The signature to this letter will be found in our book of testimonials.)

For any who fear these diseases and will send us four ounces of their water, by express, we will make a careful and exact analysis free of charge, and either put their mind at rest, or put them in the way of recovery. We wish that every afflicted one might have a copy of our book of testimonials. Dr. Tompkins gives his personal attention to every case.

March 31.—A conference on the Newfoundland treaty shore question is held in London, attended by Mr. Chamberlain, Lord Lansdowne, and Mr. Bond, premier of Newfoundland.

The situation in Russia continues very unsettled; Karpovich, the assassin of M. Bogoliepoff, is sentenced to twenty years' penal servitude.

## Domestic.

DOMESTIC NEWS.

March 25.—A score of persons are killed in Birmingham, Ala., by a tornado which does damage to $250,000 worth of property.

The President appoints Frederick I. Allen commissioner of patents and W. A. Rodenburg civil service commissioner.

Nine miners are killed and several wounded by an explosion of gas in a colliery at Connellsville, Pa.

A syndicate of New York bankers buys the Rogers locomotive works at Paterson, N. J.

March 26.—The President calls Philip C. Knox of Pittsburg, to Washington, and announces his intention to offer the attorney-generalship to him.

Wu Ting Fang is the chief speaker at a "Golden Rule" meeting in Calvary Baptist Church, New York.

At the dinner of the Get-Together Club, New York, George H. Daniels of the New York Central Railroad, and other large employers of labor, speak on plans of industrial betterment.

March 27.—The State Department abandons its plan of demanding an apology from the Sultan of Morocco, and the cruiser *New York* is ordered to proceed from Tangier to Manila.

The Rev. E. S. Phillips, of Hazleton, Pa., confers with J. P. Morgan at New York regarding the differences between the miners and operators in the anthracite region; no strike is now likely.

March 28.—The President tenders the attorney-generalship to P. C. Knox, of Pittsburg.

The Nebraska Legislature elects Governor Dietrich and J. H. Millard United States Senators for a short and long term respectively.

March 29.—Attorney-General Griggs takes leave of his associates in the Cabinet and the Department of Justice.

The United Mine Workers, in convention at Wilkesbarre, deside not to order a strike on April 1, as was at first intended.

Lieutenant-General Miles reviews the troops at the Military Tournament in New York.

March 30.—The President appoints delegates to the Pan-American Congress and members of the St. Louis World's Fair Commission.

The State Department calls Minister Loomis from Caracas to Washington to confer with him regarding the situation in Venezuela.

March 31.—Prince Peter Kropotkin, leader in the Russian Nihilist movement, speaks to a large audience in New York.

AMERICAN DEPENDENCIES.

March 25.—*Philippines:* The American Civil Commission sails from Iloilo to Sulu to confer with the Sultan.

March 27.—Aguinaldo, the Filipino leader, is captured by General Funston in his hiding-place in Isabela Province, Luzon. He is brought to Manila on the gunboat *Vicksburg*.

March 29.—It is expected that the capture of Aguinaldo will end the Filipino war; a large number of his disheartened followers surrender; General MacArthur recommends that Funston be made a brigadier-general in the regular army.

March 30.—General Funston is promoted to brigadier-general by the President in reward for his services.

March 31.—Lieut.-Com. Jesse M. Roper is suffocated on board the man-of-war *Petrel* at Cavite, P. I., while trying to rescue a sailor from the hold of the vessel, where a fire was burning; twenty-two other officers and seamen are prostrated.

Extensive frauds are discovered in Manila, involving the Army Commissary Department; many officers and civilians are arrested.

**SENT FREE AND PREPAID.**

To cure chronic indigestion and constipation perfectly and permanently. The Vernal Remedy Company of Buffalo, N. Y., will send a trial bottle of Vernal Saw Palmetto Berry Wine FREE and PREPAID to any reader of LITERARY DIGEST. It is a specific for all kidney, bladder and prostate troubles, and one dose a day cures.

# Don't Be Fat.

## New and Remarkable Home Method that Reduces Weight to Normal Without Diet or Medicine and is Absolutely Safe.

## Method Sent Free to All By Mail, Postpaid, Sealed and Plain—Write To-day.

Don't be too fat; don't puff and blow; don't endanger your life with a lot of excess fat; and furthermore, don't ruin your stomach with a lot of useless drugs and patent medicines. Send your name and address to Prof. F. J. Kellogg, 23 W. Main St., Battle Creek, Mich., and he will send you free a trial of his remarkable method that reduces the weight to normal. Do not be afraid of evil consequences, the method is perfectly safe, is natural and scientific and gives such a degree of comfort as to astonish those who have panted and perspired under the weight of excess fat. It takes off the big stomach, gives the heart freedom, enables the lungs to expand naturally and you will feel a hundred times better the first day you try this wonderful home method. Mr. Arthur K. Wallace of Abingdon, who tried this treatment, says:—"The effect of your method for reducing flesh is one that I can sincerely commend to 'fat' people. I weighed 302, couldn't get up a flight of stairs without blowing like a porpoise, was miserable from morn till night and might have dropped dead any minute. I used your method diligently for seven days and was thunderstruck to find that I could breathe naturally; in fourteen days I tipped the scales at 287: in thirty day I weighed 269; in six weeks was reduced to 212 pounds which Dr. Jones, my physician, said was normal. I am six foot two high and of large frame and to get down nearly a hundred pounds is remarkable. Dr. Jones says you are a genius; and I heartily endorse your method as the best life saving device for fat people ever invented. Am glad to write you and will try to be of as much service to you as you have to me."

Write to-day.

**AGE NO BAR**

**To Successful Treatment of the Hair.**

THE PHILO HAY SPECIALTIES CO., Newark, N. J.

GENTLEMEN:—My hair all came out, I had to tie up my head to keep it warm. I saw an advertisement and sent to the drug store to get a bottle of **Hay's Hair-Health** and a cake of **HARFINA SOAP.** Shortly after I commenced using it, my hair began to grow as thick as it was when I was a young woman. I recommend it to everyone who is in need of it. It is the best dressing for anyone's hair. **I was 72 years old when I lost my hair.** My hair is growing, has its natural color, and is thicker than it was before it came out. Many thanks to **Hay's Hair-Health.**

Yours very truly, Mrs. MARY A. KOPLIN.
AKRON, O., NOV. 22, 1900.

# Hay's Hair-Health

will restore gray, faded or falling hair to its youthful color, thickness or beauty. **It is not a dye,** but a cleanly, healthful tonic to the hair and scalp, removes and prevents dandruff and will not stain skin or clothing. Its use cannot be detected. Equally good for men and women. **Large 50c. Bottles. At Leading Druggists.**

## A BOTTLE FREE

### The Monte Carlo Tournament.

(With apologies to the Shade of Shakespeare.)

All the world's a Chess-board
And all the men and women merely players.
They have their matches and their tourneys
And now a Monte Carlo gaming frenzy,
Its course being seven stages. At first, the plan
In infancy hatched by foxy management;
And then, false promises to Masters great
To draw them to faro and roulette-wheel.
Third stage, the Chessists smell a rat,
The players best refuse the threatened trap;
And next, rules fractional and fractional.
Then tourney starts apace among unknowns,
While few of Caissa's grandest men'
Fall prey to prizes all too seductive;
And sixth, drawn parties galore mar the marr'd.
Last scene of all ends farcical French fizzle
Is childish Salta games and mere oblivion,
Sans Lasker, sans Pillsbury, sans Chess.

—*The Standard-Union*, Brooklyn.

### Correspondence Tournament.

"Herr G. Marco, the Vienna Chess-master, is the author of a very novel and interesting method of conducting correspondence tournaments. This new feature is that the individual contestants, tho knowing that none but strong players are entered, are not to know the names of their adversaries until the end of the tourney, all correspondence being carried on anonymously."

If the contestants are all "strong players," we do not see the "obvious advantage" in this. But if there are players of reputation and those who are only amateurs, then there is a very decided advantage in this method. An amateur very often does not play his best against an expert, simply because he is afraid of the *great* man, handicapped by the knowledge of the expert's powers. On the other hand, a strong player often takes "chances" with one whom he knows is weaker, and sometimes gets the worst of it.

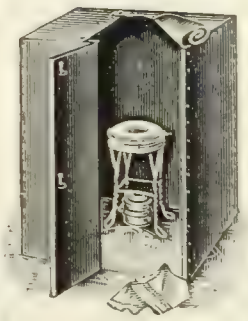
### A New Chess-Magazine.

We have received the first number of *Checkmate*, a "Monthly Chess-Chronicle," published by J. H. Graham, Prescott, Ont., Canada. It has the appearance of modesty joined to sterling worth. Besides interesting reading-matter, there are sixteen problems and twelve games.

van Houten's Cocoa

Nutritive, Refreshing, Economical in use. A breakfast-cupful of this delicious Cocoa costs less than one cent.
Sold at all grocery stores—order it next time.

Turkish Baths
For 3 Cents



A RACINE folding bath cabinet gives you a Turkish bath room at home. At a cost of three cents, you get all the possible benefit of any vapor or hot air bath. These baths taken regularly insure health vigor and, cleanliness. They clear the complexion; they cure colds. And no other treatment is so widely employed by the best physicians in the cure of most chronic diseases.

The Racine is not like the flimsy and unserviceable cabinets that are widely sold. It is a stout, double-walled room, rubber coated inside and outside, and fitted with a door. Merely tip it, and it folds into a six-inch space. The four best features in the Racine are controlled by our patents. Without them no cabinet can be satisfactory.

The Racine is guaranteed to be the best cabinet on the market. We sell on approval, to be returned at our expense if not satisfactory. Prices $5 up, freight or express prepaid. Alcohol or gas heater, vaporizer, face-steaming attachment and 35 prescriptions for medical baths included. Send today for our illustrated catalogue, and order from that.

Vapo-Cresolene

"We Were Not Disturbed All Night."

Parents tell us this who have vaporized Cresolene for their children with Whooping Cough or Croup. The record of twenty years shows the great curative and preventative power of Cresolene for Bronchitis, Influenza, Measles, Catarrh, Coughs, Scarlet Fever, and other contagious diseases. Recent tests made at the Yale Pathological Laboratory proves that vaporized Cresolene kills the germs of diphtheria. Send for descriptive booklet with testimonials. Sold by all druggists.

Vapo-Cresolene Co., 180 Fulton St., New York.

MODENE

IN COMPOUNDING, an incomplete mixture was accidentally spilled on the back of the hand, and on washing afterward it was discovered that the hair was completely removed. We named the new discovery MODENE. It is absolutely harmless, but works sure results. Apply for a few minutes and the hair disappears as if by magic. **It Cannot Fail.** If the growth be light, one application will remove it; the heavy growth, such as the beard or growth on moles, may require two or more applications, and without slightest injury or unpleasant feeling when applied or ever afterward.

*Modene supersedes electrolysis.*

**Used by people of refinement, and recommended by all who have tested its merits.**

Modene sent by mail, in safety mailing-cases (securely sealed), on receipt of **$1.00** per bottle. Send money by letter, with your full address written plainly. Postage-stamps taken.

VOL. XXII., NO. 15 NEW YORK, APRIL 13, 1901. WHOLE NUMBER, 573

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### CHINA'S REFUSAL TO SIGN THE MANCHURIAN AGREEMENT.

ACCORDING to the news reports, China has refused to accede to Russia's terms laid down in the negotiations over Manchuria, and has sent back to Shanghai Li Hung Chang, who has been urging acceptance so strongly that he is suspected of being in the pay of Russia. Russia, so the despatches say, threatens to break off diplomatic intercourse, but the Emperor of China appears to prefer that to the loss of Manchuria. The American newspapers are surveying the field of world politics to see what nations are likely to be drawn into the conflict that may ensue. The Peking correspondent of the New York *Herald* declares that he has good authority for saying that Japan has given to China "written assurances that she will share the consequences of China's refusal to sign the Russian treaty, if these consequences include war," and that Germany, England, and the United States have made protests to China against the cession of Manchuria to Russia, altho few believe that any one of these three nations will back up its protest with force. France, on the other hand, which of late years has been counted a thick-and-thin ally of Russia, is now showing some signs of coldness, and, many believe, would hardly take up arms to help Russia in this affair. The view of the American press might be summarized, therefore, by saying that if Russia persists in its attempt upon Manchuria, Japan will very likely take up the sword to prevent it, the western nations preserving a neutrality somewhat more favorable to Japan than to Russia. The American press go so far as to predict that Japan will prove superior to Russia on the sea, altho on land the Czar may prove the stronger. In the mean time, the Russian forces are in actual control in a large part of Manchuria, and, the Philadelphia *Ledger* remarks, Russia "will undoubtedly remain, strengthening her forces and position until she possesses the province." The New York *Evening Post* adds: "A treaty would legalize their temporary stay there; without it they would stay anyhow. And guns and bayonets on the Amur must count for more than notes on the Potomac or speeches on the Thames. Yet the poor Chinaman is caught between the two, and told that he will be ruined if he signs and ruined if he does not sign."

What is our own nation to do in this crisis? The Philadelphia *Times* thinks that "to the United States the matter is of little consequence," and it expresses the view of most of the American papers when it says that "we are under no obligations to defend the nations of Asia, and the less we have to do with European concerts the better for us." The New York *Journal of Commerce*, however, points to our millions of dollars' worth of trade with Manchuria, and predicts that we will lose it all if we permit Russia to take the province. The Houston *Post* thinks that peaceable measures will be useless. "The idea," it says, "that the powers, now jealous of our commercial expansion and invasion of their home fields, will listen to our 'moral suasion' with reference to the 'open door' is ridiculous." The Philadelphia *Inquirer*, too, says: "Are we going to stand idly by and see our trade go to pieces after all the trouble we have had to build it up? . . . A plain hint to Russia that the United States takes the same view of the situation as does Japan would halt that Russian Bear in his tracks and keep him halted."

### AGUINALDO'S SUBMISSION.

AGUINALDO'S oath that he renounces "all allegiance to any and all so-called revolutionary governments in the Philippine Islands" and recognizes and accepts "the supreme authority of the United States of America," and that he solemnly swears that he "will bear true faith and allegiance to that Government" and "will not, either directly or indirectly, hold correspondence with or give intelligence to an enemy of the United States," nor "abet, harbor, or protect such enemy," is considered only less significant than the report that he is preparing a manifesto advising all the rest of the insurgents to do the same. Chief Justice Arellano, of the American Government in the islands, explained to Aguinaldo the measures being taken for the rule of the natives, and at the conclusion of the exposition Aguinaldo, it is reported, declared that he was "satisfied with America," and thereupon took the oath of allegiance. The New York *Tribune* (Rep.) remarks that it is too bad he didn't find all this out two years ago. Armed bands are surrendering every day, and the War Department, it is reported, expects everything to be quiet in the islands in three months.

Some of the expansionist papers observe that if Aguinaldo is satisfied, the anti-expansionist papers in America ought to be satisfied too; but they are not. On the contrary, they seem to feel that the elimination of the armed resistance to our authority makes possible a calmer discussion of the merits of the case than was possible while the flag was being assailed. Thus the Indianapolis *News* (Ind.) says:

"With peace, we shall all have a fair chance to discuss the great question, and if the American people have their way, the Filipinos will be treated with justice and fairness, and American interests—we use the word in its highest sense—will be properly safeguarded. In 'our opinion,' the less we have to do with the Philippines after the restoration of order and the establishment

of local governments, the better it will be for us. And we ought to keep before our minds always, as the ideal to be attained, eventual Philippine independence. The situation is in our own hands. We are under no obligation whatever to govern the islands permanently. Inasmuch as we have interfered, we are bound to start the people right, but that is all. After having discharged that duty, the only duty remaining is the one we owe to ourselves. Let us not forget that."

"American institutions are brought more severely to trial now than at any time before," says the Philadelphia *Times* (Dem.), and the New York *Evening Post* (Ind.) remarks: "The fact is that the sound and convicting arguments for Philippine independence never had so good a chance of being listened to as precisely at this juncture; and those who have the Filipino cause at heart should press them, in season and out of season, with more energy and more hope than ever before." The Springfield *Republican* (Ind.), Mr. Bryan's *Commoner*, and other "anti-imperialist" papers express the same view.

Aguinaldo's sincerity in taking the oath of allegiance is the subject of diverse opinion. The Boston *Journal* (Rep.), the Chicago *Evening Post* (Ind.), and the anti-expansionist papers quoted above believe that he acted in good faith; but others doubt it. The Tacoma *Ledger* (Rep.) not only doubts the sincerity of Aguinaldo, but doubts the sincerity of his American defenders. "The truth is," it declares, "they care nothing about Aguinaldo," and "they regret his capture because it will bring the turmoil in the Philippines to an end, and then they will have to find something new to abuse the Administration about." The New York *Times* (Ind.) thinks that by swearing fealty to his former foe Aguinaldo "has effaced himself as a world personage," and the Boston *Transcript* (Rep.) remarks that it is now clear that "there is nothing about him that suggests Senator Hoar's ideal hero, the determined man who will resist the temptations of ease to preserve a principle, who prefers imprisonment to freedom purchased at the price of concession." The Washington *Star* (Ind.) considers him "a very shifty fellow," and the Louisville *Courier-Journal* (Ind. Dem.) believes he is unfit to be given a post of confidence.

The Washington correspondent of the New York *Herald* (Ind.) says:

"The cost to the United States of the Philippines in money and American lives may be summarized in these figures: Expenditures on account of military and naval operations in the islands, $173,550,000; paid to Spain under treaty of Paris, $20,000,000; paid to Spain for Cagayan and Sibutu, $100,000; interest on war loan since June 30, 1899, $8,423,000; Philippine commissioners and miscellaneous, $500,000; total cost in money, $202,573,000.

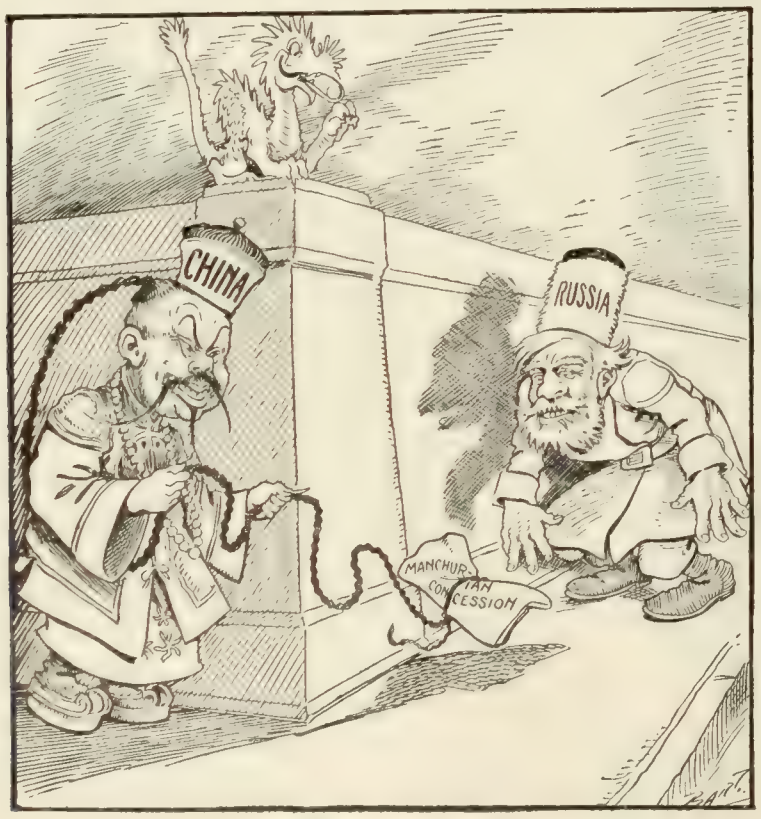
"Army lost in killed and deaths from wounds: Officers, 54; enlisted men, 836. Navy lost in killed and deaths from wounds: Officers, 2; enlisted men, 16. Deaths from disease: Officers, 48; enlisted men, 2,072. Total cost in lives, 3,028."

## THE MANILA ARMY SCANDAL.

THE report that Captain Barrows, quartermaster of the Department of Southern Luzon, together with several non-commissioned officers and a number of civilians, have been arrested in Manila, and that extensive frauds have been discovered in the commissary department there, has tended to dampen somewhat the enthusiasm aroused by the capture and imprisonment of Aguinaldo. "The humiliation of the recent revelations," remarks the Indianapolis *News* (Ind.), "is enough almost to dim the glory of Funston's act." General MacArthur cabled on April 3 that the frauds were "not of sufficient gravity to cause concern," and had been exaggerated. It is since alleged that the shortage in the commissary department aggregates $185,000. Says the Detroit *Free Press* (Ind.):

"The frauds which have been discovered in the Philippines resemble those that were perpetrated without number during the Civil War. A commissary officer and his clerks sell government stores to a contractor, who proceeds to dispose of the spoils, and everybody 'on the inside' has a share in the loot. Conditions in the Philippines are peculiarly favorable for crimes of this character. The officers and their confederates are 7,000 miles from home. The nature of the country makes it comparatively easy to 'lose' commissary supplies. An exorbitant tariff is imposed upon imports of food-stuffs. Consequently the profits to be made by the sale of government supplies are enormous, and it would be strange if somebody had not yielded to temptation."

The anti-Administration papers naturally find in the present disclosures but another instance of the kind of pitfalls that await an "imperialistic" government. The New York *Evening*

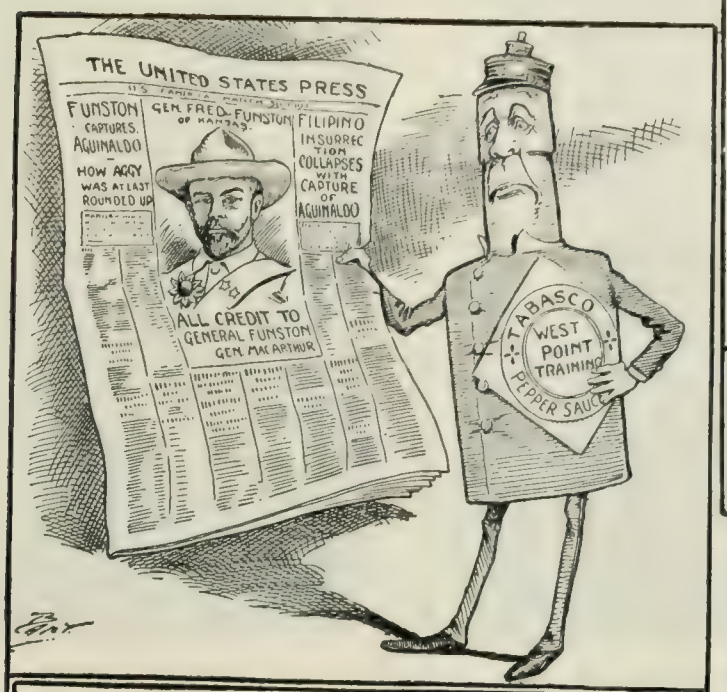


APRIL-FOOLING RUSSIA.
—*The Minneapolis Journal.*

THE BEAR: "Um, yum, yum."
—*The St. Paul Pioneer Press.*

CARTOON VIEWS OF THE FAR EAST.

## FUNSTON'S EXPLOIT IN CARICATURE.



THE MATTER WITH FUNSTON.

THE WEST POINTER: "Huh! He's no soldier; he never tasted me." —*The Minneapolis Journal.*

THE FIRST ECLIPSE OF THE NEW CENTURY.

"Terrible Freddy" outshining "Terrible Teddy." —*The Atlanta News.*

KANSAS REDEEMED.

UNCLE SAM: "Shake, old boy, this makes up for your terrible past." —*The Detroit News.*

BETRAYED! —*The New York Tribune.*

DE WET: "If Funston can catch Aguinaldo, I don't see why I can't catch Kitchener." —*The St. Paul Pioneer Press.*

*Post* (Ind.) satirically observes that the prophecies of the "pessimists" that "a civil service can not rise higher than its source" are all coming true. The Washington *Times* (Dem.) thinks that the present scandal is an inevitable outcome of the "doddering inefficiency under Otis," and is in part the result of "the example set before carpet-bag officials by people higher in authority." "Only a few weeks ago," continues the New York *Journal* (Dem.), "an American editor, one Rice, was publishing a little paper in Manila." He made certain charges against the military administration there, was tried before a military tribunal, and subsequently deported to San Francisco "just as he would have been shipped in similar circumstances from Moscow to Siberia." In view of the frauds that have now come to light, *The Journal* asks: "Would it not be just as well to send Rice back?" The Indianapolis *Sentinel* (Dem.) says:

"It is not surprising that the Neely and Rathbone scandals in Cuba are followed by the Barrows scandal at Manila. Down in his heart every American recognizes the fact that these are only specimens of what may be expected. . . . If we undertake colonial government, we will have fraud, scandal, shame, humiliation, and the more so because we have undertaken it in violation of our oft-declared principle of the God-given right of self-government."

The Republican papers protest, with a good deal of warmth, against such criticisms as these. In the opinion of the Hartford *Post* (Rep.), the Cuban and Philippine scandals do not discredit the Administration "any more than the arrest of a Connecticut postmaster the other day for fraud discredits the American postal system." Says the Baltimore *American* (Rep.), in similar vein:

"They [the scandals] are in reality nothing more than the

TOM L. JOHNSON,
Mayor of Cleveland.

CARTER H. HARRISON,
Mayor of Chicago.

SAMUEL M. JONES,
Mayor of Toledo.

outcroppings of the weakness of human nature. Trusted officials have been tempted, and have yielded to the temptation. Their remoteness from the center of authority, and, probably, a certain sense of security attributable to the chaotic conditions surrounding them, have conduced to breed these scandals, which disgrace the nation, but which do not impeach the honor or integrity of its motives.

"On the part of the country but one demand will be made. That demand will be for the discovery of all those implicated in these frauds, and their punishment without mercy."

## NEW MAYORS IN THE MIDDLE WEST.

MORE than usual interest has been shown in the recent municipal elections in Chicago, St. Louis, Cleveland, and Toledo, on account of the radical issues involved and the strong individuality of the successful candidate for mayor in each of these cities. The election for a third time of Carter H. Harrison, who is the only mayor, with the exception of his father, that ever held office more than twice in Chicago, and the election of a Gold-Democrat, Rolla Wells, in St. Louis, are regarded as a distinct victory for conservative Democratic principles; while the success of Tom L. Johnson in Cleveland and "Golden Rule" Jones in Toledo seem to mark an equally definite triumph for radical forms of Democracy. Democratic papers both of the conservative and radical sympathies are thus happily able to find encouragement in the election results, and while the Brooklyn *Citizen* (Dem.) sees danger in the election of men committed to municipal ownership, the Single Tax, and Socialism, the New York *Journal* (Dem.) believes that the leadership of such men as Johnson and Jones is just what is needed to arouse the Democratic Party from "the paralysis of the past eight years." The Providence *Journal* (Ind.) finds in the election results in all four cities a healthy popular antipathy to "bossism" and corrupt political machines, while the New York *World* (Ind. Dem.) declares that "the greatest significance of these elections lies in the demonstration they make of the growing hostility among the voters to the domination of corporations in municipal affairs and of popular dissatisfaction with the gross inequalities of taxation due to the success of rich tax-dodgers in escaping their just share of the public burdens."

It is generally conceded by the press that Mayor Harrison won in Chicago because he attracted the support of the independent element, which holds the balance of power. "He conducts 'a wide-open town,'" says the Philadelphia *Ledger* (Ind.), "and, apparently, Chicago people coincide with the idea. On the franchise question, however, he has been on the side of the taxpayers." His victory, continues the same paper, was greatly promoted by the weak nomination of Judge Haney forced upon the Republicans by "Boss" Lorimer, since Haney was popularly regarded as the nominee of the "street-railway element and franchise-seekers in general." The election of Judge Haney, remarks the Chicago *Tribune* (Rep.) was impossible "because the independent voters of Chicago, many of whom are nominally included in the Republican ranks, are not disposed to submit to the dictation of any individual or set of individuals who may have temporary control of the party machinery."

St. Louis was more fortunate than Chicago, declares the New York *Evening Post* (Ind.), in being assured a good mayor whether the Republican or the Democratic candidate should be elected. "The reform element in the Democratic Party," it says, "had induced the organization to accept a first-class man in the person of Rolla Wells, and the Republican machine had thus been compelled to present a nominee of the same type in George W. Parker." Mr. Wells is a wealthy real estate operator, who supported McKinley both in 1896 and 1900. He secured the regular Democratic nomination, but the more radical element nominated an independent candidate, Lee Meriwether. Mr. Bryan, in *The Commoner*, made a severe attack on the candidacy of Mr. Wells, whose victory gives foundation for the belief, widely expressed, that Bryan's political influence is waning.

The picturesque personality of Tom L. Johnson, mayor-elect of Cleveland, has drawn out widespread comment. Mr. Johnson has already been twice elected to Congress from the Cleveland district, and is well known as a street-railroad magnate. The Philadelphia *North American* (Rep.) says of him:

"The ex-Congressman is personally a singularly interesting

M. POBIEDONOSTZEFF,
Procurator of the Holy Synod. Probably the most powerful man in the Russian church.

COUNT LEO TOLSTOY.
Excommunicated, and it is rumored exiled.

THE METROPOLITAN OF KIEF,
Primate of the Russian Church.

TOLSTOY AND TWO OF HIS FOES.

figure. One of the most successful business men in the country and many times a millionaire, he is nevertheless devoting himself to attacking monopolies. Notwithstanding his radical views on a number of subjects that men of wealth usually consider it dangerous to have discussed, Mr. Johnson received his strongest support from the well-to-do elements in Cleveland. His theory that all taxes should be laid on land values and that the people should own public utilities no doubt caused them to shake their heads, but they know him for an able and sincere man, and saw that he steadily refused to play the demagog for the sake of votes. They also saw that he had the courage to welcome war with political machines and to defy the bosses, Democratic as well as Republican. So he brought over the property-owning class to his side, along with the majority of the intelligent and upright of all classes."

Mr. Johnson's candidacy had the support of the Democratic daily paper in Cleveland, *The Plain Dealer*, but was bitterly opposed by the Cleveland *Leader* (Rep.), which styled him a "carpet-bagger from Brooklyn, N. Y.," and attributes his success to the unpopularity of the "McKisson" machine.

Mayor S. M. Jones, elected in Toledo for the third time, declares himself to be a "non-partizan Socialist," but was backed by the Democrats. The Toledo *Blade* (Rep.) thus interprets his victory:

"There is always a large class of voters who are swayed more by their opinion of a candidate's purely personal qualities than by his actual qualifications for the position to which he aspires, or by the record which he has made as an official. With Mr. Jones, this is specially true. He is an extremely pleasant individual, philanthropic in spirit, with a wide sympathy for his fellow men, and generous to those in need. His popularity with the voters of Toledo rests far less upon his radical theories and peculiar 'fads' than upon his agreeable personality and many admirable traits as a man. It is the voters who cast their ballots for the man rather than for the mayor to which his election yesterday was due."

In Kansas the Prohibitionists swept the municipal field in the spirit of Mrs. Nation, electing the majority of their candidates. In Concord, Nebr., the "Carrie Nation" ticket for mayor and city council received a nearly unanimous vote on a platform pledging themselves to accept her advice in conducting the town's affairs.

## TOLSTOY ON MODERN SOCIETY.

COUNT TOLSTOY thinks that the workingman is cheated and bullied out of the just reward for his labor because he has the wrong conception of Christianity—because he accepts "Church-Christianity" instead of the real teaching of Jesus. The practical teaching of the church in every land, thinks Tolstoy, is that "men must believe what is taught them, and submit to the existing authorities"; and this doctrine "is the foundation of the deceit through which men come to consider military service a good and useful occupation, enlist as soldiers, and become like machines, without will, oppressing themselves," and imposing the will of the few upon the many.

Tolstoy begins the article (in the April *North American Review*) in which he advances these opinions by picturing a group of Russian peasants who stand aside to let a picnicking party of the rich drive by. One of the ladies' hats "has cost more than the horse with which the peasant plows the field"—"the black hat with the lilac veil alone has cost two months' stonebreakers' labor," and for the gentleman's riding-stick has been paid a week's wages of an underground workman. "Everywhere, two or three men in a thousand live so that, doing nothing for themselves, they eat and drink in one week what would have fed hundreds for a year; they wear garments costing thousands of dollars; they live in palaces, where thousands of workmen could have been housed; and they spend upon their caprices the fruits of thousands and tens of thousands of working-days. The others, sleepless and unfed, labor beyond their strength, ruining their physical and moral health for the benefit of these few chosen ones." It is natural that the rich should not object to this arrangement; the surprising thing is that the poor take it so complacently. "Why do all the men, strong in physical vigor, in skill, and in the habit of labor—the enormous majority of humanity—why do they submit to and obey a handful of feeble men, generally incapable of anything, and effeminate—old men, and especially women?" Count Tolstoy finds the answer very simple. It is because the minority have money, and the workingmen need the money to feed their families. Millions of workmen submit "because one man has usurped the factory, another the land, and a third the taxes collected from the workmen."

FIELD-MARSHAL KATSURA,

VISCOUNT AOKI,
Minister of Foreign Affairs.

VICE-ADMIRAL YAMAMOTO,
Minister of the Navy.

COUNT ITAYAKI,
Leader of the Liberal Party.

JAPANESE LEADERS IN THE PRESENT CRISIS.

The rich, we are told, have no right to these monopolies of land, industry, and political power. "Fortunes are acquired always either by violence—the most common way—or by avarice, or by some huge villainy, or by chronic swindling, as in the case of trade. The better a man is, the more sure is he of losing his wealth; and the worse a man, the more sure he is of retaining and increasing his fortune. The common sense of the people says, 'By honest labor one can not acquire stone palaces,' and 'By labor one becomes, not a rich man, but a cripple.'" And if the workman tries to deprive the rich of a small part of what has been taken from him by law, "he violates the sacred rights of property, and the government with its army immediately comes to the help of land-owner and factory-owner and merchants, against the workmen."

The curious part of it is that the soldiers themselves are peasants, too, "only they are arrayed in uniforms and armed with guns," and they "compel their brethren who are not dressed in uniforms to surrender their land, to pay taxes, and to cease their strikes." This subjection of the poor majority to the rich minority, then, rests on military force, and the force is supplied by the poor majority themselves! "When one realizes this for the first time," says Tolstoy, "one can not believe it, it seems so strange." Why do these men enter military service? "They do so because they believe military service to be not only a useful, but an undoubtedly praiseworthy and excellent occupation. And they think it a good and praiseworthy occupation, because they are taught to do so by the training to which they are subjected from childhood, and which is strenuously maintained in later years." This training is the "Church-Christianity" above referred to, "according to which military service is an excellent and praiseworthy occupation, and murder during war an innocent action." The root of the evil, then, is the false religious motive which impels part of the poor to forge fetters for the rest.

"Therefore, in order to remove the evils from which mankind suffers, neither the emancipation of land, nor the abolition of taxes nor the communizing of the instruments of production, nor even destruction of existing governments, is required; the only thing needed is the annihilation of the teaching falsely called Christianity, in which the men of our time are educated."

The St. Petersburg correspondent of the New York *Sun* reports by cable that the Holy Synod has issued a circular warning "the faithful sons of the Orthodox Church" against the heresies of Count Tolstoy. After recalling the false prophets who

have assailed the church in the past, the circular says: "In our days God has allowed another false teacher to appear, namely, Count Leo Tolstoy, who, led astray by pride of intellect, has dared to revolt against God, and who has devoted the talent God has been pleased to give him to destroy in the people's hearts the orthodox faith, the pillar and ground of the world, the prop and safeguard of Holy Russia." The circular concludes with a prayer that he may be brought to repent.

## THE "GRAND AMERICAN HANDICAP."

THE killing of thousands of pigeons in the Grand American Handicap shoot at Interstate Park, Long Island, last week, has roused a considerable protest against that form of pastime. The Baltimore *News* declares that "this carnival of blood, this wanton slaughter of one of the mildest and most beautiful of all nature's creatures," is "monstrous"; and the Philadelphia *Press* says that "it is difficult to realize that any true sportsman can sanction, much less participate in, any such barbarous contests." The New York *Times* remarks: "No hero of the traps was ever noted for prowess in the fields and woods, where the creature to be shot to some extent chooses its own time and ground and has just a few chances for its life. The horrors of pigeon-shooting are wholly indefensible, and so long as they exist the anti-vivisectionists are certainly fighting the lesser of two evils." Says the Boston *Transcript*:

"It is impossible that a brutal indulgence in such alleged sport should be other than grossly demoralizing, no matter how well dressed and outwardly refined they may be who are responsible for it. We have put the ban of vulgarity and lawlessness upon cock-fights; but pigeon-shoots are a thousand times more cruel and a thousand times more demoralizing because they have the protection of law and the sanction of those who set themselves up as the arbiters of social propriety, the lawgivers with respect to fashion and to form. To our thinking the slaughter of twenty thousand pigeons is both the height of cruelty and the height of garnished vulgarity."

The following partial account of one day's "sport" is from the New York *Sun*:

"The interstate slaughter, maiming and torturing 20,000 tame pigeons for the purpose of advertising various kinds of powder, shot, and guns went on all day yesterday in spite of the drizzling rain. Several women were among the spectators and seemed to enjoy seeing the butchery very much, altho to the true sportsman, as well as to the laymen, it was not very exhilarating to see the men hired by the powder companies stand a few feet away and for hour after hour blow semi-pet birds to flinders, or so mangle the harmless creatures that there remained nothing for them but to feebly wing their way off, to linger dying somewhere out in the rain.

"Some fifteen maimed and mangled birds were found dead in the vicinity of the clubhouse yesterday morning, and last night there must have been a hundred or more adrift and dying all about the neighborhood with beaks shot off, feet shot off, and even their bodies horribly torn and lacerated. . . . . .

"The Interstate Park is owned by the 'Interstate Association for the Encouragement of Trap-Shooting,' and there is little or no pretense that the latter is anything else than an organization the chief object of which is to advertise various kinds of powder, shot, and guns. Every member of the board of directors is the representative of some powder, cartridge, or gun manufacturing company, and every crack shot now taking part in the tournament is directly or indirectly in the pay of one of these manufacturing concerns. Some of them receive regular salaries and go about the country shooting at the various tournaments in the interest of the particular manufacturing concern they represent. The pretense that the slaughter of pigeons now going on is done in the interest of sport is of the flimsiest. In fact, trap-shooting of live pigeons is under a ban with true sportsmen, and the sentiment against it is rapidly growing among them. The few who still take part in it are sufficiently ashamed of the fact to shoot, as a rule, under assumed names."

## TOPICS IN BRIEF.

LET us then be up and doing,
All becoming money kings;
Some day we may be endowing
Universities and things.

Lives of billionaires remind us
That we've got to own the stock
If we want to leave behind us
Libraries on every block.

# LETTERS AND ART.

## CIRCULATING-LIBRARIES AND "EAST-SIDE" READERS.

MR. CARNEGIE'S vast gifts to various cities have revived the old discussion of the value of circulating-libraries. Some persons have gone so far as to challenge the real utility of Mr. Carnegie's gift to New York, but their objections have been almost wholly based on an old-fashioned view of the nature and aim of the libraries offered by him. The literary supplement of the New York *Times* (March 23) calls attention to the fact that while vast accumulations of books to be read within the library walls have their use, Mr. Carnegie's gift is of an entirely different kind, and is in harmony with the strong modern tendency toward carrying the books to the reader instead of requiring the reader to come to them. The writer says:

"This involves a complete change in composition of library stocks. Especially when in great part provided at public expense, the end sought tends to be the promotion of general instruction, and the great variety of books, classed, roughly, as 'books of reference,' play a decidedly larger part. These both satisfy and stimulate a healthful interest and curiosity. Let any one reflect for a moment on the range of utility thus made feasible. What a generation ago would have been called a 'gentleman's library'—that is to say, the collection which an educated man of fair means would naturally make—now includes as a matter of course one complete dictionary of one's own language and generally several dealing with particular phases of the language; at least one encyclopedia, a biographic dictionary, one or more dictionaries of dates, lexicons of Greek and Latin, usually one and often several foreign dictionaries; one or more dictionaries of quotations, at least one thorough atlas, and beyond these such special books of reference as taste or occupation may suggest. Where such a collection exists, a day rarely passes that it is not consulted, and the chance to consult it constantly promotes intelligent curiosity and the appetite for accuracy.

"This is what the circulating-library tends more and more to do for all classes of the community. How can a reasonable person think that this is not a useful function? Put aside for the moment any consideration of the joy or profit to be got from literature. These, so long as the human mind remains active, will not die out. Regard solely the advantage of accuracy of information as to the increasing multitude of things that press on the attention. Is it not well to extend this advantage to as many as possible and to bring it as near to them as may be? They who really doubt it seem to us sadly to mistake the direction the evolution of society has taken and the duty and privilege of aiding in that evolution."

Another writer in the same issue of this journal gives an account of the service actually performed by the circulating-libraries already established in the East Side of New York. In a quarter where the Russian Jews largely predominate, he finds that the younger lads and girls largely call for such books as Andrew Lang's fairy tales, Miss Alcott, Henty, and Jules Verne. When they are a little older Dumas rises high in their esteem, followed by Dickens, Thackeray, and George Eliot (who does not appear to be in eclipse on the East Side):

"It may safely be said that the most popular novelist in the Jewish quarter is George Eliot. It might be expected that 'Daniel Deronda' should find many admirers, but that novel is not more read than 'The Mill on the Floss' and 'Adam Bede.' There is not a girl on the East Side who pretends in any way to care for reading who is not familiar with most of the works of the favorite. Maggie Tulliver is a very real friend in scores of tenements. She is perhaps the most loved of all George Eliot's women, but this fact is surely not peculiar to the East Side. The charm of Maggie is all-pervading. Among the Zionists, of which there are many, the dreams of Deronda and Mordecai are a source of inspiration. The Zionist Society has published as a pamphlet the views of the two in regard to the return to Palestine, and the tract circulates widely on the East Side. In fact, the writer is of the opinion that George Eliot is more read in that part of New York which lies east of the Bowery and south of Houston Street than in any other portion of the city. Another writer whose popularity is greater than one would expect is Dumas. Not only boys, but girls also, delight in Porthos, Athos, Aramis, and D'Artagnan. Several sets of Dumas's works are in constant circulation, and the number of young people who talk of him with affection is unusually large.

"Scott is more read than Dumas, altho he does not lead by a wide margin. 'Ivanhoe' is, of course, the most popular of his works, not only because it is the most famous, but because it is of a character especially interesting to the class of readers to be found in this part of the city. The writer hardly ever met an East-Side girl or boy who has not read 'Ivanhoe,' or at least made an honest attempt to do so. The less intelligent dub Scott 'dry,' but the brighter set reads him religiously. Some have gone almost through the long list. Was it not Mr. McCarthy who a short time ago wrote down the wizard as a 'disappearing' author? Let him seek information on this point in the East Side. Of other midcentury novelists Charlotte Bronté is read but little, altho 'Jane Eyre' is familiar to the better educated. Bulwer Lytton, on the other hand, seems to enjoy a popularity out of proportion to his comparative deserts. He is very much read, especially by the more serious people."

Among living writers, Marion Crawford is the most popular on the East Side, altho Barrie and Zangwill (who, he says, "is adored") are very close seconds. Kipling's prose is also much read, while the love of Tolstoy and Zola, and the East Sider's natural sympathy with socialism, leads up to Carl Marx and William Morris, who is "very popular." It is encouraging to learn that the demand for books on American history and political economy is very large. Indeed, the proportion of serious works to fiction at the Aguilar Free Library, at Seventh Street and Avenue C, compares favorably with that of almost any public library in the country. During the month of July, 1900, the following books were read: Fiction, 9,087; history, 977; biography, 319; travel, 278; literature, 915; poetry, 247; science, 507; philosophy, 52; religion, 179; Hebraica, 37; fine arts, 117; useful arts, 125; sociology, 232; German, 273; French, 24; Russian, 806; Hebrew, 539. Total, 15,120; juvenile, 7,175. Indeed, says the writer, the fiction called for was in July sixty per cent. of the total number of books given out; but in June it was only fifty-four per cent. and in May about at its average of fifty-two per cent., and more recently it has not been over fifty per cent.

---

**Manual Labor Lightened by Literature.**—Among the many foreign colonies in New York, including Greeks, Syrians, Turks, Russian Jews, Italians, Armenians, and a score of others hardly less interesting, the Spanish colony is said to be one of those most worthy the attention of the author in search of "local color." According to a writer in *The Evening Post* (March 30), the members of this colony number about 20,000, and have their headquarters in the neighborhood of Pearl Street and Maiden Lane. In the course of a study of their social customs, the writer mentions one which is of interest both from the literary and the sociological standpoint. All through this Spanish quarter, he says, are cigar-factories which employ large numbers of operatives, more completely organized in trades-unions than the operatives in American establishments of the same nature. The discipline is strict and the loud talking or hard swearing of many American factories is not tolerated, because the employees themselves would not tolerate it. But the distinctive feature of these factories is the "shop-reader," of which every establishment has at least one. The writer says:

"This functionary may be classed as a professional. He must have a good voice, a clear enunciation, and an excellent knowledge of Spanish. In this city, most of them know enough English to translate at sight. He goes on duty with the operatives, and has a desk, chair, pitcher of water, and cigarettes or cigars.

All day long he reads aloud while the men work. Each shop has its own program. In some the reader opens the morning by reading the news of the day. He uses for this purpose a local daily, and sometimes papers from Havana or Madrid. After reading the news he then takes up the special subject of the course. This may be a feuilleton from a Spanish paper, a Spanish novel, a volume of poems, a book of plays, a history, or any other books which the shop has selected previously. It must be said that he reads well. The operatives display deep interest in the reading, and seldom speak, unless it may be to ask the reader some question. The amount of ground covered in this way is very great. The reader averages a hundred to a hundred and fifty words a minute, or from six to nine thousand an hour. At six hours a day, this would give a total of thirty-six thousand words, which is about the length of a short Spanish novel. A longer novel will take two days, so that, in the course of a year, not less than one hundred books have been poured into the ears of the men at the benches. The practise is encouraged by all employers. It keeps the men interested, and weakens any temptation to leave the workroom for drinking purposes. It enforces good order and decorum, and at the time acts as an educational force upon all the hearers. Sometimes, in place of a reader, a shop will engage a musician. The favorite music is that of the mandolin or guitar, and next to these the violin. Music, however, does not seem to be as popular as literature."

## MORE ABOUT THE GREAT FIND OF GREEK STATUES.

PROF. R. B. RICHARDSON, director of the American School of Classical Studies at Athens, has just given a fuller account of the marvelous discovery of Grecian statuary found at the bottom of the sea near the island of Antikythera.

COLOSSAL BRONZE STATUE OF HERMES RHETOR, OR PERHAPS PERSEUS HOLDING HEAD OF MEDUSA.

Courtesy of *The Independent*.

Notwithstanding the fact that the statues are more badly damaged by the sea than was at first believed, the collection is says Dr. Richardson, a most remarkable addition to our stock of Greek sculpture. It includes, besides many other valuable finds, a life-size bronze, supposed to be either a Hermes or a Perseus, a bronze Apollo with open mouth, and a marble statue of a youth supposed to be a wrestler. M. Svoronos, director of the Numismatic Museum in Athens, has already announced some positive opinions about the statues. Says Professor Richardson (in *The Independent*, March 28):

"The supposed Hermes, the orator, was thought to be pressing home a point upon his hearers by thrusting at them the tips of his fingers radiating in a circle from the palm. This was soon felt to be an improbable gesture; and the theory that the statue represented an ephebus with a ball began to gain ground. M. Svoronos now explains the figure as Perseus holding the head of Medusa; and cites a gem which represents Perseus holding the head by the back hair, which was done up in a round knob at the back. M. Svoronos is firmly convinced that the whole cargo came from Argos, setting out from the fact that Argos was the home of a school of sculptors in bronze. So he explains the marble youth as the Spartan Othryadas mentioned by Pausanias in his account of Argos as seen there in the act of being slain by an Argive. M. Svoronos sees now in the mutilated statue just brought in, with the stump of an arm raised to strike, the companion piece to Othryadas, the Argive hero who is killing him. The fault that most people find with M. Svoronos is that of explaining too much. They prefer a little penumbra of doubt to such absolute cocksureness. He goes on explaining the smaller bronze with an open mouth, showing its white teeth, by alleging the existence at Argos of a cult of Apollo *κεχηνώς—i.e.*, Apollo with an open mouth.

MARBLE STATUE OF A YOUTH.

Courtesy of *The Independent*.

"It has been confidently expected that something would be hauled out of the depths of the sea any day which would cause the structure erected by Svoronos to fall to the ground. But, now that such hopes have been materially lessened by the appearance of the last instalment, he has become more confident than ever."

## A BRITISH VIEW OF CONTEMPORARY AMERICAN LITERATURE.

THE increasing friendliness of British literary journals to American authors has been one of the notable and agreeable developments of the past two decades. Representative papers such as *The Athenæum*, *The Spectator*, *The Academy*, and *The Saturday Review* now devote a very appreciable amount of space weekly to reviews of American books. The last-named of these journals, however, has not been conspicuous for its friendliness to Americans as a people, and its recent appreciative article on American literature of the day is, therefore, the more noteworthy. It says (March 16):

"Perhaps the most significant fact in contemporary American literature is the wide extension of literary interest and activity. Twenty years ago the phrase 'American literature' meant New England literature, with the addition of a small group of books written in New York and the South; to-day books of literary intention if not of literary quality are written in all sections of the country. This is conspicuously true of fiction and biography, the two departments of literature in which the best work is being done. Some one has said that the representative American novel will be written in chapters in different parts of the country; and this prediction seems to be in the way of being verified. The differences between the New England farmer, the Georgia 'cracker,' the Louisiana Creole, the Tennessee mountaineer, and the cowboy on the plains are too many and too radical to be coordinated in any single piece of fiction, however elaborate; nothing less inclusive than a new 'Comédie Humaine' will make room enough for these widely diverse types of character. This range of life in localities is finding its record in an irregular but vital fashion in the rapidly lengthening list of American novels and short stories. The books of the year are not likely to add greatly to the enduring literature of the country, but they have, in several instances, added materially to its self-knowledge; and they

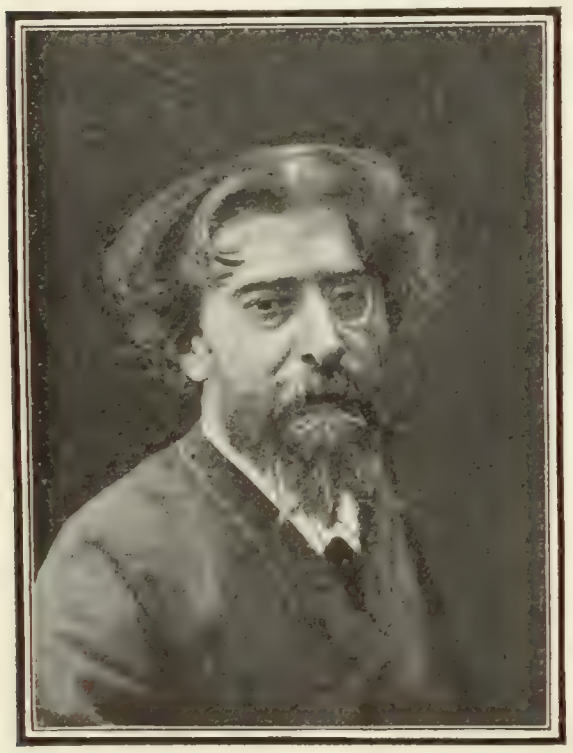
disclose a thoroughness and skill in workmanship which are distinctly promising."

The writer refers to Judge Grant's "Unleavened Bread" as "a searching and convincing study of a type of woman to be found in many communities. . . . The story approaches the national type as closely perhaps as any piece of American fiction, because it creates a character perfectly recognizable in the society of any section." Mr. Booth Tarkington's "Gentleman from Indiana" is, says the critic, "an admirable study . . . full of atmosphere, of color, of nice discrimination." "Eben Holden" is spoken of as "one of those quaint, elementary romances of primitive character, native kindliness, and untaught practical sagacity which are interpretive of the underlying quality in American life. "As Americans turn with the deepest interest to the homely rustic folk in the novels of George Eliot and Thomas Hardy, those who wish to find the spring of health in American life will do well to read 'Eben Holden.'"

After referring to the "growing interest in American history from the personal side," represented by Dr. Allen's "Life of Phillips Brooks," Mr. Farnham's "Life of Francis Parkman," and Mr. Howells's "Literary Friends and Acquaintances," the writer calls attention to the dearth of important work in the field of poetry. In this field, it remarks, Mr. Stedman's "American Anthology" is the most important event of the season, and is "both representative and inclusive," a work "carried on, in the face of great difficulties, with heroic fortitude and patience." In literary history, the most important contribution is Prof. Barrett Wendell's "Literary History of America." "It presents the evolution of literature broadly," says the writer, "and in the main with a sound sense of relative values; and some of the chapters will take high rank as criticism."

## DAUDET AND THE ART OF NOVEL-WRITING.

IN brief sketches here and there in "Thirty Years in Paris" and in "Memories of a Man of Letters," Alphonse Daudet has given us, in the opinion of many literary students, a view of his methods of work which is of the highest value to the discriminating literary aspirant. Mr. Arthur Bartlett Maurice, who writes in the New York *Bookman* (March), calls attention anew to the value of Daudet's literary example, as shown in the two books we have mentioned:



ALPHONSE DAUDET.

"These sketches, taking up the story of each of his books from the time when, studying some great structure symbolic of a certain phase of Parisian life, the germ idea flashed through his mind, show all the labor, the care, the infinite patience by which the finished novel was evolved. The initial idea, the seed-thought, which came suddenly, unexpectedly, was in itself very little; a sort of arrow, pointing the ultimate, far-distant goal. For instance, the first suggestion of 'Les Rois en Exil' came to Daudet one evening in October as he was standing on the Place du Carrousel looking at the tragic rent in the Parisian sky, caused by the fall of the Tuileries. Dethroned princes exiling themselves from Paris after their downfall, taking up their quarters on the Rue de Rivoli, and, when they woke in the morning and raised the shades at their windows, discovering these ruins—such was the first vision of 'Kings in Exile.' This was at once the inspiration of the first and last chapters of the book. It was very typical of Daudet; almost all of his works were built up about some such vague impression. . . . . .

"Daudet was indefatigable in filling note-books. It was his system of work. All through his literary life he was jotting down observations and thoughts, sometimes condensed to one finely written line, by which he was able afterward to recall a gesture, a word, or a tone, and to develop and magnify it for use in some important work. He was forever blackening sheets. In Paris, in the country, traveling, these little note-books were always with him. He was constantly looking out for striking proper names, believing with Balzac that there was in names a characteristic physiognomy, a certain likeness of the people who bear them. And of his characters one may say, as one says of Balzac, that the substitution of other names would make them seem incongruous.

"Among Daudet's note-books there was one bound in green, full of closely written notes and baffling erasures. This green note-book bore the title 'The South,' and from it Daudet drew 'Numa Roumestan' and the stories of the prodigious Tartarin. It was probably the strangest and the fullest of all his note-books. In it were jotted down the distinguishing characteristics of his native province, its climate, accent, temperament, morals, the gestures, fits of frenzy and passionate outbursts, which come of its sunshine, and 'that artless need of lying which is due to an access of imagination, to an expansive, chattering, good-natured madness, so utterly unlike the cold-blooded, wicked, deliberate lying of the North.' These notes were gathered everywhere. First of all, he drew from his inner self, as one must do who hopes to write true. All the memories of his early years—that life which he painted so vividly when telling the stories of 'Little What's-His-Name' and Elysée Méraut of the 'Kings in Exile'—were penciled there. It was full of the local ballads, the proverbs, and homely sayings of the South, the cries of its hawkers, its epithets, and its extravagances of speech. . . . . .

"Of all Daudet's books, the one with which he had most difficulty, the one which he carried longest in his head in the stage of title and vague outline, was 'Kings in Exile.' The chief trouble in the building of the story was in the search for models and for accurate information. He was obliged to press into service all his acquaintances from the top to the bottom of the social ladder. He interviewed the upholsterers who furnished the mansions of exiled kings and the great nobleman who visited these homes socially and diplomatically. He pored over the records of the police court and the bills of tradesmen, going in this way to the bottom of those royal existences, discovering instances of proud destitution, of heroic devotion side by side with manias, infirmities, tarnished honor, and seared consciences."

---

**A Plea for an English Music Laureate.**—A British music-lover has lately suggested that music, which has assumed a position of such importance in modern life and particularly in all public functions, should be recognized by the appointment of a national music laureate. It is generally conceded, he points out, that while music is the most popular art in England, that country is far behind most other nations in higher musical development, and he believes that such a royal and national recognition of its dignity and of its proper place as a sister-art of poetry would have a happy effect upon musical ideals throughout the English-speaking race. He suggests that the music-laureate, like the poet-laureate, be attached nominally to the King's household, and that he compose and direct the music at the coronation next year and upon other great occasions of state. Writing from Oxford in *Tit-Bits*, he says:

"It is, I think, a great pity that on the occasion of a public state function the music played by the various bands should not be of an appropriate nature, instead of consisting mainly of the latest theater or music-hall songs, as was the case, to quote one

instance, on the occasion of our late Queen's diamond jubilee celebrations. If it is considered the proper thing to pay a poet laureate £200 a year in order to express the feelings of the nation on special state occasions by versification, why should not a composer laureate be appointed to supply appropriate music for use at such functions? The music would appeal to and delight the people of this country far more than any poem could possibly do. At present our eminent composers do not attempt to express the feelings of the nation in music, for the simple reason that their compositions would not be performed. The coronation ceremony, however, offers an excellent opportunity of allowing a British composer to supply appropriate music for the occasion. And in order to decide on whom the title and honor of music or composer laureate should be bestowed, I would suggest that our eminent composers should be invited to compete in the writing of a coronation march, a committee composed of several of the best-known musical critics and teachers to decide as to the merits of each composition, or in any other way which may be deemed more satisfactory."

## AMERICAN COLLEGES AND LIBERAL CULTURE.

SINCE the publication of Mr. Charles Francis Adams's "A College Fetich" about 1883, and of President Eliot's essay on "A Liberal Education" a short time after, the trend of the larger American universities has been steadily in the direction of greater academic freedom in the choice of undergraduate studies, and toward the elimination of the ancient classics as necessary for the attainment of the degree of Bachelor of Arts. In his paper, Dr. Eliot showed that at the time of the foundation of European universities this degree did not stand for any knowledge of Greek—which at that time was unknown among Western scholars—nor for a knowledge of classical Latin. The medieval requirements embraced the studies which in that age constituted the most useful working equipment for the liberally educated man. The seven liberal arts of medieval education for which this degree stood were divided into the *trivium* (grammar, logic, rhetoric) and the *quadrivium* (arithmetic, geometry, music, and astronomy). Latin was known for the most part through what is essentially a different tongue from that of Cicero—the ecclesiastical language of the liturgy, the homily, and the hagiological legend. The classical Roman writers were much spoken about, as we know from Chaucer, but almost unread; and the prevailing view of Virgil was that he was a magician. On the introduction of classical learning at the Rennaissance, a Greek chair was founded at Oxford under Colet, who had learned the language from one of the many wandering Greeks exiled at the fall of Constantinople in 1481. Thenceforward to our own time a knowledge of Greek, ancient Latin, and mathematics was required for the degree of Bachelor of Arts, and these three branches of learning were regarded as the only essentials of education for a gentleman. President Eliot asserts, however, that while the ancient tongues, in the absence of any great modern literature, performed an invaluable service to the new learning of that day, they are no longer needful to a genuine liberal culture. The one essential of education, he has said, is a mastery of the mother-tongue, English, with all that this implies in a competent knowledge of history, rhetoric, and the more elementary branches of knowledge inextricably bound up with it. Harvard, under President Eliot, was thus the first of the great American universities to throw open its curriculum to free elective study, putting Greek and Latin upon exactly the same plane as other culture studies after entrance; and the degree of B.A. has since then stood for the broad and liberal culture gained by a student who for four years, under the constant counsel of his chief professors, has pursued his one major and two minor studies to a satisfactory completion. The degree of B.A., which represented the varying educational ideals of the medieval and then of the renaissance period, is thus taken as representative of the educational ideal of our own time. Later, the example of Harvard has carried more and more weight, and her lead has been followed in the main by Cornell, the University of Michigan, and many other colleges. The question is not necessarily or mainly one of strife between what are called the "humanities" or culture-studies and the "utilities," but is whether a broader culture may not be more effectively obtained through English, the modern foreign languages, science, and history, than through the post-renaissance *trivium* of Greek, Latin, and mathematics.

*The World's Work* (April), which admits that the old-time "humanities" "have lost the day in most of our universities" as they are beginning to do in Germany, their stronghold, and in almost every other country in Europe, says:

"Two things may be said about the change—either that the more utilitarian studies really serve the purposes of culture as well as the humanities served it, or that the demands of modern life require the sacrifice of the humanities. Neither assertion is true. The disciplinary value of the sciences is as great, no doubt, as the disciplinary value of the ancient languages. But the needs of culture can not be satisfied by mere discipline any more than it can be satisfied by merely utilitarian subjects. A rounded intellectual life requires a background and a mellowness that come only from contact with the highest artistic products of the race, and with its idealized products—indeed with its literature. The thing that the old scholars mean by culture is a real thing, an indispensable thing, a thing, too, the foundations of which must be laid in youth. The best balance of intellectual manhood can be attained in no other way. To attain it, fortunately there is an easier way than the way of Greek. The losing contention of the Grecians is deserved. The plain truth is that in modern education the possibilities of culture through Greek studies have practically not been realized, for but one lad in a hundred has, in these later generations, reached the degree of attainment that the Greek contention presupposes.

"The easier and better way of retaining, restoring, and greatly broadening the culture-studies of a college course is to recognize the culture-value of our own language and literature. A broader and saner and more 'humane' and thorough and loving study of the literature of our own race is the obvious way out of the dilemma. And it is more than an escape from a dilemma. It is a better means of broadening and deepening our culture than we have ever utilized or tried. We are approaching it gradually. We had one generation or more of rhetoricians and *dilettanti* as teachers of English—the slipshod, easy old tomfoolery of general 'English Literature' courses. We now have a generation of accurate and narrow English philologians and text-tinkers. Presently we shall have, let us hope, a generation of broad and mellow scholars who know their subject technically of course, but who likewise know it 'humanely.' There is a new culture and an adequate one in this direction. Surely we have been slow in coming into our inheritance."

## NOTES.

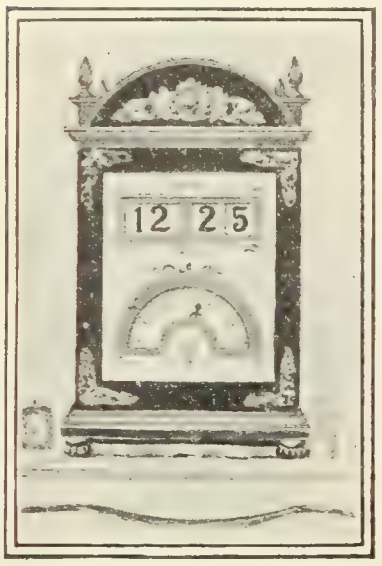
CHARLOTTE M. YONGE, who died the other day in Winchester, England, at the age of seventy-eight, was often called "the Church of England Novelist." She was a pronounced high churchwoman in her views, and her religious bent was shown in all her works. In England and throughout the colonies she was one of the most popular of story writers, and her literary profits are said to have been very large. She gave $10,000 of the profits received from "The Daisy Chain" to build a missionary college in New Zealand and a large part of her profits from "the Heir of Redcliffe" to fit out a missionary schooner for the use of Bishop Selwin in Oceanica.

DOES the typewriter affect literary style? A writer in the Boston *Transcript* thinks it does. He says: "As a general thing the typewriter produces a sort of staccato, disconnected, jerky style; to change the metaphor, a fleshless and bony style, and awkward withal. What is written with the machine seldom has the ease and expressiveness that the same author's handwriting might have possessed. The special word-by-word planning that goes with it, be it ever so slight and even unconscious, does get in the way of free expression; and there is a tendency in the writer to think out his sentence less thoroughly, and even to use stereotyped expressions, which fall in more conveniently with one's practise." It might require generations, he adds, for typewriting to become instinctive with civilized people as handwriting is.

# SCIENCE AND INVENTION.

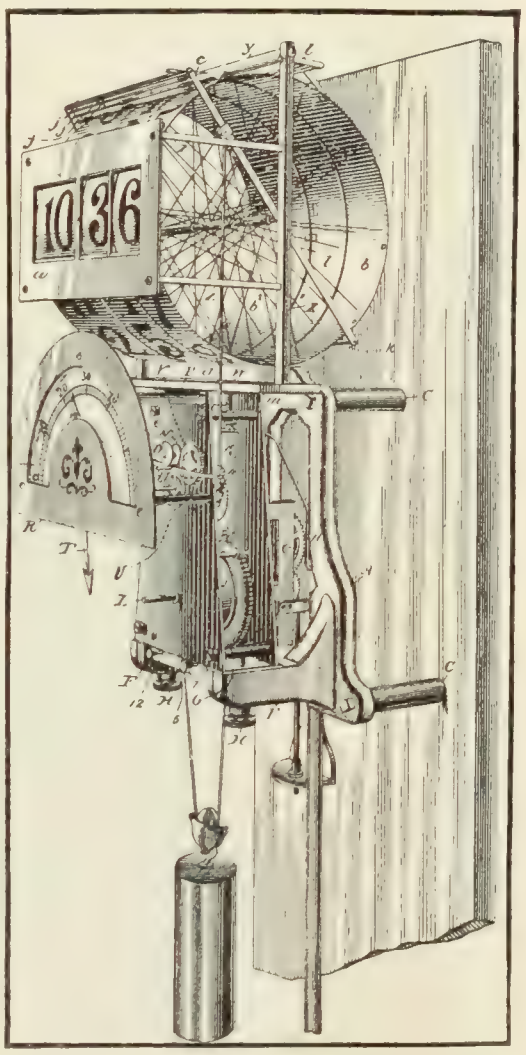
## A CLOCK WITHOUT A DIAL.

A REFORM in our present antiquated method of time-indication has been introduced by Samuel P. Thrasher, of New Haven, Conn., who has devised a simple form of clock in which the dial is replaced with moving figure-wheels, indicating the time as a cyclometer indicates miles. When one thinks of it, our present clock dial is as medieval as would be a circular cryptogram for the sign over a store. It might do for the days of astrology, but it has survived too long. *The American Inventor* (March 1), describing the new form of clock in an article entitled "A Twentieth-Century Time System," says:



PARLOR CLOCK OF THRASHER DESIGN WITH SECONDS INDICATOR.

"Instead of the old way, which does not tell the time, but presents a group of signs by which one contrives to calculate it, the new dial will actually tell the exact time without any calculation whatever. It will no longer be necessary, many times a day, to solve a mental problem—the hour and minute hands being respectively in such and such positions relatively to such and such figures, what must the time be—for a glance at the clock shows the time unmistakably announced in plain Arabic numerals. We are so used to the mental calculations referred to that we hardly realize they are a nuisance. There are seven hundred and twenty minute combinations formed by the passage of the hands on the dial. Some persons never become so used in calculating them that they do not make an appreciable pause before stating the time. Often mistakes are made as when one says it is twenty-four minutes past eight, when it is really nineteen past. But in reading the new clock no one need pause, calculate, or mistake, and a child will have no difficulty. When the hour hand of the old-fashioned timepiece is dangling in one direction between VI and VII and the minute hand is losing itself in another somewhere between XI and XII, the new timepiece will read simply and conclusively 6:58. In another minute the last figure magically disappears and 9 takes its place, and in another all the figures vanish, and in their place appears 7:00. That is, time will be told as the railroad time-tables tell it. And with one general introduction of this system would go such bungling expressions—entailed by the old circular dial-plate with its wreath of figures—as twenty minutes past nine, fourteen minutes of twelve. Instead we shall adopt the crisp, accurate terminology of the time-table and say, nine-twenty, eleven forty-six.



PERSPECTIVE OF A THRASHER CLOCK.

"Another advantage of Mr. Thrasher's clock is that time may be discerned by it at a much greater distance and a more difficult angle. The reason is obvious. There are twenty-eight figures on the ordinary dial and only one is perfectly upright. The greatest number appearing on the new dial is four and all are upright. The figures of a tower-clock, for example, may be made several feet long and thus discernible at a great distance.

"The seconds are indicated by a hand following a graduated arc instead of a complete circle. This device makes the figures easier to read than where many of them are upside down. The second hand is the only one on the dial.

"Among Mr. Thrasher's patents are some covering electrical devices which insure greater regularity and accuracy of movement than has hitherto been attained, together with a simplicity of construction which makes the consumption of battery power exceedingly small. Moreover, these improvements in electrical clocks render it practicable to have a 'system' of accurate time-indication on a scale however great. For example, the hundred rooms of an office-building may each have its indicator set in the wall, all controlled by one 'master-clock,' which in turn is synchronized from the observatory, thus insuring accurate time wherever the indicators are placed. Hotels, public buildings, factories, office-buildings, and railroads, will probably be among the first to introduce the system.

"There is a feature in regard to tower-clocks which ought to be noted. Unless very expensive precautions are taken the vibration of the tower, changes of temperature and other influences seriously impair their accuracy. But by this system the time mechanism may be located in any convenient place away from disturbing influences, and the figures upon the tower dial controlled by the electrical connections. The inventor believes his scheme is capable of and will receive great expansion, that the time will come when large houses will be fitted up with indicators in every room, when the 'time' will be reckoned among the 'modern improvements' along with lighting and heating, hot and cold water, and rented with the building. Finally, he expects, a whole city will be arranged on a 'time system,' every building whose owner desires it being electrically connected with the 'master-clock' and inaccurate time becoming a relic of the past. This is a Napoleonic idea, but is only another step in the process of organizing the conveniences of urban life which has been long going on. It is worthy of the twentieth century."

## WHENCE COMES THE LIGHT OF THE SKY?

THE ultimate source of "daylight" is of course the sun; but a great deal of it comes not directly from that body, but from the sky. The fact that the clear sky furnishes light has puzzled scientific men for years, and the great number of hypotheses advanced to account for its intensity and color shows that the true one has not yet appeared, or, at all events, is not generally recognized. The polariscope shows that sky-light is reflected light, and that it is sunlight reflected from small particles. But what are these particles? Are they dust, or fog, or a combination of the two? In a recent communication to the Belgian Academy of Sciences Professor Spring, of Liége, states his belief that the molecules of the air itself, at high altitudes where the pressure is small, can and do reflect the sunlight. Says *Cosmos* (March 9), in a notice of Professor Spring's paper:

"The illumination of the sky proves incontestably that our atmosphere is not optically empty; but what is the nature of the substance that fills it? This is an embarrassing question. We can not admit that solid particles float in the highest regions of the air. The presence of water furnishes a no less objectionable reason, for one of two things must be true—either the water is in the state of vapor, when it should be optically empty like a gas, or it is in the state of mist, and then we can not understand why the sky should be bright above the clouds. It has been proposed to admit an intermediate state, that of the 'nascent cloud' (Tyndall); but no one has explained how it happens that

throughout the atmosphere this cloud comes into being continually with the same intensity, no matter what may be the physical and meteorological conditions. But if the intensity of the light makes up for the small dimensions of the reflecting or illuminated particles, it is not impossible that the light of the sun, in the degree of intensity that it must have at the moment when it first penetrates the atmosphere, that is to say, at the time when it has undergone no weakening, may be reflected by the molecules of the rarefied gases of the upper layers of the atmosphere and thus cause 'daylight.'"—*Translation made for* THE LITERARY DIGEST.

## FUTURE INCREASE OF OUR POPULATION.

THE remarkable increase of population predicted for the United States by Dr. H. S. Pritchett in a recent article in *The Popular Science Monthly* was noted not long ago in these columns. From a study of the past increase, the writer attempted to deduce the law governing it, and this law was then applied to estimate the future increase. This process, which is called by mathematicians "extrapolation," is acknowledged by them to be exceedingly risky, even in pure mathematics, and it is doubly so in application to matters where future conditions are imperfectly known. In a communication to the magazine in which Dr. Pritchett's article appeared, Charles E. Woodruff, an officer in the regular army, asserts that the writer has not even taken into account some very well-known conditions. He says:

"He does not seem to have taken into consideration the density of population and what we might call the saturation-point, or the maximum population which can be fed. A population far below its saturation-point will increase rapidly, but when it saturates the land there is no increase, and as we approach our saturation-point our rate will rapidly diminish to zero.

"We do not know what our saturation-point is under the present conditions of food production; but we produce far more than is needed for our twenty people per square mile. Nor can we estimate our future saturation-point, for no one can presume to predict what science will enable us to do in the way of food production, other than what, by present methods, can be forced from the soil. We can only estimate our limit, basing it upon the known densities in countries which have always been populated to their limit.

"The saturation-point rises with civilization just as the saturation-point of air for water rises with the temperature. Cultivated land is said to produce 1,600 times as much food as an equal area of hunting land. Denmark, for instance, could support but 500 paleolithic people, and when their culture rose to the level of the present Patagonians, 1,000 could exist, and 1,500 of those on the level of the natives of Hudson's Bay. In the pastoral stage each family requires 2,000 acres, and France could not support 50,000 of such people. For centuries after the Norman conquest the whole of Europe could not support 100,000,000, or about 25 per square mile, while now there are 81."

The saturation-point may remain stationary in an arrested civilization, the writer notes. China, for instance, is said to have had 400,000,000 for many centuries. On the other hand, in lands where food can be bought from abroad and paid for by manufactured goods, the population can go beyond the saturation-point. Great Britain is said to import one-third of her food, and her 300 people per mile place her far beyond the point of saturation. When the countries from which she buys have no surplus for sale, her population must decrease to about 200 per mile, which is all that she can feed. Should her factories fail through foreign competition, so that she can not buy, she will also decrease in population, just as Ireland has done since the beginning of the last century. The writer goes on to say:

"America was saturated by savages in pre-Columbian times, and they were constantly at war for more room; but the land has always been far from saturation for civilized whites. Tho we now export enough food for a large population, we can not produce very much more, for all the useful land is now taken up. Fully sixty per cent. of the desert lands west of the 100th degree of longitude will never have water on it, and that alone will forever prevent us being as densely populated as Europe. Perhaps we can now support fully 125,000,000, or 34 per mile, a point which Dr. Pritchett calculates we shall reach in 1925, at our present rate. By that time we shall have farms on ten or fifteen per cent. of the arid lands, the limit of possible irrigation, and perhaps then we can support 200,000,000, the calculated population for 1950; but it is difficult to see how we can feed 500,000,000, our calculated numbers a little over a century hence, for that would be a density of about 125 per mile—far greater than Europe.

"It is also difficult to see how science is to produce food indefinitely, for the real basis of food production is the soil and vegetation, such as the changing of cellulose into starches and sugars. The possible limit is the amount of the sun's energy we can capture through vegetation. The calculated population of a thousand years hence, 41,000,000,000, or 11,000 per mile, is not at present conceivable."

The law of population, the writer points out, is that its increase depends upon its density, irrespective of the birth-rate. At the saturation-point the death-rate and the birth-rate must be equal, as they are now in China, where there is at the same time a large birth-rate and also frightful destruction of life by pestilence, famine, and murder. He goes on to say:

"Our civilization will never tolerate such mortality, nor can the surplus migrate, as it has been doing from Europe for four hundred years. Yet we need have no fear of future famines and pestilence due to overcrowding and so necessary in India and China, for the solution of the problem will come of its own accord in a natural limitation of the size of families. . . . By the time we have reached our maximum growth it is quite likely that the number of children in American families will be less than three, or just enough to compensate for unavoidable deaths and still keep the population stationary. The deliberations of the Malthusian societies may appear very absurd, but they are merely discussing things which are sure to come about naturally and not artificially.

"Thus Dr. Pritchett's estimates of our future population of 11,000 per square mile being based upon the rates of increase in a country far below its saturation-point, it seems that a better formula could have been obtained by taking the increases in European countries which probably have been saturated since the glacial times and supersaturated ever since they became maritime powers and could import food. Thus England had 5,500,000 in 1650, and only 6,500,000 in 1750, and less than 9,000,000 in 1800; since then, through food importations due to commerce, her rate of increase has been about thirteen per cent. per decade. Our rate, as above stated, was thirty-two per cent. in 1800, twenty-four per cent. in 1880, and the time it will be thirteen may be long before 1990, and it is quite likely to be zero with a century or two.

"Our country will never contain more people than it can feed, and the struggle for existence or the stress of life will not be a particle more severe than now. Since the first paleolithic man appeared on the scene, Europe has supported as many men as she could and has thus been at the saturation-point, ever on the verge of over-population, needing famines, wars of expansion, and other forms of death, so that there has always been the same struggle for existence we see now, and that struggle can never be more severe than it has always been there. The course of civilization would even justify a prediction that life will be made easier, so that posterity may pity us as we pity our savage ancestors in their terrible struggle for existence."

**An Injurious Substitute for Sugar.**—"The surprising properties of saccharin, a product of coal-tar, at first led to the belief," says *Good Health* (March), "that it would prove a complete substitute for sugar, as this curious substance possesses a sweetening power several hundred times that of cane-sugar, a single grain of saccharin being capable of giving, to a glass of water for example, a sweetness equivalent to that of a saturated solution of rock candy or of loaf sugar. For a time saccharin was recommended as a substitute for sugar in lemonade, especially for the use of diabetics, and was extensively used in sweet-

ening canned fruits and for increasing the sweetness of glucose syrup, making it possible to substitute the latter for pure cane-sugar syrup. This substitution was much more extensively practised on the continent of Europe than in this country, for the reason that sugar in France, Germany, and other continental countries is very heavily taxed, so that it necessarily sells at a high price.

"Very soon, however, sanatoriums and medical colleges took up the method from a sanitary standpoint, and discovered that the use of saccharin as a substitute for sugar is accompanied by decidedly injurious effects, and that the substance must be regarded as a poison, producing pernicious effects in any but very small doses. The Russian senate, the St. Petersburg medical administration, also the governmental chemical laboratory of Russia, have pronounced saccharin injurious to health, and laws were enacted by the senate forbidding its use in food and drink.

"It is well known that saccharin is an antiseptic. This in itself should be sufficient to prove that it is harmful, since its antiseptic properties are distinctly antagonistic to the activity of the digestive ferments."

## CONSEQUENCES OF BIRD-KILLING.

THE ills that may befall humanity through killing off the birds are by no means few. Michelet has asserted that there can be no crops without birds, a conclusion that seems to be supported by M. Louis Adrien Levat, who writes at length in the *Revue Scientifique* (March 9), on "Aviceptology and its Consequences." M. Levat appears to have coined a word here to mean "the science of bird-catching," and in his opinion the results of our present devotion to that science are likely to be serious. He says:

"If man would employ in the suppression of noxious creatures the same energy and ingenuity that he devotes to the general destruction of birds, he would suffer much less from the inroads of flies, mosquitoes, and parasites whose name to-day is legion; and agriculture would be infinitely less threatened by insect pests of all kinds. From time immemorial birds have been the object of active pursuit . . . until now what was once a pastime useful to a certain degree, since it maintained the equilibrium of nature by putting a stop to the excessive propagation of birds, has become a permanent danger, from which all sorts of insecticides will not save us."

After dealing with the history of bird-hunting and bird-catching from the earliest times, the author proceeds to describe modern methods of capturing or killing birds, which he divides into two classes, permissible and illicit. The latter, he says, may be grouped under seven heads: capture by robbery of nests, by decoys, by traps, by imitating calls, by bird-lime, by snares, and by poisoned food. All of these are opposed to the interests of the farmer, contrary to public health, and in many cases actually against the law. Yet everywhere birds are being ruthlessly slaughtered and every year some species is exterminated, to be seen hereafter only in the cages of our museums. The writer gives statistical proofs that his assertions are true, especially in France. And he goes on to say:

"It is not only in the south of France that ornithocide rages with intensity. In Corsica, in Spain, in Sardinia, in Italy, in Malta, in the Peloponnesus, in Egypt, the disease is acute; at Rome, the milkmen are almost always bird-dealers also, and sell ortolans from the Roman campagna. . . . Vows and good intentions are not wanting, but it would appear that they are not easy of fulfilment. In the mean time the insectivorous birds are disappearing from view, the insect flourishes, and in southern lands whole regions are rendered uninhabitable, by the clouds of insatiable mosquitoes that grow apace during the summer time. . . . The crops suffer; the fruits are wormy. . . . The farmer should cry with Richelieu, 'Hannibal at the gates!'—not Hannibal, but the locust, the caterpillar, the noxious insect of all kinds. He should investigate the harm that is being done to him by the bird-catchers, and he should aid the authorities in the defense of his immediate interests, else it is all over with agriculture, and Michelet's saying will be verified—'No crop without birds!'

"But we are preaching in the wilderness, and our part will have to be limited to a sad demonstration. An invisible hand, the instrument of an inevitable fatality, is pushing the feathered tribes toward annihilation; man is destructive in proportion to his civilization, and turns against his most valuable and indispensable auxiliaries the resources of his mechanism and his explosives. We must apply to the case anew the distich of Ovid with which Rousseau closes the fourth book of his 'Evile': 'He lives, and he is the worst enemy of his own life.'"—*Translation made for* THE LITERARY DIGEST.

## WAS THE BOXER OUTBREAK AN ATTACK OF HYSTERIA?

EVERY abnormal phenomenon is treated nowadays from the standpoint of pathology; naughtiness in the child and drunkenness in the adult are alike regarded as, in a way, manifestations of disease. Now comes a French physician, Dr. J. Matignon, who asserts that the Boxers are nothing more than hysterical patients, and that this disease is one to which the Chinese, despite their proverbial calmness, are particularly prone. Dr. Matignon first calls our attention to the fact that most writers on Chinese subjects have contented themselves with very superficial observation. It is his opinion that hysteria is very widespread in China, notwithstanding the dictum of the average traveler that the race is patient, calm, and phlegmatic. The Chinese, he says, are children, from the Emperor down; they are marked especially by naiveté, credulity, and suggestibility, and also by impulsiveness, tho one would not suspect this at first sight. Other characteristics are versatility of character, complete absence of precise ideas, and comparative insensibility to bodily pain. The author goes on to say:

"These mental and bodily phenomena have long made me suspect that hysteria was common in China. In the beginning of the spring of 1900 I undertook an investigation on the subject. . . . More than three hundred subjects were examined, and I proposed to extend my researches to three or four thousand cases. The serious events at Peking not only put a stop to my studies but caused my notes to disappear. The results that are at my disposal are therefore more in the nature of impressions and recollections than of precise statistical documents. My impression—which is shared by numbers of my fellow physicians who have practised in China—is that nervous disease is extremely common among the Celestials. . . . The fact that hysteria exists, and that we can easily find its chief symptoms throughout a great part of the population, seems to me to have a certain importance, and throws a new light on some phases of the moral history of the famous Boxers who have spread fire and sword over the north of China. Suggestion and hysteria have played the chief parts in the propagation of their doctrines and the recruiting of their adepts.

"It is far from my idea to show that the Boxer movement is only a manifestation of hysteria; nerve disease has been a secondary factor in it, altho an important one. . . . The party chiefs, for the most part sincere, have found a rich soil in Chinese credulity and suggestibility. . . . In all their proclamations there is something of mystery, especially for simple minds. The Chinese believes the more as he understands less, and when he does not understand at all his faith becomes absolute.

"The natural suggestibility of the Chinese was raised to the paroxysmal point this last year. The whole Middle Kingdom was in a state of tense anxiety like that which the advent of the year 1000 must have produced in Europe. The year 1900 was to have an intercalary month; this was a grave omen, as had been proved by experience. . . . Suggestibility was exaggerated; every one felt its influence and in turn exerted it upon others."

The author goes on to recount the rapid increase of the Boxers, their rites, their initiations, etc., and sees in each the regular symptoms of hysteria, which would account also for their fanatical bravery. What is the remedy? Says M. Matignon:

"What suggestion has made it can unmake. When the court

and the nobility show the Boxers no more favor, demonstrate that they believe no longer in their supernatural power, and proclaim that the foreigners are not doing injury to the country, the Celestial empire will be convinced. But I fear that the court, and especially the high officials, will not attempt to work thus by suggestion for a long time."—*Translation made for* THE LITERARY DIGEST.

## FACTS ABOUT INDIA-RUBBER.

SOME interesting and little-known facts about the growth and preparation of caoutchouc are contained in a paper read at a recent meeting of the Chemists' Assistants' Association (London) by Frederick Davis. These relate to the origin of rubber and the plants yielding it, the method of collection, the influence of climate upon the trees, and the methods of preparing the substance for the market. Says *The Pharmaceutical Journal*, in a report of the lecture:

"He [Mr. Davis] pointed out that the latex, or juice which exudes from the plants when incised, has no connection with the sap of the plant, but is contained in a special system of tubes and ducts, termed lactiferous vessels, running for the most part longitudinally in the other tissues of the plant, and themselves forming what may be termed a closed system. The latex, like the milk of animals, consists of a number of oil globules held in suspension in the form of an emulsion. Chemically, this oil, in the case of rubber, is a terpene, which, by oxidation, becomes a resin; hence its liability to 'perish,' the juice becoming oxidized so that the resin is formed and the mass becomes brittle. In this connection the author mentioned that the latices of certain plants contain very little resin, and do not readily oxidize, consequently the rubber from those plants is of greater service and more in demand than that from other sources. He also stated that the latex may be stored in stoppered bottles for some little time without any apparent change taking place, but eventually it becomes solid. In regard to coagulation, experience has shown that the latex may be kept free from coagulation for a time by the addition of a dilute solution of ammonia, but heat or the presence of an acid of any kind favors coagulation. Mr. Davis mentioned that, in order to promote the rapid production of rubber, the suggestion has been made that seeds of plants yielding rubber should be planted annually, and that the year-old plants should be pulled up and boiled in water, when caoutchouc would separate. Theoretically the suggestion was good, but practically such a method would not, in his opinion, answer commercially, because he found that no true caoutchouc is produced in the first year, but a modification, to which the term 'viscin' has been given, having the plasticity of caoutchouc, but not the durability."

**Infection Through Modeling-Clay.**—That the ordinary modeling-clay used in kindergartens and by school-children in manual-training classes may be a dangerous vehicle of infection is made to appear by the investigations of M. O. Leighton, health inspector of Montclair, N. J. His experiments and conclusions, which are set forth in a paper read before the American Society of Bacteriologists at its recent meeting in Baltimore, are thus summarized in *Science* (March 1):

"In the ordinary schools such clay, after having been used by one student, is returned to the stock-box and subsequently used again. Study of clay thus obtained from schools showed bacteria to be tolerably abundant in the clay. The species of bacteria identified were those which ordinarily occur in pus formations, thus showing that clay may be capable of distributing these organisms. An attempt to sterilize clay showed that the only efficient means of accomplishing this purpose is by the use of superheated steam under the pressure of 15–20 pounds for 45 minutes.

"Next, an attempt was made to determine how long certain pathogenic bacteria could remain alive in the clay. Sterilized clay was inoculated, under proper precautions, with the bacilli of typhoid, diphtheria, and tuberculosis. The clay was then kept moist and warm, and studied periodically for the presence of these organisms. The results were, briefly, as follows: *B. typhi abdominalis* grew vigorously after having been enclosed in the clay for 32 days. After that no colonies were found. *B. diphtheria* grew after having been enclosed in the clay for 18 days. *B. tuberculosis* was alive after 18 days. How much longer the latter two bacilli would remain alive in the clay the author did not determine."

**Psychic Influence in the Practise of Medicine.**—"A legitimate practise of medicine," says Dr. J. C. Culbertson, in *The Journal of the American Medical Association* (March 9), "takes cognizance of all psychic influences and turns them to account in a treatment of disease. The personal influence of a physician should always be firm, not vacillating, positive and never negative. These attributes tactfully administered are sedative and may be anesthetic and narcotic. They possess the therapeutic property of being able to allay irritability and excitement. . . . The wise man who is a successful practitioner uses his personal influence as a stimulant, sedative, anodyne, narcotic, anesthetic, and nervine; and does it systematically, as tho it were as important a therapeutic measure as the giving of a tonic, purgative, or opiate. It is this personal influence that makes some men great and others small. All that is known of the entire materia medica, as well as other resources in the art and science of medicine, are as wide open to the command of one physician as of another, and the differentiation between them is founded upon but two accomplishments: ability to diagnose pathological conditions and a systematic use of personal influence in the treatment of disease. All other therapeutic aids are but valuable adjuncts, not one of which is to be for one moment in the slightest degree deprecated, for they are cofactors of the greatest importance. It is this systematic use of the personal influence of the physician that gives any foundation to Christian Science or faith curists. Eliminate this one powerful agent and there is nothing left of a visionary vagary."

## SCIENCE BREVITIES.

IT has been discovered that the opacity of substances for Röntgen rays depends on their atomic weight. The greater this weight, the higher is the opacity. The opacity is independent of physical condition, that is, for instance, it is the same for ice as for water, and is not affected by temperature. It is also independent of atomic arrangement and chemical combination, and depends only on atomic weight. This interesting law was announced by M. L. Benoist to the Paris Academy of Sciences on February 11 last.

WHAT might be termed the "elevator disease" is brought to our notice by a London paper quoted in *The Scientific American*. If what it tells us be true, people with weak hearts had better climb ten flights of stairs than ride up in the elevator. "Lift attendants have died sudden deaths; people with weak hearts have noticed ominous sensations when in the elevator. We are told the sudden transition from the heavier air at the foot to the lighter air at the top is extremely trying to the constitution. Most people have experienced singular sensations of internal collapse when the lift floor sinks beneath the feet, but none suspected that the results might be so serious."

AMERICAN TOOLS IN LONDON.—"I wanted to buy something in the way of carpenters' tools, a saw, brace and bits, miter-cutter, and some planes; also a micrometer guage, some calipers and a square," writes a correspondent of *Mechanical Progress*. "To make my selection I went to a good tool dealer's, where I could get plenty of choice. At the end of my purchasing, I found myself possessed of a saw by Disstons, brace and bit by Millers Falls, miter-cutter by Lelland, micrometer gage by Brown & Sharpe, calipers and square by Starrett, and I forget the name of the maker of the planes, but think it was English. On my return from the store, I got on one of the underground tube railways and traveled in an American car drawn by an American electric locomotive."

SOME experiments have been made in England by Rev. W. Buckland to test the belief that toads can live for long periods in rocks without air or food. reported in *The Engineering and Mining Journal*, the experimenter took a large block of coarse limestone and prepared twelve circular cells in it, each about one foot deep and five inches in diameter. A groove was cut at its upper margin to receive a circular plate of glass which was in turn protected by a circular piece of slate. Twelve smaller cells, six inches deep and five inches in diameter, were made in a large block of silicious sandstone, these cells also being covered with glass and slate and luted around with soft clay. The object of the glass cover was, of course, to permit of the toads being seen without having to remove the lids. One live toad was placed in each cell and the covers cemented on. The weight of the toads was ascertained before sealing up the cells. Both stones were buried under three feet of earth for thirteen months. All of the toads in the sandstone cells were found to be dead and their bodies were decomposed, showing that they had been dead for a long period. The majority of the large toads in the block of limestone were alive, and in every instance the glass covers were cracked. The toads were weighed, and it was found that they had decreased in weight. The conclusions drawn by the naturalists were that the toads can not live a year totally excluded from air, and can not live two years if totally deprived of food."

# THE RELIGIOUS WORLD.

## COUNT TOLSTOY AND HIS RELIGION.

THE announcement of the final steps in the excommunication of Count Leo Tolstoy, to whose censure by the Orthodox Church of Russia we have several times referred, has made the great Russian novelist and philosopher again a leading object of public attention. Notwithstanding the bitter protest of his wife —whose position it is somewhat difficult to understand in view of the fact that Tolstoy himself condemns and repudiates the church idea in itself—the sentence has been carried out, and Tolstoy is no longer regarded as a member of the Holy Orthodox Church of the East, nor as entitled to Christian rites if he die unreconciled. The recent report, however, that he has been banished from Russia on account of his political and religious writings does not seem to have had any foundation in truth.

TOLSTOY AS SEEN BY HIS CRITICS.

A remarkable criticism of Count Tolstoy's religious views appears in *The Independent* (March 28). The writer, a new staff correspondent, who is to contribute frequently to the paper under the old Greek name of "Dicast," a sort of public censor, says:

"Count Tolstoy accepts without reservation the plain precepts of the Gospel, and demands our adherence to the strict letter of the law. This may be well, altho possibly it denotes something of the false logic of fanaticism to dwell so persistently on the one command, 'Resist not evil.' But deeper than the commands lies the spirit of Christ; and he who follows the law of the Gospel without heeding the spirit, wherein is he different from the Pharisees of the old dispensation whom Christ so vehemently denounced?

"If you ask in what respect Tolstoy misses the heart of true religion and of Christ, I would reply in the words of a famous French woman, '*La joie de l'esprit en marque la force*'—the joy of the spirit is the measure of its force. It may seem trifling to confront the solemn exhortation of a prophet with the words of Ninon de l'Enclos, whose chief claim on our memory is the scandalous story of her son, who killed himself on discovering that he had fallen in love unwittingly with his own mother; and yet I know not where a saner criticism could be found of the arrogant dogmatism of this Russian bigot. There is no joy in Tolstoy, and lacking joy he lacks the deepest instinct of religion. I know that here and there a sentence, or even a page, may be quoted from Tolstoy that sounds as if he had discovered joy in his new faith, and I know that he repeats volubly the glad tidings that are said to have made the angels sing as they never sang before; but it needs no more than a glance at the rigid glaring eyes of the old man to feel that the soul within him feeds on bitter and uncharitable thoughts, and it needs but a little familiarity with his later work in fiction to learn that the ground of his spirit is bitterness and denunciation and despair.

"It is natural that a writer of Tolstoy's gloomy convictions should deny the validity of beauty and should call the Greeks ignorant savages because they believed in beauty. His own later work shows an utter absence of the sense of beauty and joy. The fascination of such a novel as 'Resurrection' is no different from the horrid fascination which impels a crowd to gaze at some unseemly disaster in our city streets. The drama called 'La Puissance des Ténèbres'—I do not know that it has ever been translated into English—is one of the most revolting and heartsickening productions of the past century. The imagination of the author has apparently dwelt on unclean objects until it has become crazed with a mingled feeling toward them of attraction and repulsion.

"Count Tolstoy takes his law of righteousness from the Sermon on the Mount, and that is well; but he has forgotten the song of joy that runs like a golden thread through that discourse —'Blessed are they that mourn; for they shall be comforted. . . . Rejoice, and be exceeding glad.' Out of the preaching of Christ proceeds the wonderful and beautiful lesson of the fowls of the air and of the lilies of the field; out of the preaching of Tolstoy comes the loathsome 'Powers of Darkness.' Or, if we look for a more modern instance, we may read the 'Fioretti' of St. Francis of Assisi, than whom no one has trod nearer to the footsteps of Christ. The parables and poems of St. Francis are all aglow with passionate joy and tenderness and beauty. I do not mean that sorrow and denunciation are banished from the teaching of Christ. But the sorrow of Christ is not the uncharitable cry alone of one whose spirit has been wounded by seeing wrong and injustice in the world."

In a word, says the writer, faith is "the deliberate turning of the eye from darkness to light," and of this faith Tolstoy has naught. He denounces the world and the art and the natural pleasures of life, "not because he has attained to any true vision of the peace of the spirit," but "because the world has turned to ashes in his mouth":

"It is because I find no note of spiritual joy in Count Tolstoy when he speaks from his own heart and lays aside the borrowed jargon of Christianity, it is because I find in him only the bitterness of a great and smitten soul, it is because I find in him no charity or tenderness, but only the bleakness of disillusion, that I count him an enemy to faith and not an unbuilder of faith. *La joie de l'esprit en marque la force*, and, finding no joy in him, I reckon him only as one among those who deny and destroy. The soul of the Russian is like a strong man who has lain long in chains in the darkness of a dungeon. Suddenly a beam of light from the outer world falls upon his eyes, waking him from his lethargy, and as suddenly passes away. . . . . .

"I say boldly that Count Tolstoy is not a child of light, but a child of darkness; his speech is the voice of 'the spirit that still denies.'"

---

**A New Basis for Church-Membership.**—Hitherto almost all, if not all, Protestant bodies except the Anglican communion have regarded church-membership as composed of adult or semi-adult communicants, or, in some cases, of persons who have been "converted to religion"; and have looked upon the young as not fully children of the church. A new departure in the basis of church-membership as well as in formal statement of creed has lately been made by Dr. Macfarland and the people of the Maplewood Congregational Church, of Malden, Mass. The changes are thus stated by the New York *Outlook* (March 30):

"The first change provides for the enrolment of all baptized children upon the membership book of the church. The new article reads as follows, and might well be imitated in other churches:

"'Children baptized by the church shall be enrolled as members, with the understanding that such relation shall be continued until they indicate a desire either for a formal acceptance or for a dissolution of the relation. The list of such members shall be kept distinct from that of the adult members, but they shall be considered as members under the care of the church. This list . . . shall also include those previously baptized elsewhere who shall be presented by their parents.'

"Secondly, regarding the admission of all candidates, in place of the old clause charging the church committee with the examination of such candidates, a new rule establishes all examina-

tions of the candidate as a private matter and in the hands of the pastor.

"Thirdly, in place of the old and detailed confession of faith a new and simpler basis of membership has been adopted, as follows.

"'I believe in God, the loving Father of the race.

"'I believe in the universal brotherhood of man, as taught by Jesus Christ.

"'I believe in Jesus Christ as the Supreme Revealer of divine character, as the moral and religious Teacher, the spiritual Guide, and the Redeemer of men.

"'In uniting with this church, I promise to give myself to its service, to work for its upbuilding, and to walk with all its members and with all men in a spirit of charity and faithfulness.'"

## THE BEGINNINGS OF CHRISTIANITY AS VIEWED BY A LAYMAN.

CHURCH history has in almost every instance been written by ecclesiastics, either, as in the case of Milman and Stanley, in the active ministry, or, like Wellhausen, Harnack, and McGiffert, professors in theological seminaries. A layman's view of this subject, such as has lately been given by Judge Charles B. Waite, in his book "A History of the Christian Religion to the Year Two Hundred," is therefore of some special note. Judge Waite, who is said to be a man of learning who has spent many years in an exhaustive non-partizan study of the history of the early Christian church, has arrived at conclusions very different from those of most church historians. A summary of his views is given in the New York *Tribune* (March 12), as follows:

"Of the numerous gospels in use in the church in the second century, the author says that only three were probably apostolic, namely, the Gospel of St. Paul, the Gospel or Recollections of Peter, and the Oracles or Sayings of Christ, attributed to Matthew. These as well as numerous other sacred writings now unknown were reserved as sacred scriptures in the early church, until they were suppressed in the interest of the present four gospels. 'I found myself,' says Theodoret (A.D. 430), 'upward of two hundred such books held in honor among your churches, and, collecting them all together, I had them put aside and instead introduced the gospels of the Four Evangelists.' Many of the early fathers refer plainly to these suppressed writings, and some of these references indicate that writings now unknown to the church were regarded as authoritative. The three writings mentioned above probably did not teach the miraculous conception of Jesus or His physical resurrection. But it is the contention of the author that these and other beliefs gradually grew into shape in the church, and that then the present gospels were written, many of the materials in the older writings being used. The Gospel of Paul was thus the germ of the Gospel of Luke, the Gospel of Peter of the Gospel of Mark, and the Oracles of the Gospel of Matthew.

"Holding thus as to their origin, the author naturally rejects the gospels as unhistorical. Undoubtedly, he says, there was a moral and religious teacher who came to be known as Christ. This teacher, who had devoted followers and disciples, was put to death in the reign of Tiberius, and after His death Paul, the chief of His disciples, founded a new religion on His doctrines and precepts and on the belief in His resurrection. Both Peter and Paul, in the opinion of the author, were responsible for much of the cruelty, bigotry, and fanaticism which came later to characterize Christianity. The Apostolic Fathers emphasized most the supernatural elements in Christianity, and in a credulous age new supernatural additions could easily be made without exciting any protest."

In his account of the origin of the Gospel narratives, Judge Waite writes as follows:

"'It is difficult to believe . . . that Paul, when he declared, "It is sown in corruption; it is raised in incorruption" (it is sown a natural body; it is raised a spiritual body), had before him a gospel in which it was recorded that Jesus expressly denied being a spirit after His resurrection, and called for meat that he might demonstrate to His disciples that He had a material body like theirs. The spiritualism of Paul and Clement was too refined for the gross conceptions of the second century, which would be satisfied with nothing less than the resurrection of the very crucified body of Jesus. Gospels were accordingly constructed containing accounts of such a resurrection, related with great circumstantiality.'"

A large part of Jude Waite's book is devoted to an examination of that little known body of writings termed "The Apocryphal Gospels," many of which, he points out, were once accepted by a large part of the early church as sacred and inspired. A knowledge of them, in Mr. Waite's opinion, is essential to any just view of the canonical gospels and of early Christianity.

## THE GOLDEN RULE AND THE ABOLITION OF RACIAL PREJUDICE.

THE ethical precept known as the Golden Rule, which is so fundamental a concept of the moral order of the universe that it is found, in one form or another, in nearly every religious code, and in nearly every race and age, formed the text of the recent notable discussion in Calvary Baptist Church, New York, in which Confucian, Jew, and Christian acknowledged its efficacy as a basis of international brotherhood, and as a true guide for the religious, social, and business life. The meeting was under the auspices of an institution founded as a memorial of princely Jewish beneficence—the Baron and Baroness de Hirsch Monument Fund. The exercises began with the singing of the One Hundredth Psalm, followed by responsive readings led by the Rev. Dr. McArthur, of Calvary Baptist Church, from two other Hebrew psalms. A prayer was offered by the Rev. Dr. Joseph Silverman, of the Temple Emanu-El. Mr. Wu Ting Fang's address was one of the notable features. He said in part (New York *Times*, March 27):

"Racial prejudice and religious intolerance are two monsters of barbarism. In former days they seemed to stalk hand in hand. They set nation again nation, and people against people. Oh! what a destruction of life and property there was on account of race and religious prejudices! What good came from the Crusades or the Thirty Years' War? Not any; they only inflicted trouble on Christian and Mohammedan alike. The most striking religious persecutions were those of the Huguenots in France and the expulsion of the Moors from Spain. After the edict of Nantes 500,000 inhabitants of France sought refuge elsewhere, and the commercial industry of the country was impaired. When the Moors were expelled from Spain that country lost its best agriculturists.

"I might cite many other incidents of olden times. Such things, I am happy to say, will no longer be tolerated in our day. Liberal education and enlightenment have removed prejudice. There are, tho, on the statute books in many countries, laws directed against some people on account of race or religion. This can not be considered satisfactory. The sooner these laws are abolished the better it will be for the people and for mankind in general, as well as for the progress of the nations.

"I can scarcely recall a war between China and her neighbors over religion. During the 4,000 years China has existed she has grown up by building up within and not by accession from without. There need be no fear but that China will fairly meet the Western nations on the question of religious prejudice. Ignorance is the basis of all religious prejudice. Remove the cause by education. Some people have an antipathy for snakes. They consider all snakes venomous. The naturalist acts differently. He goes to the haunts of the snakes and studies their habits. He finds that a few are venomous, but that the greater number are harmless. If he can overcome the prejudice as to snakes there is no reason why we can not overcome the prejudice of race or religion. We can do so by acquainting ourselves with the language, customs, and nature of other peoples. Then our feelings will be correctly modified. . . . . .

"Among the wise men of ancient times who had the well-being of mankind at heart was Confucius. I am not going to preach Confucianism here. The brotherhood of man was one of his teachings. Confucius found this noble doctrine the common na-

SPEAKERS AT THE "GOLDEN RULE" MEETING.

ture of mankind. The Hottentot, as well as the Asiatic and the European, knows what is right and what is wrong. Civilization gives the Asiatic and European an advantage over the Hottentot, but the Hottentot is a man and should be treated as a man.

'No person can estimate the importance of this movement to eradicate race and religious prejudice. It will weld nations, governments, and people better than politics or family alliances. It will promote commercial intercourse. It will reduce the possibility of war and enhance the permanency of peace. The twentieth century will be signalized by the grandest of human achievements when the practise of the Golden Rule as enunciated by Confucius, 'Do not do to others what you do not want done unto yourself,' is followed by all."

Mr. Edwin Markham read a narrative poem, "Inasmuch," setting forth the brotherhood idea, and Dr. Heber Newton, of All Souls' Protestant Episcopal Church, is reported to have said in part:

"The Golden Rule is certainly not the basic law of business in Christendom—despite all the beautiful things we say about Christ. We evidently do not take Him seriously in this teaching. The Christian world of business is surely not a shining example of the Golden Rule. Too many business firms would seem to be branches of the great house of Gouge & Grab. Advertisements are written by experts in the art of lying politely. They fool simple folk into buying what they do not want at prices which they do not mean to give. Stock is watered so that companies can go on paying dividends which the public would not justify them in paying upon the actual capital invested, while they keep down the wages of their workingmen under the pretense of the necessity of paying just interest on capital.

"What an irony of history! Eighteen centuries of Christendom and we single out for fame a man who, when his workmen tell him there are no rules in the factory, has the Golden Rule printed and posted there, and makes his men believe that he really tries to carry work on according to that rule. We label him Golden Rule Jones. One Golden Rule Jones, myriads of Brazen Rule Smiths, Browns, and Robinsons.

"All honor to men like Baron de Hirsch and Andrew Carnegie, who show us how to apply the Golden Rule so magnificently in the distribution of wealth. Before such men we scarcely know whether we are Jews or Christians. More honor yet to the men who are to come after them, educated by their example to yet higher achievements; who will not only spend their money according to the Golden Rule, but will make it according to the Golden Rule."

The meeting appears to have made a deep impress upon the public as a possible harbinger of a more informed and tolerant interracial and interreligious attitude among twentieth-century peoples. Action was taken looking to the appointment of a committee for the purpose of adopting measures for permanent organization of the Universal Golden Rule Brotherhood (Theodore F. Seward, 78 Fifth Avenue, New York, secretary), and for special services three days each year—Friday in schools, Saturday in synagogs, Sunday in churches. The Boston *Herald* (March 28) remarks:

"It may be said that all Chinamen are not like Wu Ting Fang. This is true. Neither are all Americans like Channing or Sumner or Lincoln, nor all Hebrews like Baron Hirsch, nor all Englishmen like King Alfred, or Bright, or Gladstone, nor all negroes like Booker T. Washington. What then? The races that give birth to such men, the education and the religion that molds them, are not to be lightly esteemed. They stand for ideals and achievements toward which all may strive, and, in their striving, exert an influence for the elevation not only of their own race, but of all races. The significance of such a meeting to exalt the Golden Rule is that it indicates a principle which tends to community of life, to fellowship in progress, to universal justice, helpfulness, and charity. It is needed."

The Rochester *Democrat-Chronicle* (March 28) takes a less optimistic view of recent progress in tolerance and brotherhood. It says:

"For fifty years or more the equality of men in natural right to life, liberty, and the pursuit of happiness has been emphasized in this country. The press, the pulpit, the platform, and the forum of Congress have rung with eloquent appeals in behalf of that principle. It was one of the pivotal thoughts in the minds of the Northern people during the Civil War. The Constitution of the United States was amended to give it legal embodiment and standing before the nation. Yet what have we seen during the past few years in some sections of this country? Entire States prostituting their legislatures and constitutional conventions to the mean and ignoble work of proscribing and disfranchizing one-half of their population on account of the racial blood in their veins and the color of their skin. Mobs, with a ferocity exceeding that of bloodhounds, joining in the hunt of black men, merely suspected of crime in some cases, and, when caught, their victims chained to iron stakes, then mutilated and tortured, and then burned to death. . . . . .

"If prejudice and intolerance are to be exterminated, the process must be begun early in the life of the individual. The rights of men must be taught and enforced upon the minds of youth. Any society, institution, or church which inculcates intolerance toward those differing from it in faith or practise is inflicting irreparable injury upon the natures of those coming under its influence. Intolerance sours, contracts, and dwarfs the spirit of any man who nourishes it. Let the utterance of that great-souled man, Abraham Lincoln, be the motto for every life: 'With malice toward none—with charity for all.'"

## DR. CARROLL'S STATISTICS OF THE CHURCHES.

ALTHO we have already published (February 2) the church statistics for the past year given by Dr. Bliss in *The Independent*, the statistical tables prepared each year by Dr. H. K. Carroll, who was in charge of the United States Census of Churches in 1890, are regarded as so important and authoritative that we give them also herewith. Dr. Carroll's figures show that a combined gain of 244,846 communicants was made by the American churches in 1900, of which the Roman Catholic Church made 80,432, the Methodist Episcopal Church (North) 47,381, the Methodist Episcopal Church (South) 8,118, the African Methodist Episcopal Church 33,735, the Baptist Church (North) 3,214, the Baptist Church (South) 20,232, the Colored Baptist Church 16,245, the Disciples of Christ 31,586, the Lutheran Synodical Conference 38,083, the Lutheran General Synod 2,888, the Lutheran General Council 22,598, the Presbyterian Church (North) 22,099, the Presbyterian Church (South) 4,868, the Protestant Episcopal Church 17,014, the Congregationalists (estimated) 1,486. The Salvation Army and the Church of Christ, Scientist, show decreases for 1900, altho both have gained largely during the decade.

Dr. Carroll gives the following summary of religious gains in the past ten years and in the century (we quote from his article in the New York *Christian Advocate*, March 28):

"The largest gains in communicants between 1890 and 1900 were made by the Catholics—2,508,212. The Methodists [17 bodies] stand second with 1,327,065; the Baptists [13 groups] third, with 803,434; the Disciples of Christ fourth, with 508,931; the Lutherans [21 bodies] fifth, with 429,095; the Presbyterians [12 bodies] sixth, with 306,068; and the Episcopalians [2 bodies] seventh, with 179,129.

"The advance from 1800 to 1900 is indicated by the following, the statistics for 1800 being taken from Dr. Daniel Dorchester's 'Christianity in the United States,' and including only Evangelical churches:

| | Ministers. | Churches. | Communicants. |
|---|---|---|---|
| 1900 | 154,228 | 191,348 | 27,422,025 |
| 1800 | 2,651 | 3,030 | 364,872 |
| Gains during the century | 151,577 | 188,318 | 27,057,153 |

"The statistics for 1800 are not complete, even for evangelical denominations, as to ministers and churches. Probably the former should be increased to at least 3,000, and the latter to 3,500. The increase, it will be seen, including all denominations in 1900, has been enormous: the number of ministers has been multiplied by 50; the number of churches has been multiplied by 54; the number of communicants has been multiplied by 73; the population of the United States has been multiplied by 14.

"The growth of particular denominations or denominational groups during the century was as follows:

METHODISTS.

| | Ministers. | Churches. | Communicants. |
|---|---|---|---|
| 1900 | 37,987 | 54,351 | 5,916,349 |
| 1800 | 287 | ..... | 64,894 |

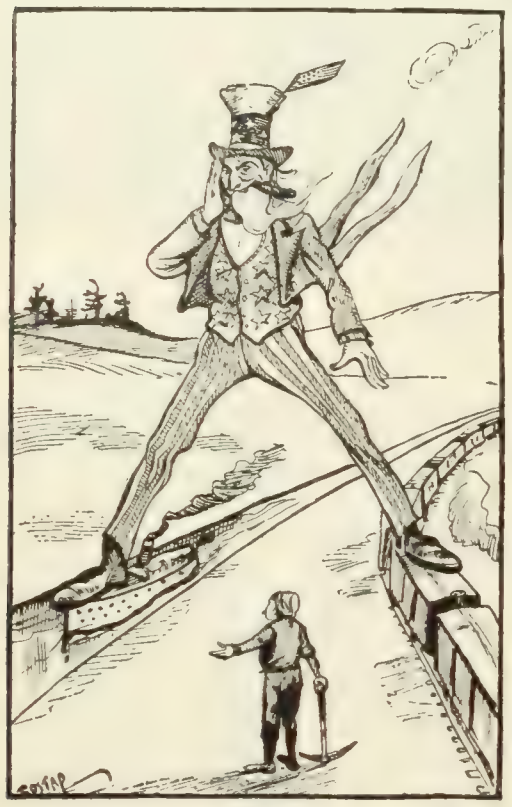
# FOREIGN TOPICS.

## EUROPEAN COMMENT ON THE "STEEL TRUST."

ALTHO a "profound sensation" has been caused in England by the formation of the "steel trust," and a "most serious outlook is now before the British steel industry," according to *The Spectator* (London), there are, that journal thinks, excellent reasons why one should not speak or think as if Mr. Pierpont Morgan and Mr. Schwab had their hands on the throat of the national welfare of England. *The Spectator* continues:



UNCLE SAM'S BENEFACTOR.

UNCLE SAM: "Good boy, Johnny Canuck; keep right on building canals and railways to carry my products to the English market fifty per cent. cheaper than your own Canada stuff gets there." —*Toronto Telegram.*

"When we consider the enormous rate at which the productive capacity of the Carnegie works has been developed, it does not seem by any means unreasonable to anticipate that in a very few years more than half the world's steel production will be under the hands of the United States Steel Corporation. That certainly is a serious outlook from the point of view of the British steel industry, and it is made much the more so by the fact that the American tariff puts the steel corporation in a position to make such great gains out of the home market that they can afford to flood foreign markets with their surplus products at cost price, if not less."

And yet the vaulting ambition of the American trust may overleap itself. It may get into difficulties with organized labor; it may create a serious anti-protection sentiment; it may cause equally serious anti-trust legislation. *The Spectator* continues:

"If, however, the American people are willing to have the price of everything made of steel kept up in the States, are we, as a nation, to contemplate with alarm and aversion the keeping down of all such prices here? No doubt it will, or may, bear heavily upon our own ironmasters, at least for a time, and that will be, as we have said, a cause for regret, but not for public interference. If, through cheaper steel, a considerable amount of capital and labor which is now employed here in the manufacture of that essential of civilization ceases to find adequate reward, there must be a corresponding gain to all connected with those industries in which steel is the raw material. American engineering competition is, no doubt, serious enough in many departments, and bids fair to become more so; but just in so far as Mr. Morgan's corporation provides or indirectly secures to our engineers cheaper steel than they would otherwise obtain, will it mitigate the severity of the transatlantic rivalry in regard to the finished product. . . . If the requirements of our blast-furnace owners and steel manufacturers are kept down, we shall escape the recurrence of a coal boom, which will be distinctly to the good. Again, if iron and steel become cheaper, the shipbuilding trade, the building trade, and in fact all trades using steel and iron, can not fail to benefit."

The sole profit to the United States in this vast consolidation of interests, says *The Outlook* (London), will be that Uncle Sam can proudly claim Mr. Morgan as an American citizen. But the "steel trust" magnates are certainly framing dangerous problems for solution by society:

"How long the people of the United States will continue to regard with equanimity these immense absorptions by the few of the fields of energy hitherto open to the many no one can say. These dominating corporations may in one sense be regarded as object-lessons in the possibility of an international organization of trade under the control of the state—the dream of the Socialists. Or they may prove a challenge to that individualism in effort which has been the mainspring of all societies hitherto known. Many monopolies of class and faction and family, inherently more powerful than this new steel combination, have fallen ere now before the resistless forces of society. Wealth is the weakest of all things upon which to build power; and it is notable that of moral or temporal good to anybody but its proprietors this latest combination promises nothing."

The French economist, Paul Leroy-Beaulieu, doubts that the trust can ever dominate the markets of the entire world; but, he says (writing in the *Économiste Français*, Paris), it may possibly "so develop the American export trade in steel products and direct this trade with such a singleness of aim that, backed up, as it is, by the enormous resources of the United States, it may gain much more favorable conditions for its progress than can possibly obtain in Europe." Over-production, however, M. Leroy-Beaulieu regards as inevitable, and this, he thinks, may bring about the downfall of the trust. Mr. Morgan's projected visit to Germany, for the purpose, it is reported, of bringing about the consolidation of all the iron and steel interests of that country, is regarded by the *Kreuz-Zeitung* (Berlin) as "the last humiliation of Europe by the young giant of the West."—*Translations made for* THE LITERARY DIGEST.

## RUSSIA, JAPAN, AND MANCHURIA.

THE rapidly growing hostility of Japan toward Russia is regarded in Europe as the most significant phase of the latest developments in the far East. Russia's grasp on Manchuria and the report that the dismissal of McLeavy Brown, Korean Director-General of Customs, can be traced directly to Russian influence, has inflamed popular opinion in Japan almost to the fighting point. Ever since the conclusion of her war with China, when Japan was deprived of the fruits of victory by Russia, Germany, and France, there has been a feeling of hostility to Russia in the Mikado's empire. Assuming that Russia, notwithstanding her promises to the contrary, will actually annex Manchuria, the Japanese declare that they must have compensation for this increase of Russian influence and good assurances that Korea will not be molested. *The Daily News* (London) publishes an interview with "a prominent Japanese diplomatist" (the Japanese ambassador to Great Britain is known to be fond of expressing himself in this way), in which Japan's position is defined as follows:

"With Manchuria in her grasp, Russia is a constant menace to Korea. Now, the real independence of Korea, if not its actual possession, is a vital thing to Japan. If Russia had Korea, Russia's predominance in the East, already very great, thanks to the loss sustained by British prestige recently in the Orient, a direct consequence of your [British] hands being tied by the war in South Africa—Russia's predominance, I say, would be so overwhelming that Japan feels her existence would be at stake in that case, and that she might be soon snuffed out from amongst the nations of the world. . . . And what general sentiment in Japan demands at this moment is that Korea, in some way, must be safeguarded from Russia; if without war, so much the better; if there must be war, then Japan will not decline to fight even the great power of Russia."

Russia is now in actual possession of Manchuria, this diplomatist continued:

"As for the Chinese local government being retained—what do you suppose is the true meaning of that? . . . Manchuria is a poor province, there is a heavy deficit annually in its govern-

ment, and supplies are sent it from the richer provinces. This system by which the poorer provinces are supported by the richer obtains throughout the entire fabric of the Chinese empire, and Russia, which is perennially short of funds, will continue to draw support in rice and money from the other provinces of China according to custom. Thus Manchuria will be kept up by China—for Russia."

QUITE AT HOME.

BRITISH AND GERMAN ALLIES: "Hi! What are you doing there?"
RUSSIAN COSSACK: "I'm the man in possession! Are you going to turn me out?"
BOTH (hesitatingly): "N—n—no. No. We only asked."
RUSSIAN COSSACK: "Then now you know." [*Goes on smoking.*]
—*Punch.*

William Durban, for thirty years a resident of Eastern Siberia, in answer to questions put to him by *The St. James's Gazette* (London), says in substance:

"Up to 1860 Manchuria was one of the largest countries in the world. It stretched for 2,000 miles along both banks of the Amur, the control of which was the proud achievement of the elder Muravieff, who completed his work by securing the partition of that ancient empire.

"We may as well admit that what in 1860 befell the upper Manchurian dominions must certainly be repeated in the case of the lower Manchurian territory, which still goes by the name of Manchuria. By a stroke of the pen all the vast region north of the Amur came into the grip of Russia, and was incorporated with Siberia as the Amur Province. Southern Manchuria remained Chinese, but the younger Muravieff ear-marked it for his imperial master. It is one vast earthly paradise of beauty, and its resources will one day astonish the world. Russia will develop these. China has simply prohibited access to any of them. Mukden is the real gateway to North China. Russia already holds that vital portal. Beauty and utility together will make of Manchuria in days to come one of the world's most attractive regions. Coal lies close to the surface in immense quantities, but under the blighting régime of Manchu mandarinism no private enterprise has been permitted to work these treasures."

The much-discussed Manchuria convention between Russia and China (which, as we go to press, still hangs fire) consists of twelve articles. The first declares that the Czar is willing to forget the "recent hostilities" in Manchuria and consents to allow China to resume civil government. The other articles (we are informed by the Peking correspondent of the London *Times*) "virtually place absolute control in Russian hands." They exclude Chinese troops and forbid the importation of arms. They demand the degradation of the high officials implicated in the recent disturbances, and exclude all but Russians from holding official positions in Manchuria or drilling Chinese soldiers or sailors "anywhere in Northern China." It is stipulated that, in Manchuria, Mongolia, and Chinese Turkestan, no railroad, mining, or other concessions shall be granted to persons of any other nationality than Russian. China herself is not permitted to construct any railroad, and no land "in the vicinity of New-Chwang" can be leased to foreigners. All the customs of Manchuria are to be under Russian control. The remaining clauses deal with indemnities, in the matter of which, in general, Russia will act with the other powers. This is regarded by the European press in general as amounting to annexation, especially in view of the additional fact (pointed out by the Peking correspondent of *The Standard*, London) that Orthodox Russian churches are being rapidly erected in several Manchurian towns.

In reply to a "diplomatic suggestion" from the British Ambassador in St. Petersburg, Count Lamsdorf, Russian Minister of Foreign Affairs, has declared that Russia has no intention of establishing even a protectorate over Manchuria. What has really happened in that province, he said, is that "the Russian military authorities who had been engaged in the temporary occupation and pacification of that province had been directed, when reinstating the Chinese authorities in their former posts, to arrange with the local civil authorities the terms of a *modus vivendi* between them for the duration of the simultaneous presence of Russian and Chinese authorities in Southern Manchuria," in order to avoid a repetition of recent attacks on the frontier and along the railroad to Port Arthur. "Effective guaranties," he added, must be given that these troubles would not reoccur; but Russia's efforts would "certainly not be in the nature of acquisition of territory" or of "an actual or virtual protectorate." Count Lamsdorf illustrated the position of his Government by saying that it was placed in the same difficulty "with regard to fixing a final date for evacuating Manchuria as the allies found themselves in with regard to the evacuation of Peking and the province of Pe-chi-li."

Russia's intentions are further defined by a writer in the *Politische Correspondenz* (Vienna). In what that journal claims to be "an inspired communication," it is said:

"The chief objection of the negotiations now in progress between the Russian and Chinese governments is to agree on the terms of effective guaranties for safeguarding the construction of the railway through Manchuria. Another object is to prevent a repetition of disturbances. In respect to both objects, the withdrawal of Russian troops from Manchuria can only be gradual, and it is out of consideration for the principle of unity between the powers that Russia also makes it a condition for the evacuation of Manchuria that China should have complied with the demands collectively made by all the powers. By imposing this condition, Russia exercises a salutary pressure upon China in the common interest of all the powers. Her own intention, however, remains, as heretofore, to respect the territorial integrity of China."

COUNT WALDERSEE: "Do make an end of it, madam, and let yourself be beaten, or I shall be terribly blamed at home in Berlin."
—*Punch, Vienna*

"We can not profess," says *The Spectator* (London), "to be either alarmed or indignant at what has taken place":

"Ever since Russia marched her troops into Manchuria we

have realized that Russia had come to stay, and that tho diplomatic assurances to the contrary might be extorted from her, they would be worthless. We do not believe that British interests need or will suffer, but if the convention is agreed to by China and carried out it means that the policy of partial partition has begun, and that Russia has actually taken her piece. We trust that even if Germany insists upon following Russia's lead as regards her sphere we shall not rush into any precipitate and panic action."

The German Chancellor, von Bülow, has declared in the Reichstag that, altho the Anglo-German agreement in China has no application to Manchuria, yet "there are larger interests involved that those of any individual power." China is a debtor to the powers. Her debt is a very large one, and she has not yet effected a settlement with her creditors. These creditors have an interest in seeing that the debtor does not give away too much *in fraudem creditorum.*" Yet, Von Bülow continued, Germany is not alarmed over the situation. The French press has very little to say on the subject, except by way of excuse for Russia or explanation of her course. The *Journal des Débats* (Paris) believes that the British protest is simply a blind to cover England's own designs of aggrandizement. Why, asks this journal, should a people which persists in remaining in Egypt without officially declaring that such is its intention, think it necessary to protest against Russia's action in Manchuria? Our interests are in Southern China, says the *Petit Parisien*, and "our diplomacy can not but congratulate itself on seeing the Son of Heaven subject to the exclusive influence of our Russian friends."

THE CZAR: "Now, boys, let me build you a railroad, and I will send you some of my best goods."

The first train load.
—*Ulk, Berlin.*

To Japan, the Russian occupation of Manchuria is a standing menace, thinks *The Times* (London), and for the following reasons:

"Her [Japan's] economic and military interests there are of the first order. Korea is the granary from which she at present draws large supplies of food for her teeming population, and upon which she relies for feeding that population when it outstrips, as it shortly must do, the limited resources of her own soil. It is the field to which she directs her emigrants. Numbers of Japanese are already settled there, and, as the pressure of population grows, those numbers will rapidly increase. It has become a favorite sphere for Japanese commercial and industrial enterprise. Much Japanese capital is already sunk there, and much more may be invested with profit in the development of its natural resources. Wherever else the door may be closed to her, Japan is determined that it shall not be shut against her without a struggle in Korea. But important as are her economic interests in that country, they are in her eyes outweighed by her military interests. She believes that a Russian occupation of Korea would constitute a permanent threat to her safety, and it can not be denied that she has strong grounds for her belief."

The possession of Korea is really vital to both Russia and Japan, declares *The St. James's Gazette* (London). "To Japan as the natural outlet of her ambition for expansion; to Russia, for the security of her far-Eastern possessions."

Both powers are reported to be mobilizing fleets in Chinese waters with Korea as their destination. Japan seems to be awakening to the situation, says *The Herald* (Kobe, Japan, published in English), which is, in brief, that "a Russian absorption of Manchuria and Korea is inevitable unless a force which would compel Russia to go to war opposes that absorption. . . . Political pledges and obligations with Russian diplomatists are waste paper or waste breath when it becomes possible to ignore them."

Public opinion in Japan, says *The Japan Weekly Mail* (also published in English), judged by the utterances of the press, seems to be divided between those who favor vigorous opposition to anything like Russian occupation and those who regard Manchuria's fate as sealed and advocate demanding a free hand in Korea as "compensating advantage." The *Kwanto-ho*, a pro-Russian newspaper published in Port Arthur, recently contained an article on Russo-Japanese relations which the *Yomiuri Shimbun* (Yokohama) reproduces with interpolations in parenthesis which make rather quaint but significant reading. We quote:

"The Chinese crisis is nearly settled and peace will soon be restored. The troops which were sent by Russia to the far East have behaved with the greatest patriotism, and they will return home covered with glory. What pains us at this time is the suspicious mood of Japan toward Russia. Japan has always been very suspicious of Russia (especially Russia of Japan). She has always adopted the greatest precautions against us, and has been as fearful of us as tho we were demons. (A squadron of a hundred thousand tons and a squadron of two hundred and fifty thousand tons—which is the terrible demon to the other?) Because Russia is obliged to keep troops in Manchuria pending the restoration of peace and good order in that region, Japan imagines that Russia has aggressive designs. (As she actually has those designs the imagination is inevitable.) Truly Japan's suspicion and jealousy are very profound. (Truly Russia's real designs are very profound.) Russia has again and again publicly declared that she has no aggressive designs in far-Eastern Asia and that she aims solely at the preservation of peace. (Was that why she seized Port Arthur and Talien-Wan?) Russia took the lead in withdrawing her troops from Peking, which was one of the proofs of her desire to restore peace. (Yes, all the world knows that these withdrawn troops played the part of the thief at the fire, stealing Manchuria while Peking was burning.) If a power of such vast resources as Russia entertained aggressive designs, she would not stop at Manchuria, but would swallow the whole of China without difficulty. (Only she is not able.) That she does not do so is the best proof of her high morality and of her desire for peace. Dismiss your doubts, Japan! It is because the Japanese are instigated by England and deceived by her specious statements that they entertain suspicions of Russia. The serpent tempted Eve and she induced the upright Adam to eat the apple. Japan had better not listen to the voice of Eve or an evil thing will happen to her. Japan's foreign policy is dictated by expectations of war with Russia. What would be the advantage of such a war? (The advantage would be that Russia could not accomplish her evil designs.) The Russian Emperor, the monarch of peace, has no desire to see blood flow in East Asia, and the Japanese Emperor, a sovereign of profound benevolence, is equally opposed to anything of the kind. If Japan continues to listen to English persuasion, she will only hasten the rupture of her friendly relations with Russia, a result which we earnestly deprecate. (Do you merely want to get Manchuria without any trouble?)"

Japan's strong desire for peace, comments the *Yomiuri*, "will not prevent her from taking proper steps for the preservation of her vital interests." The *Nichi Nichi* (Tokyo) trusts that the Japanese Government, as a subscriber to the Anglo-German agreement, will "protest with other powers against the doings of any country which aims at the occupation of Manchuria."—*Translations made for* THE LITERARY DIGEST.

## FOREIGN COMMENT ON OUR CUBAN RELATIONS.

THE present deadlock in our Cuban relations is assumed by European journals, particularly on the Continent, to be the first step toward annexation of the island to the United States, and a chorus of "We told you so's" comes from the French and German press. The *Temps* (Paris), in a bitter denunciation of "American perfidy," says:

"For love of Cuba the United States plunged into a great war. They took care to justify hostilities by declarations of magnanimous principles. Never were seen more touching passages of eloquence than in this collection of official documents and manifestoes, so rich in statements of transcendental idealism, in which all, even to plunder, is covered up by a layer of humanitarianism and morality. The United States spoke but of protocols and disinterestedness. It was well understood that they were moved by no selfish interests; that nothing could change the sublime altruism of their devotion; that, as knights-errant, they threw themselves into the conflict in order to set free Cuba and the Philippines, to break the yoke of the insolent Spaniard, and save the sun from in future experiencing the pain of rising on a land of slaves. These sonorous formulas were inscribed at full length in the state papers."

VARIUM ET MUTABILE.

UNCLE SAM: "*Ef* I could trust you not to get talkin' to strangers, I'd put my traps on board and git. But as it is, I'll just hang round the Reservation a while."

["Nor is there any probability that the American forces will be withdrawn from the island, while, etc., etc."—*New York Correspondent in The Times, March 1.*] —*Punch, London.*

Three years have passed, and what has been done? asks the *Temps*. The protectorate is already a fact. "Of the independence of Cuba nothing remains; of the promises of the United States equally little." The *Journal des Débats* (Paris) recognizes the complexity of the situation, and, while blaming the United States for breaking promises, hopes that "the counsels of conciliation will prevail at Havana and the advice of moderation at Washington." The present status, says the *Independance Belge* (Brussels), is a sad commentary on American good faith. The Monroe doctrine says "America for the Americans"; but it is always the United States which profit to the injury of all other American peoples. Cuba's fate is annexation, pure and simple; but it would be folly on her part to incur armed opposition.

Paul Leroy-Beaulieu, the French economist, contributes to the *Économiste Français* (Paris) a study of the recent Cuban census. In conclusion he remarks: "Whether Cuba is destined to become a State of the Union or to remain under American protection, she will very soon, under the hardy energy of the Yankees and by the aid of their capital, deserve more than she ever did her proud title of tne 'Pearl of the Antilles.'" The Cubans, says the *Nieuws van den Dag* (Amsterdam), do not deserve the sympathy the world willingly gives to the Filipinos. "They should have known that they were merely exchanging King Log for King Stork."

The British press contains very little comment on the subject, altho the weekly reviews speak sympathetically of the similar rôles of England and America as "civilizers." The Canadian papers generally declare that the annexation of Cuba is ultimately inevitable. It would probably be the best thing for all concerned, says *The Monetary Times* (Toronto). "The course pursued by the United States is in line with the dictates of wisdom," says *The Advertiser* (London):

"Time is required for the development of the idea of self-government. . . . It is simply an act of prudence to exercise control over those who are not in a position to exercise that virtue over themselves. Freedom and liberty, after all, amount to very little unless with them goes capacity to make use of them wisely and well."—*Translations made for* THE LITERARY DIGEST.

## BOER REJECTION OF THE BRITISH PEACE TERMS.

WHILE the failure of the peace negotiations between Lord Kitchener and the Boer general Botha is received with regret by most British journals, *The St. James's Gazette* (London) admits that "were this country [England] to find itself in the extremity to which the Boers are reduced, we hope and believe that our countrymen would return the answer of General Botha to a similar proposal." The terms offered by Lord Kitchener and discussed by the British and Boer commanders are summarized in *The Standard* (London), from which we condense as follows:

As an antecedent condition, there must be a general and complete cessation of hostilities, and the surrender of all weapons and munitions of war. This being done, an amnesty was to be granted in the Transvaal and Orange River colonies for all *bona-fide* acts of war. British subjects belonging to Natal and Cape Colony, while not compelled to return to those territories, would, if they did so, be liable to be dealt with by the colonial law. All prisoners of war now detained at St. Helena, in Ceylon or elsewhere, were to be brought back 'to their country' as quickly as arrangements could be made for their transport. At the earliest practicable date, military administration would yield place to civil administration in the form of crown colony government. Thereafter, as soon as circumstances permitted, a representative element was to be introduced, and ultimately the privilege of self-government was to be conceded. On the cessation of hostilities, a high court independent of the executive was to be established. Church property, public trusts, and orphan funds were to be respected. As to language, English and Dutch were to be used and taught in schools according to the desire of the parents. A sum of one million sterling was to be set aside for the indemnification of persons whose goods had been forcibly requisitioned. Regarding the destruction of farm buildings and loss of stock, the new administration would take into immediate consideration the possibility of assisting by loan all suf ferers who would take the oath of allegiance. . . . Provisions were promised as to the possession of rifles by individual burghers for self-protection or for sporting purposes. The franchise would not be granted to Kafirs until the privilege of representative self-government was conferred, and then the colored voters would not be permitted to be a dominant element.

General Botha announced that he could not recommend these terms to the "earnest consideration" of his government. What ever may be the reasons that actuated the Boers "in refusing such generous proposals," comments *The Standard*, the Boers "have proven that now on them and them alone rests the responsibility for the prolongation of hostilities." The imperial authorities, says *The Times* (London), "have gone to the utmost limits of lenity and indulgence in dealing with the somewhat audacious claims advanced on these points by an aggressive enemy, defeated all along the line in fair fight, with no organized army in the field and no recognizable center of civil authority in existence."

Liberal journals like *The Guardian* (Manchester) and *The Daily News* (London) believe that the rejection of the peace

terms indicates that the military position of the Boers is not yet desperate, and express grave fears for the welfare of the empire if the war continues much longer. "That the Boers would fight to the last man and the last cartridge," remarks *The Guardian*, "that this great free England of ours, after it had overthrown its adversary, would still have to thrash the soul out of his body, doing violence to its best traditions and compromising its future; these were fears that many of us have not been able to repress from the first."

THE PURSUIT OF DE WET.
—*Kladderadatsch, Berlin.*

This is no ordinary war, it continues, between recognized governments:

"It is, and has been since the capture of Cronje and the correspondence which ensued, a war for the total destruction of two little states. The assumption of the Government has been throughout that by passing a steam-roller over these two states they could make up out of the powder that was left a united, harmonious South African dependency, to be molded precisely as the wisdom of British administrators should decide. They assumed for a long time that the preliminary process of grinding the states to powder would be a very short and easy one. Nay, on a famous occasion they assumed that it was already complete. Time alone can show whether the larger assumption was better founded; but hitherto there has scarcely been a single assumption made by the Government with regard to the Boers that has turned out well."

Let us clear our minds of cant, concludes *The Guardian*, and recognize that fact that we are making a South African Ireland, with all its perils:

"We acquired Ireland by the title of conquest unqualified by Irish consent, and accordingly we have now the Ireland that everybody sees, an Ireland hostile, morally foreign, a weakness, a discredit, and a danger. Great powers partition Poland by right of simple force, thinking that a fraction of it will be as agreeable and as safe a possession as any original province in their own, and the result is the Poland that everybody sees now, a Poland growing more distinctly and unanimously and resentfully Polish than ever. No power that has swallowed a piece of Poland has ever really digested it. Yet with Ireland and Poland and a score of similar cases before her eyes Germany proceeds, full of hope and complacency, to take Alsace and Lorraine for her own use, with the result that she has been compelled ever since to shape her foreign and even her home policy with an anxious eye to the dangers brought upon her by that foolish crime. Finally, our own imperialists come upon the stage and, with such an indifference to all the teaching of human history as could have been excusable only in the Garden of Eden, proceed rapturously to light one more fire to burn their own fingers with."

General Botha refused the peace terms, says *The Daily News*, because he discovered, "as President Kruger discovered a year and a half ago, that Mr. Chamberlain was bent on war, and would raise his demands as fast as they were accepted."

The full measure of the damage inflicted upon England by the South African republics, says *The Freeman* (Dublin), is revealed by the situation in China and British weakness there.

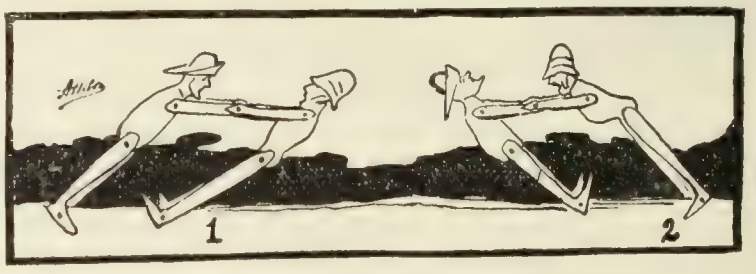
"The truth is that the outrage on the South African republics has involved such a destruction of her strength that England is no longer able to assert her influence wherever it is challenged by a first-class power. She can maintain the fiction of her prestige only by graceful concessions. But the world knows what these mean. Is it any wonder that Botha and his handful of men should still maintain their brave resolve to go on with their gallant defense of their independence?"

In all our Chinese policy, declares *The Speaker* (Liberal, London), we are the prisoners of Mr. Chamberlain's "brilliant diplomacy in South Africa." It adds:

"Imperialism is not all acquisition pure and simple, and we are paying dearly all over the globe for the excursions of imperialism in South Africa. All that we can do is to avoid a bluster and mock-heroic defiance, which only make retreat more painful and more grotesque, and not to begin striking attitudes when we know we can not strike anything or anybody else."

The *Neue Freie Presse* (Vienna) declares that there are worse fates than that of becoming an autonomous British colony, and thinks the Boers should have accepted the terms offered. The *National Zeitung* (Berlin) publishes a review of a brochure recently issued, in Berne, by Paul Botha (son of the general), in which the writer expresses the hope that "Boer and Englishman will live and prosper side by side under England's flag, which alone can secure peace and prosperity to the Transvaal." Belgian opinion, heretofore so strongly hostile to England, seems to be undergoing a change, not as to the merits of the contest but as to the expediency of continuing it. Commenting on the rejection of the peace terms, the *Independance Belge* (Brussels) says:

"Neither Botha nor De Wet can any longer cherish any illusions regarding the result of the campaign. They have hitherto continued to struggle in the hope of some great international incident which might compel Great Britain to release her prey. It is simply madness. At the point we have now reached no conflict of international importance is possible which could have the desired effect. To preserve her conquests, Britain has made enormous sacrifices, and, if necessary, will make still greater. . . . But from the moment that the war can no longer serve to bring about the emancipation of the two republics it becomes useless, barbarous, and criminal. So long as a people is not exterminated, it is not lost, and all efforts should tend to prevent that extermination."



LATEST NEWS FROM THE SOUTH AFRICAN WAR.

1. The Boers repulse the English. 2. The English repulse the Boers.
—*Fischietto, Turin.*

The British national conscience has almost awakened, and hope will soon blossom into fact, says the *Temps* (Paris). The *Journal des Débats* (Paris) believes that England is becoming alarmed at the military situation in South Africa, "being reminded, no doubt, of the fate of the Spaniards in Cuba and of what is now befalling the Americans in the Philippines." Henri Rochefort, the French radical, editor and proprietor of the *Intransigéant* (Paris), recently paid a visit to President Kruger, at The Hague. In a series of flamboyant articles in his paper he calls the world to arms to rescue the Boers and proposes an international fund to start a lottery for their benefit. This scheme, however, is generally ridiculed by the European press, and the New York *Sun* characterizes it as "idiotic."—*Translations made for* THE LITERARY DIGEST.

**THE LITERARY DIGEST EUROPEAN TOURS.**

There are many advantages in a trip through Europe with a personally conducted party of LITERARY DIGEST readers, advantages unlikely to be secured in any other way. The personnel of such a party is certain to insure companionship that will be a source of pleasure and profit, and often of lasting friendship. The opportunity to see through others' eyes as well as through one's own adds greatly to the value of a trip. These advantages were strikingly illustrated in the party of LITERARY DIGEST readers who traveled together last summer, and many of them are urging their friends to go in the party now being organized for the coming summer. The invitation is extended to other readers of this paper to take advantage of this opportunity. Read the announcement on the opposite page, and send to-day for the illustrated program of the tour and full particulars.

# A Summer's Tour in Europe

## Personally Conducted

## "One Series of Happy Hours"

## BOOK NOW

AN IDEAL TRIP FOR A CONGENIAL PARTY OF "LITERARY DIGEST" READERS

SEND TO-DAY FOR PROGRAM : : : :

A delightful tour for the summer of 1901, starting June 15 on the North German Lloyd Steamship "Trave," Mediterranean service and affording an opportunity for persons who have visited the Old World to take a different route under the most favorable conditions, and offering to those who have never been abroad an ideal trip under personal escort. *The party will be limited to* LITERARY DIGEST *readers and their friends*, thus ensuring the very best and most congenial personnel for the party: Hundreds of the readers of this paper who wished to join the party which went last year were prevented from doing so by business engagements, illness, etc. The present opportunity is one which will compensate for the disappointment then experienced. Secure membership now.

## Italy, France, Switzerland, Germany, Austria, Holland, Belgium, England.

**All Expense is included** in the price of the tour. There will be no extra charge for meals, traveling fees, or fee for visiting sights mentioned; no fees at hotels, no fees for porters, no tips, no transfer expenses. Carriage rides are included in the various cities wherever mentioned in the program, and the numerous incidental expenses which are constantly occurring are foreseen and included in the program. The services of experienced conductors and business managers are also included.

**Everything High Class.** Every important detail will be carried out in a liberal and high-class manner, and all things necessary to the comfort of the party are anticipated, provided for, and included. The Atlantic steamers are high-class; the hotels selected are invariably good, and in many instances the very highest class; the railway travel will be second-class, the almost universal mode of railwav travel among the better classes in Europe.

### SOME OF THE PLACES THAT WILL BE VISITED

GIBRALTAR, NAPLES, POMPEII, ROME, FLORENCE, BOLOGNA, VENICE, MILAN, BELLAGIO,
ITALIAN LAKES, CONSTANCE, FALLS OF THE RHINE, LUCERNE, THE RIGHI, INTERLAKEN,
GRINDELWALD, CHAMONIX, MONT BLANC, GENEVA, MUNICH, ZURICH, BRUNIG PASS, BALE, STRASSBURG,
HEIDELBERG, PRAGUE, WIESBADEN, COLOGNE, THE RHINE, AMSTERDAM, THE HAGUE, ANTWERP, VIENNA, DRESDEN,
BERLIN, POTSDAM, BRUSSELS, WATERLOO, STRATFORD-ON-AVON, CHESTER, LONDON, PARIS, ETC., ETC.

## 73 to 87 Days. Total Inclusive Cost, $575 to $660

### Letters from those who traveled in our Tours last Summer

**Miss Ella F. Keyes,** Fall River, Mass., writes: "I am perfectly willing for you to publish my opinion, in regard to the tour of 1900, as given in my letter to you (see THE LITERARY DIGEST of March 23) and will further add to what I have already said, that I have traveled quite a little throughout the United States, have been connected with ten different excursion parties, and think your party of 1900, composed of readers of 'THE LITERARY DIGEST,' the *very pleasantest* and *most congenial one* it ever has been my pleasure to be with, and hope I shall have the pleasure of enjoying another at some future time."

**The Misses Katherine and Jennie Moore,** Philadelphia, write: "Our expectations were more than realized while members of the tour, which was so admirably carried out under your direction. You succeeded in assembling a most congenial party, and procured for us gentlemanly, painstaking couriers, and saw that the program was carried out even to the most minute detail."

**Mrs. W. W. Allen,** 2 West 88th St., New York City, writes: "In view of my recent three months' trip with the Philadelphia-Paris Exposition party it gives me pleasure to say that it was in every way a most complete and enjoyable trip, and entirely free from all care and responsibility. I can heartily endorse all arrangements made by Henry Gaze & Sons, which are so faithfully carried out."

**Mr. Howard E. Yarnall,** Philadelphia, writes; "Our summer tour was a complete success, the itinerary having been carried out in every detail; the party never missing a train at any point. Much of the pleasure of the party was due to the efficient conductors furnished by Henry Gaze & Sons, and to the personal oversight and untiring energy of those in charge to see that all were as comfortable as possible. I can cheerfully recommend to any one contemplating a sight-seeing trip, who wishes to see the most in a short time and be relieved of the cares of baggage and the many inconveniences of traveling abroad, to join one of your parties."

## CURRENT POETRY.

### To April.

By CHARLES HANSON TOWNE.

Dear April, you're like some coquette,
Some little flirt, I ween;
For half the time your face is bright,
And then, all unforeseen,
You droop your head, and pout and shed
Tears that you do not mean.

Yes, April, you're a winsome lass,
A little flirt, I know;
You do bewitch this heart of mine
And bid me whisper low,
"You are a true coquette because
You make me love you so!"

—In April *Woman's Home Companion.*

### The Play.

By H. ARTHUR POWELL.

The play is on. They sit;
She sees the stage
And watches every action there portrayed.
He sees but her, and seeing her sees all—
Her face a page
Whereon the play is scriven, bit by bit;
He reads, and when she smiles, unconscious maid,
His lips into the mold of hers do fall.

# Pears

Do you know the most luxurious bath in the world?

Have you used Pears' Soap?

**All sorts of people use it, all sorts of stores sell it, especially druggists.**

**The Natural Body Brace** advertised in this paper in the first issue of this month, is a delightful, certain remedy for ailments peculiar to women and girls. It makes walking and work easy; gives good figure and light step. Write the Natural Body Brace Co., Box 713, Salina, Kan., for free illustrated book.

**See Our Great Improvements Shown Above.**
This style, size 27x18x50, **$12.87.** Freight paid east of the Mississippi river and north of Tennessee, pro rate beyond, where we have no dealer. Solid Ash case, new golden finish. Zinc-lined, mineral wool filled. One hundred styles from $7.75 up. Some porcelain-lined. Some nickle-plated. Special styles for grocers and hotels. Send for catalogue. 46-56 Ferry Street.
**NORTHERN REFRIGERATOR CO., Grand Rapids, Mich.**

*Direct From Our Factory*

# The "Graeme" Handy Box Seat

Love loses; on her cheek
There shines a pearl.
Love triumphs; in her eyes there sits a song.
Dreams he: if Imitation claim a tear,
Then, tend'rest girl,
What, what would Passion claim?—nay, fool and weak.
You want not tears and pity, but you long
To make the love-light in those eyes appear!

Below them, pipe of wood
And rosined string
All vibrate softly, whispering of Hope;
Then as his heart beats higher with the thought
Of reigning king,
Bursts into strains of triumph. Leap, O blood!
. . . . . .
The curtain's down. Lights up!—the play is o'er.
She sighs; he sighs; and Romance is no more.

—In April *Scribner's.*

### In a Copy of Launcelot and Guinevere.

By RICHARD HOVEY.

Not to reveal one mystery
That lurks beneath life's garment hem—
Alas! I sing of human hearts.
Because I can not fathom them.

—In April *Bookman.*

### When Two Have Lived.

By HELEN HAY.

How would we live! We'd drink the years like wine,
With all to-morrows hid behind the veil
That is your hair: between two lilies pale,
Your slender hands, my heart shall lie and shine
A crimson rose. We'd catch the wind and twine
The evening stars a chaplet musical
To crown our folly; lure the nightingale
To sing the bliss your lips should teach to mine.

And if the sage who cried that life is vain
Should frown upon the flower of all our days,
And chide the sun that knows no tears of rain,
He should not tease our heart with cynic eye.
The soul's vast altar stands beyond his gaze:
When two have lived, then shall they fear to die?

—In April *Harper's Magazine.*

## MORE OR LESS PUNGENT.

**Absentmindedness.**—HOST (lawyer): "Let me introduce Exhibit A—I beg pardon, I mean my elder child."—*Brooklyn Life.*

**My School-day Friends.**—

Sometime I go, reflectively,
On journeys retrospectively,
And for the moment dwell amid the scenes of long ago;
And on such outings, as a rule,
I wander to the dear old school,
And visit with the boys and girls whom there I used to know.

Perchance you were acquainted, too,
With many old-time friends I knew;
You may have met Ann Alysis and, also, Ann Elize;
Or, maybe, chummed with Algy Bray,
Or sauntered with Phil Osophy,
Or delved with Ed Ucation, who was wont to be so wise.

And there was Etta Mology,
Ah, yes, and Ann Thropology.
And Polly Gon and Polly Glot and Polly This and That;
You may have glanced at Ella Cution,
Cast a smile at Eva Lution,
Or with Ella Mentary enjoy a little chat.

Now all those friends I used to see
Are half-forgotten dreams to me,
Yet once within my thoughts they held a quite important place;
But they commenced "commencement-day"
From memory to slip away,
Till now I'd scarcely know them if I met them face to face.

—NIXON WATERMAN in *The Youth's Companion.*

## Current Events.

### Foreign.

CHINA.

April 2.—Russia makes answer to Japan's protest regarding the Manchurian convention, stating that she would discuss terms with China after their acceptance.

April 3.—China formally gives notice to Russia that it is impossible to sign the Manchurian convention

April 5.—Japan remonstrates with Russia over the question of the Manchurian agreement; Russia reiterates that she proposes to withdraw her troops from the province as soon as order is restored.

April 7.—Relations between Russia and Japan continue very strained; Li Hung Chang informs Commissioner Rockhill that he does not expect any further hitch in the negotiations between China and the powers.

OTHER FOREIGN NEWS.

Sir John Stainer, a well-known English musician, dies in Italy.

Seven hundred Boer prisoners arrive in Lisbon, in charge of Portuguese troops.

Thirty thousand iron-workers go on strike in Scotland for an eight-hour day.

For Nervous Headache

Use Horsford's Acid Phosphate

DR F. A ROBERTS, Waterville, Me., says: "It is of great benefit in nervous headache, nervous dyspepsia and neuralgia."

## Are You Deaf?

We have 25 kinds of Instruments to Assist Hearing. Sent on approval. Write for catalogue.
**WM. V. WILLIS & CO., 134 South 11th Street, Philadelphia**

April 2.—The one-hundredth anniversary of the battle of Copenhagen is celebrated in that city.

The London County Council decides to build homes for 42,000 workingmen.

April 3.—The elections in Denmark result in an overwhelming defeat of the government party.

Spain's Cabinet Council approves the new treaty between that country and the United States.

D'Oyly Carte, the well-known theatrical manager, dies in London.

April 4.—Anti-Austrian riots near Trieste, and incendiary disturbances in the Austrian Tyrol, are reported.

April 5.—A Polish hymn-book containing revolutionary matter and advocating Polish freedom, is confiscated by the authorities of West Prussia.

April 6.—Political unrest is prevalent throughout Russia and the radicals are carrying on an active agitation; riots among the workmen at the Easter festivities are feared.

The Russian and Italian consulates in Geneva are mobbed by anarchist sympathizers.

Ex-Premier Stoiloff, of Bulgaria, dies at Sofia.

Lord Salisbury leaves London for the South of France, on account of ill health.

### Domestic.

DOMESTIC NEWS.

April 1.—The Democrats carry the municipal elections in the principal Ohio cities; Mayor Jones is reelected in Toledo, Tom L. Johnson is elected in Cleveland, and John Hinkle in Columbus.

April 2.—Carter H. Harrison is elected mayor of Chicago for the third time on the Democratic ticket; Rolla Wells, Gold Democrat, is elected mayor of St. Louis.

April 3.—Secretary Gage makes a purchase of government bonds in the New York market.

J. Pierpont Morgan sails for Europe.

April 5.—The President signs the commission of P. C. Knox, of Pittsburg, who has accepted the attorney-generalship.

Governor Allen of Porto Rico comes to the United States for a conference with the President.

April 6.—Governor Allen of Porto Rico arrives in Washington and has a conference with the President; the reports of his intended resignation are denied.

General Cassius M. Clay barricades his house in Lexington, Ky., in an attempt to prevent his daughter from serving papers on him in a civil case instituted by her.

AMERICAN DEPENDENCIES.

April 1.—*Philippines:* A thorough investigation of the alleged frauds in the commissary department at Manila has been ordered; General MacArthur cables that they are not serious.

*Cuba:* Owing to American sanitary work April begins in Havana with not a single case of yellow fever, for the first time in the city's history.

April 2.—*Philippines:* Aguinaldo takes the oath of allegiance to the United States; many rifles are surrendered by Filipinos.

April 3.—Chief Justice Arellano, who administered the oath to Aguinaldo, predicts that by June 1 the islands will be completely pacified.

April 4.—Aguinaldo, with the assistance of Chief Justice Arellano, is preparing a manifesto to the Philippine people.

*Cuba:* The Cuban constitutional convention holds further sessions; the radical leaders confer with General Wood.

April 6.—The Havana newspaper, *La Discusion*, is temporarily suppressed by General Wood for publishing a cartoon hostile to the United States.

*Philippines:* Several more bands of Filipinos surrender their arms.

IF you look at a dozen common lamp-chimneys, and then at Macbeth's "pearl top" or "pearl glass," you will see the differences—all but one—they break from heat; Macbeth's don't; you can't see that.

Common glass is misty, milky, dusty; you can't see through it; Macbeth's is clear.

Tough, clear glass is worth fine work; and a perfect chimney of fine tough glass is worth a hundred such as you hear pop, clash on the least provocation.

Our "Index" describes *all* lamps and their *proper* chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address MACBETH, Pittsburgh, Pa.

THE ANGLE LAMP

The Light That Never Fails

should be in every home, but it should be there particularly during the warmer months, when its comparatively little heat, proves a genuine comfort. It is used during the summer in many places where other lights are impossible, and hundreds of

SUMMER HOMES

throughout the country are equipped with it throughout. It never smokes, smells, or gets out of order, is as brilliant as gas or electricity, and burns for eighteen cents per month. Thousands are in use, giving the very best satisfaction. Our Catalogue W shows all styles from $1.80 up, and is sent on request.

Glafke, Portland, Ore.; O. S. Adams, Rochester, N. Y.; W. Chamberlin Cody, Wy.; A. O. Jones, Corvallis, Mont.; E. S. Wood, Honey Grove, Tex.; W. W. Clement, Rabke, Tex.; F. F. Carroll, Aiken, S. C.

Comments: "We may call this good enough"—F. H. J.; "Very ingenious, but too easy"—J. G. L.; "There is more real Chess in this than most problems"—A K.; "Unusual key"—F. C. M.; "The toughest nut I ever cracked"—A. J. H.; "The easiest problem I have seen in your columns"—A. S. O.; "Unique and interesting"—J. H. S.; "One of the slickest 2-ers out"—J. E. V.; "Neat and abstruse; good enough for a place among the best"—A. N. C.; "An absolutely pure mate"—J. Q. De F.; "Goodenough is poor enough"—L. H. R.; "Almost too easy"—H. V. F.; "Solved at a glance"—G. S. H.; "Ingenious"—H. L. H.; "Fine Chess; deserves first prize"—D. G. H.; "A bright idea"—J. W. W.

This problem teaches a lesson which, it seems, a number of our solvers did not know: (1) that in getting a P to the eighth row a player can take any piece he wishes, except a K or a P; (2) that White can have two black Bishops, or as many as he can get; (3) that P—R 8 (Q) is stale-mate, *i. e.*, White can not move, and if White take any other piece than Q or B, Black answers K x B, and no mate next move.

In addition to those reported, E. S. W. got 541, 542, and 543. W. W. C., 543.

Twenty-nine States and Canada represented this week.

### The International Cable Match.

The sixth match, Great Britain *vs.* United States, will be played on April 19 and 20. Very great interest centers in this contest. The United States won the last two matches, and if we win this time, the Newness Trophy remains in the United States. Nine of the American team have been selected: Pillsbury, Showalter, Barry, Hodges, Hymes, Marshall, Voigt, Newman, and Bampton. The first five have played in all the matches; Marshall, Voigt, and Newman in 1899 and 1900, and Bampton in 1900. This is a strong team—probably, as strong as could be found.

### How the Great Master Had Some Fun.

*The Times-Democrat*, New Orleans, publishes the following interesting tidbit, taken from the first number of the newest Chess-publication, the *Schweizerische Schachzeitung*, published in Zurich:

"Among the many strangers that flood Switzerland every year during the summer season, there are always numbers of Chess-players who avail themselves of the opportunity of visiting the Swiss Chess-resorts. Among these foreign Chess-players there sometimes are peculiar characters,

van Houten's Cocoa

combines Strength, Purity and Solubility. A breakfast-cupful of this delicious Cocoa costs less than one cent.

Sold at all grocery stores—order it next time.

CORRECT TIME FOR A DOLLAR!

The Ingersoll

Guaranteed

The remarkable success which has been awarded the Ingersoll Dollar Watch has not been unearned or easily won. Continued success does not alight at random upon this enterpris or that, but, rather, it rewards the untiring efforts of intelligent and meritorious endeavors.

Nine years of steady natural growth has been the history of this watch, achieved against the prejudices of the many who "knew" that "a watch couldn't be made for a dollar," and in spite of the opposition of dealers who wanted to sell higher priced watches.

No watch today, no matter what its price, enjoys a better reputation for accuracy and reliability than the Ingersoll; its sales are larger by far than those of any other watch in the world. If you need a handsome, trustworthy timepiece, try the Ingersoll, and if it is not entirely satisfactory send it back and get your money.

*For sale by 10,000 dealers throughout the country, or the latest model sent, postpaid, in U. S. and Canada for $1.00 by the makers.*

**KLIPS** Write for price-list. H. H. Ballard, 327, Pittsfield, Mass.

which fact, as is well known, is not unusual among Chess-players; but the most striking of such guests came last summer to the Café Saffron at Zurich, and introduced himself as Dr. Kruger, from Berlin. His games were curious mixtures, now of the most nonsensical and again of the most profound moves, so that nobody knew exactly what to make of him whether he was really a Chess-master or a wood-shifter, He was, however, quite astonished that the Swiss players had not heard of his performances in matters classical, particularly of his new defense to the Giuoco Piano, by which this slow opening took an unexpected and rather lively turn: 1 P—K 4, P- K 4; 2 Kt—K B 3, B—Q 3; 3 B B 4, Q—B 3; 4 P—Q 3, Kt—Q B 3; 5 B K Kt 5, K Kt K 2; 6 B x Q, P x B. He was particularly proud of that Queen sacrifice by which the K Kt file was opened, thus giving the black Rook an irresistible attack. Such an opening he ventured even against the well-known Russo-Swiss Chess-master, Mr. Pasternack. Against this opponent Dr. Kruger had only an alternating success. A game which he won is as follows:

| DR. KRUGER. *White.* | PASTERNACK. *Black.* | DR. KRUGER. *White.* | PASTERNACK. *Black.* |
|---|---|---|---|
| 1 P—Q B 4 | P—K 3 | 21 P—K 6 | Kt—K 2 (f) |
| 2 P—Q Kt 3 | P—Q 4 | 22 Kt—B 4 | R—Kt sq |
| 3 P—K 3 | P—Q 5 (a) | 23 P x P | P—K Kt 4 ? ? (g) |
| 4 B—Kt 2 | P—Q B 4 | 24 Kt—R 5 | B—R 3 (h) |
| 5 Kt—Q R 3 | Kt—Q B 3 | 25 Kt-B 6 ch | K—B sq |
| 6 P—K Kt 4 (b) | P—K 4 | 26 P—K 4 (i) | P—K B 5 (j) |
| 7 B Kt 2 | P x P | 27 P—R 4 (k) | P—Kt 5 |
| 8 Q P x P | Q x Q ch | 28 Kt x R Pch | K—K sq |
| 9 R x Q | B x P | 29 Kt—B 6 ch | K—B sq |
| 10 R Q 2 | P—B 3 | 30 R-K B sq ! | P—Kt 6 |
| 11 Kt—Kt 5 | R—B sq | 31 B—K 5 | R—Kt 3 (l) |
| 12 P—K R 3 | B—Q 2 | 32 B x P | K—Kt 2 (m) |
| 13 Kt - K 2 | P—Q R 3 | 33 P—R 5 (n) | R x Kt |
| 14 Castles | P x Kt (c) | 34 B—K 5 ! | B—K 6 ch |
| 15 K R—Q sq | Kt—Kt sq (d) | 35 K—R sq | B—Q 5 (o) |
| 16 P—B 4 | Kt P x P | 36 R x P ch | K—R sq (p) |
| 17 P x K P | B—B 3 | 37 R x R | K—R 2 |
| 18 Kt—B 4 | B x B | 38 R—B 7 ch | K—R 3 |
| 19 R x B | P x Kt P | 39 B—B 4 ch | K x P |
| 20 Kt-Q 5 (e) | P—B 4 | 40 R—R 7 mate. | |

*Notes.*

(a) These moves, not being in any book, escape our criticism.

(b) White attempts an attack against Black's castling side, before Black has Castled.

(c) The Doctor is so anxious to Castle ahead of his opponent that he sacrifices this useless Knight.

(d) This move was copied from the Chess-master Steinitz.

(e) Threatening to win the K R by K R x P.

(f) Black, in spite of his piece ahead, is in a somewhat cramped position.

(g) Mr. Pasternack did not take care. With 23.., P—K Kt 3, he had a chance to make his game safe, and, in all probability, to win the *partie;* but, now, White can at least force a Draw.

(h) In order to avoid mate, Black offers the exchange.

(i) White does not accept the sacrifice, but plays for the mate.

(j) If 26.., P x P, White answers 27 R—B sq.

(k) White invites the advance of the black Pawns, in order to paralyze them. The Doctor is playing the ending astonishingly well.

(l) Black intends to sacrifice the exchange to get out of the pinch.

(m) Of course, the Kt can not be taken on account of B x B ch.

(n) Very well played.

(o) A futile attempt to save himself.

(p) Better, K—R 2.

"We learned some time afterward that, under the pseudonym of Dr. Kruger, no less a person than the World's Chess-Champion, Dr. Lasker, had introduced himself. He spent a few weeks at Zurich in order to recuperate from the fatigues of the Paris tourney, and, as nobody recognized him, he amused himself in mystifying the Zurich Chess-players by the most extravagant moves. That the Master was not recognized is explained by the fact that since his last visit to Zurich he has grown a very respectable full beard, and there was not a trace of that green complexion which, according to a Vienna paper, is his distinguished mark.

"After this discovery we withdraw all our criticisms to White's moves in the above game, and beg the reader to replace them by 'played with the World's Champion's skill.'"

# A Good Deal of Nonsense

## About "Blood Purifiers" and "Tonics."

Every drop of blood, every bone, nerve and tissue in the body can be renewed in but one way, and this is, from wholesome food properly digested. There is no other way and the idea that a medicine in itself can purify the blood or supply new tissues and strong nerves is ridiculous and on a par with the folderol that dyspepsia or indigestion is a germ disease or that other fallacy, that a weak stomach which refuses to digest food can be made to do so, by irritating and inflaming the bowels by pills and cathartics.

Stuart's Dyspepsia Tablets cure indigestion, sour stomach, gas and bloating after meals because they furnish the digestive principles which weak stomachs lack, and unless the deficiency of pepsin and diastase is supplied it is useless to attempt to cure stomach trouble by the use of "tonics," "pills" and "cathartics" which have absolutely no digestive power, and their only effect is to give a temporary stimulation.

One grain of the active principle in Stuart's Dyspepsia Tablets will digest 3,000 grains of meat, eggs and similar foods and experiments have shown that they will do this in a glass bottle at proper temperature, but of course are more effective in the stomach.

There is probably no remedy so universally used as Stuart's Tablets because it is not only the sick and ailing, but well people who use them at every meal to insure perfect digestion and assimilation of the food.

People who enjoy fair health take Stuart's Tablets as regularly as they take their meals, because they want to keep well. Prevention is always better than cure and Stuart's Dyspepsia Tablets do both; they prevent indigestion and they remove it where it exists. The regular use of one or two of them after meals will demonstrate their merit and efficiency better than any other argument.

# A Syringe

Such as physicians use is now offered direct. It consists of two nickel cylinders, with air pumps between to create compressed air in one cylinder and vacuum suction in other. Open valve and compressed air forces liquid from one cylinder in six streams through top of nozzle. Send to-day for our booklet. Sent free on request.

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### CUBA'S REJECTION OF OUR TERMS.

THE delay of more than a month by the Cuban Constitutional Convention before taking definite action on the "Platt Amendment," in which Congress formulated the terms on which we are willing to withdraw our troops from the island, led many papers to think that the Cubans were gradually coming around to accept it; but on the 12th, when the question came to vote, acceptance of the amendment was voted down, 18 to 10. It will be remembered that as soon as our terms were communicated to the convention it adopted a resolution declaring that no power should obtain, "for military or naval purposes, or in any other manner, any foothold or authority or right over any portion of Cuba"; and again, about two weeks ago, in secret session, the convention voted down several resolutions looking toward the acceptance of the demands of Congress. On the 13th the convention adopted a resolution to the effect that their unfavorable action of the day before was not a final rejection of the Platt amendment; but the Havana papers and the American papers take these votes as showing that the attitude of the convention is at present decidedly adverse to our demands. It is believed that the Cubans will send a commission to Washington to try to get better terms, altho the Platt amendment does not give the President the power to grant any terms other than those enumerated therein.

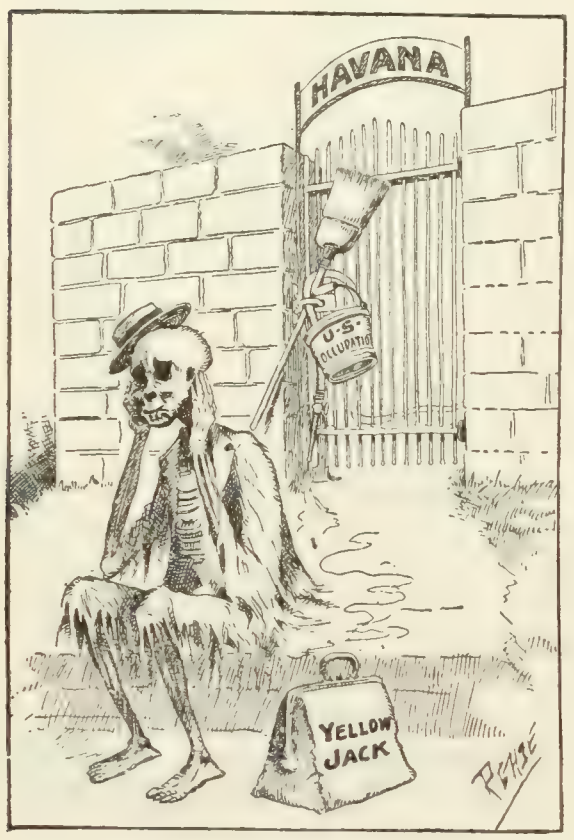
The "Platt amendment" (an amendment to the army appropriation bill) authorized the President "to leave the government and control of the island of Cuba to its people" as soon as they shall incorporate in their constitution, or add to it, measures providing against foreign complications and aggressions on Cuban territory, and permitting the United States to "exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the Treaty of Paris on the United States now to be assumed and undertaken by the Government of Cuba." It was further required that the Cubans must agree "that the Isle of Pines shall be omitted from the proposed constitutional boundaries of Cuba, the title thereto left to future adjustment by treaty"; and "that to enable the United States to maintain the independence of Cuba, and to protect the people thereof, as well as for its own defense, the Government of Cuba will sell or lease to the United States lands necessary for coaling or naval stations at certain specified points, to be agreed upon with the President of the United States." The Havana correspondent of the Boston *Transcript* says: "The chief objection made is to the specific recognition of the right of the United States to intervene. This, it is contended, would make Cuba a dependency."

Many of the American papers, however, insist that our terms must be accepted, for Cuba's sake as well as our own. "Cuba is and will be a separate, free nation," says the Chicago *Post* (Ind. Rep.), "but for the present and some time to come her freedom, stability, peace, and integrity must be protected and guaranteed by the United States." The Kansas City *Journal* (Rep.), too, believes that the Cubans "must be assisted in getting started right"; and it says that "the great nation that has given them liberty is their natural and proper guardian and will see to it that they make no organic mistake at this critical stage in their history. It has the right to do so, and, furthermore, it has the power. The vote of the constitutional convention can not be regarded as a finality by any means." Indeed, declares the Baltimore *Herald* (Ind.), "the entire attitude of this country toward the Cubans has been one of unprecedented generosity," while "the attitude of the native politicians toward us has been of almost unceasing abuse, which we have borne with a surprising meekness." Despite this Cuban attitude, it seems to the Washington *Post* (Ind.) that "the whole civilized world is justified in looking to the United States for a régime of law and order in Cuba," and the Chicago *Journal* (Rep.) declares that if Cuba is cut adrift we may expect to see some such exhibitions of misgovernment as are now seen in some of the South American republics. The Philadelphia *Inquirer* (Rep.) believes that the convention is "almost exclusively" composed of "military adventurers" and "scheming politicians" who "have it in mind to do any number of things which it would be highly inexpedient and improper to permit," and so they resent interference from our Government. The Baltimore *American* (Rep.) declares that the convention ought to be dissolved and a new election ordered. "That we have apparently succeeded in earning 'the hate of those we succor,' instead of their gratitude, says the Minneapolis *Tribune* (Rep.), "is not surprising, in view of the traits which the Cuban swashbuckling element have developed in the last two years." The Kansas City *Star* (Ind.) and the New York *Press* (Rep.) believe that while our demands are reasonable they were framed and presented in a way that wounded the Cubans' national pride; but the Philadelphia *Press* (Rep.) points out that the aim of the Platt amendment is not to limit the independence of the new republic, but to guarantee and safeguard it. The New York *Times* (Ind.) suggests that "an epistle from Aguinaldo to the Cubans on the folly of being fooled by the anti-imperialist press of the United States would do much good in the island." Says the St. Louis *Globe-Democrat* (Rep.):

"If the recent rejection stands, then the matter will be deferred

until next December, the American military régime continuing as now. The Cubans would do well to bear in mind, too, that the terms which will be formulated next winter, if any new terms have to be framed, are likely to be less favorable to Cuba than those which have been rejected. Cuba's course is likely to have just this sort of an effect on the United States. There are certain conditions which Cuba, as the price of her liberation from Spain by the United States, must agree to, and these will grow harder instead of easier by antagonism and postponement."

But the Cubans are not without American newspaper support in their action. "The constitutional convention did right when it rejected the Platt amendment," declares the Philadelphia *Ledger* (Ind. Rep.), for "if it is to give us such privileges as are claimed, it should be allowed to give them of its own free will or as the result of negotiations in which it has a voice." The Philadelphia *Times* (Dem.) says: "The Cuban policy of the Administration has been one series of disastrous blunders, and this attempt to compel what might easily have been won by friendliness and fair dealing is the worst blunder of all." The Baltimore *News* (Ind.) believes that we have much more at stake in the matter morally than materially, and the Springfield *Republican* (Ind.) thinks that the power of intervention the Platt amendment would give to the President would confer upon him "a function which he never before, in the history of the republic, has exercised or been supposed to possess," and "the meaning is that a system of suzerainty through the President is to be built up under which the American empire can be indefinitely extended without even bringing foreign territory formally under the American flag." The Hartford *Times* (Ind. Dem.) similarly says that "what the originators of the Platt scheme desire is to make of Cuba, not a State or a territory, but a 'crown colony,' and if the Supreme Court gives a decision favorable to the ideas of the Administration, that scheme will be carried out." The Charleston *News and Courier* (Dem.) remarks that "the excuse for holding on, that the Cubans are 'not yet fit for self-government,' will serve as well as another." The Philadelphia *Record* (Ind. Dem.) believes that "the only use for a strong detachment of federal troops on the island under the existing administrative scheme would be as an aid in the coercion of unwilling representative delegates who dream of insular independence"; and the Baltimore *Sun* (Ind.) thinks that "the time is fast approaching when our diplomacy will take rank with that of Russia."



"I wish the Americans would get out."
—*The St. Paul Pioneer Press.*

*La Lucha*, Havana, remarking upon American kindness in teaching the Cubans the way in which they should go, says:

"True refinement, gentleness, erudition, and the spirit of Christ are supposed to be inherent attributes of all persons who can call themselves 'American.' At least, we presume that such is the case, basing our calculations upon the unquestionable declarations of the persons most concerned, which, like eulogies to be found on the label of a bottle of patent medicine, must certainly be true.

"Cubans, according to many Americans, are utterly unfit for recognition among civilized races. They are ignorant, uneducated, savage, ungrateful brutes. They are not fit to own territory, so must give it over to Americans who need it. They are not competent to govern themselves, so the American army must handle their affairs for them.

"Some day after enjoying the tutelage of American military wiseacres for twenty or thirty years, Cubans may hope to become fitted for the higher life themselves. They may even have an army, and go into the disinterested educational business themselves.

"Should this occur, we may expect to see Cuban army officers educating the untutored natives of—for instance—Bermuda, or Long Island. We may see Cuban first and second lieutenants building schools and roads for the benighted residents of New Jersey or Madagascar; Cuban majors building sea-walls and electrozoning the sewers; Cuban army doctors governing 'deservedly free and independent' races with rich possessions which they are not competent to control themselves, making and administering laws of taxation, marriage, civil procedure, public financial operations, etc."

A report issued a few days ago by the Treasury Department at Washington registers the important fact that imports into Cuba from Europe are increasing, while those from the United States are decreasing. Our exports to Cuba fell off about $3,500,000 last year, as compared with 1899, while exports from Great Britain and Germany to Cuba increased about $2,500,000.

## CONDITIONS IN PORTO RICO.

GOVERNOR ALLEN'S reports of Porto Rican progress have been such as to justify the assumption (expressed in a recent article in our pages) that the condition of the island is most promising. Reports from other sources, however, tend to give a very different impression. The leading financial and commercial organ of the island, the *Boletin Mercantil*, of San Juan, recently declared: "The country is bleeding to death. Commerce is languishing. Agriculture is prostrate. Emigration of workingmen is taking on alarming proportions, and distress prevails in all parts of the island." A San Juan despatch printed in the American newspapers says that nearly every town on the island has an empty treasury, and that Ponce is so poor that recently it was not able even to build a temporary hospital costing $500, in face of a threatened smallpox epidemic. A writer in the New York *Sun* quotes a statement made before the United States special commission to the effect that "there are in the country places real working people who dare not venture out of their homes, as they are completely naked" and unable to buy clothes. "The extreme poverty in clothing," he says, is due to the fact that "farm laborers who receive their wages in checks good only at the plantation store could not buy clothes, as they were not sold in such stores." A memorial to President McKinley, signed by 6,000 workingmen and brought to this country by Santiago Iglesias, of the Porto Rican Federation of Labor, contains the following statement:

"Misery, with all its horrible consequences, is spreading in our homes with wonderful rapidity. It has already reached such an extreme that many workers are starving to death, while others that have not the courage to see their mothers, wives, sisters, and children perish by hunger, commit suicide by drowning themselves in the rivers, or hanging themselves from branches of trees."

"What has followed American rule in the island to date," comments the Springfield *Republican* (Ind.), "should at least serve to cool somewhat the arrogant self-confidence with which American imperialism jumped into the colonial business." "These disclosures," adds the Washington *Times* (Dem.), will perhaps surprise people who have credited official reports from

Porto Rico, which regularly assure us that the island is swimming on the crest of a mountainous wave of prosperity." The New York *Evening Post* (Ind.) says:

"The truth is that the transfer of Porto Rico from Spanish to American sovereignty was an operation requiring the most delicate skill, and that we went about it in rough, tho good-natured, carelessness. The island was densely populated. Population pressed hard upon subsistence, industry, agriculture, commerce, were all in a state of unstable equilibrium, and a push would send them sprawling. Our method was to give them a succession of pushes. We tinkered the island's tariff laws, and then retinkered them. We kept suffocated trade hung up for months not knowing what to expect. We have remodeled Porto Rican finances and codes of laws and taxation. No wonder that the nice adjustment of population to means of livelihood was broken up, and that widespread distress followed. We were given a watch to repair, and we set about it with a crowbar and sledge-hammer."

Governor Allen, when questioned at Washington regarding the adverse reports of Porto Rican conditions, replied that such reports were greatly exaggerated. About $1,250,000, he said, has been appropriated from the United States Treasury to the credit of the island, and that amount has been expended in paying wages to men employed to build roads, school-houses, etc. He admitted that it is true that many of the municipal treasuries were very short of funds, but this is due to the inadequate system of municipal taxation and will be remedied by the new Hollander law.

A hopeful picture of Porto Rican conditions is presented by the Rev. A. F. Beard, of New York, who went to Porto Rico as a representative of the American Missionary Association. In his report in the Boston *Congregationalist* he says:

"The education of the people is receiving the careful consideration of the authorities. Dr. Brumburgh, the commissioner of education, is working night and day on this pressing problem. At present 40,000 children are in the public schools, but 300,000 remain as yet unprovided for. There are 800 teachers, about ninety of whom are from the United States. Both Spanish and English are taught, and the children are quick and eager to learn. There is no high, normal, industrial school, or college in the island, tho Fajardo has raised $20,000 for a normal school. Sixteen school inspectors are in the saddle visiting the different sections of the island, and their services are much needed to keep the native teachers to their tasks, which sometimes they are disposed to shirk.

"The outlook for industrial, educational, and religious quickening is encouraging. During the last two years great advances have been made. The people, in spite of the present disturbances, are expectant of changes for the better. The hope of that fair land is in the children. By their ready assimilation of American ideas they constitute the groundwork of a new civil and moral order. That such regeneration is to come is the confident expectation of those who know Porto Rico best."

---

**"Something More than Wages."**—That it is not only ethically right, but even financially profitable, to treat employees with kindness and generosity seems to be the opinion of an ever-growing number of American employers, if one can judge from the plans for industrial betterment that have been recently introduced into factories in various parts of the country. "Every concern that has fought with its workingmen," remarks *The American Manufacturer* (Pittsburg), "has learned that it does not pay. It not only involves a loss of money, but in discipline, and leads to distrust." *The Manufacturer's Record*, of Baltimore, adds:

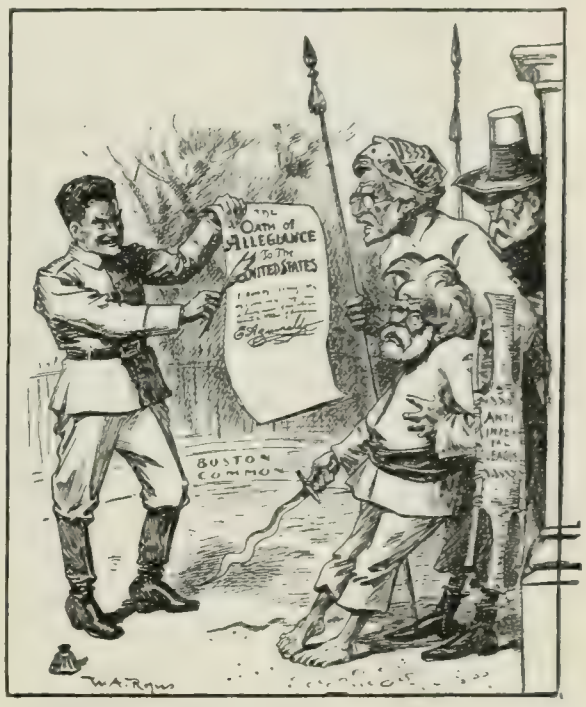
"No man is big enough to succeed in making a great success of any large company unless he surrounds himself with good men and treats his employees of all grades as thinking human beings, entitled to proper credit and proper pay for the work. In olden days the Baltimore and Ohio Railroad was run on the opposite basis, and you could scarcely find a man in its employ that did not hate the road. Despite the good management of later years, it has not yet fully got over the damage of its former system. The magnificent success of the Pennsylvania Railroad is not only due to the ability of its executive officials, but to the unswerving devotion of its employees from the lowest to the highest.

"The same thing is illustrated in the Standard Oil Company. The truly marvelous business ability of the men who have created that giant company has been displayed not only in the guiding hand of Mr. Rockefeller and his immediate associates, but in their keen insight in finding good men for every important position, and in making these men, as well as their laborers, take a strong personal interest in the company's advancement. It has often been said that no man of ability and energy and correct life once employed by the late Mr. Armour need ever seek advancement elsewhere, because Mr. Armour was willing to pay the most munificent salaries for men who were worth them, and that every man in his employ could command from him the utmost value of his services."

---

## LEGAL ASPECTS OF AGUINALDO'S CAPTURE.

THE methods employed by General Funston in the capture of Aguinaldo arouse exceedingly hostile criticism in the anti-imperialist press. The Springfield *Republican*, for example, does not hesitate to avow frankly its sympathy with those who declare Funston's exploit to have been "unbecoming a civilized military power or a United States soldier, and a violation of the accepted laws of war." In the opinion, however, of Prof. Theodore S. Woolsey, of Yale University, one of the leading experts in this country on questions of international law, no such violation of the rules of civilized warfare was committed. "The two acts most criticized," he says (in an article in *The Outlook* (New York), "are the disguise of the loyal native troops in Filipino uniforms, and smoothing the way for their access to Aguinaldo by false letters," and he does not consider either of these acts a violation of the rules of civilized warfare, as laid down by The Hague Convention. This code of rules, "the latest and highest standard of conduct in carrying on hostilities," forbids belligerents "to kill or wound treacherously individuals belonging to the hostile nation or army," also "to make improper use of a flag of truce, the national flag, or the enemy's military ensigns or uniforms." But it also declares that "ruses of war and the employment of methods necessary to obtain information about the enemy and the country are allowable." Says Professor Woolsey:



AGUINALDO: "Now, boys, sign this with me."
—*Harper's Weekly.*

"The circulation of false news, concealment or fraudulent revelation of movements, putting forged despatches into an enemy's hands, all these are as old as war itself, and have never been forbidden by any rule. They are legitimate 'ruses of war.' But to break faith, that is an unpardonable sin. Lieber makes this distinction, § 15, when he says military necessity admits of 'such deception as does not involve the breaking of good faith . . .'; and § 16 'admits of deception, but disclaims acts of perfidity.'

Were the United States waging war with a civilized power which was itself governed by similar rules, General Funston would be properly criticized for disguising his men in enemy's uniforms, but not for employing forged letters. But, as the facts are, since the Aguinaldo party is not a signatory of The Hague Convention, and since the laws of war are only reciprocally binding, there was no obligation on the part of the United States army to refrain from using enemy's uniforms for the enemy's deception."

"The so-called Filipino republic," Professor Woolsey declares, "is but a body of insurgents against the sovereignty of the United States. . . . Not being a body recognized by international law, the insurgents are neither bound by the obligations nor entitled to the rights of such a body." He continues:

"The question is thus one of ethics and policy, not of law. But to allow the insurgents to assassinate, to put on and off the military character, occasionally to kill prisoners, and to violate the white flag, while at the same time exacting specific observance of the nicest rules of civilized warfare from the Americans, is not a question of either law or ethics, but of common sense.

"The kind treatment of the insurgent leader after capture is proof that in this affair, as in others, humanity governed the actions of our army. Aguinaldo's readiness to swear allegiance to the Government of his captors, and the great stride made in consequence toward pacification, are proofs that military necessity justified his capture. Contrast the good likely to flow from the hastening of the end of the insurrection by means of it, with the offense of the use of enemy's uniforms—a stratagem illegal in war only with a lawful belligerent—and you have the measure of the justice of the criticisms of this affair."

## A RUSSO-AMERICAN CONQUEST OF ASIA.

IN these days of sharp American newspaper criticism of Russia, and of tariff tilts between M. de Witte and Secretary Gage, nothing might seem more unlikely than a Russo-American joining of hands for any purpose, and especially for a trade conquest of Asia. But probably few people realize the extent of the commercial relations into which Russia and America have entered during recent years. "It may be well," observes Mr. Alexander Hune Ford (in the New York *Iron Age*) "not to act hastily in blocking the advance of the one civilized power willing and able to force upon the half-billion people of China a growing desire for the manufactures we can best supply." Prior to the troubles in China, which put an almost total stop to all trade, everything, Mr. Ford says, pointed to a Russo-American conquest of Asia. Fully sixty per cent. of our exports to China were being transshipped northward to Manchuria and Siberia, while millions of dollars' worth of our manufactures, ostensibly exported to Japan, found their way into Russia's growing sphere of influence in Asia. Mr. Ford continues:

"Russia was marching triumphantly on, making a silent territorial conquest with her ever-advancing railways and village outposts, which she first built and then brought the population from the far-off Black Sea district. Called upon to supply great quantities of machinery and building material, America followed where Russia led, quickly making a complete and thorough commercial conquest of the new territory. On the Transsiberian Railway wooden bridges were being torn down to be replaced by modern American steel structures, flour and canned goods flooded the market—everywhere the triumph was so complete that the Siberians themselves petitioned the Government to close the doors which had been thrown so widely open to too adjacent America. . . . . .

"In Port Arthur the finest business buildings belonged to American firms, and the same statement applies to Vladisvostok, the other Pacific terminal of the Transsiberian Railway. Here, too, the locomotives were of American make, and tramp steamers were continuously unloading Yankee rolled rails and girders for bridges, to be carried inland for the construction of the Chinese Eastern Railway, while on the new $1,000,000 granite pier lay great mountains of American railway material destined for Streytensk, from which point the Transsiberian Railway was being built westward from the navigable headwaters of the Amur. Everywhere inland American drummers and commercial agents were spreading abroad the knowledge of our superiority in finished material. During my stay, an American was made president of the newly established College of Oriental Languages, and a school established for over one hundred students who desired to become acquainted with the English language, while in America, in anticipation of the early completion of the great railway, James J. Hill was building the two largest steamships in the world, to be used in the service between the two Pacific terminals of the Great Northern and Transsiberian railways.

"In fact, so far, Russia alone has encouraged our commercial conquest of Asia, and the diplomacy of the future in the far East must from now on lie largely between Russia and America,

RUSSIA'S COAT OF ARMS.
Revised to fit her varying moods.
—*The Minneapolis Journal.*

whose interests in Asia are becoming more and more entwined every year, as irresistibly these two most opposite governments are drawn into closer commercial and political contact."

The possible value of the Asian market, declares the writer, may be faintly surmised from the fact that its wealth has enriched in turn almost every country of Europe. The yellow continent, which still cradles more than half of the human race, in the infancy of its commercial development conducts an annual trade with foreigners estimated at $2,000,000,000 in value. Mr. Ford goes so far as to say that the commerce of Asia "is worth controlling at almost any price, if even but for a few brief years." Russia, intent at present on absorbing the sparsely settled portions of Asia, still welcomes foreign merchants in her new cities, but she jealously guards her right to gradually exclude all competitors as she herself evolutes from a pastoral into a manufacturing nation. America, "the only nation in the world to-day that does not fear Russia, either as friend or foe," is best fitted to supply the commercial needs of Russia's ever-widening dominion. Mr. Ford concludes:

"Everything seems to point to a compact between Russia and America as inevitable. In fact, almost unconsciously it has already, in a measure, come about; as has been shown, the interests of Russia and America in Asia do not yet conflict, they go hand in hand, the one seeking a territorial, the other a commercial monopoly of the continent; the two movements are being made each an aid to the other. With an international treaty binding all nations to maintain the open door in China and the near East, the final forward march of the Russo-American con-

quest of Asia will begin, to continue until each has attained the summit of its ambition, by which time, perhaps, the Czar's dream of perpetual peace will have become a reality, with universal good will and free trade prevailing among the brotherhood of nations, if in such a millennium there is more than one nation."

## OUR NATIONAL DRINK BILL.

THE nation's annual bill for alcoholic liquors is estimated from the annual "Statistical Abstract of the United States," which has just been issued. *The American Grocer* (New York) estimates the bill for the year ending June 30, 1900, at $1,059,563,787, and *The New Voice* (Chicago) at $1,172,493,445. Both seem to agree that it is over a billion dollars. As the Philadelphia *Times* observes, "if the American people would save their annual drink bill, they could establish a new billion-dollar trust every year without any water in its capital." The figures of *The New Voice* make the bill the largest in our history, the year 1893 standing second with a bill of $1,079,483,172. According to *The American Grocer's* figures, the per capita consumption of liquor (17.68 gallons) has been outdone only once, in the year 1893. *The New Voice* presents the following interesting comparison between the national drink-bill and other large financial records:

FISCAL YEAR ENDING JUNE 30, 1900, EXPENDITURE.

| | |
|---|---|
| Total exports of merchandise | $1,394,483,082 |
| Total receipts all railways of United States (1899) | 1,336,096,379 |
| Expenditures for liquor | 1,172,493,445 |
| Public debt, less cash in Treasury | 1,107,711,258 |
| Total gold coin in Treasury, and in circulation | 1,034,834,444 |
| Value total coal production at $5 a ton | 863,644,585 |
| Value total imports, merchandise | 849,941,184 |
| Total farm value of corn crop | 751,220,034 |
| Value of all horses in the country | 603,969,442 |
| Value of all milch-cows in the country | 514,812,106 |
| Total silver coin in Treasury and circulation | 490,104,027 |
| Farm value total cotton crop | 357,000,000 |
| Farm value total wheat crop | 323,525,177 |
| World's production of gold (1899) | 306,584,900 |
| Total internal-revenue receipts | 295,327,927 |
| Value of oil production at ten cents a gallon | 239,697,570 |
| Total customs receipts | 233,164,871 |
| World's production of silver (1899) | 216,209,100 |
| Farm value oat crop | 208,669,233 |
| Total cost public schools | 197,281,603 |
| Total paid for pensions | 138,462,130 |
| Total subsidiary coin in Treasury and circulation | 82,863,742 |
| Farm value potato crop | 90,811,167 |
| Total receipts all telegraph-lines | 24,758,570 |

*Corn Belt* (Chicago) estimates that not less than 661,554 persons are engaged in the manufacture and sale of liquor in the United States, or about 1 to every 116 of the population. The New Orleans *Picayune* says of *The American Grocer's* estimate of the national drink-bill and of the per capita consumption:

"Enormous as is the annual drink-bill of the nation, there would be no objection to it if nobody got more than seventeen gallons a year; but when it is taken into consideration that most of the millions of the women and children, and many of the men, drink little or nothing, it will be seen what a vast quantity of it goes down the throats of the steady drinkers, and it is at the expense of a billion dollars, more money than can be conceived of without an effort of the imagination. What vast quantities of the earnings of labor have been diverted from the support of families to be swallowed up in the vortex of drink! The amount of misery and crime that has resulted from that vast consumption of intoxicating liquors is beyond computation.

"While prohibitive legislation is powerless to check the drink waste, there is growing up in the business world a force that is more powerful than everything else to work a reform. It is the fact that in many branches of business drinking men are not tolerated. They can not get employment if their condition is known, and they are discharged from service when their habits are discovered. In other branches of business drunkards receive no consideration whatever, and this state of feeling is steadily growing, because it is enforced by the strenuous demands of economy and good service. The day is going to come when no man who allows himself to get under the influence of intoxicating liquors will be able to find employment in any business."

## VOTING QUALIFICATIONS IN THE SOUTH.

TWO of our Mississippi readers have called attention to the fact that the constitution of their State does not contain a "grandfather" clause, as was inadvertently stated in our issue for March 30. To make clear the franchise situation in the South, it may be desirable to state briefly the plans adopted in the Southern States that have laws operating to bar the bulk of the blacks from the polls. In Louisiana the voter must be able to read and write, or must own $300 worth of property assessed in his name, or must have been able to vote January 1, 1867, or be lineally descended from a person able to vote on that date. (The latter provision is the celebrated "grandfather" clause.) North Carolina has a similar law, omitting, however, the property qualification. The Georgia legislature, in November, 1899, defeated a like measure by an overwhelming vote. South Caro-

—*The Colored American, Washington, D. C.*

lina now requires that a voter wishing to register must be able to read and write any part of the state constitution submitted to him, or show that he has paid taxes on property amounting to $300; but for several years previous to January 1, 1898, the registration books were open to those able to understand and explain any article of the constitution when read to them, and those who registered under that provision will be entitled to vote as long as they live. In practical operation it was found that nearly all the white voters got their names upon the books, and that the great mass of the blacks did not. There are many more negroes than white people in South Carolina, and the electorate of the State now consists of about 90,000 white voters and about 10,000 or 12,000 black voters. In Mississippi the voter must "be able to read any section of the constitution of the State; or he shall be able to understand the same when read to him, or give a reasonable interpretation thereof." One of our correspondents, Mr. Philip Crutcher, of Vicksburg, says: "This 'understanding clause' was undoubtedly inserted for the purpose of allowing illiterate white men to vote, while excluding uneducated negroes; but in practise it has had hardly any effect in that direction. I have no recent statistics on the subject, but several years ago there were only 300 in the entire State who registered under its provisions." In Arkansas and, by the new law, in Maryland, the voter must

mark a ballot without party emblems or division of the candidates into party groups, and he is not allowed to take any one into the voting-booth with him to help him in marking his ballot, so that education enough to pick his favorites out of the alphabetical lists will therefore be necessary. In Maryland this measure is expected to disfranchise about 18,000 white men and 26,000 negroes. It is expected that Alabama and Virginia will soon amend their franchise laws in a manner similar to some of those outlined above.

## A SOCIALIST VIEW OF MR. CARNEGIE'S GIFTS.

A FUNDAMENTAL tenet in the philosophy of the Socialist is his belief that the capitalist class is necessarily a robber class; and his appeal is based on the demand for a collectivist society in which the worker shall receive "the full product of his toil." "Justice, not charity," is the burden of his cry. It is therefore not surprising to find in the Socialist papers a tone of comment regarding Mr. Carnegie's recent gifts that is the very antithesis of the sentiment expressed in most of the daily papers. "Mr. Carnegie has been showering millions around with a lavish hand, as only those can afford to do who have not earned them," remarks the New York *People*. It continues:

"Mr. Carnegie probably realizes, better than any other living man, the urgent necessity for an endowment fund for superannuated and disabled employees. It would take many more millions than he has given to provide relief for the thousands who are crippled and maimed in the task of producing the wealth with which Carnegie helps to build libraries. The conditions existing in the Carnegie steel-works are unparalleled in their atrocity in other similar works in the world. Carnegie's philanthropy is the result of broken bones, of bloodshed, of inhuman, excruciating suffering on the part of the workers in the great steel-mills near Pittsburg. Mr. Carnegie knows this, and may be it is because of that knowledge that he seeks to ease his conscience by providing a fund to relieve those whose lives are wrecked in his service. Whether or no, no act of his can mitigate the injustice of the system that makes possible such a condition of affairs as exists in the mills that bear his name."

*The People* proceeds to quote at some length from the description of the Carnegie steel-works which Mr. Charles B. Spahr, of the editorial staff of the New York *Outlook*, embodies in his book on "America's Working People." Mr. Spahr's picture of conditions existing among the employees of the Carnegie Steel Company is of the darkest kind. He found the men "cheerless almost to the point of sullenness," and the atmosphere in which they lived "heavy with disappointment and hopelessness." Mr. Spahr speaks of the reduction of wages since the famous strike of 1892, the hatred of the men for the company, the absence of freedom even among the small merchants dependent upon the workers for trade, and notes that the real grievances of the men "were the long hours, the Sunday labor, the strain under which they were compelled to work, and above all—or rather at the basis of all—the want of freedom to organize. Nobody in Homestead dared openly to join a trade-union. The president said, without reserve, that he would discharge any man for this offense." "If all that I saw while with the managers of the Carnegie works might be described under the title of 'Triumphant Democracy,'" declares Mr. Spahr, "nearly all that I saw while with the men might be described under the title of 'Feudalism Restored.'"

"Even were the conditions other than what they are now in the Carnegie works," says *The People* in comment, "the memory of the Homestead horror, that infamy which left a dark and bloody stain on America's industrial history, should be enough for the workers of the world to view with scorn and contempt any gifts donated by Mr. Carnegie under the guise of a benefactor to humanity." It adds:

"Let the apologists and defenders of private ownership of industry rave over and eulogize Mr. Carnegie as they may, but their ravings and eulogies will effect little against the growing recognition of the injustice and irrationality of the system that exalts Mr. Carnegie and degrades his workmen. While Carnegie's acts may be used as arguments against Socialism, yet the belief is growing that the people could operate industry in a manner that would degrade no one, either spiritually, mentally, or physically, but which would benefit all. The people are awakening to the rottenness of a system that murders human beings for an individual's sake; a system that demands accident funds to pension mutilated workmen so that one man can pose complacently as a benefactor before the world. The people can not be fooled all the time. Very soon they will rise in resistless numbers and sweep away the system that produces misery and fosters hypocrisy, and with that system will go Carnegie and all the other sycophants whose greatness is built upon the continued robbery and enslavement of the working class."

## THE "STRAIGHT EDGE" COLONY.

THE formation of cooperative colonies has been a picturesque feature of mundane society ever since the apostolic age, and probably before, but every new attempt is greeted with renewed interest. It is certainly novel to find a cooperative colony in the heart of New York City, with a dozen or more men living in harmony and cooperation, one man making the beds, another scrubbing the floors, and others dusting the furniture, washing the dishes, or sewing on buttons that have broken from their moorings. To bring in the needful funds, the colony runs a small printing-office and a bakery, the flour and meal for the latter being supplied by an old Quaker miller in Old Mystic, Conn. From the printing-office is issued a little weekly, *The Straight Edge*, whose object is "the application of the teachings of Jesus to business and society." The colony has prospered so well during the two years of its existence that it is about to start a branch settlement on Staten Island, where it has leased twenty acres of land and some farm buildings, and where the members will manufacture wooden novelties and raise "garden truck" for a vegetarian restaurant which they intend to start on Sixth Avenue. In the New York *Evening Journal* Mr. Wilbur F. Copeland, the leading spirit of the colony, says of the idea:

"What is to hinder ten people from forming a cooperative commonwealth to-day? There is no law against it, if they want to do it. If you can find the ten people who want to pool their interests, and work together, the whole question is settled—for those ten. It is easy enough to find ten people who are willing to do large stunts at 'thinking' about it, but to get down to practical work is a proposition that scares them nearly to death."

Mr. Copeland gives the constitution and by-laws of the colony as follows in an interview quoted in the New York *Sun*:

CONSTITUTION.

All things whatsoever ye would that men should do to you, do ye even so to them.

BY-LAWS.

(1) Thou shalt love thy neighbor as thyself.
(2) In honor preferring one another.
(3) Lay not up for yourself treasures upon earth.
(4) I am in the midst of you as he that serveth.
(5) Take heed that ye do not your righteousness before men to be seen of them.
(6) Whatsoever things are true, honest, just, pure, of good report, virtuous, praiseworthy, think on these things.
(7) This constitution and by-laws can not be repealed or amended by any majority however large or respectable; but supplementary articles, consistent herewith, may be adopted from time to time when found to be expedient.

The Rochester *Democrat and Chronicle*, commenting on the "Straight Edge" experiment, declares that a cooperative scheme of society is impracticable. It says: "We fancy mankind will have to be content with the 'competitive system' as long as

mankind is, because we don't believe human ingenuity will ever be able to devise any effectual evasion of the law of the survival of the fittest, under which man and his world live and move and have their being."

## HOME RULE FOR AMERICAN CITIES.

THE growing tendency to limit municipal functions and to vest more and more power in the state authorities is strikingly exemplified in Senator Quay's "ripper" bill and the New York State constabulary bill advocated by Senator Platt. In the eyes of many students of civic questions, our cities possess too little, rather than too much, home rule, and a still further curtailment of local jurisdiction is viewed with considerable apprehension. "Our law classes cities with women," humorously observes Prof. Frank Parsons, of Boston, "as having no right to self-government—a fact which may be regarded as affording legal grounds for the custom of calling a city 'she.'" Continuing (in his new book, "The City for the People"), he says:

"A municipality has no independent initiative of its own, and it is the only human thing in America that hasn't got it. The nation has a right of independent initiative in national affairs, the State in State affairs, and the individual in individual affairs; but the municipality must have *permission* from the legislature for everything it does. . . . . .

"The charter of a private corporation is held to be a contract within the Constitution, but the charter of a public corporation is not. Municipal corporations are creatures of the legislature. They have only such powers as may be given to them by the legislature, which may, at its pleasure, alter, abridge, or annul their powers and privileges, divide them, or consolidate two or more of them into one without their assent, attach a condition to their continued existence, or abolish them completely. Imagine Congress passing an act to annex Rhode Island to Connecticut, or divide New York State, or declare that Illinois shall no longer be a State! Yet such an act enforced without the assent of the States affected would be an apt parallel to the arbitrary powers possessed and exercised by many of our legislatures in respect to cities."

As extreme instances of the "bondage" to which cities may be reduced, Professor Parsons cites Boston and Philadelphia. In Boston recently the city government wished to connect two of its public buildings with an electric wire; but its application to the legislature for permission was defeated owing to the opposition of the electric companies. Boston can not run a wire between two of her own buildings over or under her own street! In 1870, the legislature of Pennsylvania arrived at the conclusion that Philadelphia should have a new city hall; so it passed an act to that effect, naming commissioners with full power in the matter. "For about a quarter of a century," says Professor Parsons, "the people of Philadelphia have been paying enormous sums, millions more than the buildings were fairly worth, for work they did not authorize and over which they had no control." Among the worst results of present municipal dependence, he contends, are the following: (1) A chaotic mass of legislation mighty in bulk and complexity, but weak in definite simplicity and uniform interpretation. (2) An eternal running to the legislature for special legislation, much of it of the most trifling character. (3) A lack of elasticity and spontaneity in municipal action. (4) A marked apathy among the people in relation to municipal affairs, due in part to the knowledge that their efforts and desires have been and are frequently thwarted and frustrated at the state capital. (6) Increased facilities for political corruption and "boss" control in politics.

"The real reason for the present state of municipal law," declares Professor Parsons, "appears to be a failure of the law so far to embody in its philosophy, with sufficient fulness and precision, the fundamental distinction between the functions of cities and towns as state agencies for enforcing state laws, and their functions as local business concerns." In France the dual character of the municipality is clearly recognized, the mayor being distinctly understood to act in the double capacity of agent for the general government and agent for the commune. In Germany, too, a much larger measure of municipal home rule is enjoyed than in American cities. In England, while the same law holds respecting municipalities as in this country, parliament has been so liberal in its provisions as to allow the widest extension of municipal functions.

"A certain amount of municipal dependence is good," says Professor Parsons, "but over-dependence is evil, and the excess should give place to independence. . . . A limited sphere of local activity should be clearly marked off and deeded to local self-government, to belong to municipalities absolutely, to the positive exclusion of legislative interference."

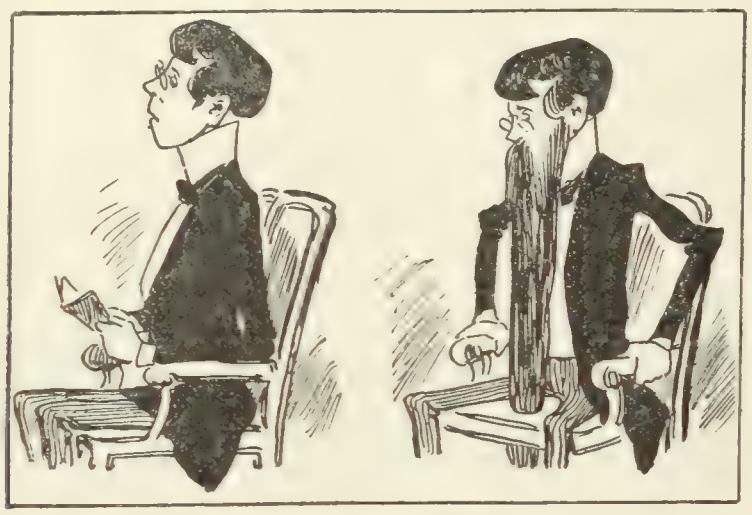
# LETTERS AND ART.

## WAGNER, MORRIS, AND LITERARY STUDY.

THE deep interest in the compositions of Richard Wagner—now one of the most striking developments of the day in America and in nearly every important country of Europe—is believed by some critics to have important literary as well as musical bearings. Wagner, it is pointed out, went to the great storehouse of literary myth to get material for his lyric treatment, to the medieval stories that had been the inspiration of four literatures—those of France, England, Germany, and Iceland. Concerning this little-observed fact, the literary critic of the New York *Times* (March 30) says:

"The result of his employment of these tales is that the really serious students of his dramas are reading the old poems from which he took them. Thus Wagner has opened up to his dev-



AT THE WAGNER OPERA.

At six o'clock a beardless youth takes his place at the opera.

At the end of the performance we find him a Barbarossa with a full-grown beard.

—*Humoristische Blätter.*

otees a vast and glorious field of poetry. Beginning with his 'Tannhäuser,' he entered upon this field. Then came 'Lohengrin,' in which the legends of the swan knight and the Holy Grail entered his works. With 'Tristan und Isolde' he opened up the Arthurian legends and the medieval literature of France as well as of Germany and England, for the early troubadours used this story. One is immediately brought face to face with Chrétien de Troyes, Robert de Boron, Thomas of Brittany, and Gottfried of Strasburg. The works of some of these are still accessible, and most fascinating subjects of study they are.

"With his 'Meistersinger' Wagner brings us into contact with the shoemaker-poet Hans Sachs, a remarkable character, and the typical figure of a striking literary period. And then comes the huge tragedy of 'Der Ring des Nibelungen,' which opens up to us the marvelous literature of the North, as well as the great epic of medieval Germany, the 'Nibelungenlied.' To gather together the threads out of which Wagner wove this great work one must read not only the German epic, but also the Eddas and the famous Volsunga Saga. And these are poems of enormous conception and imagination. And at the end of all comes 'Parsifal,' which is founded on the legends of the Holy Grail and on the wonderful 'Parzifal' of Wolfram von Eschenbach. To read the poems from which Wagner drew his material is in itself a liberal literary education. To study them in comparison with the works made from them by the wizard of Baireuth is a privilege and a delight. Fortunately for students, most of the material is accessible in English, and as a result there is opportunity for making its acquaintance even by those who do not read German or Icelandic."

Another way in which Wagner touches literature has just been commented upon by Mr. Elbert Hubbard in his "Little Journeys to the Homes of Great Musicians: Richard Wagner." Wagner had his double, Mr. Hubbard asserts, in the poet-artist reformer, William Morris. On each of these three sides of Morris's temperament the great German coincided with the great Englishman. "These men," says the writer, "were brothers in temperament, physique, habit of thought, and occupation":

"Wagner wrote largely on the subjects of art and sociology, and made his appeal for the toiler in that the man should be allowed to share the joys of art by producing it. His argument is identical with that of William Morris; and yet the essays of Wagner were not translated into English until after Morris had written his 'Dream of John Ball,' and Morris did not read German. Both men hark back to the time when man and nature were on friendly terms; when the thought, best exemplified by the early Greeks, of the sacredness of the human body was recognized; when the old medieval feeling of helpful brotherhood yet lingered; and the restless misery of competition and all the train of wo, squalor, and ugliness that civilization has brought were unknown.

"Wagner's music is made up of the sounds of nature conventionalized. You hear the singing of the breeze, the song of the birds, the cries of animals, the rush of the storm. Wagner's essay, entitled 'Art and Revolution,' is twin to the lecture 'Art and Socialism,' by Morris; and in the 'Art Work of the Future' Wagner works out at length the favorite recurring theme of Morris; work is for the worker, and art is the expression of man's joy in his work. In 1844, when Morris was ten years of age, Wagner wrote: 'I compose for myself; it is just a question between me and my Maker. I grow as I exercise my faculties, and expression is a necessary form of spiritual exercise. How shall I live? Express what I think or feel, or what you feel? No, I must be honest and sincere. I must, for the need of myself, live my own life, please himself, and nature has placed her approbation on this by supplying the greatest pleasure men ever know as a reward for doing good work. I hate this fast-growing tendency to chain men to machines in big factories and deprive them of all joy in their efforts—the plan will lead to cheap men and cheap products. I set my face against it and plead for the dignity and health of the open air, and the olden time.' This sort of talk led straight to Wagner's arrest in the streets of Dresden on the charge of inciting a riot; and it was the identical line of argument that caused the arrest of Morris in Trafalgar Square, London, when he was taken struggling to the station-house. Wagner was exiled and Morris merely 'cautioned,' placed under police surveillance and ostracized. The difference in time explains the difference in punishment. A century earlier and both men would have forfeited their heads.

"In all of Wagner's operas the scene is laid at a time when the festivals, games, and religious ceremonies were touched with the thought of beauty. Men were strong, plain, blunt, and honest. Affectation, finesse, pretense, and veneer were unknown. Art had not resolved itself into the possession of a class of idlers and dilettantes who hired long-haired men and fussy girls in Greek gowns to make pretty things for them. All worked with their hands, through need, and when they made things they worked for utility and beauty. They gave things a beautiful form, because men and women worked together and for each other. And wherever men and women worked together we find beauty. Men who live only with other men are never beautiful in their work, or speech, or lives, neither are women. But at this early time life was largely communal, natural, and art was the possession of all, because all had a share in its production. Observe the setting of any Wagner opera where Mr. Walter Damrosch has his way and get that flavor of bold, free, wholesome, honest beauty. And yet no stage was ever large enough to quite satisfy Wagner, and all the properties, if he had had his way, would have been works of art, thought out in detail and materialized for the purpose by human hands.

"Now turn to 'The Story of the Glittering Plain,' 'Gertha's Lovers,' 'News from Nowhere,' or 'The Hollow Land,' by William Morris, and note the same stage setting, the same majesty, dignity, and sense of power. Observe the great underlying sense of joy in life, the gladness of mere existence. A serenity and peace pervades the work of both of these men; they are mystic, fond of folk-lore and legend; they live in the open, are deeply religious without knowing it, have nothing to conceal, and are one with nature in all her moods and manifestations—sons of God!"

## PUNCH'S ADVANCE SHEETS OF THE NEW OMAR KHAYYÁM DRAMA.

IN a recent issue, we gave some comment about Mr. Stephen Phillips's forthcoming dramatization of the "Iliad" and also referred to a new play to be founded upon the Rubáiyát of Omar Khayyám. The many myriads of Omarites throughout the world have been wondering how this latter literary feat is to be accomplished; for to transform an Oriental lyric poem of a hundred and one short stanzas into a play suitable to set off the histrionic accomplishments of Richard Mansfield apparently presents almost insuperable difficulties. Mr. Punch, however, has solved the problem and gives us advance sheets of "The Masque of Omar" written by him. The first scene is as follows:

"Courtyard of the deserted palace of Jamshyd, canopied by that inverted bowl commonly called the sky. To right, a tavern —not deserted. To left, a potter's house. At back, the grave of Bahrám, whence a sound of snoring proceeds. A wild ass stamps fitfully upon it. It is four o'clock in the morning, and the 'false dawn' shows in the sky. In the center of the stage stand a lion and a lizard, eying each other mistrustfully."

After a fight between the lion and the lizard and a controversy between the Nightingale and the Rose on the temperance question, we get the following:

(Enter Omar from tavern. He is by this time magnificently intoxicated, and is leaning on the arm of a fascinating Sákí. He has a jug of wine in his hand.)

Omar (trying to kiss her)—Ah, my beloved, fill the cup that clears to-day of past regrets and future fears. To-morrow! Why to-morrow I may be——

Sákí (interrupting)—I know what you're going to say. To-morrow you'll be sober. But you won't. I know you. Go home!

Omar—Home!—hic. What do I want with home? A book of verses underneath the bough, a jug of wine, a loaf of bread—no, no bread—two jugs of wine—and thou (puts arm around her waist) beside me singing like a bulbul.

[Sings uproariously.

For to-night we'll merry be!
For to-night——

Sákí—Fie! An old man like you!

Omar—Old! Thank goodness I am old. When I was young I went to school and heard the sages. Didn't learn much there! They said I came like water and went like wind. Horrid chilly Band of Hope sort of doctrine. I know better now. [Drinks from the jug in his hand.]

Sákí (watching him anxiously)—Take care. You'll spill it.

Omar—Never mind. It won't be wasted. All goes to quench some poor beggar's thirst down there (points below). Dare say he needs it—hic.

Sákí (shocked)—How can you talk so!

Omar (growing argumentative in his cups)—I must abjure the balm of life, I must! I must give up wine for fear of—hic—. What is it I'm to fear? Gout, I suppose. Not I!

[Takes another drink.

Sákí (trying to take jug from him)—There, there.

Omar (fast losing coherence in his extreme intoxication)—I want to talk to you about Thee and Me. That's what I want to talk about. (Counting on his fingers.) You see, there's the Thee in Me and there's the Me in Thee. That's myshticism, that is. Difficult word to say, mysticishm. Must light lamp and see if I can't find it. Must be somewhere about.

Sákí—You're drunk, that's what you are. Disgracefully drunk.

Omar—Of course I'm drunk. I am to-day what I was yesterday, and to-morrow I shall not be less. Kiss me.

Sákí (boxing his ears)—I won't have it, I tell you. I'm a respectable Sákí; and you're not to take liberties, or I'll leave you to find your way home alone.

Omar (becoming maudlin)—Don't leave me, my rose, my bullfinch—I mean bulbul. You know how my road is beset with pitfalls—hic—and with gin.

Sákí (disgusted)—Plenty of gin, I know. You never can pass a public house.

Omar (struck with the splendor of the idea)—I say—hic!—let's fling the dust aside and naked on the air of heaven ride. It's shame not to do it!

[Flings off hat, and stamps on it by way of preliminary.

Sákí (scandalized)—If you take anything else off I shall call the police.

[Exit hurriedly.

Omar (terrified)—Here, Sákí, come back. How am I to find my way without you? (A pause.) What's come to the girl? I only spoke—hic—meta—phorically. Difficult word to say, meta—phorically! (Longer pause.) How am I to get home? Can't go 'lone. Must wait for some one to come along. (Peers tipsily about him.) Strange, isn't it, that tho lots of people go along here every day, not one returns to tell me of the road. Very strange. S'pose must sleep here. . . . S'pose——

[Rolls into a ditch and falls asleep.

---

## MR. HOWELLS ON THE RECENT DRAMATIC SEASON.

IT has so long been the custom of our leading dramatic critics to speak of the theater as in a state of hopeless decay that a commendation of the present dramatic season by so prominent a writer as Mr. W. D. Howells is a pleasant surprise. He even goes so far as to say that "there have been seven or eight new plays in New York worthy of the heyday of the English drama." In *The North American Review* (March) he writes:

"There have been no such signal productions as that of 'The Notorious Mrs. Ebbsmith,' or 'The Second Mrs. Tanqueray,' or 'The Case of Rebellious Susan,' or 'The Maneuvers of Jane,' among the English importations; and among the American pieces there has been nothing so fresh or surprising as some things hitherto done in the native drama. But I have seen four good American plays, and four English plays so much better that my patriotic pride in the first has been chastened to impartial pleasure by a sense of the superiority of the last. It is, in fact, quite useless for us to contest this superiority of the English playwrights. Somehow, they have got there, while our dramatists are still only more or less on the way. They seem to have got there, too, in spite of making their plays such good literature that one likes to read them as well as see them. This is true not only of the work of brilliant wits like Mr. George Bernard Shaw, who confessedly writes too well for the stage, but whose 'Arms and the Man' is almost the best comedy on it; and poor Oscar Wilde, who did things almost as fine from a humor almost as rich and daring; but it is true, also, of such tempered geniuses as Mr. Pinero and Mr. Henry Arthur Jones and Mr. R. C. Carton and Mr. R. Marshall. In the work of all these you taste the literary quality as you taste it in the plays of Goldsmith and Goldoni, of Molière and Sheridan, of Björnsen and Ibsen, of Hauptmann and Sudermann, of Echegaray and Estebanze. The like can be said of no American playwright that I know of except Mr. Augustus Thomas, some of whose printed dramas I have read with the sort of enjoyment they give me in the theater. But for the rest, our dramatists seem to be submissive to the impudent assumption of the theater that a play can not be good if it is literary, or other than the worse for its literature. There is, consequently, so little literature in them that one is left to wonder why they are not indefinitely greater dramatists; they ought logically to be something super-Shakespearean; for Shakespeare's plays are much more literary than any of theirs."

Turning to the plays of the past season, Mr. Howells first comments with pleasure on the perfect charm of the trained English voices of the London actors, which in modulation, timbre, enunciation, and perfect naturalness it is hopeless for the American actor, as it is for the American "clubman" or "society woman," to imitate or compete with. Next to this pleasure, he rejoices in the pure American note as we get it in Mr. Herne's "Sag Harbor" or Mr. Thomas's "Arizona." As for Mr. Richard Mansfield's "Henry V.," Mr. Howells says that "it was better than one could have hoped, since it was the Shakespeare history shaped to a point and used for the constant conspicuity of the actor." But, he remarks, it was "never such a triumph for the

actor over the author as Mme. Bernhardt's 'Hamlet,' which in that way was quite the greatest triumph possible. One did not think of Shakespeare at all; one thought only of Mme. Bernhardt. Yet she is artist enough to have wished the poet's supposition that Hamlet was a man of rich fancy, of tender if troubled spirit, and of most endearing sorrow, to have some weight with the spectator, so that one should not go away thinking him an elderly woman, harsh, hard, noisy, and restless." Mr. Howells did not see Bernhardt in "L'Aiglon"—"Miss Maude Adams in one act of that play had given me all of it I could bear." He continues:

"In fact, the 'Cyrano de Bergerac' of M. Rostand was more than enough, false as it was in every moment and motive of the preposterous fable devoted to making one believe that a man of decent conscience, not to say of brilliant intellect, could hoodwink the woman he loved into marriage with a stupid dolt. After seeing that, I was quite willing to let any one that liked think M. Rostand another Shakespeare; but I was not willing to see an exquisite talent like M. Coquelin debased to the uses of such tawdy melodrama. After Coquelin in Molière, I did not want Coquelin in Rostand.

"Perhaps I was the more sensitively reluctant, because I had already had Mr. John Drew in 'Richard Carvel.' That play is, of course, worse than the novel of the name, and the novel itself is better than the other historical romances, which, it was easy to foresee, would soon get out of their covers and expose their spiritual and intellectual nakedness on the stage. But, with the wording of that play before me, I excused myself the more readily from witnessing the other plays made from the other historical romances. I can not justly, therefore, condemn them, and if any one were to say that they were as good as the novels they were made from, or better, I could believe him.

"I did not feel the same apprehension of a fine actor's humiliation in 'David Harum'; not because Mr. Crane is not a fine actor, but because 'David Harum' is an indefinitely better book than the other great commercial successes. It is, in all that relates to Harum on his simple horse-trading and country banking level, a very true and very good book. It is when it attempts to rise from this level, and soar in the fine air of sudden benefactions to insolvent widowhood, that it betrays the perfunctory motive of a flying-machine."

As for the English plays, Mr. Howells says that compared with American drama it is to pass from "clever sketches, from graphic studies, brilliant suggestions, to finished pictures." It may be, he suggests, that our drama "will never produce such finished sketches as the English, at least till our conditions have lost their provisional character":

"Perhaps our drama is the more genuine in sympathizing with the provisionality of our conditions, and it may be that our success is still to be in the line of sketches, studies, suggestions. . . . At any rate, such even perfection as Mr. Pinero's in 'The Gay Lord Quex' is yet far before our dramatists; but I believe that it is so not solely because our conditions are provisional. It is so, also, because they have not sought the literary quality in their plays which the English dramatists have sought, and which they have found. The drama is distinctly a literary form; it is, in fact, the supreme literary form; but our theatricians have vainly imagined that the presence of literature in it is deleterious; and it must be owned that they have pretty well emptied it of the life that once filled it. . . . Mr. Pinero, in the 'Gay Lord Quex,' . . . has reached the Ibsenian pass of dealing with a predicament, rather than with a problem. . . . It is a fight between a terrier and cat—both English. The scene is really tremendous, and, as Mr. Hare and Miss Vanbrugh play it, there is nothing to be asked either of the drama or the theater.

"One can not say this of the American plays or players; and yet one can say much in honest praise of them. At no period of our dramatic history—the term is rather large—has there been so much prospect and so much performance of actual and potential excellence. We have actually advanced, and things are done now by both playwrights and players, and received as matters of cool expectation, which lately would have been acclaimed as surprising triumphs. The advance has been in the right direction, for we must leave out of the account, in the interest of self-respect, the dramatizations of the romantic novels; one *can not* consider these. But one can consider the sort of plays which I have been speaking of, and find reason for taking courage and taking hope for an American drama. Of course, the great matter is that it should be a *good* drama; but after that point is made, it is for the common advantage that it should be American, for it could not very well be English, with the same promise of fruitfulness and the same fact of raciness."

## MR. LE GALLIENNE ON THE POETRY OF STEPHEN PHILLIPS.

IN the present blare of truculent journalism and of the "literature of blood and drums," one of the most refreshing phenomena, remarks Mr. Richard Le Gallienne, is the enthusiastic welcome given to Mr. Stephen Phillips, the rising young English poet and dramatist who after the publication of his "Paolo and Francesca" last year woke and found himself famous. Mr. Phillips's success is all the more significant because more than any other recent writer "he has done his work on the most severe and classical lines, with least concession to the fashions of contemporary pleasing." Mr. Le Gallienne (in the New York *Bookman*, March) continues:

"To write tragedies, visions, and idylls in blank verse, and to draw grim pictures of the modern world in the heroic couplet, seemed the last way to catch the fevered ear of the moment. But, of course, time is always bringing in its revenges, and the longer a form of art has been out of fashion, the sooner is it likely to come into fashion again. Still, the resuscitation of the poetic drama with so much welcome and *éclat* was a surprise we had hardly dared to hope for, at least in England, where the drama has for long been at so low a point of vitality and taste, in spite of all the efforts of certain dramatic critics to breathe into it the breath of a finer life, and in spite of imported examples of noble and beautiful work from the Continent. However, the public that paid so little heed to Ibsen and Maeterlinck and Hauptmann have, apparently, given a warm welcome to Mr. Stephen Phillips; and for the first time in many years an original play in blank verse has taken the town. Here, indeed, is cause for rejoicing! And not only has Mr. Phillips achieved this success on the stage, but before 'Herod' had been produced he had already achieved the almost equally difficult success of selling his poetic play 'Paolo and Francesca' in its book form hardly less rapidly than if it were a popular novel.

"All which is matter not only for Mr. Phillips's private congratulation, but for public rejoicing. Seldom has an Anglo-Saxon public done itself so much credit, so spontaneously acclaimed the good thing when they found it—or rather when they were shown it. For here, too, those much-abused people, the critics, deserve no small share in this general congratulation. With the exception of Mr. Kipling, I remember no young poet of our time who has been received with such a consensus of acceptance and encouragement by the most authoritative critics."

Mr. Le Gallienne traces the youthful poet's development from his first volume of verses, "Primavera," in 1888, to "Christ in Hades," published in 1896, of which he remarks: "In its thrilling beauty and its clairvoyant dramatic vision it impressed one immediately as an indisputable masterpiece. Mr. Phillips has done different things equally finely, but he has never surpassed this." His "Marpessa," published a year later, Mr. La Gallienne calls "perhaps the most supremely beautiful treatment of a 'classical' subject since Keats, and certainly the loveliest poem of our time."

Coming to that work of the poet which is at present attracting most attention, his two plays, Mr. Le Gallienne expresses surprise that any one should be astonished at his dramatic success:

"The surprise is that any one can have read his poetry without feeling that its very essence is dramatic insight. Beautiful as his lines are, they are always muscular with reality. 'Christ in Hades' was packed with the dramatic imagination from end to end. Its chief beauty was that of dramatic truth. Perhaps, as I have elsewhere said, it is rather the truth than the beauty of his poetry that first arrests one; or should one say that most of

the beauty of his poetry comes of its truth, which is another way of saying that it is very fine poetry indeed? At all events, I remember to have read nothing of Mr. Phillips's that was not essentially dramatic. That he should succeed in formal drama is to me, therefore, a secondary consideration; but that he has succeeded there can be no question, particularly in 'Herod.' Perhaps, on the whole, the last act of 'Herod' is the finest thing he has done."

Mr. Le Gallienne finds some fault with the first two acts of "Herod" because of an undue brevity of speech, carried "almost to the point of a diagram in dramatic anatomy"; but of the third act he says that "it would be difficult, I think, to find an act in any English poetic play since the Elizabethans in which at once the dramatic interest is so keen and so subtly developed and the quality of the poetry so fine. . . . It is no flattery of Mr. Phillips to say that Marlowe might have signed it with pride."

## AN ART-GALLERY FOR THE SUBMERGED.

THE new art-gallery in Whitechapel, London, dedicated last month to the use of the masses of East Side residents, is one of many tokens of the increasing sympathy felt by the best men of England for those who have been deprived of most of the opportunities of life. To the artistic merit of its exterior and interior the late Sir Edward Burne-Jones and Mr. Walter Crane have contributed, and it is in many respects worthy of being compared with some of the best art-galleries of modern days. From *The Congregationalist* we take the following account of this institution:

LONDON'S WHITECHAPEL ART CENTER.

Courtesy of *The Congregationalist*.

"In it will be held on a far larger scale than ever before those Eastertide and autumn picture shows which Canon Barnett of Toynbee Hall long ago started, and besides it will shelter a permanent gallery of art. Exhibitions from the national museums of objects illustrative of trades or periods of history also will be held in this building; also exhibitions of work done by the children of artisans and by pupils in the technical schools of London. By an intimate tie with the Royal Academy, which already exists, the best work shown there each year will afterward be displayed in Whitechapel. In short, the building and its collections are to be a perpetual source of light and life to the toiling masses who may care to frequent it. . . . The first exhibition of pictures now installed includes 357 excellent paintings, among them Watts's Gladstone and Earl Roberts, and Burne-Jones's Kipling.

"Lord Rosebery, in his address opening this building, dwelt on the high percentage of non-churchgoers in Whitechapel, and insisted that, inasmuch as in these days you can not drive people to church, the best men of the churches and of society must set about for other means of civilizing and raising the people and inducing them, if not to go to church in larger numbers, then to 'feel a wish to associate themselves in work and in worship in other ways.' He wished them to understand that he was not so sanguine as to believe that contemplation of a picture will in itself at once convert a man who is a ruffian into a civilized member of society. But he does believe that it is worth while offering to the masses opportunities to come under the spell of the fine arts, and thus secure the uplift which usually accompanies such contemplation."

## THE "ONE THOUSAND BEST BOOKS" OF THE PROVIDENCE LIBRARY.

GREAT interest has been aroused throughout the country by the new "Room for the Literature of Power" maintained by the Providence Public Library (THE LITERARY DIGEST, March 23, page 346). The object of this collection is, it will be remembered, to bring together in one place the world's great classics, so that the reader might be tempted to come here in order to know, undistracted by other books, "the best that has been said and thought in the world," as Matthew Arnold has expressed it. As a result of many inquiries, Mr. Foster, the librarian, has now furnished a list of the authors whose works are included, in whole or in part, in this standard library. They are as follows (we quote from the New York *Times*, April 6):

Addison,
Æschylus,
Æsop,
À Kempis,
Antoninus (Marcus Aurelius),
Arabian Nights,
Ariosto,
Aristophanes,
Aristotle,
Arnold (Matthew),
Bacon,
Bible, The,
Boswell,
Browning (Mrs.),
Browning (Robert),
Bunyan,
Burke,
Burns,
Byron,
Cæsar,
Calderon,
Camoens,
Carlyle,
Cervantes,
Chanson de Roland,
Chaucer,
Cicero,
Coleridge,
Corneille,
Dante,
De Foe,
Demosthenes,
De Quincey,
Dickens,
Dryden,
Dumas,
Eliot (George),
Emerson
Epictetus,
Erasmus,
Euripides.
Federalist, The,
Fielding,
Franklin,
Froissart,
Gibbon,
Goethe,
Goldsmith,
Gray,
Hawthorne,
Heine,
Herodotus,
Homer,
Horace,
Hugo,
Johnson,
Jonson,
Junius,
Keats,
La Fontaine,
Lamb,
Landor,
Le Sage,
Lessing,
Lowell,
Macaulay,
Machiavelli,
Mahabharata, The,
Malory,
Milton,
Molière,
Montaigne,
More,
Nibelungenlied, The,
Omar Khayyám,
Ovid,
Petrarch,
Plato,
Plutarch,
Polo (Marco),
Pope,
Racine,
Ramayana, The,
Sappho,
Schiller,
Scott,
Shakespeare,
Shelley,
Sidney,
Sophocles,
Spectator, The,
Spenser,
Swift,
Tacitus,
Tasso,
Tennyson,
Thackeray,
Theocritus,
Thucydides,
Virgil,
Walton,
Wordsworth,
Xenophon.

## NOTES.

A LARGE increase in attendance has been noted during the past few years at the German universities. Five years ago there were somewhat less than 28,000 students in the various universities of the empire. Now, according to the New York *Churchman*, there are 34,363. Berlin has 6,673—more than any American institution. Munich is the next in size; then come Leipsic, Bonn, Halle, and seven others, all with more than 1,000. Students in medicine and theology, however, have decreased.

MARK TWAIN is reported to have said lately that if Mr. Carnegie would let him write the books for his proposed sixty-five branch libraries in New York, he (Mark) would grow so rich that he could afford to found libraries himself and let Mr. Carnegie write the books. Mr. Carnegie, however, long ago acquired this habit, and his name was on the title page of two or three books written many years before his latest volume, "The Gospel of Wealth." One of these earlier books has sold, it is reported, to the extent of 40,000 copies. At the Authors' Club an amusing story is told of his literary ambitions. Shortly after the foundation of the club, Mr. Carnegie made application for membership. In reply the secretary wrote to him that only *authors* were eligible for membership, intimating humorously that even Crœsus could not have been a member unless he had published a book. By return of mail came a letter from Mr. Carnegie to the effect that altho unfortunately "he could not deny that he was a very rich man, yet he was at the same time a *poor* author," and begged leave to submit therewith a copy of his recent volume as an evidence of his qualification. The answer so pleased the club that he was forthwith elected. Shortly after, Mr. Carnegie gave to the club, free of rent, one of the beautiful apartments in the Carnegie Building, and it thus happens that the club, not having to pay for an expensive domicile, is financially one of the most prosperous clubs in the city.

# SCIENCE AND INVENTION.

## HAS THE CANCER GERM BEEN FOUND?

IT was announced in the daily press of March 30 that Prof. Harvey R. Gaylord, of the State Pathological Laboratory, in Buffalo, had discovered the germ of cancer, after three years of experiment in this country and Europe. Professor Gaylord expresses himself as satisfied that he has found the microorganism that produces cancer.

Dr. Franz Torek, assistant surgeon at the New York Skin and Cancer Hospital, was reported in *The Times* of this city as speaking thus regarding Dr. Gaylord's result: "If Dr. Gaylord has made this discovery, he has certainly made a great step forward; but physicians generally will be skeptical on the subject until there have been conclusive tests. In case the microorganism of cancer, if there be one, is discovered, it will be a clue for the ultimate discovery of a cure and prevention of the disease. Once such cause is positively determined, there will be reason to believe that an antitoxin may be found." The report in *The Times* goes on to say:

"According to Dr. Torek, early and thorough surgical operations are at present the only known methods of curing cancers. If the Gaylord theory is established, there will be the hope that disinfection and antisepsis will prevent the developing of the disease, as well as its spread after development. But unless some kind of vaccination is discovered as a result of the finding of the germ, acting as an antidote within the human body, it seems improbable that the new theory, even if proved, can appreciably reduce the number of deaths from cancer.

"Cancers are malignant tumors, . . . and in a majority of instances the sufferers from the disease are found to have experienced local injury before the cancer appeared. Many have been the investigations to find an infective agent for the development of the tumor, such as the microbes that are responsible for other diseases; but altho there have been found microorganisms thought at first to be essentially inherent in cancer, they have ultimately proved to be only accidental, inasmuch as they have been discovered in other diseases."

The reported discovery by Professor Gaylord is noticed as follows in the New York *Evening Post* (March 30):

"In the study of any new microbe or bacteria, to connect its presence with any definite disease in connection with which it is found, it is necessary to cultivate the organism by itself, on one of the various growing media which such forms of life feed upon, then by inoculating it into a healthy animal, or, if possible, the human tissues, to watch and see if the original disease is produced.

"With the ordinary forms of bacteria associated with the best-known diseases, this has usually been successfully performed. But in some of the allied forms of lower organism not classified as bacteria this can not be so easily demonstrated.

"Professor Gaylord claims to have succeeded where others have failed in inoculating animals with these microorganisms, and states that cancer has afterward developed. A German investigator, Funke, has proved that a protozoon of a similar nature is the cause of smallpox and allied diseases. As the serum in these diseases protects against similar attacks, as is seen in the ordinary vaccination, he believes that sooner or later a vaccination against cancer will be possible. Other investigators have been absolutely unable to cultivate any of the so-called cancer bodies, tho they have been found with great regularity in numbers of cancerous tumors."

It would hardly be prudent, thinks the Philadelphia *Inquirer* (April 1), to assume the correctness of Professor Gaylord's results, in view of the fact that so many similar discoveries have been proclaimed only to be refuted. It goes on to say:

"No one can doubt that some day the secret of this dreaded and dreadful malady will be discovered, and in the meanwhile even the investigators who do not succeed, themselves, help to make the road to success easier to others. Cancer is perhaps the one disease as to whose nature the medical profession is almost as much in the dark as at any time since the disease became the subject of scientific study, and it is the one as to whose prognosis there is the least room for hope. . . . Whatever may be the reason for the circumstance, it is a fact that the reported number of cancer cases is steadily, largely, and rapidly increasing. This increase may possibly be more apparent than real. It may be due to the fact that statistics of this kind are collected much more thoroughly and accurately than was the case a century or even half a century ago. But it looks as tho there were some element in the conditions of modern life which favored the development of the malady, and the ascertainment of that element is one of the phases of the problem to be solved. It will be solved sooner or later. According to the news from Buffalo it may have been solved already."

## STEALING SCIENTIFIC SECRETS.

INDUSTRIAL secrets were much more closely guarded in former days than they are now. Nowadays we rely for protection on our patent laws; but patents were once enormously expensive, and many inventors preferred to keep their process secret, working behind locked doors, and swearing their workmen to the strictest silence. Some of the precautions taken in such cases are thus described in an article in *The Evening Standard* (London):

"The workmen . . . were searched on leaving the building, and as an additional security operations were introduced into the processes which had no other object than to hoodwink the workmen, while in many cases, as is done at the present time, no one workman ever saw the object of the manufacture through all its stages. Each had one part to do and was ignorant of what his fellow workmen in another part of the building might be about; and thus every innovation was hedged round with a quickset of mystery. Handicrafts were handed down from father to son, and such secrets as the father had discovered or inherited were inherited by his successor, so that it often happened that one man had the monopoly of some special produce or manufacture. For instance, there used to be, close to Temple Bar, a dingy little chemist's shop. But, dingy as it was, the proprietor was a well-to-do man, for he had discovered the secret of making citric acid —that is, he had found out how to make it without the fruit, and had a monopoly of the output. But he was in a more fortunate position than most monopolists who own a manufacturing secret, since his was a process which requires no assistance, and consequently he employed no workmen. Experts came to order, sample, assort, and bottle his citric acid, but all that took place in the outside shop. Nobody but he ever entered his laboratory, and his secret was locked therein and in his mind. But such a secret was too valuable to be kept without an effort on the part of rivals to fathom it. And they succeeded. One day he securely locked the door of his laboratory and went home to his dinner. But on the watch for that event was a chimney-sweep, or rather a boy disguised as such, who was possessed of some chemical knowledge. He followed the poor chemist as far as Charing Cross, and saw him enter his house. Sure that he would not return for some time, the pseudo-sweep hurried back to Temple Bar, ascended the next house, and dropped down the flue of the laboratory. There, of course, he saw all that he wanted to see, and returned to his employers, carrying with him the secret of making citric acid. A few weeks afterward the price of that commodity fell to a fifth of what it was when the monopolist alone sold it. The poor fellow was heartbroken, and died a few months after, without, however, discovering that his secret had really been filched from him.

"The secret of making china was stolen by a Frenchman. The Chinese told wonderful stories to keep the process from the knowledge of foreign devils; they said that the clay from which the porcelain was made had to lie in heaps exposed to the weather for two hundred years before it could be used. Others said that it was not clay at all, but certain sea shells ground up, and that only one variety of shell would do. But in spite of all these yarns, the foreign devil was too much for them. He spent many years learning the language, and eventually was admitted to a manufactory by practising on the feelings of a local mandarin.

But even in later years, secrets in china manufacture have been stolen. For a long time Wedgwood kept to himself the secret of making the cameo ware, which even now is not very common, altho it is exceedingly effective. But Turner, one of his employees, and afterward a dangerous rival, stole that secret with others and set up on his own account. Before that time the Brothers Elers came from Holland with a private process and settled in Staffordshire, where their secret was stolen by a rival potter by a peculiarly dirty trick. He feigned to be overcome by a storm, and begged shelter from the hospitable Dutchmen, and, gaining admittance in this way to their kilns, discovered their process and went on his way rejoicing. The secret of making metallic luster was stolen from the Moors by the Spaniards, and an escaped workman from the factory at Meissen took with him the secret of the Dresden china and carried it to Vienna. Böttger, the discoverer of the process, was kept in prison by Augustus II., the Elector of Saxony, and made to experiment on porcelain. By an accident he discovered the true clay—kaolin from Aue—and was then put in charge of the works at Meissen—about fifteen miles from Dresden. This factory was more like a prison. No workman ever went out. There was a military guard round the place, and the kaolin was sent from Aue in sealed bags, the greatest precautions being taken to prevent its destination from becoming known. But, in spite of these safeguards, at least one man escaped with his knowledge of the secret."

## THE GROUNDWORK OF THINGS.

THE ultimate structure of matter has been a fascinating subject of speculation ever since the time of the early Greek philosophers. It is more so than ever now, when it is emerging from the darkness of mere guess work into the light of positive science. Scientific men are quite ready to agree that matter has a molecular structure of some sort, and that all space is filled with some kind of a medium ("ether") that can transmit vibration. But regarding the precise nature of this structure and of the enveloping medium, and regarding the connection between the two, they continue to differ. It is of course desirable, in the interest of simplicity, that matter and ether should be reduced to some sort of common measure. Several attempts at this have been made, usually by supposing that the material molecule is a local disturbance or peculiarity of the ether, such as a vortex or a distortion. The problem has been approached from quite another side by M. A. Muller, who shows that we may equally well explain the physical phenomena of nature by the hypothesis that the ether is but matter of an inferior order of structure, or rather that it and matter consist together of an infinite number of series of molecular or "solar" systems, each of lower order than the last; that is, each consisting of smaller particles spaced at relatively greater intervals apart. The total of this infinite number of systems forms an actually continuous medium, and the ingenious author therefore performs the apparently impossible task of filling space wtih a homogeneous medium of which seemingly discontinuous material bodies form a part. The following paragraphs are taken from an account of his hypothesis contributed by the author to the *Revue Scientifique* (Paris, March 16). Says M. Muller:

"We can not escape from the general idea that the physical world, altho we may conceive of it as infinitely divisible, is not so divisible without decomposition; in other words, it can not be divided indefinitely without destroying its structural elements. It is a very widespread belief in the scientific world that tangible bodies are formed of groups of molecules or atoms that act on one another. . . . This granular structure indicates the real discontinuity of the physical world. Consequently the apparent shape of a body is deceitful, since we have not before our eyes the volume really occupied by the substance, but the geometric form assumed by an assemblage of particles more or less distant from one another. . . . . .

"But in spite of its richness in practical results, physical mathematics can not explain the existence of a limiting surface in equilibrium, without something that opposes the tendency of the attractive forces to concentrate the material molecule indefinitely. . . . We must have secondary actions, resulting from the fact that these oscillating molecules are plunged in a medium which is itself in vibratory movement. So considered, the granular structure of tangible bodies is no longer discontinuous, since the ether occupies the intermolecular cavity; but the difficulty is only removed one step, for apparently we can not construct a model of such a substance without solution of continuity."

After a careful review of all recent investigations of the properties of the ether, the writer proceeds to define it as "an isotropic, homogeneous, and continuous body which resists change of volume indefinitely." He goes on to say:

"In the first place, a question arises regarding the structure of such a medium. It is beyond doubt, first, that the molecules of the ether are very small compared to those of ponderable bodies; and, next, that the distance between their centers is very great relatively to their diameter. This constitution renders their collision improbable and assures their independence. . . . . .

"It may be seen that we have here a structure identical to that of the sidereal universe. The intermolecular distances being enormous in relation to their diameter, the molecules of the ether are themselves plunged in an etheric medium of the second order. . . . . .

"There are not then really any constituent molecules, but only a single medium whose increasing or decreasing series is beyond the domain of our observation. We may only observe that the argument drawn from the non-infinite divisibility of concrete bodies is not applicable to this conception; for it will be noted that the decreasing series of molecules and media has here the closest analogy with the indefinite division of geometric spaces.

"Besides, our concrete way of regarding things depends essentially on the fact that we are surrounded by discontinuous and heterogeneous bodies. This conception has already disappeared when we imagine the etheric medium that envelops them; this medium in its turn is composed of particles, which are themselves without break of continuity, plunged in a medium of the second order. The result is necessarily a 'full' medium, and there is nothing extraordinary in this, because a true vacuum is incomprehensible."

An ether like this, or rather an indefinite series of ethers, will act, the writer tells us, precisely as it ought to act, to satisfy modern scientific requirements. It will transmit the transverse vibrations that constitute light without being affected by waves of condensation, and its structure will account for many other phenomena that it has hitherto been difficult to explain. According to the author's theory, his ether molecules do not gravitate because they are relatively so far apart. His hypothesis thus requires that gravitation shall not be universal, but that bodies shall cease to attract each other at a distance that is very great compared to their size. This would still permit the gravitational influence of our sun to be felt far beyond the orbit of the most distant planet. M. Muller's theory of course can not be given in its entirety in a brief space, but it will be found interesting by all students of physical science. He concludes his article as follows:

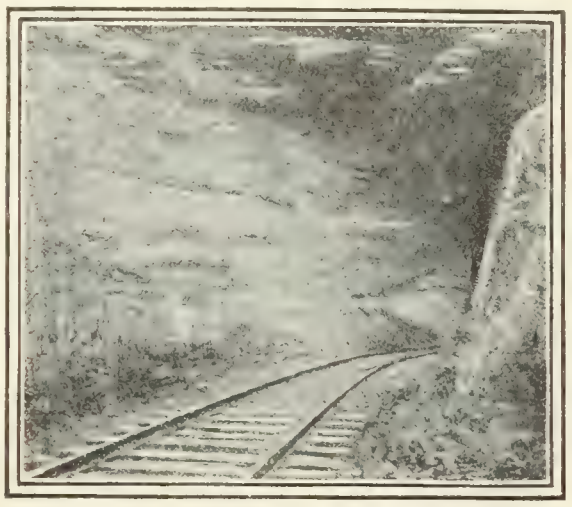
"This theory of the constitution of the medium that fills space . . . leads us far from the notion of 'substance' as the ancients conceived of it. The idea of a 'substratum,' which the word implied with them, is a conception rather metaphysical than scientific; the present development of the physical sciences leads us to think that the traditional categories of 'substance, attribute, and relation' are certainly incomplete, and that there are things not included in such a classification. The etheric medium is a transcendent reality to which the narrow ancient molds could not adapt themselves. It has nothing of what was once understood by the term 'material'; . . . it is the grand reservoir of natural forces, where naught is created and naught lost.

"In this regard, we may affirm that the science of our age has forged new arms for analysis and observation, and that in so doing it has prepared itself for tasks that are larger and incomparably finer than any that our predecessors could have imagined. It has raised itself to a point whence it may wander far

above the globe that has been assigned us as a dwelling-place; possibly it may surpass all that we know now about the physical universe and may illumine the depths of cosmic law."—*Translation made for* THE LITERARY DIGEST.

## A NATURAL TUNNEL.

IT is not usual for the railroad constructor to find tunnels already built for him, but an interesting exception was experienced in the location of the Virginia and Southwestern Railway. According to *The Railway and Engineering Review*, at a point thirty-two miles south of Big Stone Gap, Va., on the line between that point and Bristol, Tenn., the road runs for a distance of 815 feet through a natural cave, in which it was necessary to blast for a distance of only 60 feet in order to secure a desirable alinement for the track. The engineers declare that the route was a matter of "natural selection," the tunnel being directly in the line of the projected railroad, and was not sought as a curiosity. The east portal of the natural tunnel is in a perpendicular wall of rock 400 feet high, and is 200 feet wide and 150 feet high from the bed of the stream to the crown of the natural arch. The track through the cave is on a reverse curve, and the blasting done within the cave was required to cut through the corner of a sharp bend. The west portal is 175 feet wide.



EASTERN PORTAL OF "NATURAL TUNNEL" ON THE VIRGINIA AND SOUTHWESTERN RAILROAD.

WESTERN PORTAL OF THE SAME TUNNEL.

Photographs showing the entrances to this interesting piece of Nature's engineering are published in *The Review*, and two of them are reproduced herewith. The entire distance from end to end of the tunnel is 1,000 feet. The under structure of the country is of limestone formation, and the cliffs at each end are fully 400 feet in height.

**Cushion Bicycle Frames.**—For a new form of cushion frame for bicycles, the advantage is claimed, says the Providence *Journal*, that its operation does not change the distance between the saddle and the pedals, and the rider is not troubled by variations in length of reach, as in the 'anti-vibration' appliances consisting only of springs. We quote as follows:

"The upper rear forks are hinged just above the axle of the driving-wheel, there is a rocking point at the crank-bracket, and the lower frame tube and the seat-post upright are brazed to a cylinder, in turn brazed to the crank-bracket. This cylinder, 2½ inches long and 1 inch in diameter, is fitted with ball-bearings and cones and lock-nuts for adjustment against lateral movement, the various parts being practically the same as the parts constituting the regular bearings of a wheel or crank axle. In combination with the parts specified are telescoping tubes connecting the seat-post lug and the rear upper forks, the latter being attached to the sliding tubes just above the tire. The tubes are held apart by a strong spiral spring. Altho the movement of the tubes is said to form an air-cushion, it is probable that the air compressed has comparatively little to do with taking up the shocks caused by a rough road surface and fast pedaling. The spring undoubtedly carries the load. The construction described permits an inch of free movement of the telescoping tubes, and the lessening, if not elimination, of vibration by the coil-spring. And as the seat-post upright, the seat-post, and the crank-bracket are rigidly connected, it is apparent that there can be no variation of distance between the saddle and the pedal."

## VEGETARIANISM AND EVOLUTION.

AN attempt to deal with vegetarianism from the standpoint of modern science, both historically and physiologically, is made in a recent paper by Prof. Ferdinand Hueppe. He considers that geological evidence proves that the cradle of primitive man was in a northern land, and fixes his evolution in the tertiary period when Asia was still partly separated from Europe, but connected with Africa and united with America by a land bridge. His line of thought is thus summarized by *The British Medical Journal* (March 2):

"The human-growing anthropoid, owing to hard times, left the forests and became a beast of prey, probably the most cunning and ferocious that has ever stalked on the face of the earth. In the interglacial period man was a mammoth hunter. The Danish kitchen middens show that the primitive Europeans were fish and flesh eaters. The Asiatic stock, meanwhile, evolved into shepherds and began to cultivate cereals in the alluvial plains of the great rivers. The irruption of Asiatics into Europe brought about the introduction of cereals and domesticated animals, and a mixed diet became usual. With the overgrowth of population in the East vegetarianism arose, and man took to rice-eating, not from desire, but through scarcity of animal food. The Eskimo remains to this day an example of a pure flesh-eater. The anthropoid stock from which man evolved fed on nuts, fruits, eggs, small birds, and insects. Such is still the mixed diet of the ape, as well as of the Arabs of this age. Owing to the struggle for existence man has evolved into a flesh-eater, a mixed feeder, and lastly into a vegetarian, but vegetarianism became possible to him only by the introduction of fire and cooking. He has neither the teeth nor the gut of a herbivorous animal; otherwise he would naturally graze the fields, and in winter chew oats in a manger."

Professor Hueppe asserts that the experiments of breeders show that the best proportion of albumen to carbohydrates in the diet is 1:5. Among the Eskimo, he says, it is found to be 1:2.9, among Europeans on a mixed diet 1:5.3. The Irish peasant, on the other hand, consumes, or used to consume, a diet containing ten times as much carbohydrate as albumen (1:10.6), and in a Munich vegetarian Voit found the proportion to be 1:11. A diet such as that of the Irish peasant increases the death-rate among all those in whom the excess of carbohydrate can not be burned off by hard bodily labor; in other words it is injurious to all but those of middle age. Says the writer:

"Such a diet can be consistently borne only by a man bred to it from infancy, and accustomed to the doing of hard work. There is no advantage in vegetarianism as a working diet. The same amount of potential energy (thirty-three per cent.) consumed as food appears as work in the carnivorous dog, the herbivorous horse, and the omnivorous man. No vegetarian animal, not even the horse, ox, camel, or elephant, can carry the weight of his own body. The carnivorous lion, on the other hand, gripping a calf equal to himself in weight, can jump a hurdle six feet high. The lifting power of man, the mixed feeder, exceeds that of any other mammal. . . . The vegetarian is like an overheated steam-engine which is in danger of explosion owing to the use of a wrong kind of fuel. His digestive system is forced to deal with a far greater bulk of food, and energy which might be used for the higher purposes of mental ac-

tivity is wasted. Only in the condition of hard manual labor in the open air can a purely vegetarian diet be borne. Of course he who consumes milk, eggs, butter, and cheese can not be considered a vegetarian. Vegetarianism does not, as is sometimes suggested, lead to a mild and gentle spirit, for the wild buffalo, the rhinoceros, and the rice-eating Chinese pirate are alike remarkable for ferocity and cunning. Finally, the vegetarian is exposed to as many chances of poisoning as the flesh-eater. The vegetarians of our time, Professor Hueppe tells us, belong to the class of neurotic men who, failing to meet the strain of town life, ever seek for a 'heal-all' in one or other crank. Their doctrines, pushed with fanatic zeal, make no impression on the healthy, and only tend to overthrow the balance of others who, like themselves, are the victims of an unnatural mode of existence."

## COAL PRODUCTION AND NATURAL POWER.

THE world's output of coal for 1899, as compared with that for 1845, is given in the annual report of the Miners' Federation of Great Britain as follows:

| | 1845. | | 1899. | |
|---|---|---|---|---|
| Belgium | 4,960,000 | tons. | 21,000,000 | tons. |
| France | 4,141,167 | " | 32,000,000 | " |
| Germany | 3,500,000 | " | 101,000,000 | " |
| United States | 4,400,000 | " | 226,000,000 | " |
| Great Britain | 31,500,000 | " | 220,000,000 | " |
| Rest of the world | 1,700,000 | " | 50,000,000 | " |

Commenting on this report, *The St. James's Gazette* (London) declares: "Despite these large figures, England positively must economize her coal supply":

"The best steam-engines are utilizing only one-twelfth of the energy available by the combustion of fuel, while the ordinary steam-engines utilize a far less proportion. Whether our coal supply is sufficient to last for some centuries, or whether, as is the opinion of many competent authorities, a serious coal famine will begin to be felt within the lives of the present generation, economy in the use of coal is unquestionably of the utmost importance, and the investigation of the best means of effecting such economy would repay even a large expenditure. If the result of such inquiry were merely to effect an economy of one per cent. in the consumption of coal, this would mean an annual saving to the coal consumers of this country of nearly one and two-thirds million tons, worth at last year's prices about £625,000 [$3,125,000]."

Dear coal, writes Mr. A. J. Wilson, London financial correspondent of *The Times* (New York), has been "like a canker at the root of all our industries":

"If you [Americans], with your richer coal measures and more scientific method of extraction, can supply fuel to your furnaces at a lower price than England, and when I say England I mean all Europe in this respect, since every iron-producing country on this side of the Atlantic is more or less dependent upon English coal, the world's metal markets must ultimately fall into your hands."

*The Spectator* (London) holds that England's coal supply would be spared exhaustion if all her machines were moved by electricity, "as electricity favors centralization of power production."

The coal-fields of Japan have been developing at a rapid rate. There has just been formed a coal trust in Japan by all but one of the principal mine-owners. The *Keizai Zasshi* (Tokyo) declares that these owners have adopted "the most stringent regulations providing for the fixing of prices and the imposition of penalties upon members who violate the agreement and sell below the figures decided on by the trust." Discoveries of extensive new coal-deposits are reported in China, South Africa, and Java. According to *Engineering* (London) these are "large enough to make the world breathe easier for a generation."

**Artificial Flesh.**—The well-known Viennese surgeon Dr. Gersuny has been lately occupied, says the London *Telegraph*, with medical experiments which will cause general interest. By a simple, painless injection, performed without difficulty, external defects, such as cavities and hollows in the skin, are fully removed, and these inequalities restored to full roundness. *The Telegraph* describes the process further as follows:

"Dr. Gersuny's experiments are purely professional, and have nothing to do with cosmetics. But tho Dr. Gersuny restricts himself to medical operations, there is a great possibility of his discovery becoming extremely useful in other directions. The doctor's idea, for instance, was to restore to its original form a badly injured nose, or to fill up a sunken cheek caused by the removal of part of the jaw. In such operations, his discovery has been highly successful. The doctor takes a syringe, such as that used for injecting morphin, fills it with medicinal paraffin heated to a certain degree, and injects it beneath the skin into the hollow cavity till this is rounded to its original form. The paraffin fixes itself firmly beneath the epidermis and remains immovable. Very little unpleasantness is caused to the patient by this operation, and all Dr. Gersuny's attempts up to the present have succeeded."

Another report of the Gersuny discovery is thus described:

"The professor published an account of his experiments at the very commencement, and since then he has become very expert in injecting vaselin, with very satisfactory results. It has been proved that paraffin, when melted to 40° Celsius, and injected beneath the skin, remains quiet, causing no local irritation. Gersuny occasionally uses this injection to form a small swelling, and he obtained very successful results with the obturator muscles by forming a sort of valvular flap when the former were lost, which proved a valuable substitute for them. He found it also extremely useful in relaxing stiff muscles and in improving the articulation in cases of the so-called wolf's-jaw, or open split in the roof of the mouth. It has still to be ascertained whether Dr. Gersuny's discovery can be made useful for beautifying the human face, as up to the present the paraffin hardened after injection, forming no soft flexible support. The professor himself strictly confines these injections to surgical cases."

**The Cost of Smoke.**—A recent document issued by the Coal-Smoke Abatement Society of England states that the annual loss in London resulting from imperfect methods of combustion is not less than £12,000,000 [$60,000,000]. "About 18,000,000 tons of coal," says *L'Écho des Mines*, summing up this report, are annually consumed in London; it costs about £16,000,000 sterling [$80,000,000], and probably 3,000,000 tons are used in the manufacture of gas. About two-thirds of the heat produced is lost by passing up the chimneys, and this loss would thus be 8,000,000 of pounds. The damage caused to paint and decoration, furniture, etc., is estimated at £3,000,000 yearly, while the loss directly due to imperfect combustion reaches about £1,000,000."—*Translation made for* THE LITERARY DIGEST.

## SCIENCE BREVITIES.

A CURIOUS preference of certain pigeons for the use of metallic objects in building their nests is noted by M. Maurice Dusolier in the *Revue Scientifique*. He assures us that several pairs of these birds that he has observed in Paris have raised their young in nests made entirely of hairpins! These articles they collected in the paths of the Luxembourg. The young pigeons grew up normally as they would in a softer nest. M. Dusolier believes that there is a useful suggestion in this for pigeon fanciers, who are often over-anxious, he thinks, to see that their charges have soft material for their nests.

AN instrument to detect distant thunder-storms has been devised and described by M. T. Tommasina, according to *The Engineer*, London. "The apparatus consists essentially of a self-decohering carbon coherer placed in circuit with a dry-cell and an ordinary telephone-receiver. The grains of carbon are hermetically sealed in a glass tube attached to the telephone magnet, so as to lie horizontally when the receiver is placed to the ear. The impression produced on the observer is that of being transported into the neighborhood of the thunder-storm which might yet be hidden below the horizon. To strengthen the effect the author used three copper 'antennæ,' each 30 meters [98 feet] long. In this manner it was found possible to observe the development of a violent thunder-storm at a distance twelve hours before it broke loose at the observing-station, which was situated on the Lago Maggiore. A distant rain is indicated by a rattling sound before a cloud is visible."

# THE RELIGIOUS WORLD.

## THE DOUBTFUL VALUE OF CHURCH STATISTICS.

IT is well known that one important reason why the Government, in its last census, decided to publish no estimates of a religious nature was the fact that returns from the churches are in many cases unsatisfactory and misleading. Some denominations, like most of the large Protestant bodies, count only their communicants; others, like the Roman Catholics, regard all children born of Roman Catholic parents as church-members. Then, too, the vast leakages from all denominations, and the great number of merely nominal members, often not even Christian, whose adherence is really a source of church weakness, are to a large extent unprovided for in the official returns from the churches. The Chicago *Interior* (Presbyterian), in commenting on this untrustworthiness, says:

"As was to be expected, the denominations which keep no official records of membership have made large 'gains' since the census of 1890. It is strange how slowly religious people come to the conviction that it is as much a duty to tell the truth about their churches as about their stock. Our friends of the body which calls itself 'The Disciples' claim an increase of 74 per cent. in the past ten years, the absurdity of which is patent. The Disciples, who are in fact Baptists with extreme views regarding immersion and its relations to the salvation of the soul, flourish chiefly in the middle and border States; and their growth is largely made up by defections from other denominations, denunciations of other churches characterizing their preaching in many localities. Being intensely congregational in their views of polity, they are without any central, official body, so that their reports are subject to no strict supervision or rigid comparison. We have heard one of their best-known and most venerated leaders say in public assembly that when he reported his members he 'always included an estimate of those who would be members if a church were located so that they could conveniently attend it.' The 'growth' of such a body depends only upon the development of the imagination of its leaders. The Christian Scientists come next in the 'average' or 'per cent.'; but unfortunately for the trust one would wish to repose in their figures they are always in 'round numbers,' in tens of thousands. The student who remembers that '*Dolus latet in generalibus*,' invariably throws such figures out of his reckoning and puts down the result as 'unknown.' The Roman Catholics have, upon their own confession, no standard of membership by which to gage their returns, some priests counting all that come to their first communion; some those that are baptized in infancy, and others all members of all families any members of which attend service. In the same way the 'Church of Jesus Christ of Latter-Day Saints, Reorganized,' the non-polygamous Mormons, report tremendous advances, mostly '*in nubibus*,' as those who have ever listened to a Mormon elder may well believe. But perhaps a better illustration of these figures which not only 'can lie' but do lie, can not be given than to call attention to the fact that there were only a little more than a quarter of a million Jews reported in the last federal census (1890), while the very next year the rabbis of their congregations reported over a million and a quarter adherents. The Presbyterians, Methodists, Baptists (North), Congregationalists, Episcopalians, and some of the Lutheran bodies, are as careful in making up their tables as the State itself; but as for the other religious bodies, their figures are for the most part the result of a vivid fancy rather than of a careful count."

In another issue the same journal qualifies its statement as to the accuracy of Protestant Episcopal Church estimates and says:

"The worthlessness of much that passes for statistical information is seen in the fact that the Episcopal Church in this country publishes three tables of parish and diocesan reports, and *The Church Standard* [Prot. Episc.] calls attention to the remarkable incident that no two of these reports agree upon any single item or group of items. Meanwhile *The Independent*, which gives unusual care to the collection of religious statistics, reports in one column 1,000,000 Christian Scientists; and in another, 'from later advices,' 100,000. Catholic bishops send in estimates that differ from each other by two or three millions, more or less; and our colored churches now add a hundred thousand and now lop off twice as many. It is not to be wondered at that the Federal Government declined this year to send out any reports upon churches to which must be appended the government imprimatur. *The Church Standard*, despite the fact that certain papers report the Episcopal Church as leading almost all denominations in the percentage of growth during the past ten years, insists that that church is barely holding its own. Surely we ought to have better information upon these points, or none."

Another feature in tables of church statistics which sometimes meets with criticism is the grouping of organically separate and more or less hostile bodies into "denominational families." In the tables, for instance, from which we quoted last week, Dr. Carroll groups seven bodies—some of which, like the Roman Catholic, Polish Catholic, Armenian, and Reformed Catholic, anathematize and excommunicate each other—under the family denomination "Catholics," which "family" made a gain during last year of 80,432 communicants; while the Methodist "family," composed of seventeen denominations, made a gain of 106,472. Closer examination of the figures discloses the fact that the only gains reported by anybody in the "Catholic family" are those made by the Roman Catholic Church, namely, 80,432, a fact somewhat obscured by the plan of grouping different bodies.

The following table, prepared by Dr. Carroll and omitted last week for want of space, gives the most trustworthy figures concerning the numerical rank and strength of the chief separate church bodies of the United States:

TABLE SHOWING ORDER OF DENOMINATIONS.

| Denominations. | Rank in 1900. | Communicants. | Rank in 1890. | Communicants. |
|---|---|---|---|---|
| Roman Catholic* | 1 | 8,690,658 | 1 | 6,231,417 |
| Methodist Episcopal | 2 | 2,746,191 | 2 | 2,240,354 |
| Regular Baptist (South) | 3 | 1,630,985 | 4 | 1,280,066 |
| Regular Baptist (Colored) | 4 | 1,591,735 | 3 | 1,348,989 |
| Methodist Episcopal, South | 5 | 1,468,390 | 5 | 1,209,976 |
| Disciples of Christ | 6 | 1,149,982 | 8 | 641,051 |
| Regular Baptist (North) | 7 | 998,657 | 7 | 800,450 |
| Presbyterian (North) | 8 | 983,433 | 6 | 788,224 |
| Protestant Episcopal | 9 | 710,356 | 9 | 532,054 |
| African Methodist Episcopal | 10 | 675,462 | 11 | 452,725 |
| Congregational | 11 | 631,360 | 10 | 512,771 |
| Lutheran Synodical Conference | 12 | 581,029 | 12 | 357,153 |
| African Methodist Episcopal Zion | 13 | 536,271 | 13 | 349,788 |
| Lutheran General Council | 14 | 356,401 | 14 | 324,846 |
| Latter-Day Saints | 15 | 300,000 | 21 | 144,352 |
| Reformed (German) | 16 | 242,831 | 15 | 204,018 |
| United Brethren | 17 | 239,639 | 16 | 202,474 |
| Presbyterian (South) | 18 | 225,890 | 18 | 179,721 |
| Colored Methodist Episcopal | 19 | 204,972 | 23 | 129,383 |
| German Evangelical Synod | 20 | 203,574 | 17 | 187,432 |
| Lutheran General Synod | 21 | 199,589 | 20 | 164,640 |
| Methodist Protestant | 22 | 183,714 | 22 | 141,989 |
| Cumberland Presbyterian | 23 | 180,192 | 19 | 164,940 |
| United Norwegian Lutheran | 24 | 130,000 | 25 | 119,972 |
| Primitive Baptist | 25 | 126,000 | 24 | 121,347 |
| United Presbyterian | 26 | 115,901 | 26 | 94,402 |
| Reformed (Dutch) | 27 | 107,594 | 27 | 92,970 |

*These are the estimated communicants. Fifteen per cent. has been deducted from the Roman Catholic population.

**A Defense of the Doukhobors.**—The daily press, as we have shown, has been sharply criticizing the Russian sect, the Doukhobors, for their alleged failure to agree to the very reasonable terms offered them by the Canadian Government in their new home. The emigrants, who have many doctrines, including that of non-resistance, in common with Quakerism, have to some extent been under the benevolent tutelage of the American Society of Friends, and now *The Friends' Intelligencer* (Philadelphia, April 6) comes to their defense. There is so little truth in the current reports about the discontent of the Doukhobors, says this journal, that their friends need not give it serious thought. Some trouble indeed has been stirred up by a mischief-maker named Bodyansky, but his influence with his coreligionists is almost *nil*, and his circular, upon which

the newspaper despatch was based, found only three signers, one of whom was himself. Says the writer:

"The Doukhobors are doing very well. They are getting on hopefully. They are peaceable, industrious, kindly, and patient. They are now able to earn their own living, and they have made fair progress in establishing comfortable homes. They are very grateful to those who have aided them, and very desirous to aid others who still are in the situation of hardship they formerly were. There has been some agitation amongst a portion of them over the administration of the Canadian laws relating to the registration of marriages, births, and deaths; and the necessity of taking land titles in severalty has been unpleasing to some who adhere to the plan of community holding. But we do not suppose these to be anything more than temporary and inconsiderable matters, which with good counsel from those who have proved themselves friends of the colonists, and quiet and tactful management by the Canadian officials, will in due time be smoothed out. We have no idea that the Canadian Government will take seriously these ripples in the current of affairs. The Doukhobors are strangers; they have entered upon new conditions; their views are earnest and sincere; but they wish to do what is right according to the Christian code, and it is certain that with patience and tact any differences over mere administrative details can be in good time adjusted."

## THE "CHRISTIAN ISRAELITES."

THE East Side of New York is well known to be the gathering-place of a large number of interesting and unusual creeds, both political and religious. Here all advanced beliefs are in favor, and various schools of socialism, and of its philosophical antipode anarchism, flourish like the green bay-tree. One of the most singular of these little-known faiths is that of the Christian Israelite Church, whose only place of worship is a small building at 103 East First Street. A student of East-Side life thus writes of this denomination in the New York *Commercial Advertiser*:

"One of the distinctive peculiarities of the doctrine of the Christian Israelite Church is its combination of the beliefs of the Jewish and Christian faiths. All the Hebrew ceremonial concerning purification of meats and of washing and ablutions are strictly adhered to by the modern Israelites, and one of its most strict requirements of believers is that no razor shall come upon their heads. The matter of sacrificing animals is eliminated from the ceremonial. On the other hand, the Christian Israelites are emphatic in their belief in Christ as a Redeemer, and on all points of orthodox [Christian] faith they are eminently sound. The mixed character of the belief of this church may be seen from the fact that acceptance of the four [*sic*] books of Moses and of the four gospels are necessary to membership in the church. But it is in their belief as to how things are going to be arranged during the millennium and afterward that the Christian Israelites are unique. They believe that 144,000 'immortals' are to be in charge of matters on the earth during the millennium, which is to begin within the present generation, some setting the date as early as 1917. The favored 144,000 will rule the earth, judge those who have already departed this life, and endeavor to convert those still living. As many as accept the opportunity will be permitted to retain their bodies, but must be subject to the 'immortals' throughout eternity. Those who do not take advantage of their last chance may never have their bodies, but must forever be spirits. So also must those who have died before the millennium, and those who have died in their sins be relegated to a still lower estate, becoming of the last order of creation. There are to be none lost absolutely, and one of the believers in the faith ventured the hope that somewhere in the æons of the future God might find some way to permit mortals to become immortals and the disembodied to resume their bodies.

"The denomination started in England in 1792 by the preaching of Joanna Southcot. She was followed in 1822 by John Wroe, whose last utterance in 1869 is regarded by the church as the last revelation from God. A symbolic half hour or forty years of silence has been over the church since, but it is expected that it will soon be broken by another revelation. In 1830 the Christian Israelite doctrines were first preached in this country, and the church in this city was erected in 1852. There are representatives of the faith in some eighteen or twenty States of the Union."

## DR. BRIGGS ON CHRISTIAN IRENICS.

DR. CHARLES A. BRIGGS, who has an international reputation not only as one of the leading American exponents of the higher criticism, but on account of his trial for "heresy" in the Presbyterian Church a few years ago, in a recent article defines irenics as "that theological discipline which aims to reconcile the discordant elements of Christianity, and to organize them in peace and concord, in the unity of Christ's church." Irenics is, he says, the antipode of controversy or polemics, with which the Christian church has mainly been occupied during its nineteen centuries of life, and is "the modern culminating discipline" to which all religious forces contribute their noblest results, the apex of the pyramid of Christian theology, to which all the lines of Christian scholarship and Christian life tend, and in which they ultimately find their highest end and perfection." In the New York *Churchman* (Prot. Episc., March 16) he writes:

"Polemics has its limitations. It battles for the denominational or sectarian institution and dogma as the indubitable and the final statement, and with a determination to destroy all that is discordant therewith. It has little, if any, interest in the historical origin of those institutions or dogmas. It is regarded as disloyal to subject them to any kind of criticism. It is counted as downright treason to propose new and better statements.

"Irenics, on the contrary, searches all the statements thoroughly. It must know exactly how they came into historic being; for only so can it determine how much of them was the genuine and necessary product of Christianity, and how much was due to human frailty and ignorance, or to unchristian motives and influences. It must study the history of the statements in their use in the church; for only so can one go back of the traditional interpretation which usually drifts from the original sense through change in the meaning of the words, the unconscious adaptation of old terms to new situations, and the continuous reconstruction of dogma in the treatises of the theologian and the homilies of the pulpit. Irenics is not content with these discordant statements as they are. It can not say: This one is altogether true; the others are altogether false. It must put them all alike into the fires of criticism, testing them in every way, to eliminate the dross of error from the golden truth, confident that truth is indestructible and imperishable. It tests them by Holy Scripture, by the reason, by Christian experience; as well as by the decisions of the church in their original sense."

There are several tasks to be accomplished by irenics, says Dr. Briggs, the chief work being a determination of what are the essentials of Christian belief, organization, and practise, as shown by a study of all creeds and Christian bodies. He continues:

"Truth is given to mankind only gradually. He has to learn it little by little in the progress of his education. So nations and races are educated step by step in the progress of the centuries. All institutions, all knowledge, all things living, all religions undergo this heavenly discipline; for the history of mankind is the divine education of our race. When Jesus promised His disciples that the Holy Spirit would lead them into all the truth, He did not mean that the Holy Spirit would lead the apostles into all the truth and leave that truth as an infallible deposit in the church to which nothing could be added in knowledge and statement. The Holy Spirit did not guide the ante-Nicene Church until the Nicene Creed was given as the final statement of the Christian faith, and then leave the church to itself to work out the hardest problems of Christianity. He did not cease His guidance at the Reformation. He did not give His last word at the Synod of Dort, or in the Formula of Concord, or to the Westminster Assembly, or through the Book of Common Prayer, or at the Council of the Vatican. He has not left the Christian world in a chaos of discordant theologies with the alternative of submission to an infallible pontiff. There never was a time when the Holy Spirit was more needed by Christians than in our

age, and there never has been a time when the divine Spirit was so operative as in this age of transition. All things are heaving and tossing in the throes that will surely give birth to a nobler, grander Christianity. The Church of Rome recognized this when it stated the new dogma of an infallible pontiff to guide the church of the present and the future. However much formal error there may be in this new dogma, it yet honors the divine Spirit as the present guide of the church, speaking infallibly through its supreme head. It puts to shame that Protestant scholasticism which has, so far as it could, pushed the Holy Spirit out of the church by its insistence upon an irreformable system of dogma. An irreformable dogmatic statement in the present time, even if given by the Pope, is presumptively of more value than an irreformable dogmatic statement of the sixteenth or seventeenth century, pronounced by any assembly of divines or the decisions of any council, however venerable. In fact there can be no irreformable dogma in any age. All dogma is reformable, and must be reformed in the progress of the church as she advances under the guidance of the divine Spirit toward the ultimate, the all-comprehending and all-satisfying truth."

We possess a few documents for which there is even now, Dr. Briggs points out, a consensus among Christians, such as the Ten Commandments, the Lord's Prayer, the Apostles' Creed, and the Nicene Creed, all composed before the fifth century, before the forces of disintegration and dissension had begun to manifest themselves strongly in the Christian church—for the Arian movement did not bring about a permanent and important schism, and gradually faded away after the adoption of the Constantinople symbol in A.D. 381. But more modern statements of belief, because not made or agreed to by the whole Christian body of believers, have been limited, unsatisfactory, and divisory, and they are everywhere throughout Protestantism being cast aside as inadequate; while movements for revision and new creeds everywhere persist. Dr. Briggs continues:

"It must be evident to any one who knows the currents of thought which have been working during our century and which are now working still more powerfully, that in a very few years not a single Protestant confession of faith or catechism will retain binding authority in any denomination. There is, in fact, no alternative between a rally on the Nicene Creed as proposed by the Chicago-Lambeth Conference [the proposals by the Anglican bishops for a basis of union for all Christians in the Scriptures, the Apostles' and Nicene Creeds, and the 'historic episcopate'] or about those new statements of faith which other communions are seeking. Therefore no discipline is so much needed as that of irenics, which rises above all denominational partizanship and sectarian bigotry, and seeks solely and alone 'the truth, the whole truth, and nothing but the truth,' for therein alone is peace and unity."

---

**Is the Golden Rule a True One?**—In connection with the recent discussion of Huxley's beliefs stirred up by the publication of his "Life and Letters," a writer in the St. Louis *Mirror* gives the following excerpt from his "Evolution and Ethics" concerning "The Golden Rule":

"Moralists of all ages and of all faiths, attending only to the relations of man toward one another in an ideal society, have agreed upon the 'golden rule.' 'Do as you would be done by.' In other words, let sympathy be your guide, put yourself in the place of the man toward whom your action is directed, and do to him what you would like to have done to yourself under the circumstances. However much one may admire the generosity of such a rule of conduct; however confident one may be that average man may be thoroughly depended upon not to carry it out in its full logical consequences; it is nevertheless desirable to recognize the fact that these consequences are incompatible with the existence of a civil state, under any circumstances of this world which have obtained, or, so far as one can see, are likely to come to pass.

"Strictly observed, the 'golden rule' involves the negation of law by the refusal to put it in motion against law-breakers; and, as regards the external relations of a polity, it is the refusal to continue the struggle for existence. It can be obeyed, even partially, only under the protection of a society which repudiates it. Without such shelter the followers of the 'golden rule' may indulge in hopes of heaven, but they must reckon with the certainty that other people will be masters of the earth.

"What would become of the garden if the gardener treated all the weeds and slugs and birds and trespassers as he would like to be treated, if he were in their place?"

---

## PROS AND CONS OF THE "AWAY-FROM-ROME" MOVEMENT.

THE "Los von Rome" agitation in Austria continues to call forth bitter charges and counter-charges. According to the official organ of Protestantism in Austria, the *Evangel Kirchenzeitung*, the movement, especially in the provinces in which Germans predominate, has shown a steady progress in recent months, and, starting originally as a political movement, has become a purely religious and ecclesiastical agitation. The ten thousand converts called for by Representative Schönerer have long since been secured, it is said, and the number is now nearly twenty thousand, of whom nearly three-fourths have connected themselves with the Protestant churches and one-fourth with the Old Catholic, only a handful refusing to affiliate with either communion. Within the last two years forty new preaching-places have been established, twenty-one Protestant churches have been dedicated in Roman Catholic districts, eighteen such churches are now in process of being erected, and twenty-nine others are in contemplation. Forty-three new pastorates have been established.

The *Chronik* (Protestant, Leipsic) is disposed to consider the above estimate of converts as too high, and concludes that the total is now about fifteen thousand, of whom four thousand have become Old Catholics. The venerable Catholic poet Rosegger, who in his literary monthly, *Der Heimgarten*, expresses warm sympathy for the movement, yet declines to sever his connection with the Roman Catholic Church, contenting himself with the demand that the church shall grow in spirituality. One peculiar phase of the movement has been the establishment of the "Church of the Savior" in Mürzzuschlag, in which there is to be Protestant preaching, but which in its service and decoration has retained many of the peculiarities of the Roman Catholic Church, among these being a magnificent picture of the Madonna.

The prelates of the Roman Catholic Church have recently inaugurated a counter-agitation, in which they are energetically aided by the Government. The *Korrespondenzblatt*, the official organ of the Roman Catholic clergy, calls the "Away-from-Rome" movement a "pillage crusade [Raubzug] of the Protestants," which has succeeded by political machinations and because of religious indifference of the people in estranging several thousand Roman Catholics. Immense sums of money, so it charges, have been used in the interests of this propaganda. More severe are the words of the *Hausfreund*, a German-Bohemian paper of influence, which says: "The purely human faith of a Luther, who was an escaped monk, and had broken his most sacred vow and induced others to do the same, and even led astray a nun and married her, and was a teacher of immorality and turned the word of God upside down—this is the faith that is here offered in the place of the Catholic!" Dr. Schöbl, bishop of Leimeritz, in his diocesan letter, says:

"And what are the means resorted to in order to win people for these erroneous doctrines? Pamphlets without number, filled with bitter assaults on the Catholic Church, are scattered broadcast by colporteurs in public places and in houses, while foreign and non-Catholic preachers have systematically carried on a crusade in Catholic districts, and money in great abundance has been brought in from other lands for this purpose. The battle of 'Away from Rome' has indeed inflicted some wounds in this diocese, but has no great victory to rejoice over."

The highest Roman Catholic authority in Austria, Cardinal

Gruscha, of Vienna, recently addressed these words, as reported in the *Reichspost*, to the church:

"Let us cooperate in the future as in the past, for the agitation for freedom from Rome and from the Pope is really a movement for freedom from Christ and is a rebellion against Christianity. It is the watchword of antichristianity, in which not only non-Catholics, but also former Catholics who have become unfaithful join."—*Translations made for* THE LITERARY DIGEST.

## QUEEN VICTORIA AS THE CHIEF PATRON OF RELIGIOUS TOLERATION.

ONE great movement which distinguishes the past half-century in England is that toward entire toleration of all forms of religious and non-religious thought. How far the late Queen was related to this movement has not hitherto been widely noticed. A high tribute to her beneficent influence in this direction, however, is paid by an English Freethinker, Mr. C. E. Plumptre. This movement, he affirmed, "is more directly connected with the Queen's personal influence than the majority of the other great movements of the age." Writing in the London *Literary Guide* (Free-Thought, March 1), he says:

"It is true that the times were ripe for the movement; that liberty of thought, or, at all events, agitation for liberty of thought, had commenced before the Queen's succession to the throne. But I believe that it is largely due to the Queen's personal example that the victory has been achieved, comparatively speaking, with so little friction. Strict, even to the point of severity, toward any lapse of morality, the Queen succeeded in rendering her court pure and refined. Had she been of narrow, bigoted views, it would, I believe, have been almost inevitable that she would have surrounded herself with the dogmatic retrograde element so unhappily associated with narrow religious opinions. The atmosphere of her court would have been tainted with all those unlovely qualities that we have been taught by unhappy experience to connect with those who worship the letter rather than the spirit, who give greater honor to orthodoxy in dogma than to nobility of character. This wide toleration on the part of her Majesty for all forms of creed, so long as they bore the fruits of a good life, is the more remarkable inasmuch as the Queen, unlike one or two of her own daughters, has never been reputed to have held any very advanced religious opinions herself. Brought up in all the pious orthodoxy of the earlier portion of the nineteenth century, she probably received a certain widening influence from her marriage with an enlightened, tho naturally religious, German prince, interested—after the fashion of enlightened Germans—in all questions bearing on philosophy and metaphysics. Her friendship with Lady Augusta Bruce, afterward the wife of the liberal-minded Dean Stanley; her known admiration for Tennyson's poems, and her subsequent friendship with the poet himself; her intimacy with Charles Kingsley and Norman Macleod—all served to increase this widening influence; so that, in religious dogma she seems to have taken a slight coloring from the movement known as Broad Church—a movement, I think, more prominent in the middle of last century than toward its decline. In matters pertaining to ritual her Majesty's tastes lay on the side of extreme simplicity. Of all forms of Christianity that flourished freely throughout her dominions, the Tractarian and Ritualistic were probably those that had the least personal attraction for her. Moderately Broad Church in dogma, she seems to have been somewhat of the Puritan in taste; and it is impossible to doubt, alike from her published journals and from her personal habits, that in what are called the 'essentials' of Christianity she was a sincere believer. . . . . .

"Her Majesty taught by personal example that honesty in conviction is not incompatible with justice toward those of opposed convictions. She did not think with us, yet she bestowed not only toleration, but special honor, upon our more distinguished representatives. It could have hardly been, save with her permission, that the present King publicly unveiled the statues of Darwin and Huxley.

"The more striking events of a reign are not always the most far-reaching in their results; and it may be that, when the Victorian era comes to be investigated by future generations, the dazzling accumulation of wealth, the vast expansion of empire, will be proved to have been less productive of permanent good than her Majesty's own example of unobtrusive religious toleration."

## IS A "CHRISTIAN THEATER" POSSIBLE?

THE Rev. Charles M. Sheldon, through his experiments with the Topeka *Capital* last year, is already well known as an upholder of a new type of daily "Christian journalism." One of the criticisms made concerning his attempt was that during his week of editorial management he wholly ignored the dramatic field, apparently deeming it too much given up to the devil and all his works to deserve Christian notice. Mr. Sheldon, however, evidently believes that the theater is, as he has shown the novel to be, a possible means of religious teaching. "The whole question of the theater," he writes, "has raised in my mind the possibility of a school for Christian actors and for Christian playwrights and Christian managers—in other words, a distinctively Christian theater where men and women of consecrated, devout, earnest Christian character would act only good plays." The stage at present, in Mr. Sheldon's opinion, is one of the chief demoralizing forces of society, and is largely given up to themes of "infidelity in the family life, duels, revenge." Yet the histrionic passion of the human race seems to be born with it, he says, and the church will do well to take cognizance of this fact. Writing in *The Independent*, he says:

"Humor that is sweet and wholesome is as much a part of life as tragedy; and if it is true, as most theaters confess, that the majority of theatergoers, especially among the young people, go to the play to be entertained and amused, then it would be true in a Christian theater that plays written for the purpose of making people laugh, in sending them away with sweet and wholesome images of what they had seen and heard among things that were funny, would be a distinctively Christian thing to do for large numbers of people who often grow very tired and weary in the great struggle for existence in the great cities, and need the rest and refreshment that comes from wholesome fun.

"I can not answer exhaustively my own question, Is a Christian theater possible? At the same time I do not see anything impossible in men and women being trained in the future, some time, to exercise their histrionic gifts for the purpose of making life sweeter, happier, stronger, and distinctly Christian. At present I am one of a good many ministers who can not, with safety to their own people and their influence over them, attend the theater at all, and while not condemning it absolutely, and while not calling all its work bad or demoralizing, I am not able to avoid the conclusion that at least half the plays which are at present put upon the stage in the great cities are not helpful to the Christian life of those who attend them. I do not see any prospect of a change for the better until we have established a school for Christian acting, or even founded a theater, which shall be as distinctively Christian in its purpose, in its financial management, and in its entire life, as the most Christian home or church that we now possess. That this is within the reach of possibility I believe, because I believe in the elevating power of Christianity over all things that belong to humanity. The histrionic passion is a part of life. If it can be ministered to through a Christian channel, there is no telling what wonderful impulses might be set in motion, or what influences upon conduct and character might be permanently established."

## RELIGIOUS NOTES.

AFTER the alleged experience of Canada with the Doukhobors, Americans will probably not be elated to hear that the Molukanes, another Russian sect, residing in Transcaucasia, wish to come to this continent. They number about 50,000, according to *Consular Reports* (March 18), and are moved to emigrate on account of increased taxation and lack of land.

THE national congress of the Disciples of Christ, lately held at Lexington, appointed a committee of seven to take charge of a movement in behalf of an international confederation of religious denominations. According to this scheme, the different religious bodies are to retain their own creeds, but will be auxiliary to an international congress and will affiliate with all other churches on a common platform. The ultimate aim is to create one international church. This movement is the first of its kind in America, and is in line with the widespread tendency toward church federation and church unity, and with the rapidly growing spirit of internationalism in literature, social reform, and art.

# FOREIGN TOPICS.

## A DEFENSE OF RUSSIA.

DENUNCIATION of Russian political methods and social customs is very general in Europe, but a defense of the Russian Government appears in a recent issue of the *Handelsblad* (Amsterdam). In a series of articles entitled "Russian Impressions," a Dutch writer, named Van Oss, says:

"There are probably but few people who enter Russia without a certain feeling of dread. There are Nihilists in Russia, and you must carry a passport. The government is an autocracy, and the traveler has heard of ukases, the knout, and Siberia. A

PAWS OFF!

*Punch.*

short time in Russia is sufficient to dispel your fears. The passport system turns out to be a harmless formality, and the officials are found to be polite. The stamp on your passport guaranties you, at a minimum cost, free treatment in one of the excellent Russian hospitals, and you find that it is not a disadvantage to be able, with the help of the police, to find persons you are looking for. Many of the stories of Russian officiousness should be received with great caution. It may happen that one gives a tip to an official who is willing to oblige after office hours, but even outside of Russia the police are sometimes willing to receive tips. Russian conditions are often different from Western conditions, but they are not necessarily worse."

Russia has a real constitution, continues this writer:

"In theory, the Czar can do as he pleases, but, even in more Western countries, 'the king can do no wrong.' In reality, the Czar is conspicuous for his respect for the law, and so are his ministers. Nearly everything is regulated by law, and the administration of justice is both good and cheap. Even Peter the Great began to curtail his own authority by formulating laws with the help of the best legal talent in Europe, and Catherine II. continued the work with the help of a commission, saying that 'political freedom is based upon security. It is necessary that one citizen should not fear the other, but that both fear the law.' Nicholas I. completed the code in 1832, but no country is so ready to adopt beneficial regulations from abroad as Russia. . . . The laws are made by the imperial council, which may be called the Russian parliament. True, it is not chosen by the people, but appointed by the Emperor; but, until the people are better educated, elections would be merely a farce, and, altho King Demos is not consulted, the council is progressive and even democratic. The council is formed by ex-ministers of state, heads of government departments, and other persons who have distinguished themselves. High connection is not at all a necessary qualification, nor is wealth necessary. The present system is such that no man of talent is prevented from rising. Witte, the present Minister of Finance, and certainly one of the most influential statesmen in Russia, was a station-master on a railroad only twelve years ago. His talents and industry alone enabled him to rise. Prince Hilkoff, tho of a very old family, was formerly an employee of an American railroad company, and began as a simple engineer. Yermolloff, the Minister of Agriculture, also began very humbly, and the list could easily be extended. It would seem, indeed, to be part of the Russian system to renew the governing classes continually from the people, and to raise democratic elements to power."

Says M. Van Oss, in conclusion:

"When autocracy is progressive and elastic, when it understands and provides for the needs of the people, as it does in Russia, there certainly is no occasion to demand democracy. Russia is governed in accordance with Russian needs. When Ivan comes of age intellectually, he will, doubtless, be allowed greater say. He will get a democratic parliament, ministerial crises and other blessings. Whether he will be more happy is a matter open to doubt."

The imperial ukase abolishing exile to Siberia, which took effect on January 14, the Russian New Year's Day, was due, in large measure, to the humanitarian ideas of the Czar, but not (as W. T. Stead points out in *The Review of Reviews*, London) in the sense in which the Anglo-Saxon world understands this. Commenting on the ukase, Mr. Stead says:

"It was the interests of the peaceful inhabitants of the country, primarily, and not the interests of the convicts, which led the Czar's commission to conclude that the abolition of exile could not be longer delayed. The criminals, henceforth immured in Russian prisons, will probably regret the comparatively free, tho shiftless and miserable life they had led in Asia. It is the industrious peasants who will gain. Of 300,000 exiles, M. Salomin [president of the commission] found that 100,000 were vagabonds, another 100,000 a homeless proletariat, while only 30,000—a tenth of the total—were settled agriculturists. Not more than 4,500 had a chance of final assimilation with the non-criminal population. The great majority of the exiles were in the end driven to prey on the peaceful population."

In a review of the national internal development of Russia in the nineteenth century, the *Russki Vestnik* (Moscow) considers the degree of progress made in religious tolerance in the empire since 1800. Says this journal:

"The opening of the nineteenth century brought the first glimmer of real religious toleration. There is a deep significance for the present day in the ukase of November 27, 1801, in which we find the following: 'Reason and experience teach that the spiritual error of a simple people is only deepened if attacks are made on it by controversy and ecclesiastical admonition; but that, under the influence of a good example and a toleration that imposes no conditions, this error is obliterated by degrees and finally disappears. . . . The admonition of the Doukhobors must never take the form of a trial, a controversy, or an assault upon their convictions; it must proceed from spiritual "politeness," must take into account their methods of life, and must seem unpremeditated and unaffected.'"

The principle set forth in this ukase, says the *Vestnik*, was firmly believed in by the Emperor Alexander I., "who permitted the sects to remain unmolested, allowed them to have their own churches, and compelled their ministers to keep parish registers." Very little progress was made during the reign of Nicholas I., but the general privileges of the sects were confirmed by the law of May, 1883. The reaction soon began and reached its culmination in 1894, when the Stundists were forbidden to assemble for worship. The question of "confession," concludes

the *Vestnik*, remains practically the same as at the beginning of the past century. "The fact that one parent belongs to the Orthodox Church determines that the child shall also, by law, be regarded as an adherent of the Orthodox faith."—*Translations made for* THE LITERARY DIGEST.

## A FRENCHMAN'S ANALYSIS OF THE ENGLISH CHARACTER.

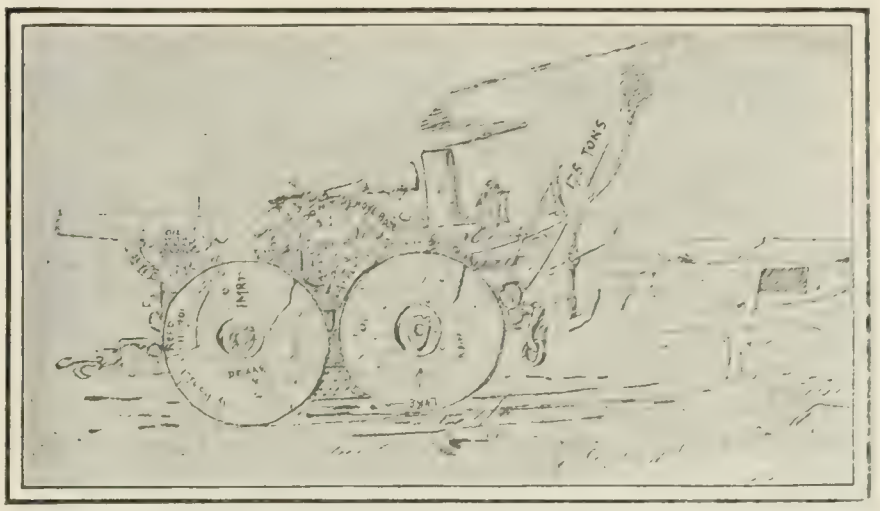
THE Englishman accomplishes more and "gets there" more frequently than the continental European because he not only works for a definite result, but he enjoys the working. The taste for action, for the action itself, independently of the result sought, is one of the dominant characteristics of the English people; it satisfies an imperious need of their nature. Such is the conclusion reached by Emile Boutmy (of the Institute of France), who has just published a book entitled "An Essay on the Political Psychology of the English People." M. Boutmy, following the method inaugurated by Taine, looks for the explanation of the genius and methods of the English political system in the life and character of the English people. A study of the general psychology of a people, he says, must precede an inquiry into the psychology of their politics. He finds two dominant traits in the English character: the love of action for itself, already mentioned, and a repugnance to theory and system, a difficulty in "forming and conceiving abstract ideas and generalities." Geographical, climatic, and racial conditions have combined to produce these characteristics. They are fundamental in the race, says M. Boutmy, and they color the Englishman's whole view of life.

An analytic review of M. Boutmy's book, by Pierre Leroy-Beaulieu, the well-known French political economist, and one of the comparatively few outspoken friends of England on the Continent, appears in the *Économiste Français* (Paris). M. Leroy-Beaulieu says, speaking of these dominant traits in the English character:

"In those countries in which a prodigal nature gives to man strong and varied impressions, he looks upon nature herself as the essential fact and considers himself as simply a molecule of the grand whole. The Englishman, on the other hand, ascribes to himself the world of nature, which gives him only feeble impressions and much trouble, and outside of which, independent of it, he exists; he looks upon the world as an arena in which to exercise his activity even as a potter molds the clay. . . . Metaphysical speculation has no charm for the generality of Englishmen. In his religion, the Briton looks only for a guide to his will (volition), and he finds this in Protestantism, especially in the advanced sects (toward which all the more active, energetic Englishmen are tending), which exert a profound influence upon the national spirit. The doctrine of justification by faith, which is so dear to the British mind, and which stands opposed to justification through works, covers up the national pride with humility. . . . But once having confessed the insufficiency of human reason, this faith brings about an alliance of man with God, it changes the aspect of everything, it sets aside the 'vain qualification of works' to give place to the general qualification of the volition and the conscience. Those who believe are the chosen people, they are permitted to act freely, fully, not troubling themselves with any fear of sin. This explains, to a great extent, the 'English arrogance' and also much of the English brutality to other peoples."

BRITISH LION: "I wish I could get rid of these confounded fleas."
—*Owl, Cape Town.*

The insular position of England, says M. Leroy-Beaulieu, has tended to make the Englishman himself "insular"—proud, unsociable, fond of adventure. The English spirit of adventure can not be traced to a desire for novelty, but to the characteristic already predicated of the race: a love of action for action's sake—"the desire to work its will freely for the joy of the working." This love of action is plainly evident, he declares, in the English politics, which are "full of activity and tumult":



A CARTOON BY RUDYARD KIPLING SATIRIZING THE BRITISH PURSUIT OF DE WET.
—*Illustrated London News.*

"Everywhere the leagues, the meetings, the manifestations, where the innate brutality of the race comes to the surface and gives itself free course; but we must not be surprised, for the man works, he satisfies a need, he gains the most essential of his pleasures. He does not expect to realize the result at which he aims to-day or to-morrow, but he has had the opportunity to 'object' freely."

Governments are short-lived in England, he continues, because English political parties do not concern themselves with loyalty to a principle:

"The predominance of the principle of action soon results in two contending armies, which change their ground to suit the occasion, when they believe they can thereby increase their chances of victory. . . . A too strict party adherence to doctrine, a too resolute loyalty, would be an obstacle to the proper play of parliamentary forces. If there is too strong an attachment to doctrines, it will be impossible to form great, homogeneous parties; if these should split up into groups and sub-groups, there could only be governments of coalition, without unity of opinion, without cohesion."

The English, the writer says, are *androlatrists*—manidolaters:

"The parties pay but meager attention to doctrines, and form two armies; the men, the chiefs, *the chief* in particular—these are of supreme importance. . . . The nation falls in love with a man; in general, it falls in love with him because of his energy, his activity, and the 'ease with which he does things.' He is given considerable leeway. How many of England's great statesmen have completely and suddenly changed their views in the full swing of their career! The people pardon many faults in their public men because they are always looking at the power, the will, the activity of these men. This *androlatry* has its advantages, and also its dangers. England was enamored of a Peel, a Gladstone, and a Palmerston. . . . In her latter days she is charmed by a Chamberlain."

During the reign just closed, says M. Leroy-Beaulieu, England has been the admiration and envy of the entire world. She has

compelled the respect and esteem of all who are not blinded by passion. She has been found on the side of justice and liberty in almost all the great problems which have pressed for settlement in the nineteenth century. But she must beware. "The exaltation of the naked will may change or atrophy all other faculties, and the delight in action is likely to result in stupid brutality." "England seems to forget that a people may remain quite energetic, and yet fall into decadence. Spain stands as a witness that this is a fact."—*Translation made for* THE LITERARY DIGEST.

## GERMANY'S INTEREST IN AUSTRIA'S DECLINE.

PAN-GERMANISM, as outlined in the recent speech of Dr. Kramarz, leader of the Young Czech party in the Austrian Reichsrath, is now regarded by the continental European press as the imminent danger to the dual monarchy. Dr. Kramarz, in speaking of Austro-German relations, read from a confiscated pan-German pamphlet entitled "Austrian Disintegration and Reconstruction" the following extract: "The Austrians will scarcely be able to subjugate the Czechs without foreign assistance. Yet the main difficulty in the way of all organization among them is the necessity of rendering innocuous this thorn in the flesh." The Czechs, said Dr. Kramarz, have long been aware that they are a thorn in the flesh; they realize that they hold a Slav outpost which it is very hard for a small nationality to defend against superior numbers. They will continue to stand for autonomy, but are not blind to the fact that the empire must be preserved, if for no other reason, to check pan-German ambition. They will not compel the empire to call in foreign assistance. The union of Germany, continued Dr. Kramarz, with the so-called German provinces of Austria, "which is the pan-German dream," would mean the creation of a German empire extending from Hamburg to Trieste. "This would make Germany the greatest of the world powers and destroy the balance of power in Europe. In opposing this, the Czechs of Bohemia are not merely fulfilling a national duty, they are at the same time acting as the guardians of European equilibrium." The pan-German settlement of the central European problem, concluded Dr. Kramarz, would put the Czechs under the same régime as the Poles in Posen are made to bear, and to this "we will not submit." The *Journal des Débats* (Paris), in commenting on this speech, declares that the pan-German desire to be ruled only from Berlin instead of, as heretofore, from Berlin and Vienna, would make Germany the mistress of central Europe and "give her political and commercial predominance over the Balkans and Asia Minor." The union of Germany and German Austria would relieve Germany of her agrarian problem for years to come and would give her a great advantage in her economic struggle with France and the United States. The same journal says further:

"From the moment Austria (without Galicia, for the loss of her Polish province would be inevitable) became joined to the German empire, she would find herself an underling of Prussia, just as Bavaria now finds herself. Indeed, the Berlin Government would then be mistress of the commercial legislation, of the posts, telegraphs, telephones, and railroads of all central Europe. Germany would at once unify as solidly as possible all tariffs and business regulations. She would unite in one great system the canals of the Elbe, the Oder, and the Danube. German Silesia could send her products direct to the Orient by one water route. This would mean commercial supremacy in the Balkans, in Turkey, and in Asia Minor."

Let the Hapsburg dominion break up, says *The Spectator* (London), in much the same vein, and Germany becomes "arbitress of the European continent." The *Kreuz-Zeitung* (Berlin) fears that Germany will be drawn against her will into Austria's home quarrel. "If the many millions of Austrian Germans ask for help," it says, "it will be difficult to refuse."

Speaking of the general belief that the Austrian empire is held together principally by loyalty to and affection for the Emperor Francis Joseph, Sidney Low (writing in *The Nineteenth Century and After* for March) declares that it is not only the Emperor's personal character but his abilities that give him his power. As a master of statecraft, the Austrian Emperor has few equals. Mr. Low continues:

"Silent, reserved, egotistical, with few friends and no confidants, he has shown himself a very Odysseus, *πολύμητις*, many-wiled, much-enduring, among the monarchs of the world. Somehow he has kept the loose bundle of sticks together; and if it is beyond his power, and beyond the power of any man, to solve the insoluble problem of making a nation of such a 'geographical expression' as Austria, he has at any rate gone nearer to success in this labor of Sisyphus than seemed possible when the Magyar columns were on the march for Vienna. When he dies, the cataclysm, as many men expect, must come. But if so, all the more astonishing are the tact, the statesmanship, the mingled firmness and judgment, which have postponed the inevitable for over half a century. It is the personal influence of Francis Joseph, and practically nothing else, that unites the dual monarchy. . . . No one is greatly concerned when a Premier, after a brief and wrangling session, follows his cohort of short-lived predecessors into retirement or opposition. The Emperor-King, it is felt, is the real Prime Minister, and he can be relied upon to see that the government is carried on, and that the noisy politicians of Vienna and Pesth do not too seriously endanger the common weal. Here, assuredly, it is the King who governs as well as reigns; and under the forms of constitutionalism Kaiser Franz Joseph exercises a more genuine control over public affairs than the majority of his autocratic ancestors. The lumbering and cranky machine jolts along, kept from toppling over by that steady hand upon the lever."—*Translations made for* THE LITERARY DIGEST.

## THE GREAT DOCK STRIKE IN MARSEILLES.

THE strike of the dockers and shippers at Marseilles has become one of the dominant subjects of discussion in the French press. An interpellation in the Chamber of Deputies has brought out the fact that the Government intervened to prevent what the Premier referred to as "grave international complications." The strike began upon the refusal of the shipping concerns of Marseilles to accede to the demand of the laborers for shorter hours and larger pay; but the situation is "rendered chronic and much aggravated," says the *Temps* (Paris), by the socialists, who are "guiding the strikers and inciting them to hold out for a new heaven and a new earth, to be achieved by the confiscation of private property." The tramway employees have joined the strikers, and rioting and violence are terrorizing the city, the trade and business of which, says the correspondent of *The Standard* (London), is completely paralyzed. The immediate occasion of the rioting was the publication by the "International Syndicate" (an organization employing French, Italian, and German laborers) of a manifesto announcing that the shipping companies were employing only a few Italians and giving the preference to French laborers. This incited the Italians to violence. In sending troops to the scene, the Government pointed out to the shipping companies and the strikers that a general strike would be disastrous not only to the port of Marseilles but to the industries of the entire Rhone Valley and to Northern Italy. This would cause international complications and would interfere with important strike legislation, which the Government is now in process of formulating. The *Temps*, in a severe condemnation of the "agitators who are keeping the strike alive," says: "The Marseilles strikers are not simple strikers. They are revolutionists. They are not seeking to improve their relations to the employers, their material or moral condition in

society. What they desire is to do away with employers, to abolish society as at present constituted, and to start the social revolution."

Why has France become the country *par excellence* of strikes, asks Paul Leroy-Beaulieu, in the *Economiste Français* (Paris)? This question he answers by asserting that the present French ministry is directly and wholly responsible, since the presence in the cabinet of M. Millerand, an avowed socialist, is a "constant incitement to violence." M. Millerand, continues M. Leroy-Beaulieu, is the "open enemy of private property, of private capital, the resolute advocate of the socialization of all production. . . . There is no other country in the world where we find such a phenomenon as a collectivist, avowed and militant, taking part in the government, dominating the departments of commerce and industry, preparing all the laws, and presiding at the passage of all measures which should be submitted to merchants and tradesmen." The *Journal des Débats* (Paris) declares that the inaction of the Government in the matter of the strike has amounted to actual complicity with the strikers. Henri Rochefort, in his radical paper the *Intransigéant* (Paris), defends Millerand and declares that M. Waldeck-Rousseau, by his pro-Dreyfus, anti-Catholic, pro-foreign attitude is responsible for the present strike, as he has been for fourteen hundred other strikes since his accession to power. "The international sentiments of the present cabinet," M. Rochefort concludes, "are of the same caliber as its anti-religious views. It regards as perfectly proper that Italians, Maltese, and Spaniards should be favored above Frenchmen in our country, and would even deprive us of the right of protesting against English occupation of the Transvaal." The reference to Italians, Maltese, and Spaniards is inspired by reports that shipping concerns of Barcelona, Genoa, and Malta are profiting largely by the paralysis of trade in Marseilles.—*Translations made for* THE LITERARY DIGEST.

## MEXICO'S STEADY PROGRESS.

ALTHO there is no Mexican statesman quite equal to the task of taking up the work of President Porfirio Diaz, says *The South American Journal* (London), yet so enduring and well established is this work that, in the event of Diaz's death, the constitutional machinery (as understood in Mexico) would continue to operate without a hitch. Mexico to-day, says this journal, is by far the most attractive country in all Spanish America.

Altho Diaz is an "absolute dictator masquerading as a constitutional ruler," says the City of Mexico correspondent (a Mexican) of *The Commercial Advertiser* (New York), he has been a great blessing to his country. Mexico needs a strong arm to govern her. A glance at the gallery of portraits of Mexican presidents will show that the country has had strong men at the helm almost ever since she became a republic. The writer continues:

"It takes but a few moments' contemplation of this array of faces to produce in the foreigner a greatly increased respect for the Mexican people as a nation. No thoughtful man can leave that gallery of portraits without thoroughly realizing that here is a great nation, a distinct nation, a nation with a remarkable and strenuous history, a nation which has been ruled successfully only by men of the strongest character and heroic attributes. The turbulent and distressing periods of Mexico's national life can be pointed out in this portrait gallery by selecting the faces of weak or venal men. The periods of peace, prosperity, and national pride are written between the dates marking the beginning and end of the administration of those whose faces show strength, character, and purpose. Not one among all these faces is more admirable in its qualities of strength, reliability, and loftiness of purpose than that of President Porfirio Diaz, the present ruler of Mexico and the author of her greatest prosperity."

Mexico is becoming slowly but surely a world nation, declares the *Union Ibero-Americana* (City of Mexico). The Nicaragua Canal discussion has been listened to in the republic with eager attention, and the next Mexican congress is likely to take official part in the Far-Eastern question, as Mexico has a growing interest in China and outlying Asia.

## CANADIAN COMMENT ON THE CAPTURE OF AGUINALDO.

THE press of the Dominion generally looks upon General Funston's exploit in capturing Aguinaldo as anything but honorable or worthy of reward. The method of the capture, says *Events* (Ottawa), was thoroughly American:

"He was not taken by force of arms, or in any manner which reflects credit on the American army, but by a trick, the only means by which the Americans ever win anything. We, who live beside them, and have had many dealings with them, know how utterly unscrupulous they are. By the use of false maps, mere forgeries, they did us out of the State of Maine, which rightly belongs to us; and it ought not to surprise any of us to learn that it was by a forgery they took Aguinaldo. . . . Funston showed bravery, it is true, but it was the kind of bravery that the burglar shows who breaks into your house at night, the same bravery that the common forger displays when he presents his spurious bill or false check for payment and trusts to luck to carry him through. There is nothing brave or noble or inspiring in the act of this new-made American general. . . . There is more of the oily serpent than of the true bravery of the soldier about such an act. Could you, for instance, imagine Lord Kitchener or Lord Roberts catching De Wet by such a trick? Funston deserves credit for being a clever spy, but it is an insult to all true heroes to make one of him."

Aguinaldo's long fight, says *The Daily Witness* (Montreal), was a noble one as far as his own reckless daring was concerned; but, being utterly hopeless, was far from a real kindness to his people. There is a very disagreeable aspect to the matter for the contemplation of citizens of the republic who cherish its traditions, continues *The Witness:*

"This is that, in displacing the Government of Spain in the islands, their own Government should have to repress a freedom-loving people by brute force, just as the Spaniards did, instead of bestowing on them that freedom which was declared to be the mission of the United States to people groaning under Spanish tyranny, and which the Filipinos certainly look to them for."

Aguinaldo, declares *The Telegram* (Toronto), was the chief architect of the plan for his own capture:

"Victory being out of the question, Aguinaldo was forced to choose death or surrender. To die would have been glorious, but uncomfortable, and to tamely surrender would have been destructive to the high character for dauntless patriotism which Aguinaldo has been building up for himself.

"Aguinaldo's best way out of the blind alley in which he found himself was to be captured. The last tableau in his career was stage-managed with marvelous skill. The circumstantial evidence in the case indicates that Aguinaldo's alleged betrayer was in reality Aguinaldo's agent. The whole transaction with General Funston seems to have been dictated by Aguinaldo's desire to find an easy way out of all his difficulties."

This raises our hopes, says *The Free Press* (Ottawa). "May some of the peripatetics in South Africa also soon be garnered in."

UNCLE SAM: "Come, my little fellow, this European crocodile wants to eat you." —*Anzeiger des Westens, St. Louis.*

## MISCELLANEOUS.

### THE LIFE-STORY OF HENRY GEORGE.

POVERTY, reaching at times to the bitterest privation, dogged the footsteps of Henry George up to the last ten years of his life. He was a sailor, a miner, a printer, a book-canvasser, a newspaper man, an author, a lecturer, and at last a politician; but in every situation he was, as his son Henry George, Jr. (in his "Life of Henry George"), shows, a philosopher.

When Henry George was but fourteen years of age or thereabouts, he left his Philadelphia home to sail before the mast on the *Hindu* for Australia. He was absent on this voyage for more than a year, and the hardships of a sailor's life seem only to have whetted his appetite for the sea. On his return he remained at home just long enough to learn to set type, and then he was off again in the *Shubrick*, a United States man-of-war, for San Francisco, where he lived, off and on, for nearly a score of years, and where the miner, printer, and newspaper man developed into the author of "Progress and Poverty." It was 1858 when he first set foot on the shores of the Pacific, and he was nineteen years of age. At this time the gold fever had broken out on the Frazer River, and Henry George worked his way on a sailing-vessel from San Francisco to Victoria. It does not appear, however, that he washed as much as a pan of dirt at this place. Instead, he went into his cousin's store, an old shanty with few goods. He slept in the loft of this building, and in a letter to his sister later on he wrote concerning this period:

"You innocently ask whether I made my own bed at Victoria. Why, bless you, my dear little sister, I had none to make. Part of the time I slept rolled up in my blanket on the counter, or on a pile of flour; and afterward I had a straw mattress on some boards. The only difference between my sleeping and waking costumes was that during the day I wore both boots and cap, and at night dispensed with them."

It appears that even thus early, while so severely pinched by poverty, he had begun to dream of his single-tax theories, altho he had not as yet said anything about them to any one. Thirty years later, Mr. George made a speech in San Francisco, and among other things he said:

"Let me, since I am in San Francisco, speak of the genesis of my own thought. I came out here at an early age, and knew nothing whatever of political economy. I had never intently thought upon any social problem. One of the first times I recollect talking on such a subject was one day when I was about eighteen, after I had come to this country, while sitting on the deck of a topsail schooner with a lot of miners on the way to the Frazer River. We got talking about the Chinese, and I ventured to ask what harm they were doing here, if, as these miners said, they were only working in cheap diggings. 'No harm now,' said an old miner; 'but wages will not always be as high as they are to-day in California. As the country grows, as people come in, wages will go down, and some day or other white men will be glad to get those diggings that the Chinamen are now working.' And I well remember how it impressed me, the idea that as the country grew in all that we were hoping that it might grow, the conditions of those who had to work for their living must become, not better, but worse."

Henry George, failing to make any headway in his cousin's store, borrowed enough money from his friends to get back to San Francisco. When he started, he had no coat to wear. His idea was to take to the sea for good if he found nothing in San Francisco on his return. But he had not been in the city many hours before he met a friend in a printing-office, where he got "a case." For the next few years he was found in the composing-rooms of newspapers in San Francisco and Sacramento, when he was not tramping to and from the gold-fields. The most interesting episode of his struggles during this period was his marriage to a young orphan girl, Miss Fox, who did so much to bless and adorn his subsequent years. Miss Fox was living with her uncle in San Francisco where the young printer was a frequent visitor. His poverty was so evident that the uncle did not receive him with very much favor at any time, and toward the last had ordered him away from the house. This so angered the young lady that she determined to leave home and sustain herself by teaching school in Los Angeles. Henry George saw that they were likely to be separated perhaps forever, and in a fit of desperation he pulled out the only coin in his pocket and said: "Annie, will you marry me?" She straightway replied: "If you are willing to undertake the responsibilities of marriage, I will." The next day they went to a Methodist church and were married. The marriage was witnessed by Isaac Trump, who, being called upon by the clergyman for his name, replied, to the great confusion of the clergyman and the merriment of the couple, "I. Trump."

No couple was ever called upon to suffer more bitterly from poverty. In 1865, while living in San Francisco, Mr. George got only occasional small jobs of work in the composing-rooms of the newspaper offices. He made this painful record in his diary:

"I came near starving to death, and at one time I was so close to it that I think I should have done so but for the job of printing a few cards which enabled us to buy a little cornmeal. In this darkest time in my life my second child was born.

"The baby came at seven o'clock in the morning of January 27, 1865. When it was born, the wife heard the doctor say: 'Don't stop to wash the child; he is starving. Feed him!'"

After the birth of the child, Mr. George left the house, and he tells, in his diary, what happened:

"I walked along the streets and made up my mind to get money from the first man whose appearance might indicate that he had it to give. I stopped a man—a stranger—and told him I wanted $5. He asked what I wanted it for. I told him that my wife was confined and I had nothing to give her to eat. He gave me the money. If he had not, I think I was desperate enough to have killed him."

About this time Henry George formed a number of resolutions, among them these:

"To endeavor to make an acquaintance and friend of every one with whom I am brought in contact.

"To stay at home less and be more social.

"To strive to think consecutively and decide quickly."

About this time he began to write and speak. His first essay was "On the Profitable Employment of Time," and is characteristic of his clear, simple style in "Progress and Poverty." He followed this with other essays, among them a very fervid one on the death of Lincoln, which was published in a San Francisco paper. This led to regular work on the *Alta California*. During these early years Henry George was a fervent Protectionist. One night he went to a debating society to hear William H. Mills, a man of great ability, speak for protection, and the speaker's ultra views converted Mr. George into a free-trader.

Soon after this, Mr. George became a regular editorial writer for the San Francisco *Times*, and later its managing editor.

In 1869, at the age of thirty, Henry George came East and visited New York, and the sharp contrasts of life fired his soul to write "Progress and Poverty." In his mayoralty campaign of 1886 he said:

"Years ago I came to this city from the West, unknown, knowing nobody, and I saw and recognized for the first time the shocking contrast between monstrous wealth and debasing want. And here I made a vow from which I have never faltered, to seek out and remedy, if I could, the cause that condemned little children to lead such a life as you know them to lead in the squalid districts."

One day, in 1878, while thinking of the panic the country was passing through, he determined to write a magazine article suggesting a remedy. Using the main arguments found in a pamphlet which he had written on the land question seven years before, he gave the article the title "Progress and Poverty," and read it to his friend, Dr. Edward R. Taylor, who was so much pleased with it that he advised its author to delay publication for the purpose of elaborating it into a book. Mr. George's long struggle to have this book published has been often told. He himself set the type and cast the plates in San Francisco, and printed the first copies.

## CURRENT POETRY.

### April Weather.

By BLISS CARMAN.

Soon, ah, soon the April weather
With the sunshine at the door,
And the mellow melting rain-wind
Sweeping from the South once more;

Soon the rosy maples budding,
And the willows putting forth,
Misty crimson and soft yellow
In the valleys of the North;

Soon the hazy purple distance,
Where the cabined heart takes wing,
Eager for the old migration
In the magic of the spring;

Soon, ah, soon the budding windflowers
Through the forest white and frail,
And the odorous wild cherry
Gleaming in her ghostly veil;

Soon about the waking uplands
The hepaticas in blue—
Children of the first warm sunlight
In their sober Quaker hue—

All our shining little sisters
Of the forest and the field,
Lifting up their quiet faces
With the secret half revealed;

Soon across the folding twilight
Of the round earth hushed to hear,
The first robin at his vespers
Calling far, serene and clear;

Soon the waking and the summons,
Starting sap in hole and blade,
And the bubbling, marshy whisper
Seeping up through bog and glade;

Soon the frogs in silver chorus
Through the night, from marsh and swale,
Blowing in their tiny oboes
All the joy that shall not fail—

Passing up the old earth rapture
By a thousand streams and rills,
From the red Virginian valleys
To the blue Canadian hills;

Soon, ah, soon the splendid impulse,
Nomad longing, vagrant whim,
When a man's false angels vanish
And the truth comes back to him;

Soon the majesty, the vision,
And the old unfaltering dream,
Faith to follow, strength to stablish,
Will to venture and to seem;

All the radiance, the glamour,
The expectancy and poise,
Of this ancient life renewing
Its temerities and joys;

Soon the immemorial magic
Of the young Aprilian moon,
And the wonder of thy friendship
In the twilight—soon, ah, soon!

—In Philadelphia *Saturday Evening Post.*

### The Pipers of the Pools.

By CHARLES G. D. ROBERTS.

Pipers of the chilly pools,
Pipe the April in;
Summon all the singing hosts,
All the wilding kin.

**Is your Brain Tired?**

**Take Horsford's Acid Phosphate**

Dr. Y. S. TROVER, Memphis, Tenn., says: "It recuperates the brain and enables one to think and act." Makes exertion easy.

**RARE OLD VIOLINS**

Remarkable values in fine solo instruments from $50 to $10,000. Largest and finest collection in the world. Send for new catalogue containing Biographies; fac-simile labels; &c. Easy terms.
**LYON & HEALY, 20 Adams St., Chicago.**

**The America that Our Children will Govern**

The figures of the Census of 1900 not only present many interesting facts as to the state of the country now, but indicate very accurately what lines its development will follow during the next fifty years. How the Census gives us a glimpse into the future is cleverly brought out in an article which Ex-Gov. Merriam contributes to the April 25th issue of :: ::

**The Youth's Companion**

The same issue will contain a group of good stories: "The College Course of Hiram Allen," by Margaret Sherwood; "A Lesson From Brother Tom," by Agnes Louise Provost; "The Talents of Althea," by Emma A. Opper; "The Submarine Susan" (Chap. III.), by Charles Adams—all in addition to the valuable article on Domestic Hygiene, the comments on Current Topics, notes on Nature and Science, and a great variety of Anecdotes, new, apt and amusing. :: :: :: :: ::

SAMPLE COPIES OF THIS ISSUE WILL BE SENT TO ANY ADDRESS FREE.

**The Youth's Companion, Boston**

FARM HOUSE AT GLEN COVE, L. I.
C. P. H. GILBERT, ARCH'T, N.Y.

**Cabot's Creosote Shingle Stains**

Are 50% cheaper than paint.
Cost 50% less to apply.
Look 100% better than paint.

*"Wood treated with Creosote is not subject to dry-rot or other decay."*—CENTURY DICTIONARY.

Samples of 24 Colors on Wood, with Colored Sketches, sent on application.

SAMUEL CABOT, Sole Mfr., 71 Kilby St., Boston, Mass.
Agents at all Central Points.

**INGERSOLLS' BASE BALL UNIFORMS.**

All uniforms are of good durable material, excellent workmanship and very handsome. Send for samples showing qualities and colors.

Prices include shirt with 8 letters, padded pants, cap, hose and belt to match.

Per Suit. **$2.50** $3.75, $5.50 and $7.50. Special prices in clubs of 9 or over. Samples, measurement blanks and our catalogue showing Cameras, Base Ball Supplies, Bicycles, Bicycle Suits, etc., FREE.

Robt. H. Ingersoll & Bro. Dept. 17, 67 Cortlandt St., New York.

**ARTISTIC HOMES** A (NEW) 608 PAGE BOOK

of 800 low-cost houses, sent, postpaid, $1

THE "COTTAGE-BUILDER" Issued Monthly.

$1 per year or $1.50 with new 608-page Book. Sample copy, 10c.

WHEN ORDERING It is best to send a rough sketch of the kind of building wanted with probable cost, etc.

HERBERT C. CHIVERS (Suite 316 Walnwright) St. Louis, Mo.

*We have no agents or branch stores. All orders should be sent direct to us.*

# New Suits for Summer Wear

IF you wish something decidedly new in a suit or skirt, and entirely different from the ready-made garments which you find in every store, write for our Catalogue and Samples.

There are hundreds of firms selling ready-made suits and skirts, but we are the only house making fashionable garments to order at moderate prices. Our Summer Catalogue illustrates an exquisite line of ladies' costumes and skirts, selected from the newest Paris models. Our designs are exclusive, and are shown by no other firm, and the materials from which we make our garments comprise only the very latest fabrics. Our Catalogue illustrates:

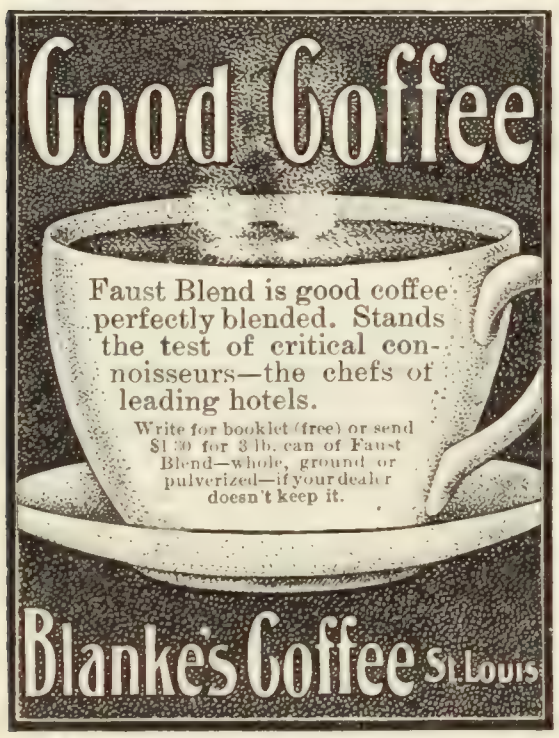
**Suits, smart tailor-made suits . . $8 up.**
**Silk-Lined Suits, lined throughout with fine quality taffeta silk . . $15 up.**
**Skirts, $4 up. Rainy-Day Skirts, $5 up.**
**Wash Skirts, $3 up. Wash Dresses $4 up.**

*We Pay Express Charges Everywhere.*

Write to-day for Catalogue and Samples; you will get them *free* by return mail. Order what you desire; any garment that does not fit and please you may be returned and *your money will be refunded.* Our aim is your satisfaction.

**THE NATIONAL CLOAK COMPANY,**
**119 and 121 West 23d St., New York.**

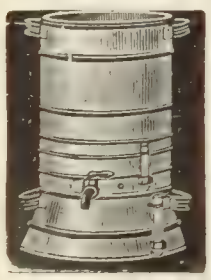
# Good Coffee



Faust Blend is good coffee perfectly blended. Stands the test of critical connoisseurs—the chefs of leading hotels.

Write for booklet (free) or send $1.30 for 3 lb. can of Faust Blend—whole, ground or pulverized—if your dealer doesn't keep it.

**Blanke's Coffee St. Louis**



Write for Booklet.

**THE SANITARY STILL**

on your kitchen stove furnishes plenty of distilled aerated water at trifling cost. Simple as a tea kettle. **HON. HILARY A. HERBERT,** Ex Sec'y of the Navy, writes: "The Sanitary Still has been used with success in my family, and I consider the use I have made of it shows that it will afford a good supply of absolutely pure water for drinking and other purposes." The Sanitary Still used in the **WHITE HOUSE.** Highest award at Paris Exposition. DURABILITY UNEQUALED. AVOID CHEAP AND FLIMSY STILLS.

Cuprigraph Co., 68 N. Green St., Chicago

Through the cool and teeming damp
Of the twilight air,
Call till all the April children
Answer everywhere.

From your cold and fluting throats
Pipe the world awake,
Pipe the mold to move again,
Pipe the sod to break.

. . . . . .

Then a wonder shall appear,
Miracle of time:
Up through root and germ and sapwood,
Life shall climb and climb.

Then the hiding things shall hear you
And the sleeping stir,
And the far-off troops of exile
Gather to confer;

Then the rain shall kiss the bud
And the sun the bee,—
Till they all, the painted children,
Wing by flower get free;

And amid the shining grass
Ephemera arise,
And the windflowers in the hollow
Open starry eyes;

And delight comes in to whisper—
"Soon, soon, soon,
Earth shall be but one wild blossom
Breathing to the moon."

—In April *Lippincott's.*

## PERSONALS.

**Correspondence between Milan and Queen Nathalie.**—Some extracts from a very long letter written by ex-King Milan of Servia to Queen Nathalie in 1893, and her answer were published some time ago in the Paris *Temps.* The following is a condensation of the correspondence:

"NATHALIE: I have been here at Bayonne since yesterday evening, hiding in a wretched hole of a hotel under the name of Henri Catargi. For me the hour of supreme resolution has sounded; for you, the hour of vengeance and triumph has arrived. I have but a few days to live. At the moment of appearing before my Supreme Judge, I wish to tell you all. You will repeat it, some day, to your son. It will be your best justification in his eyes, for he has more sympathy for me than for you, and this will be my condemnation. . . . .

"Gambling on the Bourse and elsewhere has brought me to a situation which compels my death. The world will say that women have contributed to my ruin, but, as usual, the world will be wrong, for I have had only one *liaison* and that, financially speaking, a very modest one. Now I am not only ruined, but my debts amount to 345,000 francs. . . . . .

"It will not do for me to blow my brains out. I must die 'by accident.' The world must not know the real reason, which would react on the King [his son]. . . . . .

"When my affairs are adjusted, I shall die, for I have nothing else to do and am weary of life; but I wish to die quietly, 'accidentally,' without bringing disgrace upon our son.

"I have wasted my life and injured my family, and it is just that I should answer for my sins be-

# Pears'

No soap in all the world is so cheap.

No soap in all the world is so good—none so lasting.

All sorts of people use Pears' soap, all sorts of stores sell it, especially druggists.

*"Health and comfort hand in hand."*

fore God. I do not seek to defend myself; I have suffered no more than I deserve.

"And now, Nathalie, farewell forever. Forgive the wrong I have done you. In a few days I shall be dead. A word more. If you wish to see me, answer briefly; if not, simply say no."

The Queen's reply was dignified and scornful. It runs:

"TO KING MILAN: You think that my hour of triumph and revenge comes with your letter. No; the latter sentiment has never had a place in my heart, and it would be a poor triumph to see the father of my child driven to self-destruction. . . .

"You speak of appearing before God. Do suicides appear before Him? And do you suppose that any one hearing of your death will believe it to have been accidental? To live well is a difficult thing. And it is the only thing that does not occur to you.

"As for the sole injury for which you reproach me, I am proud of it. Kings are not created to distrust and exploit their subjects, but to live, suffer, and die with them. My sufferings have been acute, my disillusions many. But I have never held Servia responsible for them, and if you fancy that you can, on your death, bequeath to me your hatred toward your country, to be held in trust for your son, you are in error.

"And as to your last wish in regard to your son, you leave this—that he may sell himself to some rich woman! Have you not learned, even yet, that wealth is nothing, and duty is everything? What Sacha's honor demands is that you live properly, not that you kill yourself like an actor. Besides his honor depends on himself, not on you.

"Now, Milan, understand me. I can not pay your debts of 345,000 francs. My fortune is not as great as you think, and here, too, you are not free from blame. If you need a friendly hand to save you from the chasm which yawns before you, I extend mine; not from affection—I have none for you now; but from the duty I owe to my son. There will be no clandestine interviews, underhanded negotiations, or anything of the sort; I detest them. If you will confess your fault frankly and openly and ask to see me, I will receive you; otherwise, not.

"NATHALIE."

## Current Events.

### Foreign.

CHINA.

April 8.—Tung Fu Hsiang, in collusion with Prince Tuan, leads a new rebellion against the Emperor of China.

April 10.—The Japanese Government accepts Russia's assurances in regard to Manchuria, thereby relieving the strained relations existing between these two countries.

April 12.—It is stated on reliable authority that the indemnity demanded from China by the powers will amount in the aggregate to nearly £100,000,000. The United States Government proposes that the indemnity be reduced one half.

April 14.—The Japanese minister and General Yamaguchi inform the Chinese plenipotentiaries at Peking that the presence of the Emperor Kwang Su is urgently needed in Peking; the Emperor is asked to bring at least 20,000 soldiers to be sent into Manchuria for the purpose of restoring order.

SOUTH AFRICA.

April 9.—Lord Kitchener reports the reoccupation of Pietersburg by the British and the capture of seventy-five men of the fifth Infantry and Imperial Yeomanry by the Boers.

April 10.—General Botha renews negotiations with Great Britain for peace in South Africa; De Wet is reported to be insane.

April 14.—A Bloemfontein report says that ex-President Steyn is broken down in health and is advising the Boers to surrender.

OTHER FOREIGN NEWS.

April 8.—Sir George Murray-Smith, the well-known London publisher, is dead.

President Loubet of France arrives at Nice; a plot against his life is discovered and thwarted by French detectives.

More arrests of students are made by the police in Kharkoff and other Russian cities.

Anti-clerical outbreaks are again reported from Spanish cities.

April 9.—Friedrich Franz IV. assumes rule over the Duchy of Mecklelenburg-Schwerin.

April 10.—President Loubet meets the Duke of Genoa at Toulon and is decorated with the collar of the order of the Annunciata, the gift of the King of Italy.

The French Dreyfusite organ *Le Siècle* fails, and will be sold at auction.

A new cabinet is appointed in Venezuela in consequence of the assumption of the provisional presidency by General Castro.

April 11.—Mr. Loomis, United States minister in Venezuela, sails from San Juan for New York; he attributes the trouble in Venezuela to the cases of indemnity and a disposition on the part of General Castro to embarrass the United States Government.

April 13.—The British Foreign Office is still desirous of negotiating a canal treaty with the United States; the Colombian minister at London says that he may approach the British Government in relation to the building of the Panama canal.

April 14.—The Russian Government orders the lectures to be resumed in the high schools of the country; a commission is appointed to reorganize the penal settlement on the island of Saghalien.

## Domestic.

DOMESTIC NEWS.

April 8.—Charles R. Flint testifies before the Industrial Commission in Washington in regard to the effect of great combinations of capital.

The Spanish War Claims Commission holds its first meeting in Washington.

April 9.—A statue of Gen. John A. Logan is unveiled in Washington, addresses being made by President McKinley and Senator Depew.

Philander C. Knox, of Pittsburg, takes the oath of office and assumes his duties as attorney-general of the United States.

The Navy Department completes a coaling-station in Mexico, the first to be established by the United States on foreign soil.

April 10.—The President appoints Col. Wallace F. Randolph chief of the artillery corps under the army reorganization law.

A rich oil strike is made near El Paso, Tex.

April 12.—Governor Hunt issues a proclamation abolishing martial-law in Shoshone County, Idaho, established two years ago.

April 13.—Cotton-mills in Lawrence and Fall River, Mass., decide to close down their works for a brief period, throwing twenty-three thousand workmen out of employment.

David B. Hill speaks on Jefferson at Buffalo; Senator Platt, of Connecticut, speaks on Cuban relations before the American Academy of Political and Social Science at Philadelphia.

AMERICAN DEPENDENCIES.

April 10.—*Porto Rico:* Discouraging reports are received of conditions in Porto Rico; it is stated that dire poverty exists over great portions of the island and that hundreds of the workingmen are emigrating.

April 11.—*Philippines:* Martin Delgado, a former general in the Filipino army in Iloilo, is appointed governor of that province.

*Cuba:* The radical element in the Cuban constitutional convention is endeavoring to put the convention on record against the Platt amendment.

April 12.—*Philippines:* A cable despatch to Agoncillo, in Paris, says that Sandico has been chosen commanding-general of the Filipino forces, to succeed Aguinaldo.

*Cuba:* The Cuban constitutional convention rejects the Platt amendment by a vote of 18 to 10.

April 13.—*Cuba:* The Cuban constitutional convention at Havana decides in a later resolution not to go on record for or against the Platt amendment, but to await the return of the commission which will visit Washington.

*Philippines:* Archbishop Chapelle, the Papal Delegate to the Philippines, is summoned to Rome; trials of commissary officers accused of fraud begin in Manila, and testimony is given to show that illegal sales of flour were made.

# Money for School Boys

# $10 SECURES $400.00 LOT

## IN GREATER NEW YORK.

### FREE TRIP TO NEW YORK CITY AND RETURN.

**$2,000,000 INSURES YOUR INVESTMENT—THE ASTORS' WAY OF MAKING MONEY MADE POSSIBLE TO SMALL INVESTORS—$10 SECURES $400 LOT WHICH IS GUARANTEED TO BE WORTH $500 BEFORE ONE YEAR FROM DATE OF PURCHASE—WE TAKE ALL RISK—READ EVERY WORD**

THERE is no City in the World in which so much money has been made in Real Estate as in New York, and especially since the consolidation of New York and Brooklyn.

Brooklyn Borough has experienced the greatest increase of values, because, as New York has grown, Brooklyn has had to house the extra population. In consequence our property has improved at least 25 per cent. each year over the preceding year, and we are so sure that this will be done for the next year that we are willing to guarantee this result to our investors, *based on the regular prices we will then be receiving for lots similar to those we now sell for $400.*

Our $400 lot calls for a payment of $10 at the time of purchase, and $6.00 a month each month until the lot is paid for; for the first year this calls for an outlay of $82, and we guarantee that this lot will increase in value $100 during the next 12 months, based on the price at which our corps of salesmen will then be selling similar lots. The Trolley and Elevated service has been extended and improved to such a degree that these lots are now within 35 minutes and 5 cent fare of the New York City Hall, and upon the completion of the new East River Bridge, which will be in active operation within a year and a half, it will be possible to reach Cooper Union, the great Educational Institute and center of New York population, within 35 minutes from the property and at a single fare.

These $400 lots will, in our honest opinion, be worth $4,000 in 10 years, and will correspondingly increase in value as time goes on, as property becomes more and more scarce near the heart of the great city. The great growth in value of property in Manhattan Borough has for the last few years been the secret of the recent increase in value of Brooklyn Borough property, because property at the present time in Manhattan Borough (the same distance from the City Hall as our property) is now selling for 20 to 100 times the money we ask, and there is every reason to believe that values will generally reach the same level in Brooklyn Borough as in Manhattan.

**GUARANTEED INCREASE.** Our guarantee of 25 per cent. increase in one year in the value of lots is a simple one, and should not be misunderstood or misconstrued. It means that the regular prices publicly marked on our property (every unsold lot being plainly tagged and priced), and at which our large corps of salesmen will be then selling these lots, will be 25 per cent. in excess of the prices at which we now offer them.

It **does not mean** that we can or will assume the responsibility of selling customers' lots, except incidental to our business of development, or that we will take them off their hands; this obviously would be impossible in the great work of development we are undertaking. This is intended as a straight business agreement of an honest increase in value, and that only.

N. B.—Our non-forfeiture agreement prevents the loss of your lot from misfortune.

We have over $2,000,000 invested in Real Estate in Brooklyn, and are offering to sell only a portion of our holdings, the balance we are reserving to participate in the great increase in value which we are predicting. We are selling a portion, so that we can improve our property with all the latest city conveniences, and also, to have a desirable class of the best houses, and that diversified ownership which is necessary in order to give Real Estate its greatest value. We believe this to be one of the greatest chances of a lifetime, and our judgment is based upon 15 years' experience had in the honorable development of 27 different cities in various parts of the United States, and we can without hesitancy say that this is by far the best opportunity we have ever seen.

Our reputation is above reproach, and we court closest investigation. We have never yet made a claim or promise which has not been fulfilled. We will be glad to supply references from banks, Commercial Agencies, or customers, and satisfy the most critical investigators.

**BETTER THAN SAVINGS BANKS.** The property is always where it can be seen, and is not in any way susceptible to financial panics, or such disasters as financial institutions are subject to. Your principal grows as the city grows, which, in this instance, will be without a parallel on earth.

**AS A LIFE INSURANCE.** If you should die at any time before payments have been completed, we will give to your heirs a deed to the lot without further cost.

This gives the full value of a life insurance policy without cost to you for premium, and this point alone is a large item. It gives you an insurance company which cannot fail, and will guarantee a home to your family.

**COME TO NEW YORK AT OUR EXPENSE.** We have been so careful in our representations that we will agree to pay railroad fares East of Chicago to New York and return, if, upon visiting our property, you find any part of this advertisement which is not strictly true, or, **in case you buy,** we will credit on your purchase the cost of your trip. To those living farther away than Chicago, we will pay that proportion equal to cost from Chicago and return.

**WE WOULD ADVISE** you to send us payment of $10 in cash, at our risk, immediately, and let us select the very best lot for you. We will agree to give you the very best choice at the time of receiving your money, and will also agree to refund this money, together with the cost of your fare, if, upon visiting the property, you find we have in any way misrepresented it. If you desire further particulars, write immediately for maps, details and references.

Remember, the lots we can sell to out-of-town buyers are limited in number and every day sees some of the best ones taken. The only fair rule, you know, is to give best choice to the first applicant. Write at once—to-day.

## WOOD, HARMON & CO., Dept. 28, 257 Broadway, NEW YORK

**As one evidence of our standing at home, we give the following testimonial:**

*NASSAU NATIONAL BANK.*

"There is no doubt the property offered by Wood, Harmon & Co. in the Twenty-ninth Ward represents one of the best investments a man of limited income can possibly make within the corporate limits of Greater New York. It can be said without hesitancy that Wood, Harmon & Co. are perfectly reliable, and are worthy the fullest confidence of the investor, whether he resides in Greater New York or any other section of the United States.

"THE NASSAU NATIONAL BANK OF BROOKLYN."

Boston, Mass.: Globe Gas Light Co., 77-79 Union St.

**Bright's Disease and Diabetes**

No diseases, with the possible exception of consumption, have so baffled medical skill and investigation.

Stealthiness is their terrible feature and therefore the shock when the discovery is made.

We distinctly wish to assure all so afflicted that these diseases are not incurable. The Tompkins-Corbin Co.'s Bright's Disease Cure and Diabetes remedy—two separate and distinct medicines—have cured numbers of cases which had been pronounced hopeless.

This claim is not made wildly, for we can and are at all times prepared to prove it.

There is only one method of assuring yourself that you are free from these diseases, and that is by an analysis of your water.

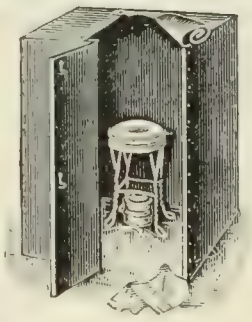
Send us by express, prepaid, four ounces of your water, and Dr. Tompkins will promptly make a careful and exact analysis free of charge, and either put your mind at rest or put you in the way of recovery.

We urge you most earnestly to let us send you our book of treatment and testimonials. Free on application.

**TOMPKINS-CORBIN COMPANY,**
**1300 Broadway, New York.**

**Turkish Baths**

**For 3 Cents**



A RACINE folding bath cabinet gives you a Turkish bathroom at home. At a cost of three cents, you get all the possible benefit of any vapor or hot air bath. These baths taken regularly insure health vigor and, cleanliness. They clear the complexion; they cure colds. And no other treatment is so widely employed by the best physicians in the cure of most chronic diseases.

The Racine is not like the flimsy and unserviceable cabinets that are widely sold. It is a stout, double-walled room, rubber coated inside and outside, and fitted with a door. Merely tip it, and it folds into a six-inch space. The four best features in the Racine are controlled by our patents. Without them no cabinet can be satisfactory.

The Racine is guaranteed to be the best cabinet on the market. We sell on approval, to be returned at our expense if not satisfactory. Prices $5 up, freight or express prepaid. Alcohol or gas heater, vaporizer, face-steaming attachment and 35 prescriptions for medical baths included. Send today for our illustrated catalogue, and order from that.

**RACINE BATH CABINET CO.**
**Box X, Racine, Wis.**

### "When the Pawns Start Down the Board."

You must have had this trouble, for it comes to
every one,
When you're penned up in a corner and your King
is on the run,
And you hold your breath in terror, hoping that
the move he'll miss,
But he doesn't, and you're finished when the
Pawns
start
down
like
this.

Talk about a sea of troubles, talk about the woes
of life;
Talk about the rough old sledding which we strike
in daily life;
They are nothing to the feeling which such times
as this afford,
When your King is in the corner, and the
Pawns
start
down
the
board.

### Pillsbury in Atlanta.

The Atlanta *Journal* thus describes the Champion when playing against the combined Chess-prowess of the Southern city:

"Sitting with his legs wound into an ungraceful knot, calmly puffing at a cigar as he studied intently a flowered figure on the wall three feet in front of his nose, a good-looking young man last night pitted himself against the individual and combined Chess-wit of fourteen of Atlanta's best players. . . . . .

"This young man is an eighth wonder of the world, the wizard, H. N. Pillsbury, a Chess-master. He is a thinking machine, an intellectual tablet upon which he himself inscribes what he would remember, and once inscribed, there is no forgetting it. . . . It is the acme of concentration; a triumph of mind over matter; a physical demonstration of the infinite possibilities of the human mind once it is turned upon a certain

IF you own a garden, a country house, an herbarium; if you are a naturalist, a botanist, a sportsman, or a lover of nature, *send for our catalogue of out-door books.* Each volume named below is important.

**Home Life of Wild Birds**

A new method of Bird Study and Photography. By FRANCIS H. HERRICK, Professor of Biology in Adelbert College. Nearly ready.

The most important bird book of recent years. Profusely illustrated with original half-tones from photographs taken at short range, the equals of which have never before been produced.

**Ornamental Shrubs**

**CORRECT TIME FOR A DOLLAR!**

**The Ingersoll**

**Guaranteed**

The remarkable success which has been awarded the Ingersoll Dollar Watch has not been unearned or easily won. Continued success does not alight at random upon this enterprise or that, but, rather, it rewards the untiring efforts of intelligent and meritorious endeavors.

Nine years of steady natural growth has been the history of this watch, achieved against the prejudices of the many who "knew" that "a watch couldn't be made for a dollar," and in spite of the opposition of dealers who wanted to sell higher priced watches.

No watch today, no matter what its price, enjoys a better reputation for accuracy and reliability than the Ingersoll; its sales are larger by far than those of any other watch in the world. If you need a handsome, trustworthy timepiece, try the Ingersoll, and if it is not entirely satisfactory send it back and get your money.

*For sale by 10,000 dealers throughout the country, or the latest model sent, postpaid, in U. S. and Canada for $1.00 by the maker.*

**OPINIONS OF THINKERS ON "A BOOK OF QUEER THOUGHTS."**

THOUGHTS ON "THE RELIGION OF DEMOCRACY" BY EMINENT THINKERS.

CHARLES H. PARKHURST, D.D., says: "An interesting, stimulating, startling, and, all in all, wonderful book."
EDWIN MARKHAM says: "It has style, insight, high seriousness, spiritual passion. It is a great book."
JULIAN HAWTHORNE says: "He is a voice speaking unfamiliar things, with good emphasis and discretion."

*12MO, CLOTH. PRICE, $1.00, POSTPAID.*

**FUNK & WAGNALLS COMPANY, Publishers, 30 Lafayette Place, NEW YORK.**

achievement. One can not help wonder what the same concentration along other and more practical lines would have done; it would have moved the world. Such minute detail as exists in the wonderful brain which does this thing is absolutely unsurpassed.

### The Q's Gambit Counter.

That P-K 4 counter to the Queen's Gambit has aroused considerable discussion among Chess-players everywhere. When Albin first sprung it on Lasker, the champion instinctively found the answer, P—Q R 3, that has since been almost universally adopted as best. The moves go 1 P—Q 4, P-Q 4; 2 P—Q B 4, P—K 4; 3 Q P x P, P—Q 5 (the distinctive move of the gambit); 4 P—Q R 3. After a while, the masters began to try the opening in unimportant games. Marshall played it in his match with Janowsky, and the Frenchman played 4 P—K 4. This did not pan out well, however, for after 4 P—K 4, Kt—Q B 3; 5 P—K B 4, P—K Kt 4, a move apparently discovered simultaneously by Schlechter and our own Napier, and, as Pillsbury termed it, "Black has a won game." With the 4 P—Q R 3, Kt—Q B 3; 5 Kt—K B 3 variation, White seems able to hold the Pawn for a time, at least, but the cramped game which he has to put up with is annoying. When Showalter was last in Brooklyn he proposed a rather simple, but apparently effective, way of treating the counter attack. Instead of trying to hold the Pawn, he suggests 4 P—Q R 3, Kt—Q B 3; 5 P—K 3, P x P; 6 Q x Q ch, K x Q; 7 B x P, Kt x P; 8 Kt—Q B 3, and now, altho White has surrendered the Pawn, he has a fine open game, which the Kentuckian thinks should give him strong winning chances.—*Brooklyn Standard Union.*

### A Steinitz Mate.

It is said that some one moved in such a way as to permit Mr. Steinitz (White) to get the following position:

| | White | Black |
|---|---|---|
| 1. | P—K 4 | P—K 4 |
| 2. | Kt—K B 3 | Kt—K B 3 |
| 3. | B—B 4 | Kt x P |
| 4. | Kt—B 3 | Kt—B 4 |
| 5. | Kt x P | P—K B 3 |
| 6. | Q—R 5 ch | P—Kt 3 |

White announced mate in twelve moves. Finding, after six checks, that he could mate on the seventh move, he refused to go back on his word, made six more moves, and mated according to announcement.

### An "Eccentric" Problem.

On December 29, 1900, *The Westminster Gazette*, London, published the following position by D. L. Anderson, as a legitimate (?) problem:

BLACK (4 pieces): K on K sq; B on K R 2; R on Q R sq; P on Q R 2.

WHITE (5 pieces): K on K sq; Bs on K R 2 and Q Kt 3; Rs on K Kt 7 and K R 3.

White mates in three moves.

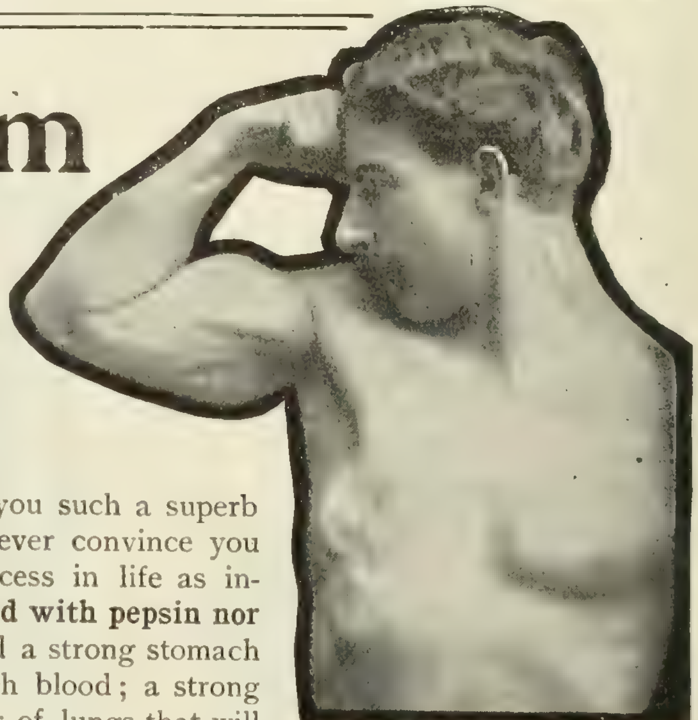
This, so we are told, proved a puzzle to *The W. G.* solvers. Probably THE LITERARY DIGEST solvers will be able to find the trick.

---

OF the twenty-one games actually played by S. Alapin, in Monte Carlo, no less than fourteen were drawn. After such a record Schlechter may well hand over his old title of "Drawing-Master" to his newer exponent of that school.

# The Swoboda System

*Restores to Health, Strengthens the Heart*

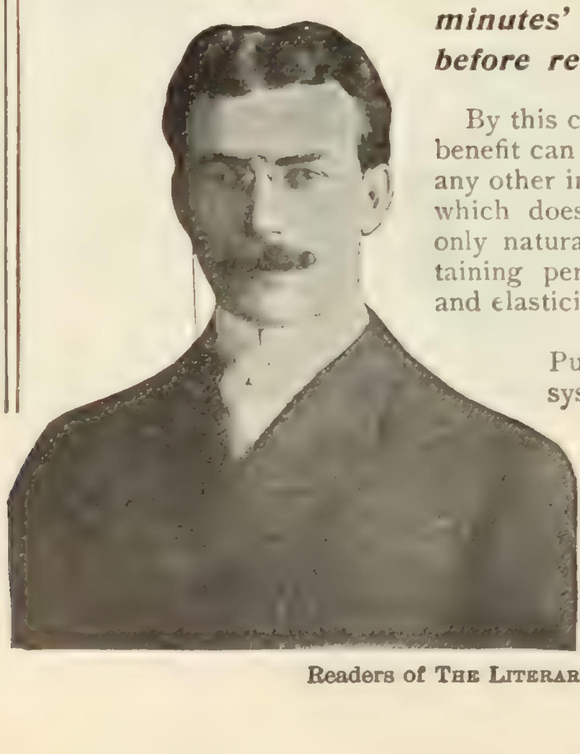


ALOIS P. SWOBODA,
Originator and Sole Instructor.

**I am teaching intelligent men, brain workers, the ideal principles of attaining and preserving perfect health. It is not a problematical theory, but a system of physiological exercise, based upon absolutely correct scientific facts.**

And if you will follow my instructions for a few weeks I will promise you such a superb muscular development and such a degree of vigorous health as to forever convince you that intelligent direction of muscular effort is just as essential to success in life as intelligent mental effort. **No pupil of mine will need to digest his food with pepsin nor assist nature with a dose of physic.** I will give you an appetite and a strong stomach to take care of it; a digestive system that will fill your veins with rich blood; a strong heart that will regulate circulation and improve assimilation; a pair of lungs that will purify your blood; a liver that will work as nature designed it should; a set of nerves that will keep you up to the standard of physical and mental energy. I will increase your nervous force and capacity for mental labor, making your daily work a pleasure. You will sleep as a man ought to sleep. You will start the day as a mental worker must who would get the best of which his brain is capable. I can promise you all of this because it is common-sense, rational and just as logical as that study improves the intellect.

***My system is taught by mail only and with perfect success, requires no apparatus whatever, and but a few minutes' time in your own room just before retiring.***



By this condensed system more exercise and benefit can be obtained in ten minutes than by any other in two hours, and it is the only one which does not overtax the heart. It is the only natural, easy and speedy method for obtaining perfect health, physicial development and elasticity of mind and body.

**An Appreciative Testimonial from the Contracting Freight Agent of the Chicago, Rock Island and Pacific Railway Co.**

KANSAS CITY, MO., December 22, 1899.

MR. ALOIS P. SWOBODA, Chicago, Ill.

*My Dear Mr. Swoboda:*—Although it is less than two months since I first commenced work at your system of physiological exercise I am most thoroughly convinced that your system is a decided success. A comparative statement of my measurements will show you what I have accomplished in the short period of less than two months.

MEASUREMENTS:

| | At beginning. | In 60 days. |
|---|---|---|
| Chest normal | 33 | 38½ |
| " contracted | 31¾ | 31¾ |
| " expanded | 34½ | 39½ |
| Waist | 29 | 29 |
| Neck | 13¼ | 14 |
| Biceps | 10¾ | 13¾ |
| Forearms | 9⅝ | 10¾ |
| Weight | 137 | 150 |
| Height | 5 8½ | 5 8½ |

In addition to this large increased muscular development my general health is decidedly improved. Thanking you for what you have done for me, and with best wishes for your continued success, I am,

Very sincerely,
T. O. JENNINGS, Contg. Fgt. Agt.

Pupils are both sexes, ranging in age from fifteen to eighty-six, and all recommend the system. Since no two people are in the same physical condition, individual instructions are given in each case. Write at once, mentioning THE LITERARY DIGEST, for full information and convincing endorsements from many of America's leading citizens.

**ALOIS P. SWOBODA**

**51 Washington Street, CHICAGO**

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

# The Literary Digest

VOL. XXII., NO. 17 NEW YORK, APRIL 27, 1901. WHOLE NUMBER, 575

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### THE BRITISH BUDGET AND THE BOER WAR.

PRESIDENT KRUGER'S oft-quoted statement, at the opening of hostilities in South Africa, that he would make his enemies pay a price that would "stagger humanity" is recalled once again by the startling figures of the British budget presented to the House of Commons last week by the Chancellor of the Exchequer, Sir Michael Hicks-Beach. "It is the most disastrous statement that the Exchequer has ever made," says Sir William Vernon-Harcourt. From the figures of this budget it appears that there is a national deficit of over £40,000,000 ($200,000,000) and that the Boer war has already cost £151,000,000 ($755,000,000), double the cost of the Crimean war; and the Chancellor of the Exchequer asks permission to borrow £60,000,000 ($300,000,000). Says the New York *Tribune:*

"Briefly, there is a deficit of more than $266,000,000, which the Chancellor of the Exchequer proposes to meet by suspending the operation of the sinking fund and by borrowing $300,000,000 on consols. There are also to be various increases in taxation, including additional duties on tea, wine, and beer, and the imposition of duties on sugar, molasses, and glucose, and an export duty on coal, while the income tax—that 'temporary device' which has persisted unbroken for nearly threescore years—is to be raised from 16 cents on the pound in 1899 and 24 cents in 1900 to 28 cents in 1901, a figure almost equal to the high-water mark to which Mr. Gladstone forced it in the disastrous Crimean days."

"There will doubtless be much grumbling," continues *The Tribune*, "which is characteristic of the race. There will also be much criticism from the Opposition benches, some of it of a caustic kind. But the Government ranks are firm and solid, and are not lacking in leaders who are masters of debate. That the budget will be approved by Parliament is not to be questioned." "The budget statement presented in the House of Commons is an historical document, in that it marks a departure from the British principle of free trade, which the world has been taught to believe was immovable," remarks the Philadelphia *Public Ledger.*

The news from the seat of war in South Africa is no more encouraging than that at home. Sir Alfred Milner, in recent official correspondence, frankly admits that "the last half-year has been one of retrogression." He continues:

"Seven months ago this colony was perfectly quiet, at least as far as the Orange River. The southern half of the Orange River Colony was rapidly settling down, and even a considerable portion of the Transvaal, notably the southwestern districts, seemed to have definitely accepted British authority and to rejoice at the opportunity to return to orderly government and the pursuits of peace. To-day the scene is completely altered.

"It would be superfluous to dwell on the increased losses to the country caused by the prolongation of the struggle and by the form which it has recently assumed. The fact that the enemy are now broken up into a great number of small forces raiding in every direction, and that our troops are similarly broken up in their pursuit, makes the area of actual fighting, and consequently of destruction, much wider than would be the case in a conflict between equal numbers operating in large masses."

SIR MICHAEL EDWARD HICKS-BEACH,
Chancellor of the British Exchequer.

The situation is certainly a serious one even yet, remarks the San Francisco *Chronicle*, and England will have to make up her mind to send men and mounts and to forward munitions and supplies in undiminished quantities. "To British greed absolutely nothing is sacred," says the Indianapolis *Sentinel;* and the Houston *Post* declares that "Southern people will sympathize with the struggling and unfortunate Boers more than ever when they realize that these plain people are to undergo all the rigors of reconstruction which the people of the South underwent during the sad and well-remembered period after the war between the States."

The trade tilt between Great Britain and the United States over the question of the deportation of mules to South Africa from New Orleans on the one hand, and of English exclusion of American beef on the other hand, has aroused a good deal of interest on both sides of the water. The "beef-exclusion" policy, which was at first expected to seriously threaten American trade, turns out to be a small matter after all, leaving untouched the sources of supplies for South Africa and applying only to the contracts for home troops. In the opinion of the Chicago *Daily News*, the present policy is simply directed by England's growing consciousness of her economic dependency on other countries. The Kansas City *Journal* humorously observes that "if the London War Office has an idea that Kitchener's men will fight better on English beef" than on "the refrigerated beef

raised on Western ranches and dressed and packed in Kansas City packing-houses," it will soon be disillusionized!

The decision of the federal court of New Orleans, denying an application of three Boers for an injunction to prevent the shipment of mules and horses to British ports in South Africa, was looked upon as a foregone conclusion, and the Rochester *Democrat and Chronicle* refers to the Boer petition as one "of impropriety and even insolence." The Pittsburg *Post*, in very different strain, expresses regret that the circumstances are such that America is able to send to the Boers only "sympathy and good wishes with money contributions."

## MAYOR JOHNSON'S BEGINNING IN CLEVELAND.

THE energy and originality that mark the administration of Tom Loftin Johnson, the new mayor of Cleveland, are attracting comment. The Cleveland *Plain Dealer* (Ind.) says that "it is evident that Mayor Johnson fully realizes how this city has been handicapped by faint-hearted and lukewarm administrations, and that he is determined to do all in his power to assist the growth of the city at a time when it has such magnificent opportunities." It believes that "he will have the cordial enthusiastic approval and support of all the people." Mr. Johnson began his administration by taking office just in time to prevent the transfer of a large strip of the city's water front to a railroad company. Some other phases of his activity are related as follows in a Cleveland despatch to the New York *Sun*:

"'The first thing he did was to set Peter Witt, a local tax reformer, to work with a force of one hundred clerks and nearly one thousand maps to make a tax valuation of every piece of land in Cleveland. Johnson proposes a complete readjustment of taxation here.

"Then the mayor started out in earnest to tear down all old and shaky buildings in the city. He also says no more frame buildings shall be erected in the fire limits. He sent a fire-department truck with a building inspector to 121 Erie Street, where a frame structure owned by County Examiner Black had just been completed. This was torn down, and the tearing-down process beginning before the occupants had taken their belongings out. Another building on Vermont Street was torn down. Notices to tear down their buildings were served on hundreds of land owners to-day. If at the expiration of twenty-four hours the buildings are not removed, the fire department has orders to pull them down.

"All the enormous sign-boards on vacant lots, signs that are eyesores, are being removed by the order of the mayor. Another Johnson order calls for the removal of all barns now inside of the fire limits.

"The mayor acted as his own bouncer to-day putting a drunken caller out of his office, using physical force. Mayor Johnson was lionized at the meeting of the council last night. He outlined a few instructions for the council. The mayor called attention to his communication vetoing several ordinances because of their slovenly appearance, and declared that he would take the same action on all city documents that came before him in such shape.

"Incident to the day of the mayor's activity was the renewed announcement that the citizens' squad of policemen would hereafter cease sneaking around saloon side doors for evidence.

"'The laws of this city shall be enforced,' said the mayor, 'without resorting to sneaking.'"

The New York *Independent* adds these items:

"Owners of gambling-houses have been ordered to close them at once. The mayor appointed the Rev. Harris M. Cooley to be director of charities and correction, and at the same time made a liquor-dealer named Madigan director of accounts. The latter at once retired from the liquor business. The mayor's brother, Albert —whose plan for a tunnel and three-cent fares in New York the Rapid Transit commission could not accept—will now ask the people of Cleveland to give him the right to use their streets for a railway system, on which the fare shall be three cents with universal transfers. The franchises of the existing lines will expire during the present mayor's term."

The Chicago *Tribune* (Rep.) advises Mayor Harrison to visit Cleveland and take a few lessons from Mayor Johnson, but the St. Louis *Globe-Democrat* (Rep.) thinks that Johnson's "ragtime pranks" show that he is little more than a political mountebank.

## TENEMENT-HOUSE REFORM IN NEW YORK.

THE investigation of New York tenements, carried on during recent months by the tenement-house commission and the lately appointed committee of fifteen, crystallized a few days ago in four bills passed by the New York legislature and signed by Governor Odell. These new laws, remarks the Brooklyn *Eagle*, "will work a revolution in the houses of this kind erected hereafter," even if they do not actually "prevent altogether the erection of such houses for the poor." Mr. Robert W. De Forest, chairman of the tenement-house commission, thus summarizes the most important provisions of the new measures:

"The principal reforms that the new law will bring will be more air and light to the dwellers in tenements, the doing away with dark interior rooms and cellar rooms, proper sanitary appliances for every family, proper protection against fire, and a proper enforcement of the laws in regard to tenement-houses in the city. This will be accomplished by the appointment of a tenement-house department which the acts provide for.

"Probably the gravest evil resulting from the present tenement-house system arises from a lack of proper sanitary supervision. The number of sanitary inspectors is wholly inadequate. The health department has plenty to do without inspecting the sanitary conditions in the tenements. The law in regard to the building of new tenements recently has not been enforced. Out of 333 tenements recently constructed only 15 were found, upon examination by the commission, which fulfilled all the conditions laid down in the old law.

"One of the chief reasons why tenement-house reform has been a failure in New York for many years is the fact that there was nobody specially charged with the care and oversight of these houses. At present the enforcement of the laws in regard to them is divided among the health department, the building department, the police department, and the fire department. The new tenement department will have full control of the enforcement of the laws, and the commissioner at its head will be the one man whom the people of New York will hold directly responsible for any violations.

"The bill creating the tenement-house department provides that the head of the department, who shall be called the tenement-house commissioner, shall be appointed by the mayor and shall hold office subject to removal by the mayor. His salary will be $7,500 annually, and he will be under bonds of $20,000 for a faithful performance of his duties."

Under the new laws, continues Mr. De Forest, every tenement over five stories in height must be fireproof, and fire-escapes consisting of open stairways and balconies must be built in the front of every non-fireproof tenement. A tenement-house sixty-feet high must have a rear yard twelve feet in depth, and an additional foot must be added for every twelve feet in the height of the building. No rear tenements can be erected in a lot less than fifty feet in width. What are at present known as air-shafts, situated between wings or parts of the same building, must be at least ten feet wide in a house sixty feet in height. The total window area in the rooms must be at least one tenth of the superficial area of the room, and each room must have at least 120 square feet of floor area. All these provisions go into effect immediately, tho contracts made under the old laws hold good.

The New York *Evening Post* points out that this tenement-house legislation, tho primarily growing out of conditions existing in New York City, applies equally to Buffalo, the only other one of the "cities of the first class" where evils demanding like

correction have already developed. The same paper especially commends the conscientious labor, entirely without compensation, of the members of the tenement-house commission. "There is undoubtedly a growing recognition by public-spirited citizens," it says, "of the obligation to render public service through other channels than those of public office. This is true, the country over, as it would be easy to cite many illustrations to prove. It is a most hopeful sign of the times."

## TRYING TO BREAK UP THE "SOLID SOUTH."

SOME of the political prophets think that they see in two recent appointments by the President an effort to split the Democratic Party in South Carolina, and to win over to the Republican ranks those who indorse expansion and the gold standard. As the Washington correspondent of the New York *Herald* (Ind.) puts it:

"President McKinley did his part to-day (April 15) in the launching of the new White Man's Republican Party of the South, when he appointed John G. Capers, of South Carolina, to be United States district attorney. This appointment followed that of W. G. Chaffee to be postmaster in Aiken, S. C., which was made on Saturday, over a colored Republican worker named Dickinson, who was recommended by F. A. Dickinson, Republican national committeeman from South Carolina.

"The significance lies in the fact that the President is cutting loose from the old Republican leaders in the South; that both of these new officers are Gold Democrats, and that their appointment at this time is deemed politically necessary in connection with the speech to be made by Senator McLaurin in Charlotte next Thursday, when he will let loose his boom on expansion and anti-Bryanite lines. Mr. Capers's appointment was made at the request of Senator McLaurin, who is still classed as a Democrat, and whose activity in leading the new party is expected to begin a political revolution in the South.

"The Republican organization in the South is composed largely of negroes and carpet-baggers, and, except when a national convention is at hand, little interest is taken in the Southern contingent by the Republican leaders in the North.

CLIPPING THE CRITTER.
—*The St. Paul Pioneer Press.*

"Prominent Gold Democrats in the South refused to support Mr. Bryan in 1896 and 1900 and gradually drifted away from the old-line Democratic moorings. Added to this element is a younger generation, with new ideas and new ambitions in politics, who have become indirectly associated with the Republican Administration. Mr. Capers is regarded as a representative of the latter class of Southern Democrats. Senator Hanna believes the South can be brought to support the Republican Party. Mr. Capers is an assistant attorney-general in the Department of Justice, and is engaged in the settlement of Southern war claims in the court of claims. He was appointed to his present position during the last Cleveland Administration, while Mr. Olney was Attorney-General. When McKinley was elected he was retained.

"The appointment of Mr. Capers will cause a sensation among Southern Republicans. Mr. Lathrop, present United States district attorney of South Carolina, was appointed by President McKinley upon the recommendation of National Committeeman Webster, who is now ignored."

SENATOR JOHN LOWNDES McLAURIN, of South Carolina.

Senator McLaurin is an expansionist and an advocate of shipping subsidies, the gold standard, and a protective tariff. He has declined to attend the regular Democratic primaries in South Carolina, and it is expected that he will try to form a white men's Republican organization in the State. The St. Louis *Globe-Democrat* (Rep.) believes that "tens of thousands of other intelligent Southern men" are ready to follow Senator McLaurin, and it predicts that "unquestionably the Republicans, in most of the ex-slave States, will make a better showing in 1904 than they have done since 1876." The New York *Evening Post* (Ind.) also declares that "no intelligent person can doubt that a large, intelligent, and influential element among the whites in the South who have always been Democrats believe in the present great policies of the Republican Party," and the Philadelphia *Evening Bulletin* (Rep.) thinks that with the negro vote and the danger of "negro domination" removed from politics, "there would seem to be a chance for the establishment of a party which would more adequately represent the intelligence and progress of the South in antagonism to the old Bourbon faction." The Washington *Star* (Ind.), however, recalls the failure of other similar attempts—President Grant's appointment of General Longstreet to federal office, President Hayes's appointment of David M. Key, of Tennessee, to a cabinet position, and the Mahone defection from the Democratic Party in Virginia—and thinks that altho Senator McLaurin "is a clean and able man, with courage," and "deserves success," yet "how large his following may be at home on this new line is yet to be determined."

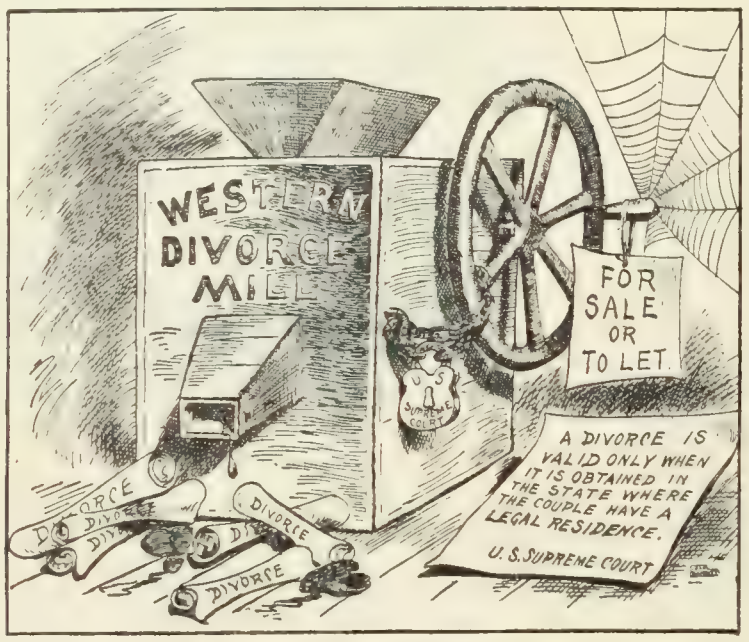
The Columbia (S. C.) *State* (Dem.) says: "The President desires a white Republican Party in this State, and we are quite willing that he shall have one. . . . In our opinion there will be a white Republican Party organized in South Carolina before the primary election in 1902, and Senator McLaurin, like Mr. Capers, will be a member of that party." The Charleston (S. C.) *News and Courier* (Dem.), however, predicts that Senator McLaurin's new movement will fail. It recounts the previous similar attempts noted above, and says: "If the able men in the South who have gone over to the Republican Party could not take their States with them, it is not probable that the smaller men who are now being selected for this purpose will be able to make

much better progress." The Baltimore *Sun* (Ind.), too, thinks that "it is doubtful whether the South Carolina senator's appeal will meet with the favorable response for which he evidently hopes."

It is also interesting in this connection to note that ex-Congressman Harry Skinner, Populist, of North Carolina, has declared his allegiance to the Republican Party.

## SUPREME COURT DECISION ON A DAKOTA DIVORCE.

AS about eight per cent. of the marriages in the United States, according to the statisticians, end in the divorce court, the Supreme Court's decision that a typical Dakota sundering of the marriage tie does not hold good in New Jersey has stirred up considerable feeling, for it is believed that the decision unsettles thousands of divorces and remarriages. The decision of the court is, in effect, that one party to a marriage can not, by moving to another State, establish a residence and obtain a divorce, unless the "matrimonial domicile" of the other party to the marriage is also fixed in the same State, a statement which some lawyers interpret to mean that the defendant party must be present or be represented in the divorce court in the suit. The New York *Tribune* says that the decision "is to be regarded with sincere satisfaction as a step toward a much-needed reform," and it seems to the Chicago *Record-Herald* to merit "the approbation of all right-minded people." "The granting of divorces on such flimsy pretexts as are trumped up in the courts of the Dakotas, when neither party is a legal resident of the State and when one party seldom has a chance to be heard," adds the *Record-Herald*, "is a scandal to the nation and a reproach to our civilization." The Philadelphia *Press* reminds its readers, however, that the ruling handed down by the Supreme Court has been law in Pennsylvania "for half a century," that "it has been law in New York as long," and that "in New Jersey it has been law for almost as many years"; and the Philadelphia *Inquirer* believes that in practise the decision "will make much less difference than some of those who are commenting upon it imagine." *The Inquirer* adds: "The matter is not so simple and so clear as some commentators seem to imagine, and the idea that all divorces obtained in a State where the parties have not conjointly resided have been invalidated, need not be entertained for a moment. Nothing of the kind is the fact."



PUT OUT OF BUSINESS.
*The New York Tribune.*

The decision in question was that on the case of August Streitwolf and Mrs. Streitwolf, of New Brunswick, N. J. It is described editorially as follows by the Washington *Times*:

"The Streitwolf decision, as outlined from the bench by Judge Gray, is far-reaching in its effects. In the case involved, the husband not only complied with the easy law of nominal residence prescribed by the legislature of North Dakota, but really became a legal resident, engaging in business, voting at caucuses and elections, and being commissioned on the staff of the governor. The wife had left Streitwolf in New Brunswick, N. J., on August 3, 1896, alleging abuse and ill-treatment as the cause of her action. On August 7 of the same year she began a suit for divorce in New Jersey. Her husband had filed an application two days before in North Dakota, and a decree was issued to him in October, 1897. When the New Jersey issue was made up, Streitwolf denied all the allegations, pleading the Dakota divorce and setting up the contention that article iv., section 1, of the federal Constitution provides that full faith and credit shall be given in each State to the public acts, records, and judicial proceedings of every other State. On November 22, 1898, the vice-chancellor of New Jersey decreed that the judgment entered in the court of North Dakota was 'wholly void and of no effect.'

"This decision is now upheld by the Supreme Court. In rendering the opinion of the bench Mr. Justice Gray discussed the distinction between legal and matrimonial residence. He brought out the doctrine very clearly that under our jurisprudence there is no such thing as the conviction and punishment or the infliction of personal pains and penalties *in contumaciam*. A court to have jurisdiction of a case involving the relations and rights of the parties to the suit must have actual jurisdiction over both plaintiff and defendant. Thus, the court held that while the defendant Streitwolf did have a legal residence in North Dakota when the divorce was granted, he did not have a matrimonial residence there. To be binding, the proceedings must have included evidence that the wife against whom a decree was sought was equally a resident of the State, and had been given the opportunity as such to appear in court in person or by attorney. As the wife was not in fact or fiction a resident of North Dakota, and probably had never seen the region, the judgment was absolutely null and void, and of no possible effect except, perhaps, within the boundaries of the State granting the divorce."

"Abe" Hummel, one of the most prominent lawyers in New York City in divorce cases, interprets the decision as follows in an interview in the New York *Sun*:

"The United States Supreme Court says in effect that unless both parties to the issue come within the jurisdiction of a foreign State any decisions issuing from the courts of that State will prove ineffectual. This does not mean that the defendant must be absolutely physically present in the foreign State to contest the action, but if the papers in the case are served upon the defendant wherever he may be, and the defendant, through an attorney, honestly contests the litigation in all its phases, then whatever decision is rendered will be respected by all of the States in the Union. To put it briefly, the plaintiff must be an actual *bona fide* resident of a State before he or she can get a divorce. Now, by simply ignoring the service of the papers, the defendant can make null and void a decision granted where the plaintiff has taken up a temporary residence in a foreign State for the mere purpose of getting a divorce; but if the defendant responds and then loses, he will have to abide by the decision."

The Minneapolis *Tribune* voices a sentiment expressed by many other papers when it says: "What is needed in this country is an amendment to the federal Constitution authorizing Congress to pass a uniform marriage and divorce law. Such an amendment would also give Congress the power to effectually stamp out polygamy, in Utah and elsewhere." *The Deseret Evening News* (Salt Lake), the official organ of the Mormon Church, deplores the increasing number of divorces, and says:

"There is an uncertainty among legislators of the country, whenever they essay to do something for the regulation of marriages and divorces, which indicates that they recognize the threatening danger, but are at a loss as to the remedy. Nor is it easy to understand how a change for the better can be effected until there is a general return to first principles. Marriage was, from the beginning, a divine institution. Most of the trouble arises from the fact that the divine element has been eliminated from it. To be sure, it is also a civil institution in which the

State is vitally interested, but it is more than that. And until this fact is recognized, no rules can be found for its successful control. The spirit of the age is in the direction of emancipation from all kinds of authority, both divine and human, and the result is seen in the deadening of conscience, the relaxation of morals, and the prevalence of brute force. There is no way out of all this except in a return to first principles."

The Chicago *Journal* says:

"The decision will have its most serious effect in regard to the transfer of real property, the descent of estates, and rights of dower. Wives who have been divorced from their husbands in this easy way, and husbands from their wives, still have their original rights in each other's property, which can be enforced after the death of either in any court.

"Another unhappy effect is that children born of subsequent marriages will be illegitimated and may in certain ways suffer from such disability.

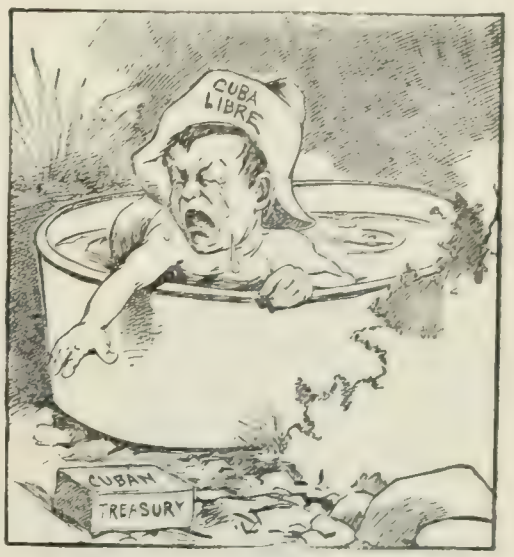
"Indeed, one can hardly foresee all the dire effects of this apparently sweeping decision, but that it will result in great unhappiness and misery to many innocent people there can be no question."

"The only safe advice," remarks the Philadelphia *Record*, "to those contemplating judicial separation by the Dakota method or on a similar plan is—like *Punch's* advice to those about to marry—'Don't.'"

## VISIT OF THE COMMISSION FROM CUBA.

THE mission of the five delegates from Cuba to Washington to confer with the President upon the terms of the "Platt amendment" is a theme for considerable newspaper discussion; but the discussion fails to reveal any changes of opinion on the main question of our relations to Cuba. *La Lucha*, of Havana, declares that the commission is "on a useless errand," first, because the Platt amendment "being a law of the United States, the President has no power to alter it," and, further, because the Cubans really favor the acceptance of the terms. It says that the amendment "has wrought miracles in six weeks," and adds: "All the planters, commerce, industries, the representatives of almost all the wealth in Cuba and over one-half of the men who compose the radical parties, have publicly declared they accept the amendment, and even the delegates of the convention all privately say that they accept it, or that there is no remedy but to accept it as the means of constituting the Cuban country as soon as possible." If the present convention does not accept the amendment, says *La Lucha*, another one will be elected that will.

The New York *Tribune* (Rep) thinks that one good result of the commission's visit will be the "valuable information concerning the United States" that the commissioners will carry back to their people, and the Boston *Transcript* (Rep.) thinks it will do them good to learn "how different American public opinion is from what anti-Administration papers represent it to be," for "the members of the convention have plainly been influenced by some of these papers, and possibly by some of our politicians, to the extent of believing that the Administration and the country are not in unity on the Cuban question." Indeed, it seems to the New York *Times* (Ind.) that "the light and knowledge brought back from Washington by the commission ought to end the temporizing and convince at least a majority of the delegates that the short way and the right way to independence and the establishment of self-government is the acceptance of the terms of the Platt amendment." The St. Louis *Globe-Democrat* (Rep.) goes still further by saying that "if calm sanity and unerring judgment prevail," Cuba "will ask for admittance to the United States as a territory, and therein will find its freest as well as most prosperous estate."



HE WON'T BE HAPPY TILL HE GETS IT.
—*The Chicago Inter Ocean.*

The Philadelphia *Ledger* (Rep.) urges that the acceptance of our terms be left to the free will of the Cuban republic after the withdrawal of our troops. "Treatment of the subject in this way," it says, "by placing the two countries on a diplomatic equality and avoiding all semblance of dictation by the superior power, might have the happiest result in cementing the friendship of the two nations." "It is now a fact," declares the Springfield *Republican* (Ind.), "that our Government has recklessly thrown away the affection of every Spanish colony which came

## CUBA AND UNCLE SAM.

to it under the treaty of Paris. It is a record of blundering that is not to be admired, much less emulated, in future years, if these peoples are to be made our steadfast friends."

---

## WAS THE ABOLITION OF THE ARMY CANTEEN A MISTAKE?

EVER since Congress passed, last January, the law which forbids the sale of intoxicating liquors "in any post-exchange or canteen or army transport, or upon any premises used for military purposes by the United States," reports have been circulated by daily papers in various parts of the country describing what are alleged to be demoralizing results that have followed in the train of the new army regulations. The first of these accounts, published in the Chicago papers about two months ago and reprinted by other papers, was to the effect that at Fort Sheridan, near Chicago, the abolition of the canteen had resulted in the establishment of many new saloons in the vicinity and in greatly increased drunkenness among the soldiers. In its issue of April 10 the Chicago *Tribune* (Rep.) says:

THE MONTREAL "STAR'S" IDEA OF UNCLE SAM.

"The folly of Congress in enacting the anti-canteen law is illustrated every time there is a pay-day at the military reservations. Last month the soldiers at Fort Sheridan invaded Highwood in such numbers and consumed so much bad liquor that a riot call was turned in and a posse of special officers was called out to patrol the town. Last Saturday was the second pay-day since the canteen was abolished, and yesterday it was reported that a number of Uncle Sam's warriors were locked up in the jail at Waukegan as 'drunk and disorderly,' while others had entirely disappeared and were in danger of arrest as deserters. Nothing has happened as a result of closing of the canteens but what the men best fitted to judge predicted would happen. Congress, which would hesitate a long time before it would close the restaurants of the House and Senate, has practically driven the soldiers off the reservations in search of amusement and recreation. They wander now at their own free will, without let or hindrance, without restraining influences of any kind. As the members of Congress who voted to abolish the canteen read the monthly reports which come in from the points where soldiers are stationed, they can see how greatly they injured the army when they weakly yielded to the demands of the W. C. T. U. woman in the gallery."

The Washington *Post* (Ind.) describes similar conditions existing at Fort Meyer, near the national capital. "Since the canteen was abolished," it says, "the saloons around Fort Meyer have been doing well. One of them is newly painted, and another, which had been closed because of lack of patronage, has reopened and is doing a land-office business." It continues:

"There has been but one pay-day at Fort Meyer since the wiping out of the canteen. At that time the Fifth Cavalry was stationed at the post. The companies of this regiment are a notably fine body of men, and there was little or no trouble with them. Still the officers say that men who had always been reliable failed to show up for roll-call for the first time in years after they had been compelled to go away from the post to spend their money.

"There was one company of the Fifth Cavalry which had a well-organized canteen fund. There still remains of it $1,400. This has come entirely from the canteen. This company owned three cows and had fresh milk and cream every day. It had all the ice needed at all times. It had $90 every month with which to buy additions to the ménu furnished by Uncle Sam. It has a typewriter and cabinet, and an iron safe for the keeping of valuable papers of the men and officers, and it has a complete baseball outfit, which was purchased when the organization was ordered to the Philippines. The Government does not furnish ice or fresh milk, or any of the hundred palatable things the canteen added to the fare of the Fifth Cavalry, and to hundreds of other commands. There is no way to make up this amount except by direct tax on the men, which the officers do not believe will meet with general favor or success."

The majority of the daily papers seem inclined to accept these reports as statements of fact. "All the evidence goes to show that in abolishing the canteen a serious mistake has been made," remarks the New Orleans *Times-Democrat* (Dem.); "and if this be so, the sooner a return is made to the canteen the better." "Our temperance friends have made the mistake of trying to accomplish too much," adds the Philadelphia *Inquirer* (Rep.): "to assume that drinking in the army could be stopped by abolishing the canteen was to assume the impossible." The liquor papers, naturally enough, are especially ready with arguments of this kind. *Mida's Criterion* (Chicago), for example, says:

"No amount of sentimental moralizing about what the American soldier 'ought to do and be' can palliate the indefensible folly of turning him over to the disreputable resorts that cluster about the posts and camps and rob him of his pay and fill him with bad liquor."

The Philadelphia *Public Ledger* (Ind.), on the other hand, takes the view that the results following the abolition of the canteen have been greatly exaggerated. Communications received from its readers led this paper to request the editor of the Chicago *Tribune* to substantiate the Fort Sheridan story. *The Tribune* stood by its report in the main, tho admitting that some details had been overdrawn. *The Ledger* conducted an independent investigation and states its conclusions in the following words:

"We have no end to serve in this case but to get at the truth. The original statements by several Chicago papers are not borne out by the reports which we have received. There has been no rioting; there is a difference of opinion as to whether there is more drunkenness than formerly among the soldiers, and in any event, as our own correspondent says, the abolishment of the canteen is too recent, under the conditions existing at Fort Sheridan, to permit of an accurate judgment on the effects of the new policy at that place. We may add that at the end of a year or more the conflict of opinion is likely to be as sharp as it is now; it is an 'irrepressible conflict.'"

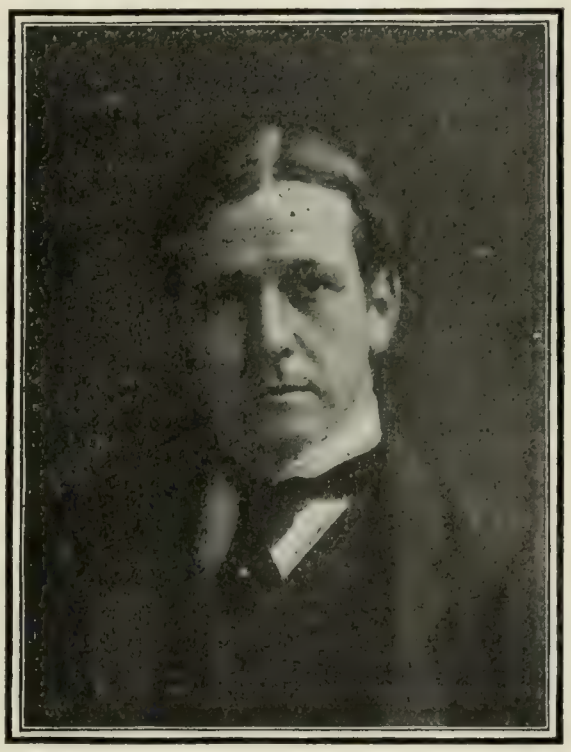
*The New Voice* (Chicago), the leading Prohibition paper and a considerable factor in the agitation that led to the abolition of the canteen, makes a very spirited reply to the hostile criticisms of the daily press. It takes up their allegations *seriatim*, and attempts to show that all the principal "facts" cited are false. The Fort Sheridan story, it declares, is a pure fabrication. "Not a single saloon has been opened there since the canteen was abolished," its staff correspondent reports; "there is just one more drinking-place than there was a year ago, and that was opened before the canteen was abolished."

In equally emphatic language, the Washington correspondent of *The New Voice* scores the Washington story, as printed in *The Post* of that city, the Chicago *Record-Herald*, and other papers. He says that he questioned all the leading officials of the police force regarding the alleged increase of drunkenness and disorder, which, in the words of the staff correspondent of

the Chicago *Record-Herald*, created on the occasion of last payday a scene of "bedlam" unparalleled during several years. The chief secretary at Washington police headquarters told him there was "absolutely no truth in the statement." No new saloons have been opened near Fort Meyer, nor have any applications for licenses been received. As for the closing of the canteen at Fort Meyer, *The Voice* correspondent interviewed the steward of the canteen in question, who told him that it had been closed because the Fifth Cavalry had just left for the Philippines, and that it would probably be opened again (with the liquor feature eliminated) as soon as a body of men is stationed there with a prospect of staying for six months or a year.

## WHO IS MASTER OF THE STEEL TRUST?

TROUBLE in one of the mills of the steel trust (the Wood plant of the American Sheet Steel Company in McKeesport, Pa.), last week, gave rise to a report that the 22,000 employees of the Sheet Steel Company, and perhaps all the 200,000 employees of the trust, might start a labor war with their employers. This danger, now happily averted by concessions to the men in the McKeesport mill, and by the ending of the strike, lends interest to the following discussion in the New York *Journal* (by Arthur Brisbane, whose editorials in *The Journal* are attracting wide attention) of the question: "Who is the real head, the permanent head, of the steel trust?" Says *The Journal:*



ARTHUR BRISBANE,
Editorial writer on the New York *Journal.*

"Not Morgan, or Rockefeller or all the power of all the banks and of all the great fortunes controls the steel trust, now that it is born.

"THE RULER OF THE STEEL TRUST IS THE MAN WHO CAN CONTROL THE TENS OF THOUSANDS AND HUNDREDS OF THOUSANDS OF HUMAN BEINGS ENGAGED IN THE PRODUCTION OF STEEL.

"The great financiers have congratulated themselves on putting all their eggs in one basket. They view with delight a situation which puts at their mercy all industries dependent on steel.

"But they deceive themselves, and an awakening is ahead of them.

"They have staked ELEVEN HUNDRED MILLION DOLLARS on ONE SINGLE SET OF WORKINGMEN.

"To pay interest on their vast capital they must earn more than SEVENTY MILLION DOLLARS A YEAR.

"Their trust can only exist, they can only pay those dividends, SO LONG AS THEIR ARMY OF WORKMEN CONSENT TO MAKE STEEL.

"They have put all the steel PLANTS into one organization.

"They have also put all the steel WORKMEN into one organization.

"The capable leader of that vast army of men may not be visible to-day. But he is bound to appear.

"GREAT OPPORTUNITY ALWAYS FINDS THE GREAT MAN.

"When the man shall appear capable of acting as leader of the steel makers, you will SEE THE HEAD OF THE STEEL TRUST, and not before.

"When one hundred concerns made steel, a strike in one concern meant little. Ninety-nine concerns were at work.

"But Rockefeller's genius has forced every able steel-maker into one great organization.

"How will Rockefeller's genius reply when he shall find himself confronted by a leader able to say:

"'Mr. Rockefeller, I represent ALL THE MEN IN AMERICA CAPABLE OF MAKING STEEL. I am, therefore, as you will easily understand, the HEAD OF THE STEEL TRUST, and, hereafter, unless you want your eleven hundred million dollars to melt, unless you want your dividends to stop, unless you want such a panic as this country has never seen, YOU WILL PLEASE TAKE MY INSTRUCTIONS AS TO THE STEEL TRUST MANAGEMENT. My orders are those of the REAL steel trust, of the men who make the steel.'

"The manufacturers of trusts have manufactured, without knowing it, a giant that may pursue them as Frankenstein's giant pursued him.

"A vast power is this power of labor monopoly, and one that may be as dangerous, more dangerous, than all the monopolies of finance.

"It is to be hoped that wise leaders will be found by the great armies brought together by trust formation.

"It is to be hoped that stock speculators may not succeed in manipulating these forces, and that private ambition or conceit may not misuse them.

"Great new problems confront the people in this trust age.

"The greatest of these is not the problem of financial control.

"It is the problem presented by the possibilities of a labor trust more dangerous and aggressive than any other."

## AGUINALDO'S MANIFESTO.

THE address of Aguinaldo to the Filipino people, advising them to submit to the American authorities, seems to have worked a striking change of opinion among his former friends and former foes. The anti-expansionist papers, that a short time ago were printing eulogies of his character, now consider him a weak and faithless fellow, while the Administration papers have suddenly acquired a sort of admiration for the man upon whom so recently they were heaping ridicule and contumely. The New York *World* (Ind. Dem.) says that "the grandiloquent but abject address of the captive Filipino leader goes far to confirm the low opinion of his character hitherto expressed by his enemies." The Springfield *Republican* (Ind.) thinks that it "gives us a character certainly not of the stuff of which the heroes of the Western world have usually been made, or of which we find evidences in the Mabinis of this Malay people." It appears to the Baltimore *Herald* (Ind.) that the document is "a bombastic, puerile, fawning, insincere statement of an opportunist in a bad plight"; and the Philadelphia *Record* (Ind. Dem.) remarks that "few professional traders in patriotism have more successfully marketed their wares." Sixto Lopez, formerly Agoncillo's secretary, who is stopping in Boston, believes that the manifesto is not genuine, but he seems to be practically alone in that opinion. Turning to the Administration press, the Hartford *Post* (Rep.) believes that Aguinaldo is sincere, and thinks that "his appeal must be taken as made in good faith," and the Boston *Transcript* (Rep.) says: "We shall not be surprised if Aguinaldo becomes conspicuous as one of the agents we shall employ to solidify our domination."

After declaring that "a complete termination of hostilities and lasting peace are not only desirable, but absolutely essential to the welfare of the Philippine islands," Aguinaldo says in his manifesto:

"The Filipinos have never been dismayed at their weakness, nor have they faltered in following the path pointed out by their fortitude and courage. The time has come, however, in which they find their advance along this path to be impeded by an irresistible force which, while it restrains them, yet enlightens their minds and opens to them another course, presenting them the

cause of peace. This cause has been joyfully embraced by the majority of my fellow countrymen, who have already united around the glorious sovereign banner of the United States.

"In this banner they repose their trust, and believe that under its protection the Filipino people will attain all those promised liberties which they are beginning to enjoy. The country has declared unmistakably in favor of peace. So be it. There has been enough blood, enough tears, and enough desolation. This wish can not be ignored by the men still in arms if they are animated by a desire to serve our noble people, which has thus clearly manifested its will. So do I respect this will, now that it is known to me.

"After mature deliberation, I resolutely proclaim to the world that I can not refuse to heed the voice of a people longing for peace nor the lamentations of thousands of families yearning to see their dear ones enjoying the liberty and the promised generosity of the great American nation."

The New York *Tribune* (Rep.) says of the document:

"It will strengthen the cause of law and order. It will facilitate and expedite the process of pacification and the establishment of a free civil administration, in which the natives themselves will participate to the largest possible extent. It will reduce to the merest fraction of a remnant the ill-advised faction which still strives to hold up the standard of revolt. It will deprive the few remaining insurgents of the last pretense of regularity in their warfare, and will remove the last shadow of constraint for regarding them as anything better than wandering outlaws. As for our domestic Tagals, now numbering some seven or eight, we suppose they will remain recalcitrant and unconvinced. Mr. Garrison or Mr. Crosby will emit a lyrical lament over the 'lost leader,' and then they will go right on railing at the Government for governing the Filipinos with their consent just as bitterly as they have hitherto abused it for governing them without their consent. But then they do not really matter. If they were in Manila instead of in Boston and New York, there might shine upon them the great light which Aguinaldo has seen, and the scales of prejudice and hatred might fall from their eyes as they have from his. As it is, they are joined to the idols of their own imagination. Let them alone. The Philippines will become loyal and free without them."

---

**New Record for America's Export Trade.**—"The fiscal year 1901 [ending June 30]," according to a report issued by the Treasury Department a few days ago, "seems likely to exceed any preceding year in its record of exports from the United States." The report continues:

"The steady growth of our exports from $392,000,000 in 1870 to $835,000,000 in 1880, $1,030,000,000 in 1892 and $1,394,000,000 in 1900 has been a subject of much attention and much favorable comment; but it seems that 1901 is to surpass the record of the year 1900 and bring the export figure nearly, if not quite, to the billion and a half mark. The March import and export figures, just completed by the Treasury Bureau of Statistics, show a total exportation from the United States in the nine months ending with March, 1901, of $1,140,170,728, or $86,540,032 in excess of last year, which held the highest record in the history of our export trade. Another interesting fact developed by the March figures of our foreign commerce is that imports seem likely to show a decided decrease in 1901 as compared with 1900, while the exports are showing the increase above indicated. The figures of the nine months ending with March, 1901, show a decrease of $42,292,639 in the imports, as compared with those in the corresponding months of the preceding year. . . . . .

"The farmers are apparently the chief beneficiaries in this remarkable increase in our exports, and are in the fiscal year 1901 showing greater gains in their exports than are the manufacturers, whose record in 1899 and 1900 showed a greater percentage of growth than those engaged in agriculture."

The Washington correspondent of the New York *Times* reports that "of breadstuffs, there were exported nearly $5,000,000 more in the nine months than in the preceding year."

# LETTERS AND ART.

## THE PAST AND COMING OPERA SEASONS.

THE recent grand-opera season in New York, altho the longest in the history of the city, has not been regarded as an unqualified success either by the managers, critics, or public. Of the preliminary English opera season, it is generally admitted that no new note was struck nor any singer of eminent talent revealed; and the experiment appears to prove that while an earnest effort to establish a genuine American opera at low prices might succeed New York is not ready to support an expensive company made up of mediocre singers.

In the course of the regular opera in French, Italian, and German, twenty-eight operas have been sung at eighty-two performances. The musical critic of *The Commercial Advertiser* (March 30) gives the following statistics, with comments on the season:

"The operas given this year were 'Lohengrin' (8) 'Faust' (7), 'Tannhäuser' (5), 'Die Walküre' (5), 'Romeo et Juliette' (5), 'La Boheme' (5), 'Tristan und Isolde' (4), 'Aïda' (4), 'Cavalleria Rusticana' (4), 'Les Huguenots' (4), 'Die Meistersinger' (3), 'Götterdämmerung' (3), 'Tosca' (3), 'Le Cid' (3) ''Salammbo' (3),' Der Fliegende Holländer' (2), 'Das Rheingold' (2), 'Siegfried' (2), 'Rigoletto' (2), 'Lucia' (2), 'Don Giovanni' (2), 'Mefistofele' (2), 'Il Trovatore' (1), 'La Traviata' (1), 'I Pagliacci' (1), 'Fidelio' (1), 'L'Africaine' (1), and 'Carmen' (1). As to composers, Wagner, of course, leads, having had nine operas done thirty-four times. Gounod follows with two operas done twelve times; Verdi, with four operas done eight times; Puccini, with two operas done eight times; Meyerbeer, with two operas done five times; Mascagni, with one opera done four times; Massenet, with one opera done three times; Reyer, with one opera done three times; Mozart, Donizetti, and Boïto, each with one opera done twice; and Beethoven, Leoncavallo, and Bizet, each with one opera done once. . . . . .

"Jean de Reszke is said to receive $2,450 a performance, Melba $1,900, Nordica $1,250, Ternina $1,000, Bréval $750, Gadski $600, Van Dyck $1,200, Saléza $1,000, Plançon $500, and Edouard de Reszke $750 each for ten performances in a month, and $500 each for all over that number. The other singers are paid by the week, the month or the season. It may be safely conjectured that with the appearances on tour and in New York none of these singers will have to pawn their jewels for the next year or two.

"The season has been notable in several respects, both regarding the singers and the productions. Jean de Reszke returned after a year's absence and demonstrated to the satisfaction of all that not only was his voice still in his possession, but, until the grip attacked him a few weeks ago, it was better than it has been for several seasons. His presence has added much to the brilliancy of the winter, and he has given some memorable performances, notably his Radames in 'Aïda,' his youthful Siegfried, his Rodrigue in 'Le Cid,' and his Raoul in 'Les Huguenots.' His Lohengrin, Faust, Tristan, and Romeo still make a standard for others to strive to reach. Equal to him in importance stands Milka Ternina. She has at last won the recognition given to her all too tardily. To be sure, she has been in better voice this year and has had a broader field in which to show her great gifts as a singing actress. Without casting reflections on any of the other women in the company, it is only justice to say that she is the greatest dramatic singer seen in this country in many years. Her gifts as an actress betray that divine spark which we call genius, and her voice and the manner in which she uses it complete an equipment for the modern operatic stage which is not equaled to-day in Europe or America. In all that she does, she is great; but if one were asked to mention those parts in which she is supreme the reply would unhesitatingly be Isolde, Elizabeth, Sieglinde, the Brünnhildes in 'Siegfried' and 'Götterdämmerung' and Tosca. But even while choosing these, one's mind recalls her Fidelio, her Elsa, and her Brünnhilde in 'Die Walküre.' It will be a great loss if she persists in her determination not to return next year.

"Until the last few weeks of the season Melba's work has been characterized by a most lamentable indifference, which has militated much against the success her beautiful voice should have gained for her. Her presence in the company added to the repertory Puccini's pretty little 'La Bohême,' and she found in Mimi a most congenial part. Nordica, always a sound and satisfactory artist, added no new rôles to her repertory, but Gadski was seen in three new parts, all of which increased her artistic worth, Aïda, Santuzza, and Donna Elvira. Saléza has had better luck with his health this year than he had a year ago and shared well in the work and honors. To his credit must be placed the wonderfully spirited impersonation of Matho in Reyer's 'Salammbo,' and his capital Rodolfo in 'La Bohême.' Van Dyck's work was confined to four parts; but plenty to do was found for the versatile Dippel, who added Radames to the innumerable rôles he already knew. Edouard de Reszke finally sang Hans Sachs in German; Scotti added to his reputation with his picturesque Scarpia in 'Tosca'; Campanari made much out of Marcel in 'La Bohême.' He also sang Nelusko for the first time in this city."

The report that owing to the poor financial success of the past season there will be no opera next year is currently regarded as a "bluff," and the usual season of fifteen or seventeen weeks is looked for. It is said that Mr. Grau is determined to popularize still further the French opera of the "Salammbo" type, and that we may have "Le Montague Noire," "Astarté," and others of that type. Among the artists not to return next year are Jean de Reszke, Saléza, and Melba.

## WILL RUSSIAN BECOME THE WORLD LANGUAGE?

EVER since the modern colonizing era began, some centuries ago, with the explorations and settlements of the Portuguese, Dutch, and Spaniards, there has been a strife of tongues for predominance, almost as strenuous as the clash of arms and the struggle of commercial rivalry. First it was Spanish that seemed likely to prevail as the coming international language. Then French, always strong as the language of diplomacy, art, literature, and fashion, seemed at the point of prevailing. Since the downfall of Napoleon, however, English has steadily forged ahead as a world-language, and while French is still vastly important in diplomatic and literary fields, and German as the language of scholarship, English for more than half a century has not only far distanced all competitors, but has appeared to have every prospect of remaining without a serious rival. Now, however, a new planet swims into our ken—the portentous Muscovite nation. The possible future of this people and their language even within the next fifty years is forcibly stated by *The Independent* (March 14). It says:

"Russia, last of European nations to rise out of barbarism, occupies half the territory of Europe. She also possesses the vast fertile plains of Siberia. Every decade carries her possessions farther south. Already she reaches Afghanistan, and casts covetous eyes on that country and Persia. To the east she has just taken Manchuria, and her next step will be the Chinese provinces in the latitude of Peking. All this territory, which will produce the hardiest of men, will support many hundreds of millions of people. A rejuvenated China may raise a barrier to the southern progress of Russia, but no European power can. All this territory, from the Baltic to the Yellow Sea, from the Arctic to the Persian Gulf, is likely to be dominated by the Russian language. The Russian empire will, fifty years from now, be by far the strongest in the world, even as now it can raise by far the largest armies. And the Russian language will be spoken by half of Europe, and the best half of Asia, that half which raises the hardiest men. And they will be no rude people; men of ability, of genius, of culture, in a country of railroads and universities. Already scholars lament that they must miss so much of research because it is published in the Russian language, a language which hitherto it has not been thought necessary for scholars to learn; English and German and French, with a little Italian, were enough.

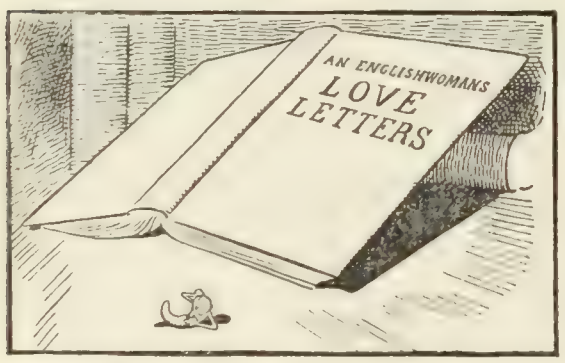
"The conflict of the world is to be between the English and the Russian languages. German is hemmed in. When half of Austria goes to Germany, it will be a German gain politically, but not linguistically. But when the other half of the Austrian empire goes to Russia, and Rumania and the other Balkan provinces go to Russia, they will become Russified in language. France will make insensible progress in imposing her language on her African possessions; the Arabic will hold its own where France can send no settlers. The Arabic tongue is quite as likely to invade France. The rivalry of the world will be between the English and the Russian tongues.

"It is the part of high statesmanship to help the spread of the English language, for language is the most powerful of all unifying forces. Those whose tongue we can not understand are barbarians to us. Perhaps not a million people in India yet talk English. The British Government ought in every way to encourage the use of its own tongue. Its study should be required in all schools above the lowest grades. We should do the same in Porto Rico and the Philippines. The building of the Nicaragua Canal ought to lead to the prevalence of English in Nicaragua and Costa Rica, and we should hope that its use may spread in Mexico."

Our scholars and teachers also, says the writer, should agree to influence public opinion to remove the wholly unnecessary difficulties which prevent its spread, especially "our uncivilized orthography." No language has an easier grammar; none except Chinese is so hard to read on account of its spelling. The man who leads this reform to victory, says *The Independent*, will be one of the greatest of the world's benefactors.

## LOVE LETTERS, REAL AND OTHERWISE.

THE past three years have seen the publication of more love letters of eminent men and women than were probably witnessed by the three preceding centuries. Only so short a time ago as 1878, Mr. H. Buxton Forman called down upon his head not only severe criticism but even vituperation for publishing the letters of John Keats to Fannie Brawne—letters priceless not only for their sentiment but as supplying the one key, not possessed even by his friends, to his last years and death. The Browning love letters, published some three years ago, altho far more voluminous and intimate, called forth far less criticism. Since then we have had the love letters of Victor Hugo and of Bismarck, besides the publication anew of the "Love Letters of Dorothy Osborne to Sir William Temple," one of the most charming collections of its kind. Yet all of these have been far distanced in popularity by the extraordinary book called "An Englishwoman's Love Letters." Contrasting these manufactured letters with the genuine charm of the Dorothy Osborne letters, a writer in the literary supplement of the New York *Times* (April 13) says:



BOOKWORM: "Mercy on me! but I was lucky to get out of that book. I have never felt so sick in my life." —*Life.*

"The temptation is strong to linger over these charming letters, Dorothy's personality being as living to-day as tho she were numbered among one's intimate friends in the flesh. One is equally tempted to ask why a book of this character should have taken nearly fifteen years before it was thought expedient to issue a new edition, and why letters showing the beautiful natures and hidden characteristics of the writers, disclosed in books like the 'Browning Love Letters,' the 'Stevenson Letters,' 'The Love Letters of Victor Hugo,' and the 'Love Letters of Bismarck,' reviewed elsewhere to-day, should sell, steadily, it is true, but still slowly, when books of the character of 'An Englishwoman's Love Letters,' 'An Englishman's Love Letters,' and other books of like nature, including the somewhat appalling title, 'The Love Letters of a Liar,' should go into edition after edition, and even, in the case of the first two, attain to the dignity of becoming 'first editions' and being held at greatly advanced prices. The first editions! 'An Englishwoman's Love Letters,' was quoted some months ago by an English bookseller to an American collector at 16s., with the added advice that it would be well to secure it at once, as it was constantly advancing in value!

"It is simply appalling to learn of these facts when it is known that the Browning and Stevenson collections have scarcely reached sales of 15,000 copies each—books that will live far beyond the generation that saw them published, while those popular collections of worthless stuff falsely named 'love letters' will lie stark dead and forgotten before the year is ended."

## AMERICAN LITERATURE AND PROFESSOR BARRETT WENDELL.

NEXT to Mr. Stedman's "American Anthology," Prof. Barrett Wendell's "Literary History of America" is commonly viewed as the most important American publication of the season in the sphere of critical literature. Two noteworthy reviews of the book appear this month: one by Mr. W. D. Howells, in *The North American Review;* the other by Prof. Lewis E. Gates, in *The Critic.* The latter writer, who holds an assistant professorship of English in the same institution (Harvard) in which Professor Wendell holds the chair of English, defends the author from certain charges of "Bostonian priggishness" and "class superiority," which have been freely made in what Mr. Gates calls "the daily prints." Caste prejudice, says Mr. Gates, "has always exerted and probably always will exert a marked influence—favorable or unfavorable—on art. . . . What Mr. Wendell has done has been to indicate with the utmost human sympathy, but otherwise with scientific dispassionateness, the modifications which from time to time the peculiar character of conventional social life in New England or in the Middle States has impressed on literature." He continues:

PROF. BARRETT WENDELL.

"One of the most noteworthy of Mr. Wendell's guiding ideas is his conception of the American character as perpetuating under specially favoring conditions many of the traits of the English character of the age of Elizabeth. He thinks that in America the variation from the original Elizabethan type of Englishman has been far less than in England. The Elizabethan Englishman was spontaneous, enthusiastic, versatile; the modern Englishman—we find him with his traits somewhat over-accentuated in *Punch's* John Bull—is far from being a similarly imaginative and nervously effective type. He has resulted from the long disenchanting, materializing experiences of political, social, and economic struggle which the English nation has had to undergo within its narrow, old-world boundaries while life has been at high pressure. For nearly two centuries, Americans, on the contrary, had, as Mr. Wendell urges, hardly any of this harsh

experience to submit to. The economic ease and political freedom and general simplicity of all life in the new world left comparatively undistorted or undeveloped the type of individual character which the early emigrants brought over from Elizabethan England. 'Freshness of nature and feeling' persisted in America; faith in ideals and devotion to them remained purer and firmer than in England; 'American character preserved much of the spontaneity, the enthusiasm, and the versatility transported thither from the mother country.' Hence, the modern American is of a more nervous, eagerly intellectual, alertly imaginative type than his English cousin. . . . . .

"From this survey of the past Mr. Wendell turns toward the future and indulges in a confident forecast of what it has in store. He is temperate here as always; he points out certain dangers; but he also points out certain qualities in the American character that seem likely to conjure out of these dangers their formidableness. Particularly suggestive and wise are the closing sentences of this chapter which plead for what Mr. Wendell regards as the authentic American democratic tradition as opposed to the European democratic tradition. In America democracy, while it has fostered liberty, has also recognized and done honor to excellence of all sorts, and has refused to convert equality into a fetish or to make mediocrity compulsory on pain of decapitation: 'If, in the conflicts to come, democracy shall overpower excellence, or if excellence, seeking refuge in freshly imperious assertion of authority, shall prove democracy another futile dream, the ways before us are dark. The more one dreads such darkness, the more gleams of counsel and help one may find in the simple, hopeful literature of inexperienced, renascent New England. There, for a while, the warring ideals of democracy and of excellence were once reconciled, dwelling confidently together in some earthly semblance of peace.' Thus with a discreet blending of academic conservatism and broadly human democratic optimism, Mr. Wendell brings to a close what is sure to be for many years the standard history of our literature."

Mr. Howells pays Professor Wendell the compliment of a review extending over nearly twenty pages. He admits that certain critics are right and that the book "*is* priggish and patronizing," but it is "several other things so very much better that one must not, on one's honor, on one's honesty, fail to recognize them":

"It is, throughout, the endeavor of a narrow mind to be wide, and the affair in hand receives a species of illumination in the process which is novel and suggestive. It is not the kind of mind I like, but I like it better than I did before I was so well acquainted with it. It has an elasticity which I had not suspected, and the final result is a sort of instruction which the author seems to share with the reader. One is tempted to say that if Professor Wendell had not produced in his present book the best history of American literature, he had educated himself, in writing it, to produce some such history. His general attitude toward his subject is the attitude of superiority, but not voluntary superiority; every considered volition of his is toward a greater equality with his theme. It is as if, having been born a gentleman, he wished conscientiously to simplify himself, and to learn the being and doing of his inferiors by a humane examination of their conditions, and a considerate forbearance toward their social defects. He has his class feeling against him, but he knows it, and he tries constantly to put it aside. All this is temperamental; but, besides, Professor Wendell has certain disadvantages of environment to struggle with, and in this he exemplifies the hardship of such Bostonians as have outlived the literary primacy of Boston. A little while ago and the air was full of an intellectual life there, which has now gone out of it, or has taken other than literary forms; and, in the recent ceasing of the activities that filled it, the survivor is naturally tempted to question their greatness. The New England poets and essayists and historians who gave Boston its primacy are in that moment of their abeyance when the dead are no longer felt as contemporaries, and are not yet established in the influence of classics. . . . . .

"Professor Wendell's radical disqualification for his work seems the absence of sympathy with his subject. He is just, he is honest, he is interested, he is usually civil and too sincere to affect an emotion which he does not feel; he is versed in general literature, and he knows a great deal of his chosen ground. But he does not, apparently, know all of his ground; and his facts, when he ascertains them, are the cold facts, and not the living truth. Only those of like temperament can fail to be aware of this in him, and only those of like intellectual experience can fail to perceive the error of his ideals."

In another passage Mr. Howells calls attention to numerous passages which, he says, are not only lacking in distinction, but are bald and would be unworthy of a schoolboy. The London *Athenæum* (February 23) also dwells upon this characteristic, as well as upon more serious failings:

"It is rather the student than the professor whom one would expect to say that Washington Irving's 'Sketch-Book' is 'in formal style . . . more conscientious than Leigh Hunt's 'Indicator,' Shelley's 'Cenci,' 'Don Juan,' or 'The Bride of Lammermoor.' We can imagine only a very young person saying in cold blood that 'the English imagination seemed checked by a variously developed sense of the inexorable limits of facts and of language.' Nor does one expect a professor to reprove Emerson for speaking of great names like Socrates and Galileo and Newton with the easy assurance of intimacy. In a truly delicious passage close to this Professor Wendell takes pains to explain that Emerson's famous advice, 'Hitch your wagon to a star,' can not be taken in a literal sense: 'No chain ever forged could reach far on the way from a Concord barn to Orion.' We are tempted to think that the author of such a statement has been studying too closely the criticism of the Massachusetts judge who said of a colleague that 'his English was purified by constant reading of the greatest models—the English Bible, Shakespeare, Addison, and Fisher Ames'; or that other compatriot whose idea of mental rest was to lie in a garden and read Shakespeare and E. P. Roe.

"Of course, it is conceivable that a book may have all the faults which we have suggested and still be a valuable and fruitful piece of criticism. Coleridge reminds us that a man may be a great critic without a keen sense of humor. Professor Saintsbury has long shown that a careless writer may yet have sound views combined with encyclopedic knowledge. Froude is a standing witness that constitutional inaccuracy need not deprive the historian's work of charm and breadth of view. But Professor Wendell has not made the best of either world; he is as bizarre in judgment as he is strange in style and untrustworthy in detail. He is fond of accusing other writers of 'guileless confusion of values'; but it is the pot calling the kettle black. We have seldom read a work with pretensions to criticism in which the real proportions of men and books were so frequently obscured."

---

## HOW CHINESE NEWSPAPERS DO THEIR WORK.

CHINA, like India and Japan, has a large number of daily and weekly newspapers which in the main are of the modern type, yet which present interesting variations from occidental journalism. Mr. Frederick W. Eddy, formerly city editor of the New York *Times*, but now in Shanghai, gives the following account of newspaper life in that city (New York *Times*, March 24):

"In Shanghai there are six daily native papers and one weekly. The local departments to be covered engage four reporters for the native city, one for the Mixed Court, and one each for the French, English, and American settlements. In the native city, one man looks after the movements of the Taotai and news of his yamen, one after the yamens of inferior officials, and two watch for police and general news. Every man is expected to become proficient in speed and in condensation. He should learn how to write characters that express much in little, for the paper is not elastic, and the local field can not have more than 3,000 characters out of the 8,000 that compose the reading matter of the paper. Advertisements fill about three-fourths of each edition. A man is considered fast and competent who can write a striking and graphic story in 100 characters or less at the rate of five characters per minute. It is hard to conceive a piece of news worth more space, according to accepted local notions. If a man is deficient in terse expression, the talented readers who handle his copy are expected to boil him down. Including the

managing editor, there are eight readers, who must look after proofs, and each of whom is charged with the proper adjustment and placing of all the reading matter that comes to him as copy. This fixes responsibility beyond question for every line in the paper. These eight men oversee correspondence and general news as well as the local field. . . . . .

"A Chinese compositor can not stand at his case and, remaining in erect posture, pick up type, as in a foreign office. He needs both arms and legs, a good stooping back, and, if the editor's vocabulary is especially rich, a stepladder. There must be a pocket for every character, and as ordinary newspaper uses require about 4,000 characters one compositor needs almost enough room to live in. It is a mark of distinction to employ unusual characters. Every paper likes to appear learned. There are editors who seem to employ their leisure in devising combinations which, while original and distinctive, shall yet be self-explanatory. As no merchant could anticipate or supply such demands, every office contains its own foundry. Two men attend to this. One of them keeps busy making steel dies and the other melts and stamps out the type. The compositors make new pockets for all creations. It behooves them to burnish their memories frequently, or they may be hours in setting up a single article, which would never do. As the types are of soft lead and easily worn, one man has his hands full in sharpening their lines by picking out the ink that they gather or in filing down the inequalities that are always appearing. When a type becomes worthless it is thrown into the pot, to be melted over for a fresh stamp."

As for the reporters, they get but from eighteen to twenty Mexican dollars per month, says Mr. Eddy, from which the numerous fines of a Chinese newspaper office have to be subtracted. It is a waste of money for a Chinese reporter to hire lodgings. Having no possessions worth mentioning but the clothes on his back, he sleeps and eats when and where he finds it convenient; while a weekly visit to the barber shop satisfies all the requirements of his toilet.

## SHOULD THE POET READ HIS OWN WORKS IN PUBLIC?

THE fact that during the past year or so Mr. Edwin Markham has given public readings from his own poems, particularly from his world-famous "Man with the Hoe," has subjected him from time to time to twittings from the press, which for the most part is not inclined to relish his collectivist and fraternal beliefs. His recent appearance in New York called forth the following remonstrance—among others—from *The Commercial Advertiser* (March 19):

"At it again:—reading from his own works at the People's Institute on Sunday—this time not 'The Man with the Hoe' but a new poem on Lincoln. Never has this country seen so prevalent a poet as Mr. Edwin Markham. It has come to such a pass that no matter what the occasion, they must have him in, poetry by Markham taking the place on the program of music by the band. No Sunday-closing law for him. The man has put up a pumping-station at the Pierian Spring. It is all wrong, bad for the people, bad for the poet. Our instinct in regard to poets is a safe guide. They ought to be more or less remote, and if they mingle with men at all they ought to behave like the rest of us and not like poets. There is nothing more hideous than a poem in the wrong place, and when a man starts up before a placid, practical-minded audience and says, as Mr. Markham did: 'When the Norn-Mother saw the Whirlwind Hour, Greatening and darkening as it hurried on,' there is a general feeling of sheepish discomfort. And if the poet does not see it, but keeps straight on doing this kind of thing over and over, he becomes that awful scourge of mankind—the obtuse, horny-skinned, aggressive, and irrepressible parlor bard, never seen without a song inside him, which you know is sure to emerge. A social evening with one of these self-winders is the darkest form of entertainment as yet devised, the first part spent in dreading what is to come, the last in getting it. 'Won't you read us some little thing?' Why need they always ask him? Let him burst. It is a radical course, but something is due to us, who never drank of Aganippe well nor ever did in vale of Tempe sit."

In the same journal (March 22), a reader defends Mr. Markham from this somewhat severe indictment, and incidentally opens up the whole question of the proper relation of literature to civilization. He says:

"The critic implies that Mr. Markham's Lincoln poem (not a new one, by the way, except in the writer's telescopic imagination) is a thing not calculated to be read before 'practical' people. When one reflects that this fine piece of verse was written for that eminently sane and unsentimental assemblage, the Republican Club, at its annual celebration of Lincoln's birthday a couple of years ago, and by them hailed with acclamations as a fit tribute to the greatest American, and when one remembers that the press has received the lines with almost universal approval as the 'final and adequate word on Lincoln,' as one magazine has editorially expressed it, one wonders at the strange point of view of this censor in *The Commercial Advertiser*. Where does one find the great martyr's justice, and loving-kindness, his sturdy independence, his unflinching honor, better celebrated than in these lines rejoicing in this hero who 'held on through blame and faltered not at praise'?

"This critic further objects to Mr. Markham's readings (I think the poet has read some four times this winter) on the ground that our instincts (whose instincts?) demand that the poet be a 'thing remote.' Why, the trouble with our commercialized civilization is that we lack too much of poets and of poetry. If poetry is the highest truth, why should the torchbearer hide him in his cell as a thing unclean? Since when has it become undignified to write an 'occasional' poem? Oliver Wendell Holmes did his best work in this line. Emerson gave us the 'Embattled Farmers' on 'occasion.' Lowell was left his finest monument in this shape. Lowell, too, lived the strenuous life, speaking upon a hundred occasions, and was only applauded. But here is a poet in our midst, kindly, modest, asked to give his talent for the pleasure of his fellows now and then, and the critic demurs.

"The person who is so concerned over this Markhamic appearance would better calm his nerves by a sedative of Mr. Martin Tupper's stuff, and reflect that Mr. Sprague Smith and Mr. Charles Powlisson are men in touch with the public and know what will please their audiences when they ask this poet—too simple to care for appearances or conventionalities—to give us of his work in the old Homeric way."

## NOTES.

IT seems a curious example of life's occasional ironies that Sir Edwin Arnold, the author of "The Light of Asia" and "The Light of the World," should have become totally blind in his old age. Besides his various literary undertakings and his travels, he has found time for active journalism, and during the past forty years he has been on the editorial staff of the London *Daily Telegraph*. In spite of his affliction, it is said that Sir Edwin may devote some of his leisure to new interpretations of Oriental life and thought.

AN influential factor in securing fuller educational privileges for women is the National Institute, of which the secretary is Miss Clara Barton, of Washington. Under its auspices fellowships for women are founded in the chief universities, and loans are made to deserving women students. At present a special effort is being made to raise funds for the new "Victoria foundation," the aim of which is to aid deserving women students and to honor womanhood as exemplified in the life and character of the late Queen of England.

AN American novel which has attracted comparatively little notice in this country, "The Heritage of Unrest," by Gwendolen Overton, gains very high praise from the London *Spectator* (March 31), which refers to it as "by far the most brilliant and striking novel on our list." It deals with life on the frontier in Arizona and New Mexico, and the treatment is to some extent historical. "Indeed," concludes *The Spectator*, "whether we consider scenic accesories, incident (sometimes, as the theme necessitates, of the most terrible nature), or characterization, this is one of the ablest books that has [*sic!*] come to us during the year from America."

A BOSTON despatch of April 10 to New York *Sun* states that an unpublished hymn by Longfellow has been discovered among the private papers at the Longfellow house. It says: "The hymn is entitled 'Christo et Ecclesiæ,' and was written for the dedication of Appleton Chapel, which took place on October 17, 1858. Dr. F. G. Peabody read the hymn at morning prayers last Monday. Miss Longfellow does not wish to give out the poem for publication just now, and she has not definitely decided where the hymn is first to be published. It is possible that it will soon be published in *The Harvard Graduates' Magazine*.

## SCIENCE AND INVENTION.

### AN AERIAL TROLLEY.

THE system of electrical haulage known as "telpherage" [Greek *tele*, far, + *pherein*, to carry] is being developed with persistence and success. It was invented twenty years ago and was perfected before the surface trolley system, but has lain dormant for a long time. Telpherage is a cableway system in which the traveler is actuated by its own electric motor. From a description in *The Electrical World and Engineer* (April 6) we quote the following:

"As our readers are aware, the telpher travels along a bearing cable and takes current by rolling contact from a lighter wire suspended just above it. We are now able to illustrate the standard apparatus, which has been developed and perfected . . . and to show some of its performances. Either a single unit telpher or a double unit may be employed for the work, with or without a trailer, the single unit consisting of two small enclosed motors and the double unit of four motors. The hanging or slinging arrangements attached to the telphers or the trailers are of a great variety of shapes and styles, adapted to the transportation of all kinds of loose or easily divisible material, such as bags, barrels, sand, coal, ashes, ores, bricks, fruit, etc.; while a ready combination of one or two trailers lends itself easily to the transportation of long pieces, such as lumber, rails, tubes, drain-pipe, etc. One of the most remarkable things in connection with the work is to witness the manner in which telpher units of not to exceed one-fourth to one-half horse-power will travel at a rate of five or six miles an hour with loads of several hundred pounds on lines running around sharp curves and even up sharp inclines. The current consumption is surprisingly small.

FIG. 1.—TRAILER WITH BAGS IN SLING.

"At the present time, in addition to the production of its apparatus, the company has found it a task of no mean description to attend to all the applications which have poured in upon it from commercial and engineering concerns for agencies, and these, both domestic and foreign, are being assigned as rapidly as possible. The development has attracted the liveliest interest abroad, and was recently investigated by the engineers of a leading English electrical firm; while one of the requests from Russia came from Prince Hilkoff, who desires to equip several miles with the system, which is obviously much lighter and cheaper to construct than railroads, while it does not encroach in any way on highway rights and does not impose any difficulties as to crossings, etc., along the routes it traverses. The utilization of the system for transporting mail and express matter has already been taken up, and applications have been received from managers of telephone and trolley lines, who see in this light and flexible electrical system a means of getting an additional service out of their pole lines, while at the same time subserving for purposes of varied freight transportation the necessities of the districts they cover. The conveyance of mail matter is peculiarly within the function of this apparatus, as letters and papers can be concentrated into very small bulk for transportation, and the deliveries can be made with great frequency where, under existing conditions, the postman can go over his route but once or twice a day at the most.

"In connection with the handling of mail matter it may be stated that the company has already been invited to consider the question of transporting mail in cities by means of underground tube systems, where the conditions would if anything be even more favorable than the aerial lines. At the present time mail in transit from post-office to railway depot is subject to all the vicissitudes of interruption by street blockade, weather, etc., and is frequently delayed on that account. The use of pneumatic power has already been tried in this direction, but it is plain that in this field, as in others, electricity will readily prove its superiority and be generally adopted for such work. In the mean time the company has its hands more than full of propositions for equipping wharves and docks, railroad depots, factories, plantations, mines, and a host of other establishments where goods have to be transported continuously in relatively small bulk; and it is only reasonable to predict that we shall now see the fruition of the work in this new industry, which was attempted even before the electric railway began its great development, and which may be said to have awaited the perfecting of apparatus and details not available in the earlier days. Except so far as it may do some of the work hitherto assigned to cable haulage systems, telpherage appears to cut out an entirely new province of its own, and it thus gives opportunity for considerable utilization of current and motive power, as well as new and profitable employment of capital."

---

**Berlin to Hamburg in an Hour.**—The projected high-speed electric road from Berlin to Hamburg, to which allusion has already been made in these columns, is thus described by United States Consul Guenther, of Frankfort, in a report quoted in *The Scientific American Supplement* (April 13):

"Experiments are now being made by the firm of Siemens & Halske, of Berlin, with electric trains having a speed of 125 miles an hour. The main objects of these experiments is to complete the technical improvements for the wheels, necessary on account of the greatly increasing rotation. These experiments, it is now stated, have demonstrated that a speed of at least 125 miles per hour can be attained without difficulty. In using electric motive power, a transformation of the horizontal motion of the piston into one of rotation of the wheels is not necessary; the rotary motion of the motor can at once be transmitted to the axle of the coach, or the motor axle can serve at the same time as the coach axle. A pamphlet issued by the privy councilors of engineering

—Messrs. Philippi and Griebel—states that with such electric roads of great speed surface crossing is out of the question; railroads, streets, passages, and canals must be crossed either by bridges or tunnels. The quick succession of trains (intervals of six minutes) makes it imperative that the tracks must be kept clear at all times while being operated. Neither the public nor employees can be permitted to enter upon them. For this reason, the three-track system must be adopted and switches are to be avoided. The plan for this rapid electric road between Berlin and Hamburg is as follows: The road will run between a point immediately adjoining the city of Berlin and one adjoining the city of Hamburg. The total length of the line will be about 156 miles. The subways and elevated tracks are already projected for the whole line. The estimated cost, according to Messrs. Philippi and Griebel, is $33,000,000, among which are $4,400,000 for the right of way, $7,200,000 for grading, $10,000,000 for construction, and $5,000,000 for electric power-stations, passenger-depots, and workshops."

## THE KILLING-POWER OF AN ELECTRIC CURRENT.

SOME new experiments along this line, using the new "triphase" currents, have just been made in Zurich, Switzerland, by Prof. H. T. Weber, of the Polytechnic Institute of that place. A trolley company of the city wished to make use of triphase currents of a pressure of 750 volts, while the authorities wished to limit them to 500. Professor Weber's experiments show that a man could be killed by triphase currents of much lower voltage than those that could be employed by the company, and that consequently there was no use in imposing any limit at all. We translate the following paragraphs from the *Revue Scientifique* (February 9):

"The first experiment was as follows: A person grasped the two cables, one in each hand . . . and the action was studied at first with the hands moistened. The results showed that above 30 volts the contact is extremely painful and that at 50 volts there is such serious danger that it is preferable not to continue the experiment. At 30 volts, says M. Weber, 'the fingers, hands, wrists, forearm, and arm are almost paralyzed, the pain is very sharp and can not be borne longer than ten seconds. The hold can be released, but only by a considerable effort of will.' At 40 volts there is 'instantaneous paralysis of the upper limbs and almost intolerable pain; the experiment can be kept up only for five seconds.' At 50 volts, finally, there is immediate paralysis, impossibility of letting go, and at the end of two seconds the experimenter has had more than enough. Beyond 50 volts contact is very dangerous, and would probably soon cause death if the hands are moist.

"With dry contact the danger does not begin until higher pressures are reached. At 40 volts there is scarcely a tingling of the fingers; 80 volts must be reached before there are serious effects. At 80 volts there is difficulty in letting go; at 90 it is impossible, and the experimenter has had enough at the end of two seconds.

"The conclusion of this first series of experiments is that 'simultaneous contact with the two poles of an alternating current is dangerous after the pressure exceeds 100 volts; and from the moment when the subject can not let go by his own efforts, the issue must be regarded as fatal unless immediate assistance can be given.' . . . . . .

"These facts show that the pressure of 500 volts, generally considered as not dangerous, is really very dangerous. . . . . .

"In the second series of experiments the method was quite different. M. Weber here considered the case where the subject is in contact with one of the poles, the earth in particular, from which he is in some slight degree insulated by his shoes, and where he comes into accidental contact with a live wire. In this case the voltages were increased by steps of 100 up to 2,000 volts.

"The experiment was made . . . first with moist ground and then with dry ground. With the former M. Weber could go without difficulty up to 2,000 volts, and could have proceeded farther if the experiment had been so arranged. At 800 volts there was almost no sensation; at 2,000 there was nothing but an intense trembling of the fingers.

"On the dry soil the voltage of 1,000 was extremely disagreeable; the shocks could not be tolerated more than one or two seconds and the subject had difficulty in letting go; at 1,300 volts the paralysis of the hands is absolute and they can not be loosened. . . . . .

"The practical conclusion of it all is, . . . that since voltages of 300 or even 200 are dangerous and even fatal, it is perfectly absurd to limit a company to a voltage of 500. Either make it 100 or allow the highest pressures. For while a current at 200 kills as effectively as one at 750, the latter presents a notable advantage from the point of view of exploitation and assures a much more economical result."—*Translation made for* THE LITERARY DIGEST.

## WHY SCIENCE HAS MADE SUCH RAPID ADVANCEMENT.

WHY has science moved so slowly until very recent times, and then gone ahead with such rapid leaps? Is not modern science based on fundamental facts that have been known for ages? This question is asked and answered by M. Maurice Levy in his retiring address as president of the Academy of Sciences, Paris. This address, published in full in the *Comptes Rendus* of the Academy, is abstracted in *The Engineering Magazine* (March), and from this abstract the following paragraphs are quoted:

"Nearly all the fundamental phenomena of the various branches of science have been observed during many centuries, and only after long lapse of time have these principles been developed and applied with that system and judgment which may truly be called scientific.

"Thus, for example, the attraction of the lodestone for iron and steel was known for ages, but it was not until the expansion of navigation in the fifteenth century that thecom pass came into use. The philosophers of Alexandria were familiar with the force imparted by heat to vapor of water, but it was not really until the commencement of the nineteenth century, after the expiration of the patents of Watt, that the development of the steam-engine really began, and not until the formulation of the science of thermodynamics in the latter half of the century that the improvements were made which enabled a horse-power to be obtained with one-fourth to one-fifth of the fuel consumption formerly necessary. In this connection M. Levy calls attention to the remarkable prediction of Oliver Evans concerning not only the development of the locomotive-engine, but also of the automobile, the latter prediction requiring practically the entire century for its accomplishment, altho all the data for its full realization were in existence in Evans's own time.

"A number of such examples might be given, but the facts are sufficiently well known, and hence M. Levy passes to the query as to why the systematic evolution of science and scientific methods have been almost entirely reserved to the century just closed. The answer he finds in the liberation of thought, by which alone it was made possible for the phenomena of nature to be studied intelligently, without the trammels of preconceived and erroneous notions."

In the work of preparing the world for the application, in the nineteenth century, of scientific methods to the study of observed facts, the position of so-called pure science, M. Levy reminds us, must not be overlooked. What in one age appears vain and unpractical speculation becomes in a succeeding period a vital factor in material progress. Applied mechanics enables us to plan the most complex machines, because in former ages the shepherds of Chaldea and Judea observed the stars, and because Apollonius of Perga produced a treatise on conic sections, regarded as useless by many following generations. To quote further:

"From the untrammeled application of scientific thought to observed facts, all has been resolved into matter and motion. Heat is motion, light is motion, as is also electricity; and all special theories of peculiar fluids, special forms of matter, etc., have been abandoned. Whatever may be the revelations of the near future, the great doctrines of the nineteenth century will

long remain at the foundation of all science and of all human industry. By their generality, by their strength, and by their simplicity, they offer the widest and most secure base for a structure which may lead to developments which, while not to be predicted with certainty, may at least be indicated in character."

## PROGNOSTICATION FROM DREAMS.

IF a serious treatment of such a subject as this would not usually be looked for from a scientific student, that is only because a wrong interpretation is commonly put upon it. Dreams certainly do indicate many things, especially in the realm of medicine, and their study may often result in the acquisition of valuable information by the physician. In the *Revue Scientifique* (March 30), Messrs. Vaschide and Pieron publish an interesting article on "The Semeiologic Value of the Dream." They note that as long ago as 1806 Double published the result of special investigations on this subject, dividing dreams into four classes: (1) Those dependent directly on brain reaction; (2) those resulting from the association of ideas; (3) those due to the action of the exterior sensations; and (4) those dependent on the action of the internal sensations and the animal functions. Only the last are of value as indications, and they may be either diagnostic or prognostic. Among the signs noted by this author are the following:

"In dropsy of the chest, the patient has fatiguing dreams of suffocation; in gastric affections, frightful moving pictures appear; in water on the brain, dreams of ponds, rivers, and marshes. . . . Dreams may also reveal temperaments; sanguine persons dream of songs, feasts, dances, brilliant spectacles, combats; melancholy persons, of specters, ghosts, solitude, and death; phlegmatics, of white phantoms, moist places, and water; bilious persons, of black things, abductions, assassinations, fires. . . . . .

"Dreams of eating and drinking are a good sign in convalescence, but less favorable at the beginning of an illness. . . . Dreams of bathing in warm water indicate critical sweats; . . . violent pains show (when the dream is not the result of external action) lesion, inflammation, or gangrene."

The next writer of importance on the subject seems to have been Artigues, who published a thesis on it in 1884. He asserts that abnormal dreams are due to the awakening of an affected organ, which increases the circulation and gives to the dream its character and intensity. Such dreams, he says, occur in the first or "hypnagogic" period of sleep, and in the last or wakening period, never in the middle period of sound sleep. A morbid dream is often amplified by the imagination, when it becomes "the delirium of sleep." Such dreams are thus of two kinds: prognostic dreams, arising from exaggerated sensation, and delirious dreams, symptomatic of established maladies. The dreams of alcoholics, insane persons, and sufferers from asthma and typhoid have characteristic forms. Dreams that return at fixed hours are indicative of malaria. A later writer, Tissié, in his work on "Dreams," states that dreams of circulatory origin are characterized by fear, anguish, and representations of fire, falls, etc., while those of respiratory origin are accompanied by a sensation of oppression and suffocation. In those who have affections of the stomach, he says, dreams provoke sensations of taste; or, if the trouble is deep-seated, there are frightful dreams with impressions of weight and great pain. Tissié notes also the influence on dreams of fever, parasitism, saturnism, etc., and the "snake-seeing" visions of alcoholics. He believes in general that maladies often begin with pathologic conditions that do not reveal themselves to the waking patient, but that can provoke dreams. Still more recently Klippel and Lopez, in a work on "Dreams and the Accompanying Delirium in Acute Affections" (April, 1900), investigate the effect of toxins on the production of dreams, and state that the dreams of alcoholics, with their disgusting reptiles, are in type the same as those found in toxi-infectious diseases. The authors of the review article from which we are quoting treat at length the connection between dreams and insanity or hysteria. In discussing the influence of dreams on the waking state and its possible utilization in medicine, they say:

"It has been attempted to use this influence of dreams on the waking hours by guiding the dream and so trying to affect the normal life. Thus, M. Paul Farez . . . has succeeded, by certain processes, in making himself heard by sleepers and in suggesting to them such dreams as he believes will be beneficial. . . . Corning, having observed that dreams are often due to the exterior sensations that precede sleep, has attempted to act upon them, before sleep, by musical vibrations, and thus to react on the waking life. . . . Their action produces excellent effects in the cure of neurasthenic affections. . . . . .

"It may be remarked that in two interesting cases of this new therapeutics . . . an appeal was made, not to the simple material action of vibrations, but to psychologic associations awakened by musical harmonies.

"De Sanctis, in his remarkable work, considers the habitual influence of the sleeping on the waking life as a morbid phenomenon. He notes in particular, with hysterical and neurasthenic patients, so with children, a reaction of emotions of sleep on those of life."

In this summary of the subject, which is to be continued in a further paper, Messrs. Vaschide and Pieron refer by name to no less than one hundred and thirty-one different works or articles. It may be seen that the subject has engaged the attention of scientific men all over the world and that it is in no danger of being abandoned to quacks and clairvoyants.—*Translation made for* THE LITERARY DIGEST.

## A FRENCH OPINION OF TWO AMERICAN INVENTORS.

IT has recently been announced by Thomas A. Edison that by means of his magnetic ore-separator he has been able to separate hematite from magnetite, thus making it profitable to work enormous European ore deposits that do not pay with present methods and potentially blasting America's supremacy in the manufacture of steel. A representative of *The World* (New York) recently interviewed Eugene Schneider, head of the Creusot Iron Works, the most important rail, locomotive, and gun factory in France, on this subject, and reports to his paper that Mr. Schneider and his chief mining engineer expressed themselves skeptically regarding the new discovery. Mr. Schneider said:

"What is the use of discussing Edison's advertising dreams? He has no special knowledge of metallurgy, and the problems he claims to have solved have engrossed scientists all over the world.

"Let Edison occasionally do what he claims he can do and then we will be willing to give him attention. But Edison's tactics, like Tesla's, consist of finding what difficulty puzzles scientists and announcing that their own genius is about to solve it. But when the time comes neither realizes his glowing promises.

"Let it be said once and for all that real scientists all over the world consider Edison and Tesla a pair of humbugs.

"What has Edison discovered except the phonograph, which was a chance discovery and not the result of scientific perspicacity? Not electrical incandescence, for that was really invented in Germany; nor the biograph, which was discovered here by Lumiere, nor anything of real importance.

"On the other hand, has Tesla destroyed the Spanish fleet, as promised, or telephoned across the ocean, or lighted houses without wires, or entered into communication with the planet Mars?

"It is a perfect wonder that the American public, with its quick sense of humor, has not long ago shamed these two cheeky pretenders into silence."

The American technical weekly, *Electricity*, which quotes the above interview, has the following to say regarding it:

"Assuming that the above is a correct report of the interview, we think the head of the Creusot Iron Works has committed a grievous error in referring in the way he did to two such men as Edison and Tesla.

"That Edison is not a scientist every one will agree, but, on the other hand, he has given to the world invention after invention of untold value, the Frenchman's statement to the contrary notwithstanding. He did more toward perfecting incandescent electric lighting than any other investigator, invented the phonograph and gave to the world the quadruplex system of telegraphy, to say nothing of the three-wire system, the low-resistance dynamo, and innumerable other devices which have benefited the world to a greater or less extent.

"As regards Nikola Tesla, the gentleman quoted states that he is no scientist. In this we beg to differ with him, for altho it must be acknowledged that Tesla has only given the world one important invention, he is such a deep scientist and looks so far into the future that he is a century before his time. In other words, some of Tesla's ideas, which are considered by the general public as visionary dreams, will be actual facts a hundred years hence. When, therefore, a foreigner undertakes to belittle in the language quoted above two such well-known investigators and inventors as Edison and Tesla, it may safely be attributed to a feeling of envy on his part."

---

**The Transmutation of Bacteria.**—Some evidence has been presented in recent years to show that disease germs may in some cases be abnormal forms of bacteria which in their ordinary types are harmless. For instance, at a recent meeting of the Société de Biologie, Paris, as reported in *The Journal of the American Medical Association*, Dr. Caldas, a Brazilian bacteriologist, reported that by cultivating the colon bacillus of the rat with a certain mold derived from rice, and passing it from rat to rat, he finally obtained a bacillus closely resembling the typical plague germ. This germ was found in great numbers in the glands, spleen, stomach, and intestines of the infected animals, and produced, when injected into rats, similar clinical symptoms, always rapidly proving fatal. We quote as follows from the account:

"The biological characters of this organism throughout were the same as those of Kitasato's Bacillus pestis [the plague germ], and he [Dr. Caldas] has no doubt as to their equivalence. He claims, moreover, to have succeeded in rendering a horse immune by venous injections of at first very diluted cultures of the germ, followed by more virulent ones, and with this horse's serum has been able to save rats that had previously been inoculated with the virulent cultures. He gives it as his opinion that the plague in its origin is a colon bacillosis of rats caused by the ingestion of rice containing a mold, *Aspergillus orizæ*, and that the colon bacillus, by successive passages from rat to rat, takes on the characters of the plague bacillus."

---

**New Test for Human Blood.**—"A method of distinguishing human blood from that of animals, discovered independently by Dr. Uhlen-Luth, of Greifswald, and Drs. Wassermann and Schutze, of Berlin, and originally described in *The Medical Press and Circular*, is thus noted in *Nature*:

"It appears that it is now possible to obtain a definite reaction from blood-stains, however old, which indicates with something approximating absolute certainty the source of the blood under examination. This result is based on the fact that the blood-serum of animals which have been injected with the blood of an animal of a different species, when added to a dilution of blood from the latter, produces therein a well-marked precipitate. Thus, if a rabbit be injected with human blood, the serum of the rabbit blood, when added to a dilution of human blood, causes immediate turbidity, a phenomenon which is conspicuous by its absence when it is added to dilutions of any other kind of blood. The only element of uncertainty is that the blood of monkeys reacts, to some extent, in the same way as human blood; but apart from the fact that the medico-legist is seldom likely to be called upon to differentiate between these two varieties, there is a notable difference in the length of time required for a dilution of monkey's blood to become cloudy as compared with that of man."

---

**Strength of Snails.**—In an article on snails in *Cosmos* (February 23), M. Albert Larbalétrier gives some extraordinary instances of the hardiness of these creatures. He says: "Vital energy is very strong in them and they are gifted with wonderful muscular strength. In the first place they can fast a long time. M. A. Locard, a very distinguished malacologist, has succeeded in bringing back to life snails that he had left without food for a year and six months. Baron Aucapitaine has kept snails for three and one-half years without light, without food, and almost without air, in a closed box. Their muscular strength is not less remarkable. They fix themselves on solid objects and drag these along. We thus saw one of these creatures dragging for about ten minutes a stone that weighed sixty-seven times as much as the snail itself—a truly prodigious instance of muscular power. In the winter the snail retires into its house and stops up its shell with a plaster of calcareous mucus; during this time (about six months) it takes no food; but this fact does not prevent its waking in fine spirits, at the approach of spring, and eating like an ogre."—*Translation made for* THE LITERARY DIGEST.

## SCIENCE BREVITIES.

"A FRIEND of mine," says a correspondent of the Sydney [Australia] *Bulletin*, "noticed near his camp a trap-door spider run in front of him and pop into its hole, pulling the 'lid' down as it disappeared. The lid seemed so neat and perfect a circle that the man stooped to examine it, and found, to his astonishment, that it was a sixpence. There was nothing but silk thread covering the top of the coin, but underneath mud and silk thread were coated on and shaped convex (as usual). The coin had probably been swept out of the tent with rubbish," says R. I. Pocock, commenting on this in *Nature*.

THE Michigan Central Railroad is proposing during the coming summer to illuminate Niagara Falls, which will afford a view of the greatest grandeur, says *The Railway and Engineering Review*. "A test recently made by officials of the passenger department with an electric searchlight convinced them that marvelous effects could be secured. Accordingly arrangements have been made for several similar searchlights to be erected on the high banks overlooking the falls from the Canadian side. The electric power is derived from the rapids, and the illumination will take place during the passage of all trains after nightfall. The most superb view will be from Falls View Station."

A CINEMATOGRAPH for the blind has been invented by Dr. Dussaud, of the Psychological Institute of Paris. The inventor, we are told by *Advance Sheets of Consular Reports*, March 14, gave a lecture on February 16 at the Hôpital des Sociétés Savantes on the education of the blind and deaf, where a large audience "witnessed interesting experiments founded on his method for supplementing the senses of these two classes of unfortunates. The cinematograph for the blind is a machine which passes under the fingers of the blind, a series of reliefs representing the same object in different positions—the branch of a tree, a bird, or any other object. The blind person has the illusion of moving scenes just as photographs passing over a luminous screen lend the illusion to those with sight."

THE title of Elias Howe to the invention of the sewing-machine is impugned by a contributor to *The Popular Science Monthly*, who says: "In the list [of names to be inscribed in the 'Hall of Fame'] the name of Elias Howe appears, which must produce astonishment in the minds of every one who has a knowledge of him or of the history of the sewing-machine, upon which alone his claim to notoriety rests. To all who are acquainted with the advent of that machine, Howe occupies a very minor place. Patents were granted for such machines long before Howe entered the field, and he never succeeded in producing a practical machine until more than one device invented by others were added to it. . . . To place his name on the roll of fame above the host of his superiors on the records of the Patent Office would be doing American genius a grave injustice that would render the Hall of Fame absurd."

COLORING WITHOUT PIGMENTS.—"It is well known," says *Popular Science News*, April, "that colors can be produced without the use of dyes or paints by means of that peculiar phenomenon of light called 'interference.' An instance is afforded by the rainbow hues of a soap-bubble due to the interference of the light reflected from the front and back surfaces of the thin film. The colors of butterflies are also caused by interference. In the soap-bubble and in all cases of the 'colors of thin plate,' as these phenomena are called, the color depends upon the thickness of the film. A brilliant play of color has been produced by coating sheets of paper with collodion, but the color was largely a matter of chance and the method had no practical application. Recently, however, Prof. Charles Henry, of the Sorbonne, has succeeded in obtaining brilliant interference colors of any desired hue. He uses mixtures of turpentine, gum damar, and asphalt with benzin. The coatings, which are many times thicker than the film of a soap-bubble, are not easily destroyed, and the colors, which of course are permanent, can be altered and strengthened at pleasure. An imitation of the skin of a snake with its brilliant metallic colors attests the perfection of the method."

# THE RELIGIOUS WORLD.

## RELIGIOUS UNITY AND THE INCREASING OBSERVANCE OF LENT.

THE greatly increased attention paid to the Lenten season of late among Protestant denominations has frequently been commented upon. The New York *Outlook* (April 13) remarks that this tendency "was never so marked as during the past six weeks":

"In all parts of the country, among churches of almost every denomination, and Christians of every communion, the memories and associations of the Lenten season were made the subject of preaching, meditation, and prayer. The special noonday services held in many of the large cities were attended by congregations which filled the edifices; and the number of busy men who were willing to take half an hour out of the short noon hour for the sake of attending service was surprisingly large, but appears to be growing from year to year. The Episcopal churches in this city were crowded to the doors on Good Friday for the three hours' service, hundreds of men staying through the entire service. Special Good Friday services were held in Presbyterian, Congregational, Methodist, Baptist, and Unitarian churches, and there was evident a deepening feeling of reverence for the spiritual significance of the day, and a deeper appreciation of what it stands for in the spiritual life of the world."

Such a tendency, *The Outlook* believes, "shows a deep current which, underneath all surface differences, tends more and more to bring Christians together":

"This tendency in its deepest aspect is a revelation of a change which is not only making for the unity of Christendom, but for its revitalization; the shifting of emphasis from philosophy, dogma, and creeds to the living Christ—the divine personality in whose life all creeds must find their verification; who not only revealed the truth, but was the Truth. Dr. Gordon, in his notable discussion of modern religious conditions in 'The New Epoch for Faith,' has brought out very strikingly the significance of what may be called the modern humanistic movement—the movement which tends more and more to discover what is divine in man by clearly discerning his sonship in the Infinite and the kinship between his nature and the nature of God. Without the key of man's mind nature is incomprehensible, and all attempts to formulate a natural theology by studying nature apart from man are doomed to failure from the beginning. In like manner, and following a kindred instinct, men are turning more and more from all attempts to state in terms of abstract truth and formal logic a philosophy of Christianity, to the person, the spirit, and the life of its Founder, discerning that what He came into the world to do was not primarily to disclose a system of religion, a body of doctrine, but to bring life and immortality to light. What men are seeking to-day with passionate insistence is not additions to their knowledge, but the deepening and the widening of the sense of life—that immortal vitality in which all great things have their roots, and by the aid of which all great achievements are made. . . . Instinctively or intelligently, in all churches, devout men of a religious spirit are turning away from systems and creeds to a Person. The biography of that Person becomes of more searching interest year by year; and every season the great days of the Christian year are more and more widely observed, as men turn to that Person; and, being drawn to a common center, they are being drawn to one another."

---

**Will New York be Roman Catholic in Fifty Years?**—The subtleties of Irish humor are at times so puzzling that many will be in doubt as to the genuine seriousness of a recent prophecy in the New York *Freeman's Journal* (March 23). The writer, in the course of an article on the value of a truer knowledge of liturgiology and of sacred music (particularly plain-chant) in winning souls to the church, has the following prophetic vision of New York in the year 1950:

"The unfolding of this knowledge to pupils is destined to be beneficial in the extreme, and will attract to the church by its abiding and wholesome culture countless converts of an upright, intellectual type. Then operatic soloists and figured music shall not be tolerated in the house of God, and Gregorian and Ambrosian chants will resound throughout this Christian land. In former Protestant temples about the middle of this century the Adorable Sacrifice will universally be offered. In the Cathedral of Saint John [Evangelist], which earnest Episcopalians are now erecting here, scholarly, energetic, and apostolic duties will be performed by the Paulists or other Fathers installed therein, with large congregations at the daily services, from matins to compline.

Holy Psalmist, Royal Prophet:
Saint David, we invoke thee!

"On all days in the year, with its recurring festivals of gladness, the sacred offices will be conducted on a scale of splendor and impressiveness similar to that observed daily in the famed Cathedral of Seville, Spain."

---

## CAMPAIGN OF THE CHURCHES AGAINST CHRISTIAN SCIENCE.

RECENT utterances by ministers of three of the leading Protestant denominations of New York appear to indicate the purpose to make a concerted attack upon the Christian Science body and its doctrines. The determined onslaughts made in the late meetings of the New York East Conference of the Methodist Episcopal Church, of the Baptist Ministerial Conference, and of the Presbyterian Ministers' Association were followed by a vigorous sermon in the same vein by Rev. Dr. Charles H. Parkhurst, the well-known Presbyterian pastor of New York, and the cry has been taken up by a large number of other ministers.

At the first-named meeting the Rev. Dr. James M. Buckley, editor of *The Christian Advocate*, is reported to have said: "Christian Science denies and ridicules every Christian doctrine, even to the principles of morality. It denies the personality of God, the deity of Jesus Christ, the vicarious atonement. It offers freedom from personal responsibility and destroys the idea of personal repentance." The views of the Baptist Conference are summed up in the address of the Rev. J. Lawson, who is reported to have said in part:

"As a professedly Christian church, Christian Science throws down every vital doctrine of Christianity. It is, moreover, an immoral system and bound to bring in time a sad harvest of corruption. Had it not been for its pretended power to heal, it would never have attained even notoriety. The most dangerous of Mrs. Eddy's doctrines is her repudiation of the existence of sin. Christian Science reminds me of the animal called the guinea-pig. It does not come from Guinea, and it is not a pig. The Christian Scientists are not Christians, and they are anything in the world except scientists."

Dr. Parkhurst, in the course of a sermon on April 14, asserted that "thousands upon thousands of men and women are at this moment being sucked into the draft created by a shrewd but conscienceless woman, who lies and knows she lies—who finds in the roomy vacuity of her susceptible devotees easy space for the lodgment of her astounding conglomeration of piety and puerility."

Another Calvinistic divine, Dr. David J. Burrell, of the Collegiate Reformed Church, is reported to have said (New York *Herald*, April 17):

"I regard Christian Science as a dangerous delusion. So far from being a form of Christianity, it is in my judgment blasphemy against God the Father, in denying His personality; against God the Son, in denying His divinity and the reality of His atonement for sin; and against the Holy Ghost, in asserting that Christian Science itself is the Spirit of God. I do not deny that there are Christian people in the circle of the Christian Scientists, but they labor under a delusion of the most dangerous sort, and as to their leaders, with some of whom I am personally acquainted, I regard them as deliberate enemies of true religion and wilful deceivers of those who follow them."

From information collected by the New York *Herald*, the attitude of the leading evangelical denominations in Washington, Philadelphia, Buffalo, Cincinnati, Chicago, St. Louis, and other parts of the country show a similar marked antipathy to the Christian Science Church and its teachings.

It is alleged that these churches are seriously alarmed at the rapid growth of Christian Science, made, it is said, largely at their expense, and at its capacity for making wealthy converts. *The Herald* publishes the following figures, vouched for by Mr. Carol Norton, one of the Christian Science leaders, and by Mr. Willard S. Mattox, head of the state publication committee:

| | 1890. | 1901. |
|---|---|---|
| Number of church societies | 94 | 623 |
| Number of chartered educational institutions | 33 | 79 |
| Number of public reading-rooms | 27 | 283 |
| Copies of Christian Science text-books in circulation | 50,000 | 205,000 |
| Estimated value of church property now held in the United States | | $12,000,000 |

In New York alone the Christian Scientists have three structures under way or just completed, the aggregate value of which will approximate $1,500,000. In addition they possess six other edifices. The superb new marble structure called the Second Church alone cost $670,000. According to the same authority, there is now a total membership of 1,000,000 Christian Scientists in America; altho, it will be remembered, the figures published by us recently from Dr. Carroll show only 90,000. In foreign countries, too, Mr. Mattox claims that Christian Science is growing with marvelous rapidity, especially in Great Britain, where among the recent converts are the Earl of Dunmore, the Earl of Tankerville, Mrs. Henry Montague Butler, wife of the master of Trinity College, Cambridge, and Mrs. Charles Smith, wife of the head-master of Sidney Sussex College; and even hopes of royal favor have lately been encouraged through the conversion of one of the ladies-in-waiting to Queen Alexandra. In Germany, the Berlin *Kreuz-Zeitung* asserts that the leaders of the movement are planning to build several churches, characterizing the movement as "an inroad of Anglo-Saxon Protestantism," while the *Deutsche Evangelische Kirchen-Zeitung* also inveighs against it. The two antagonistic opinions about the future of this movement throughout the world may be summed up in the statement made by a prominent New York divine: "Christian Science is a passing fad; it will fade like other errors"; and in the prophecy of its founder, Mrs. Eddy: "In fifty years Christian Science will be the religion of the world."

The Christian Science leaders have made very little effort to reply to the attacks lately made upon their faith. They assert that these attacks are beneficial to them both through their virulence and through the attention they draw to Christian Science doctrines, and point out that in like manner the very churches now attacking them, particularly the Baptists and Methodists, were looked down upon with almost universal suspicion and contempt by other Christians during their earliest struggles. Mrs. Augusta E. Stetson, "first reader" of the First Church of Christ, Scientist, New York, has replied formally to the recent attacks. Referring especially to the words of Dr. Lawson, already quoted by us in part, she has given out the following statement:

"The Rev. Dr. Lawson, of Camden, N. J., assumes to criticize Christian Science, and makes some reckless statements which are not true. He says, as quoted in *The Herald* of yesterday, that Mrs. Eddy is a pretender. He does not say to what she pretends. This charge grossly misrepresents Mrs. Eddy and her teachings. She pretends to nothing, and makes no claims for herself which are not established by the facts. She is the discoverer and founder of Christian Science, and the author of its textbook, 'Science and Health, with Key to the Scriptures,' and these facts can not be legally or otherwise disputed or discredited.

"A Christian minister should hesitate to insult thousands of Christian men and women by publicly charging that the system to which they adhere is immoral and 'bound to bring a sad harvest of corruption.' Shame on such bigotry of creed and doctrine that will stoop to malign and slander those who do not subscribe to a particular ritualistic formalism! Jesus taught the nobility of gentleness, the beauty of charity, and the value of a pure heart; His theology was the brotherhood of man; He taught no creed. Dr. Lawson departs far from the teachings of the Master he serves when he makes unjust charges against Christian Scientists.

"No church demands more of its followers than Christian Science. No religious system emphasizes more than Christian Science the ever presence of God and the duty of living close to Him in thought and deed. Christian Science is idealistic in that it makes the life of Christ the ideal for which all must strive. Such teachings of themselves refute the Rev. Dr. Lawson's accusation, which was made in ignorance of the subject he discussed. If he knew one Christian Scientist, and was honest, he could not have been so unwise or so incorrect in his estimate."

Mrs. Lathrop, "first reader" of the Second Church of Christ, Scientist, New York, replied last week in a similar vein, denying that she had ever, as charged, asserted that Mrs. Eddy is a "female Christ." She admitted that Christian Scientists deny the personality of God, since personality, in its usual meaning, limits His powers. They deny also the divinity of Jesus, but make a distinction between Jesus the man and the divine Christ dwelling in Him.

*The Sun* (April 17) thinks that there is special significance in the fact "that the Baptists have joined the Methodists in taking up cudgels against Christian Science":

"Tho differing in fundamental theological doctrine, the Baptists being generally Calvinistic and the Methodists Arminian, they have always been similar in their emotional religious spirit and the social conditions from which their membership was drawn; that is, they have been recruited from elements of our population very much alike, from the 'plain people' more particularly. They were alike, too, in remaining long unaffected by the skepticism which began to invade the religious world so seriously fifteen or twenty years ago; but now at last, it has entered into both ominously. Moreover, the type of mind to which hitherto they both have appealed most powerfully, or the enthusiastically and emotionally religious, would seem to be peculiarly susceptible to such influences as Christian Science exerts; and, as we have intimated, the coincidence in time of the assaults of Baptists and Methodists on the new cult would seem to indicate that they have found reason for such a change of policy in its persuasion from their ranks. . . . . .

"It is questionable if this present policy will not rather conduce to the advantage of the party attacked, in arousing inquiry concerning it, than prove effective in preventing desertion to it. Bitter assault has replaced indifference, and serious argument ridicule. That is the way to help, not to hurt, more especially when the movement assailed provokes curiosity by its pretensions and awakens surprise by its mysticism. Consequently it may be that we are approaching a time when Christian Science will be making much noise in the religious world, for this is a period when many people are losing the faith in which were bound up their deepest sentiments and their most exalted hopes, and when even their teachers, oftentimes, are unable to conceal their own skepticism regarding the supernatural foundation of theology."

In the New York *Christian Advocate* (April 18), Dr. Buckley disagrees with *The Sun* on a number of points. Most of the converts from Methodism, he asserts, have been persons "who never had a true fervor or a settled faith"; and, too, other churches such as the Episcopal and Unitarian have contributed largely to Christian Science, as have "Ingersollism" and even the Quakers. America, he says, is prolific in religious "epidemics," such as modern Spiritualism. Little movements may safely be left alone to die of themselves; but great movements like Spiritualism and Christian Science, he says, which contain more falsehood than truth and are strong enough to organize themselves into powerful bodies, should be publicly attacked and exposed:

"Christian Science has been let alone long enough. Its prin-

ciples or want of principles should be exposed, its tendencies traced, its unfulfilled promises enumerated, held up to the light. This may lead to the loss of some nominal members to the churches, but to allow this leaven to enter those churches would poison the whole lump. The situation calls, not for persecution, but for instruction and warning. Christian Science is *not* dangerous if *exposed*; it may *become* so if *ignored* or if *treated* as if it were either rational or Christian. We shall soon place in the possession of Methodists the materials for aggressive and defensive warfare against this insidious foe to Christianity, science, and common sense."

## IS PROTESTANTISM DISINTEGRATING?

THAT Protestantism will eventually fall to pieces as a result of innate weakness and lack of authority has long been a favorite view of Roman Catholic writers. The publication of Harnack's "Wesen des Christentums," widely accepted as an authoritative expression of the modern higher critical tendencies of Protestantism, has occasioned renewed expressions of this view by Roman Catholic scholars. One such is found in a dispassionate series of articles recently published by Dr. Kraus, a leading professor in the Roman Catholic faculty of the University of Freiburg, who, in the *Beilage* of the Munich *Allgemeine Zeitung*, says, in substance:

Harnack's characteristic utterances constitute a complete break with the whole structure of Protestant dogmatics. It is a formal break with the past, and, in fact, is subversive of the fundamental teachings of the Roman Catholic, the Greek, the Lutheran, and the Calvinistic systems and the historical development of these branches of the Christian church. Harnack's position can be compared only with the auto-da-fé, with which Luther, on the 10th of December, 1520, burned the *Corpus Juris Canonici* of the Roman Catholic Church. The only difference is that Harnack has saved the wood. The fact that in the conservative and positive circles of the Protestant Church of Germany, and still more in England, the teachings of Harnack have aroused the greatest consternation can readily be understood by those who see how this new essence of Christianity deprives it of much that has been regarded as essential to the faith. It is easy to understand that so high thinking a man as Harnack has not found it an easy matter to sever the tie that has bound him to his fellow churchmen. But one thing is remarkable, namely, that this newest phase of radical Protestant theology has not produced a strong reaction in the church, nor has any strong voice been heard in protest. Evidently Harnack, with his neological views, is representative of the tendency of modern Protestantism. In view of this fact, the conclusion is justified that this book and its reception by the Protestant world at large is an indication of the death of the dogmatical principle within the Protestant Church, at least of Germany.

The Berlin *Germania*, the most scholarly popular organ of the Roman Catholic Church in Germany, in commenting on this view, says in substance:

A sharper and more exact judgment of scientific Protestant theology in Germany has perhaps never been uttered. It declares that German Protestantism has lost its soul. What is Christianity without its foundation of dogma? A non-dogmatical Christianity is a scabbard without a sword, a dull weapon that can not ward off the attacks of radical deniers of Christ.

Protestant journals of the more conservative type agree with this estimate of the destructive character of Harnack's position, but deny that it is representative of the best Protestantism or that it will supplant the traditional views of the church. The Leipsic *Kirchen-Zeitung*, which has been particularly sharp in its attacks on Harnack, announces that there are already two refutations of his book in the press from conservative scholars, one by Professor Walters, of the University of Rostock, and one by Pastor Dr. Rupprecht, the most pronounced defender in Germany of the traditional views of the Old Testament.

Altogether different, of course, are the views of the liberal church papers, notably the *Christliche Welt*, which has pronounced the book of Harnack a "reformatory act," and believes that only by the adoption of its teachings and spirit can Christianity regain its hold on the educated circles.—*Translation made for* THE LITERARY DIGEST.

## THE PAN-AMERICAN EXPOSITION AND "SUNDAY CLOSING."

THE question of the desirability of opening great expositions, libraries, art museums, and other similar public institutions on Sunday is settled unhesitatingly in the affirmative in almost all countries except England and America. The matter has come up at all our large fairs, and is now causing much discussion in connection with the Pan-American Exposition, shortly to be opened in Buffalo. As the subject is one of recurrent importance, we give a symposium representing all sides of the question.

The New York *Christian Advocate* (Meth. Episc., April 11) prints a lengthy letter from the Rev. Dr. C. E. Locke, who argues chiefly from what he conceives to be the interest of the laboring man. After first appealing to certain sections of the New York penal code, which render any entertainment a penal offense if, as Dr. Locke thinks in this case, it is "a serious interruption of the repose and religious liberty of the community" (Penal Code, § 259), he says in part:

"The contention of all who are seeking the closing of the gates is that the operation of the exposition upon the Sunday will be a 'serious interruption of the repose and religious liberty of the community,' because vast numbers of excursionists will be unloaded every Sunday who will spend the day in this spacious form of Sabbath desecration. The street-car lines will be overcrowded by a noisy and impatient and, later in the day, a wearied throng. Thousands of men will be forced to be on duty in and about the exposition grounds, and for six months will be required to work seven days in the week. Instead of a day of repose, it will be a time of delirium and dissipation most demoralizing and deplorable—the very opposite of the educational and elevating purposes of the exposition. The workingmen want the gates closed on Sunday because workingmen are not lawbreakers and anarchists.

"The gates ought not to be opened on the Sunday because of the thousands of men who will be compelled to labor on a day which the law recognizes as necessary for their rest. Let me remind you of the unanimous opinion of the national Supreme Court, rendered March 16, 1885 (113 U. S., 710):

"'Laws setting aside Sunday as a day of rest are upheld, not by any right of the Government to legislate for the promotion of religious observances, but from its right to protect all persons from the physical and moral debasement that comes from uninterrupted labor. Such laws have always been deemed beneficial and merciful laws, especially to the poor and dependent, to the laborers in our factories and workshops, and in the heated rooms of our cities, and their validity has been sustained by the highest courts of the States.'

"All workingmen should continuously antagonize all efforts to transform the Sunday into a day of recreation and sight-seeing. When the Sunday becomes a holiday for the frivolous, it will be a regular workaday for the toiler, and the slavery of labor will once more curse the annals of history. There is a great cry going up now from some quarters to open the gates for the benefit of the laboring people. Workingmen should courteously decline, if necessary indignantly spurn, the offer, for with it is the viper hidden in the garland of flowers! . . . . . .

"The need of Sunday as a rest day inheres in man's physical requirements. Mental vigor and nerve energies depend upon a sound and healthful physical nature. A renowned physician has said, 'Men no longer die; they kill themselves.' God has made men for three-score years and ten, and when a man by overwork drives himself into a premature grave is he, in fact, any less a suicide? The necessity of the workingmen of this country standing in solid battle array against the opponents of Sunday rest should be emphasized."

The New York *Evangelist* (Presb., March 14) prints a symposium giving the views of leading Buffalo ministers for and

against Sunday opening. The Rev. Frank S. Fitch, of the First Congregational Church, writes:

"We are a Sabbath-keeping people and have been from the first. A day of rest and of opportunity for public worship is one of the most characteristic features of our manner of living. Business, courts, schools, and social life have adjusted themselves to the setting apart of one day in seven as free from secular labor as far as works of necessity and mercy permit. This is the written and unwritten law of these United States, and as we are the hosts in this great fair, we may properly inform our guests that we wish them to be at home and enjoy themselves subject only to those laws and customs which we have found to be salutary."

The Rev. S. S. Mitchell, of the First Presbyterian Church, writes:

"The first day of the week, considered as an institute of religion, is a debatable subject, both as to the obligation that enforces it and the use that shall be made of it. But as to the claim that this first day is a *dies non* in the business world, this it seems to me is not open to dispute. The traditions of our country, its institutions and usages, as these are underwritten by the common law, ought, by all Americans at least, to be received as the 'end of controversy.' I therefore think that every item and element of business should be excluded from the Pan-American Exposition on Sundays. I fully believe that the influence for 'Sunday opening' represents neither tradition nor hope which a true American is under any obligation to respect."

The Rev. L. M. Powers, of the First Universalist Church, says:

"I am in favor of having the Pan-American open on Sunday. Not days but souls are sacred.

"The saloons will be open. They are open now. It is the avowed purpose of the city officials not to be too strict during the Exposition. Thousands who come here and thousands who live here will be kept out of the saloons by having the Exposition open. It will be a great privilege for poor people who can not afford to lose their wages in addition to the entrance fee. To close the Exposition is to still further alienate the masses from the churches. The sooner churches understand that they must win people and that they can not force their allegiance the better for the churches.

"There is but one argument for Sunday closing. It necessitates work. But keeping churches and libraries and art museums open on Sunday also necessitates work. The one question is this, Have we a right to ask some to work that many may enjoy and be benefited? If the Exposition is what we believe it is, of esthetic and educational value, then there is no valid argument against Sunday opening that does not apply to the church or public library. Nearly all the Buffalo churches will be kept open all summer and made as attractive as possible.

"Beyond offering this opportunity I believe we have no right to go. The man who does not believe in the churchman's way of observing Sunday has as good a right to his opinion as the churchman. More than this, he has the same right to hear a concert in the Temple of Music that I have to go to church. . . . The lesson of liberty has not yet been learned. We are slowly traveling the road that leads to it, and I believe the church is a more vital power in the world to-day than ever before because more than ever before the only power it has is that of persuasion."

Dr. Israel Aaron, of the Jewish temple, speaking in behalf of the "many non-Christian Americans" whose liberty he thinks ought not to be ignored, argues that this is not legally nor really a Christian nation, that the Hebrew Scriptures had a large share in its making, and that Jewish blood flowed in founding and defending it. Jews, he says, do not regard the first day of the week as the true Sabbath; but that is not the question:

"I have seen no argument which could convince me that the Pan-American Exposition should be closed on Sunday. I do not advocate its opening as the adherent of any religion. I am not speaking for the Jewish visitors. As Jews we can afford to remain indifferent, but as American citizens, deserving and demanding the liberty of believing and worshiping according to our own faith, we are profoundly interested. . . . . .

"Those who advocate the closing of the gates do so because they demand the subservience of all—even of those who disagree with them on principle—to their particular religious convictions. They seem to make nothing of the fact that they are not the only religionists who will visit the fair. Many Jews and nominal Christians, and a large number of no religious affiliations, have stock and interest in the Exposition, and the religious convictions of these people have a clear right to consideration. . . . . .

"If the happiness and welfare of the great majority of our people who are bound fast to the toilful daily task, confined to workshops during the week, are considered, the opening of the Exposition on Sunday can not be looked upon as a contradiction of the broad aims of religion. Look at the facts themselves. On Sunday the asphalted streets of our city swarm with thousands seeking the leafy avenues of park and the 'somber boscage of the wood.' Many pulpits have thundered, without success, against this, to them, so flagrant secularization of Sunday. The long Sunday bicycle-column never diminished. In the coming spring and summer this flood of humanity, speeding toward the suburban open, will be greater than at any time in the history of Buffalo. Will not the interests of humanity, of religion, of virtue, of morality be subserved if this outing-seeking concourse were diverted to the fair, where old and young may be inspired by the beauties of art, the achievement of science, and the wonderful creations of human ingenuity, where patriotism and reverence may be stimulated, and man's better nature quickened?"

*The Truthseeker* (New York, April 13), referring to the petition of the "American Sabbath Union" in behalf of closing the fair, counsels "liberals" everywhere to redouble their efforts, and to write to the director-general of the Exposition in favor of Sunday opening. It says:

"Of course the representatives of the Epworth League and the Y. M. C. A. and the Y. W. C. A. have signed the petition, and they count for so many; but they do not at all represent the bone and sinew, the brawn and brain, of the country. They represent only those women under the dominion of the ministers, the Sunday-school children who can not speak for themselves, and a lot of ignorant men who are tooled along by the church because of their inability to think at all. . . . . .

"The protest of the Sabbath Union is a gigantic piece of cheek. It describes the protesters as 'the citizens of Buffalo and the United States,' as tho all were present, when only between seven and eight hundred were really gathered in the church. It relates that Sunday opening would be in opposition to tradition—meaning of course Puritan tradition; that it would be opposed to the policy and custom of the general Government—forgetting that the general Government refused to contribute a dollar to the expense of the Exposition; that it would be a menace to the right of labor to have a holiday—the same old hypocritical chestnut, rotten all through; that many millions are praying that Buffalo will not so disgrace itself—forgetting to state that these praying millions are under no obligation to attend if it is against their convictions."

## RELIGIOUS NOTES.

THE example of Haeckel shows that it is not always easy to classify the religion of those whose faith is unfamiliar to us. An additional example of this sort is furnished by a Western journal, *The Rocky Mountain Magazine* (January). A Unitarian minister was lately entertained at the house of a lady of like faith. An Episcopalian woman-friend, prominent as a social leader, asked her if she had not found it difficult to get things for him to eat. "But why so?" queried the hostess. "Why? Because he is a Vegetarian, isn't he?" replied the Episcopalian. "No," said the lady somewhat hotly, "he is a Unitarian." "Well," triumphantly replied the other, "aren't they the same? Aren't Unitarians and Vegetarians just the same?"

THE Summer School of Theology of the Harvard Divinity School presents an interesting example of the growth of interdenominational sympathies. Among the lecturers will be Professor Palmer, of Harvard College, a Congregationalist; Professor Fenn, of the Harvard Divinity School, a Unitarian; Dr. Stone, professor of theology at Oberlin, a Methodist; Dean Hodges, of the Episcopal Theological School in Cambridge; Associate Professor Kerby, of the department of Sociology of the Catholic University at Washington; Mr. Booker T. Washington, and United States Commissioner Carroll D. Wright. Among the students last year were 17 Congregationalists, 14 Universalists, 6 Baptists, 6 Unitarians, 3 Episcopalians, and 3 Methodists.

# FOREIGN TOPICS.

## IS INDIA DEFENSELESS?

THE report of the British parliamentary commission on Indian expenditure has precipitated considerable discussion in the House of Commons. In view of the ravages of the famine and the fact that a large proportion of the regular army heretofore stationed in India, and while there maintained at India's expense, is now serving with British colors in South Africa, the commission recommended that the British Government pay part of the cost of maintaining the Indian force, and, in addition, liberally increase the famine funds. Commenting on this, *The Daily News* (London) asks: "Why do we never let justice enter into our relations with India? We open our pockets to India when she starves; we enjoy the reflection of our imperial presence in the mirror of her wonderful civilization; we praise her and forget her and are sorry for her, as the mood takes us. When are we going to treat her with justice?"

The question of the apportionment of military expenditure between the home Government and India, continues *The Daily News*, is "the greatest and gravest of all." We quote further:

"In order to safeguard the country against Russia and the hill tribes on the one side, and to keep down sedition and religious turbulence on the other, we quarter an army of 76,000 English soldiers on India, and levy another army of 143,000 natives. The cost of this military establishment is about sixteen millions [of pounds] a year. . . . Now the question to which the country and Parliament ought to address itself is whether a great part of this army is not quartered in India under false pretenses of the most flagrant kind—quartered there, not for India's sake at all, but purely to suit the convenience of the imperial power. It so happens that this is no speculation depending on a nice balancing of hypotheses. At the present moment the army in India is below its normal complement by some 30,000 men, who are serving under the British colors in South Africa and China, and doing garrison duty at Singapore, Ceylon, the Straits Settlements, and other stations.

"There is no pretense that these thirty thousand men, who up to the time of their embarkation were being paid for by the Indian people, are engaged on anything but purely British service, nor have we seen one shred of evidence to show that the safety or tranquillity of India is in any way affected by their departure, or is likely to be affected by their return. . . . Why, then, in the name of common sense and common justice should these thirty thousand soldiers be quartered on the Indian exchequer when they return to India and cantonments? . . . It is indeed a bitter thought that India, who stands at our gate in silence and submission, scourged with plague, wasted with famine, bleeding under the blows of the rough West that can not comprehend her, should out of her want and misery be acting as paymaster for our troops."

Even with her large army, India, in the opinion of continental military critics, would be practically defenseless before a powerful invader. A German army officer, writing in the *St. Petersburger Zeitung*, declares that to put India in a proper state of military preparedness would "necessitate the making good the neglect of half a century." This, he fears, is impossible, as at the present time military expenses amount to $88,000,000, or twenty-five per cent. of the entire budget, and the impoverished country can hardly pay more. The forces of India are "respectable enough on paper," he says, but would not, in reality, amount to fifty per cent. of the figures published. Of the equipment he says:

"The troops are armed with an antiquated model of the Lee-Metford rifle. There are only nine cavalry regiments, partly armed with the obsolete Martini-Henry carbine. The artillery is the worst off of all arms of the service. The guns of all the field and horse artillery date back to the '80's, they are too heavy and there are not enough of them. India has sent many horses to South Africa, and is now dependent on Australian remounts. The much-advertised mountain-batteries are provided with ancient seven-pounder muzzle-loaders. It has long been an open secret that they are worthless, and, during the late Afridi war, they were wisely left at home. Of heavy artillery there are but four batteries, drawn by elephants; but three of these have antiquated muzzle-loaders and the fourth consists of four howitzers and two ordinary heavy guns. The 'siege park' is hopelessly obsolete."

None of the "so-called Sepoy army," says this writer, can be properly placed in the field, certainly neither the Bengal nor Madras divisions. The Punjab and Bombay armies are serviceable, but they have been greatly weakened for the benefit of the China expedition. In conclusion, we are told:

"The condition of the garrisons at Karachi, Rangoon, Bombay, Madras, and Calcutta is scandalous. The defenses are armed only with muzzle-loaders, and these fire black powder. The flooring of the hydraulic guns at Rangoon and Calcutta is so bad that no less an authority than Sir Charles Nairne, late inspector of artillery, said they would all be useless after an hour's fight. At Bombay and Karachi an attacking fleet could enter without opposition, as the batteries either could not reach the ships or would be forced to fire into the best portions of the city. India, it may be summed up, is at present practically defenseless."—*Translation made for* THE LITERARY DIGEST.

## DOES THE KAISER FEAR POPULAR REVOLUTION?

THE German Emperor has again become a topic of serious discussion in the European press, by reason of a recent speech at the formal dedication of the new Berlin barracks of the Alexander Grenadier Guard regiment. The Kaiser referred to the proximity of the barracks to the palace, and at least five more or less different versions of what he said have appeared in print. We quote the version given by the semi-official *Kreuz-Zeitung*:

"You are, therefore, so to speak, the body-guard of the Prussian King, and must be ready, day and night, to risk your lives in the trench, to spill your blood, if need be, for your king and his house. . . . If ever trying times should come again like those which this regiment has gone through, if ever this town should rise, as in 1848, against its king in disobedience and insubordination, then the Alexander Grenadiers will hasten to the protection of their king and, with their bayonets, soon teach the insolent a good lesson. . . . May valor, loyalty, and unquestioning obedience be the virtues which distinguish this regiment. Its deeds will then meet with the approval of me, its king and master."

At luncheon in the officers' mess-room immediately afterward the Emperor made another speech, in which he said (we quote again from the *Kreuz-Zeitung*):

"I have a firm conviction that the officers of this regiment will always prove equal to their responsibilities by educating the soldiers for the supreme moment when devotion to king and fatherland must be sealed with blood and life. This knowledge inspires me with the certainty that we shall always be the victors, even should we be surrounded by foes, and have to fight in a minority against superior numbers. For there is a mighty Ally, that is the eternal God in heaven, who was already on our side in the times of the Great Elector and the Great King!"

This was the Emperor's first public appearance after the attack on him by the Bremen lunatic, and this fact has deepened the impression made by his words in Germany and the rest of Europe. The Berlin press generally express astonishment. The *National Zeitung* (Liberal) declares it can not understand what current events induced the Emperor to refer to the revolution of 1848, and does not see any signs of His Majesty's needing a body-guard. Nobody in Berlin is thinking of a revolution, says the *Vossische Zeitung* (also Liberal); why, therefore, suggest such a thing? The *Tägliche Rundschau* (Radical) regrets

that the Emperor dropped "words which will have a disastrous effect upon those hitherto loyal," and expresses a hope that he will not commit "faults which, on former occasions, have led to revolutions." The *Kölnische Zeitung* (usually believed to be officially inspired) blames the Kaiser for "throwing a new firebrand into party strife," and declares there is "no disposition anywhere to revolt." The Hanover *Courier* asserts that the Conservative press is trying to make political capital out of the Bremen assault. The pessimistic views of the Emperor, it declares further, "explain themselves in the light of authentic information that His Majesty's entourage are assiduously at work to convince him that the attempt was a deliberate crime, altho the Bremen court has not found the slightest confirmation of such a theory." The *Neuesten Nachrichten* (Berlin) connects the speech with the annual demonstrations of the Social Democrats and their press in honor of the Berlin citizens who fell in the street fighting on March 18, 1848, and demands for the Emperor the same right to express his opinion on the events of that year "as is arrogated for himself by the meanest demagog in the ranks of the social democracy." The viewpoint of the extreme radical journals is shown by *Simplicissimus*, the humorous paper of Berlin, which prints a large picture showing the "study

THE LATEST FLIRTATION.
EDWARD (England) and KUNIGUNDE (Germany).
—*Lustige Blätter.*

hour" of a Prussian regiment. "Tell me, Johann," says the lieutenant, "why should a soldier gladly give his life for the Emperor?" The reply is unexpected: "Yes, indeed, Herr Lieutenant, why *should* he?" The *Neues Wiener Journal* (pro-German) thinks that there must have been other causes for the speech than the attacks at Bremen and Breslau. Says this Viennese journal:

"What is it that has transformed the Kaiser's usually sanguine disposition into such bitter feeling? From the Scholastic Bill to the Lex Heinze, Emperor William had an opportunity to realize that, on the basis of German legislation, it is difficult to introduce reforms of an ultra-conservative character. In this, as in other items of their program, his government gave way either to popular pressure or to popular resistance. Have these circumstances left a sting behind because one or the other rejected scheme emanated from his personal initiative?"

Has the shaken authority of the crown which the Kaiser deplores, asks the *Neues Journal* further, been so evident recently that this crown is driven to seek protection in the barracks and behind the guns of the Life Guards? Is Berlin in a state of revolution? The journal concludes as follows:

"The Kaiser refers to the possibility of fresh rebellion with amazing imprudence and offensive doubt as to the loyalty of his capital. . . . These utterances, whether they be less or more emphatic than reported, betray such a curious misconception of historic developments, such a strange view of the relations between a constitutional ruler and his people who have a voice in their own destiny, that it is incomprehensible how impressions so at variance with facts can have entered the mind of a monarch with modern ideas such as Emperor William has repeatedly proved himself to be."

The French press find in the speech evidence that the Kaiser's mental condition is not sound. The occurrence shows the degenerate, remarks the *Temps* (Paris). The Emperor is, at any rate, a medievalist living out of his time, with his ideas of royalty by divine right. "Such apprehensions are not natural to the temperament of a well-balanced prince confident of his star." If only a passing fit of ill-humor, says the *Journal des Débats* (Paris), the matter can be passed by lightly; but perhaps the speech presages a campaign, a political program, looking to the restriction of popular liberty. "The Kaiser has surprised the world by seeing in comparatively simple experiences (which are a part of his trade, as the late King Humbert remarked, after an unsuccessful attempt to assassinate him) great general consequences which involve a new orientation of the domestic policy of Germany." The Emperor has often been out of *rapport* with his people, says the *Independance Belge* (Brussels). He has made a grave mistake and should withhold further confidence from his ill-advised advisers.

That the authority of the crown in Germany has declined is true, says *The Westminster Gazette* (London), but—

"It is not the sharp criticism of government measures that is to be blamed for it, but the Government itself. Even the extremest adherents of the 'king-by-the-grace-of-God' principle regard it nowadays as their right to criticize the acts of the monarch and his ministers. The times of blind and silent obedience have gone forever. Moreover, a difference is made involuntarily between an aged monarch like the late Emperor William, who reigned for thirty years with the greatest statesman of his time by his side, and a young monarch who ascended the throne long before his time."

The recent attacks on his person have affected the Emperor deeply, says *The Spectator* (London), and during his seclusion he has "doubtless revolved all the dangers he perceives to himself, his throne, and his country, and, with his strange habit of thinking aloud, he takes the whole world into his confidence. There can be little doubt, however, that public confidence in him is shaken, and there is some reason to apprehend that he may try to establish it by some great act, which can hardly be one of legislation. Most men are sensitive to any coldness among their friends, but William II. can not bear to feel that for the moment he has ceased to be worshiped."

There is great danger in suggesting revolution, says *The Daily Witness* (Montreal):

"He has been told that he must be prepared to accept the risks and accidents of his trade, as the late King Humbert of Italy described attempts on his life. But to blame the whole German people, loyal to him and devoted to the Fatherland as they most undoubtedly are, is petulant folly, to which the admonition to his guards that they must be ready to turn their bayonets on their fellow Germans for his sake, adds the darker suggestion that the Emperor and the people are, or will soon be, enemies, than which no idea could be worse for the army, for the people, for Germany, and for himself."

There is a growing opposition in Germany to "personal rule by a fixture," is the statement made in a recent article in the *Nation* (Berlin), written before the recent assault on the Emperor. We condense this article as follows:

"Neither the German nor the Prussian constitution guarantees that the sovereign should be a personal ruler. When properly interpreted, it may be fairly asked, Does the constitution admit of personal rule at all? The *Dresdener Nachrichten* [organ of the Saxon conservative nobles, and, therefore, strongly opposed to the Hohenzollerns] declares that 'the Reichstag must see to it that this purely personal rule ceases. Respect for the crown compels us to say as little as possible; but that little without

fear.' It is generally realized that Germany and Prussia have outgrown absolutism, that even a genius like Frederick the Great would be compelled to desist from interfering directly with the administration of the laws. But what can be done to change our [German] governmental methods? It is not likely that the Kaiser is aware of the feeling against him. The fog that envelops all royal courts is too thick for that. If the Kaiser regards the *political* advisers of the crown as mistaken, they must resign. Perhaps others, more subservient, will be called to take their places in the cabinet. But these, too, must be taught their duty by public criticism. If public opinion would only make up its mind to give no quarter, no statesman worth his salt would be content henceforth to be the mere executor of personal rule."—*Translations made for* THE LITERARY DIGEST.

## DOES RUSSIA WISH WAR?

REASONS for a negative answer to this question are given by the Montreal *Herald*, and these reasons are summed up in the statement that it is not to Russia's interest to provoke war. Says *The Herald*:

"It would be overstating the case to say that she [Russia] can not afford to go to war, but it is quite certain that the penalty

HAUNTED!

—*Punch.*

that she would pay for provoking war would be out of all proportion to any possible advantage she could gain from the most favorable issue of the struggle. The fact is sometimes forgotten that the Russian Government is a gigantic corporation doing business on a scale of unexampled magnitude. In the words of the Russian *Journal of Financial Statistics*, the Russian state is the greatest economic unit on the face of the globe. This authority concedes that, as a nation and a country, Russia is far behind England in wealth and America in productiveness. But this does not prevent the Russian state standing alone in the magnitude of its business operations. As a land-owner it draws, according to the journal, an annual net profit of over twenty-three millions of dollars from its forests, mines, and agricultural property, while the land it has ceded to or purchased for the communities of ex-serfs brings it in over forty-one millions. As a constructor and purchaser of railways, it is building one of the longest lines in the world and works 20,300 miles of railway on its own account, the net profit on which is reckoned at over $68,000,000 a year. Besides being a capitalist and banker, the Russian state is a metallurgist and spirit merchant. Apart from its banking operations, the state treasury received in 1898 over $876,000,000 into its coffers, nearly $39,000,000 of which was revenue other than that received from taxation."

Poor harvests have affected the Russian money market unfavorably, tho De Witte hopes for a favorable turn in financial affairs of the nation in the near future. But, however that may be, remarks *The Herald*, "it is sufficiently obvious that the stability of the economic and financial system of Russia is far from being secure under ordinary conditions, and is hardly calculated to stand the pressure of a great foreign war."

## BRITISH REFUSAL TO RECEIVE THE BOER PEACE DELEGATES.

EUROPEAN comment on the South African war is now chiefly directed to the refusal of the British Government to permit Messrs. Merriman and Sauer to appear before the bar of the House of Commons. These Boer delegates desired to present a petition, in general representing the views of the Afrikander Bond, with reference to the terms on which peace should be made; and requesting that, in any final settlement, the Dutch element be given equal governmental rights with the English, "lest the two white races suffer from permanent dissensions." The Government's rejection of the petition was, says *The Standard* (London), "what it should have been: an absolute refusal of an unjustifiable demand." The "most extraordinary generosity of the terms offered to a beaten foe," and rejected, has not, continues *The Standard*, impressed the enemy nor the Opposition in England. They must have another lesson. It says further: "All we can say is that we are quite sincere in our determination to give all South Africa the privilege of Responsible Government in due course of time. But of the fitting season we ourselves must be the arbiters. It will depend on circumstances—on the pacification of the country, on the character of the new population, and on the temper of the Dutch. Firm and just, but still autocratic, rule is all we are entitled to promise for the present." These delegates from a disloyal organization, says *The Times* (London), asked leave to usurp the position of arbitrators—"a position which sovereign states have shrunk from attempting to assume"—and very properly they were not heard. This petition was the substance of the Boer demands before the war, says *The Morning Post* (London), and it will attract the sympathy of those only who, from the beginning, have been "opposed to the policy of this country and in favor of that of its enemies." The delegates, continues *The Post*, have one good quality:

"They are not lacking in effrontery, for their political careers have been spent in the effort to make British Government impossible in South Africa; their crowning success would have been the victory of the Boers in the present war; yet they have come to this country to try to deprive Great Britain of the fruits of her victory and to render as difficult as possible the future peace of South Africa. In their efforts for this end they rely on the help of that group of British politicians which in every international crisis of our time has found right and justice on the enemy's side. Messrs. Merriman and Sauer have their uses, of which just now the most valuable is that their presence may help British voters to distinguish between two different classes of politicians at home."

The Liberal and the other Opposition journals hold that the refusal to hear the delegates was a grave tactical blunder on the part of the Government. The Government's decision, says *The Speaker* (London), is more than discourtesy to the colonies represented; "it is supreme political folly." The Dutch colonists have had little reason, it thinks, to retain any confidence in British justice as exhibited in the colony. Was it wise policy to shatter their lingering confidence in British justice at home?

The delegates had a perfect right, says *The Daily News* (London), which thoughtful, liberty-loving Englishmen everywhere will admit, to lay the Dutch view fully before the one tribunal which is supreme throughout the British empire, the high court of Parliament. It is not Mr. Merriman and Mr. Sauer who are in question; it is the unity and integrity of the empire. The matter concerns the terms of peace; but the body to which these gentlemen would have applied if it had jurisdiction, namely, the Legislative Assembly at the Cape, can not receive such a petition. The British House of Commons is the proper, and the only proper body to address. If the Government had been astute, it would have remembered the precedents for granting such requests. Against the Quebec bill of 1791, which established the constitution of Canada, two petitions were presented, and in both instances the petitioners were heard. The case of Mr. Roebuck is more recent. He lost his seat in the House of Commons at the general election of 1837; but in 1838 he addressed the House below the bar against Lord John Russell's bill to suspend the constitution of Lower Canada. Against suspending the constitution of Jamaica in 1839, as the constitution of Cape Colony has been suspended now, Mr. Burge spoke for the House of Assembly, and Sergeant Merewether for the people of Jamaica.

There is one precedent, however, upon which *The News* hopes the Government will not lay too much stress. This occurred just before the American war of independence;

"On the 14th of March, 1774, a petition was read to the House of Commons from William Bollan, agent for the council of Massachusetts. But the House rejected it with contempt. Benjamin Franklin was heard in the same cause, not before the House of Commons, but before the Privy Council. He was attacked with extreme virulence by the solicitor-general, Sir Alexander Wedderburn, afterward Lord Loughborough, of whom Junius said that there was something about him which even treachery would not trust. The privy councilors present, except Lord North, roared with laughter. Franklin wore a suit of spotted velvet. He was a careful man, and he kept that suit. But he did not wear it again until he signed, in 1778, the treaty with France which recognized the independence of the United States."

The imperialism of a Chamberlain, says the *Temps* (Paris), arguing in the same vein as the British Liberal journals, has changed the wise policy of the empire:

"It would be dangerous, unworthy of the British metropolis, according to this imperialism, to hear the views of the race which is in the majority in South Africa. Messrs. Merriman and Sauer, but yesterday ministers of the crown in the Schreiner cabinet, are looked upon with suspicion, almost as enemies. The South African League, the instrument of Anglo-Saxon insolence, has launched the bolt of excommunication against the great majority of the colonists of the Cape. [The *Temps* here refers to the fact that the South African League sent a demand to Parliament that the Boer delegates be not heard.] The ministry has bowed to this body, and has refused a hearing to the representatives of an entire race. . . . But the imperialistic counselors of Edward VII. should remember Benjamin Franklin and the Nemesis of History."—*Translations made for* THE LITERARY DIGEST.

## EUROPEAN OPINION OF THE CAPTURE OF AGUINALDO.

EUROPEAN comment on the capture of Aguinaldo is brief, and, almost without exception, is to the effect that General Funston's method violated the spirit, if not the letter, even of the rule that everything is fair in war. Some things are not fair even in war, says the *Fremdenblatt* (Vienna), and one of these is forgery. Funston's act was contemptible. Quite American and therefore hypocritical, is the verdict of the *St. Petersburger Zeitung*. Treachery, contemptible treachery, says the *Epoca* (Madrid). Essentially dishonorable, declares the *Petite République* (Paris). A perpetual shame to the American republic, comments the *Lanterne* (Paris). The white man has had to bend very low in order to get the burden on his shoulders, says *The Guardian* (Manchester), which continues:

"There have been more wicked wars than this on the liberties of the Filipinos, but never a more shabby war. It is nearly three years since the Americans, having gone to war with Spain for the liberties of Cuba, decided that it was their manifest destiny to deprive the Filipinos of their liberties. This was called taking up the white man's burden. For some time the Americans quite honestly believed that they were doing rather a noble, self-denying thing; but the cant phrases of three years ago are worn threadbare. Had Aguinaldo been captured in some spirited action in the field, American interest in the war might have revived. As it is, it was effected by a piece of sharp practise thoroughly in keeping with the rest of the war. Of all that curious mixture of sentiments, noble and ignoble, out of which the war with the Filipinos sprang, only the element of hypocrisy seems to have retained its original vigor."

As meaning the end of the war, the news of the capture is welcome, says *The Saturday Review* (London); but for Aguinaldo himself, "whose capture was effected by a gross act of treachery," there must be general sympathy. It adds:

"He gave the Americans invaluable assistance in the capture of Manila and in the previous maneuvers. He proved a faithful ally until, partly owing to a change of policy at Washington, partly to want of tact in American generals, war suddenly broke out between the allies on February 2, 1899. It is inevitable to compare the tactics successfully employed by Aguinaldo to those of De Wet. De Wet is probably the finer general, Aguinaldo the finer character. His proclamations were model expressions of statesmanlike and broad-minded policy, and considering his antecedents he proved himself singularly humane. He possessed, moreover, a genius for inspiring the scattered tribes with his own enthusiasm for the freedom which was promised him."—*Translations made for* THE LITERARY DIGEST.

## AMERICAN CAPITAL IN CANADA.

IN view of the bitter criticism of the United States and of things American which comes so frequently from the Canadian press, it should be noted that the part played by American enterprise and capital in the Dominion is generally recognized by the more thoughtful journals of Canada. *The Canadian Manufacturer* (Toronto) declares that Canada must more and more turn to her Southern neighbor for the capital she needs. Speaking of the resources of the Dominion in the way of wood for paper pulp, this journal says that the promoters in this industry are all looking to the United States for capital. It is the same in other industries, continues *The Manufacturer*:

"It was in the United States that most of the Dominion Iron & Steel Company's issue of $15,000,000 was underwritten last year. It is in New York and Philadelphia that a million dollars is being obtained for the new steel-works at Collingwood, Ont. To the United States Mr. Clergue [president of the new Algoma Central Railroad] has hitherto looked for the vast sums required for his undertaking, tho he is now in England, presumably to sell the bonds of his road. If we are ever to get the power developed at Niagara Falls, it must be by the aid of American enterprise, if not actual American capital."

When you come to think of it, says *The Herald*, also of Montreal, Americans have had a good deal to do and to say in the development of our resources; and it proceeds to put the case as follows

"Who bought the claims for mines of our prospectors in British Columbia? The Americans!

"Who sold them to the Canadians afterward, pocketing fat profits? The Americans!

"Who have developed our wood-pulp trade? The Americans!

"Who sold us the wonderful Stanley mine? The Americans!

"Who started the iron industry in Sydney, Cape Breton? The Americans!

"Who pocket the millions therefrom? The Americans!

"Who is the moving spirit at Sault Ste. Marie? An American!

"Who has obtained elevator privileges from our harbor commissioners? Americans!

"Who fails to build elevators, and thereby helps Buffalo? Americans!

"Who will gobble our meat export trade? The Americans!

"Who have bought all our petroleum wells? The Americans!

"Who was called to reorganize our Grand Trunk Railway? An American!

"What architects get the work for our largest and finest buildings? Americans!

"Who are quickest to appreciate and employ our smartest young men? Americans!"

## CURRENT POETRY.

### The Way of the World.

By ARTHUR KETCHUM.

This is the way of all the world,
The law of change and chance,—
That one there is whose lot's to pipe,
That other folk may dance;

That one must wear the shining gem
Another died to bring;
That he who makes the lilting song
Has not the heart to sing.

—In April *New England Magazine.*

### The Bluebird.

By MADISON CAWEIN.

From morn till noon upon the window-pane
The tempest tapped with rainy finger-nails,
And all the afternoon the boisterous gales
Beat at the door with furious feet of rain.
The rose,—near which the fleur-de-lis lay slain,—
Like some red wound dripped by the garden rails,
On which the sullen slug left silvery trails.
Meseemed the sun would never shine again.
Then in the drench, long, loud, and full of cheer.—
A skyey herald tabarded in blue,—
A bluebird bugled . . . and at once a bow
Was bent in heaven, and I seemed to hear
God's sapphire spaces crystallizing through
The strataed clouds in azure tremolo.

—In April *Lippincott's.*

### The South Wind.

By MARGARET E. SANGSTER.

Wind that sings of the dreamy South
When the pale first blossoms woo the bee,
Wind that flings from a golden mouth
Tender sprays of the summer sea,
Wind that keeps for us light and bloom,
That cradles the bird in the tree-top nest,
Wind that sleeps in the lilac's plume,
Of the winds of heaven we love thee best.

Over the springing wheat-fields pass;
And over the small home gardens fare,
Evermore bringing to grain and grass
And the flowers thy breath of blessing rare.
Give us the cup of thy wine to taste,
O wind of the South, so strong and fleet!
Never a drop of its joy to waste,
In the days of the springtime coy and sweet.

—In April *Woman's Home Companion.*

### How the Spring Came to Pierrot.

By BLISS CARMAN.

Look, love, how the woods are all misty
With purple and gray!
And the soft mellow wind has a touch
Of enchantment to-day.

There is rain in the air, and a magic
Unloosing of bonds--
A glad putting forth of new life,
An unfolding of fronds.

Whence come these old exquisite ardors
In crimson and green,
That walk through the valley and quicken
The life that has been?

Whence come these old exquisite fervors
In yellow and blue,
That touch the frail flowers, and waken
Their beauty anew?

Whence come these old passionate raptures
In whistle and trill,
That open the gates of the morning
By meadow and hill?

A COMPLETE CYCLOPÆDIA FOR THE YEAR 1900, which can be used alone or in connection with any of the large encyclopædias, is offered on approval to LITERARY DIGEST subscribers on the first advertising page of this paper. It will certainly pay any one to send for this excellent work —"The International Year Book."

THE Five May Issues of The Youth's Companion, which cost Subscribers Fourteen and a Half Cents, will contain these Articles and Stories:

| | |
|---|---|
| WILLIAM CULLEN BRYANT | *Hon. John Bigelow* |
| WAN TSZE-KING | *Elia W. Peattie* |
| COMPROMISE HALL | *Hervey White* |
| A MISTAKEN PHILANTHROPIST | *Carroll Watson Rankin* |
| THE PIPER GIRL | *Mabel N. Thurston* |

# New Suits and Skirts for Summer.

THE styles for Spring and Summer are decidedly pretty and distinctly new—entirely different from anything shown heretofore. Is it not worth your while to write for our new Catalogue and a selected line of samples of the materials from which we make our suits and skirts? Many readers of this paper are our regular patrons, but perhaps you have never had a garment from us. May we not mail you our Catalogue and Samples?

Remember that we keep no ready-made garments, but make everything especially to order. Prices are lower than ever before. The garment which we make you must fit and give satisfaction—if not, send it back and *we will refund your money*. Our Catalogue illustrates:

| | |
|---|---|
| **Tailor-Made Suits** | **$8 up.** |
| **Visiting Costumes, lined throughout with excellent taffeta Silk** | **$15 up.** |
| **Skirts, $4 up. Wash Skirts,** | **$3 up.** |
| **Rainy-Day Skirts** | **$5 up.** |
| **Wash Dresses** | **$4 up.** |

***We Pay Express Charges Everywhere.***

The Catalogue and Samples tell you all you want to know about our garments; they will be sent *free* for the asking—promptly, too.

## THE SANITARY STILL

on your kitchen stove furnishes plenty of distilled aerated water at trifling cost. Simple as a tea kettle. Major-General **JOS. WHEELER**, U. S. A. writes: "The Sanitary Still is very satisfactory. It is useful and valuable." The Sanitary Still used in the **WHITE HOUSE.** Highest award at Paris Exposition DURABILITY UNEQUALED. AVOID CHEAP AND FLIMSY STILLS.

Cuprigraph Co., 68 N. Green St., Chicago

**WANTED**—Active, educated men to represent us; weekly salary or guarantee paid. In replying give age and references. DODD, MEAD & COMPANY, New York City.

Whence come to the house of the spirit
Love, daring, desire,
To knock at the door—bid the inmate
Awake and aspire?

My heart never questions a moment
What April may bring,
But only cries, after long patience,
"Pierrot, it is Spring!"

—The Philadelphia *Saturday Evening Post.*

## PERSONALS.

**An Actress in the Early 50's.**—Many and varied were the experiences of an actress fifty years ago. Stage appurtenances were crude, and historical settings, where they were required, were not accurate in detail. Distances between points were long, travel was tedious, and engagements were uncertain. When Mrs. Anne Hartley Gilbert came to America in 1849, she and Mr. Gilbert jointly received sixteen dollars a week. Writing in *Scribner's Magazine* (February), Mrs. Gilbert says:

"Of course in those days living was much cheaper all over the country, and in a frontier town, as Milwaukee was then, we could be very comfortable on our eight dollars apiece. Everything was most simple. Our rooms were up an outside stair, and at the head of the stair was a sort of little wash-up place. All the houses were light frame affairs, and altho we were fairly near to the theater, and so in the center of the town, there was no pretence of a sidewalk beyond a narrow plank walk, and cows and pigs were to be met with on equal terms. We got into the way of carrying a lantern, when we went back and forth at night, for those who have never tried can have no idea how huge and terrifying a cow can seem when met snddenly in the dark."

Actors had to work continually, to be prepared in the parts assigned to them. Mrs. Gilbert thus describes the routine:

"We would get our Monday part on the Saturday, and that gave us all day Sunday for study; but for the rest of the week we would get the Tuesday part on the Monday, have perhaps a bit of Monday afternoon and Monday night after the performance, for study, have a rehearsal on Tuesday morning, play the part on Tuesday night, and then begin work on another part for Wednesday night. A different play every night was the rule. 'Runs' were unknown; an entire week of one play was an unusual success, and possible only in big centers. Sometimes, when we were not quite sure of ourselves, we would take our lines along and study them between the acts, or during our waits. Our call would come, and we would tuck the parts just anywhere, usually under the slender woodwork of the wings; we called it 'winging the parts.' Then, if the scene were shifted, the parts would be whisked out of sight and reach, and there would be a great flutter and outcry!"

**The Knowing Bee.**—"Bees are very intelligent," commented the Great Scientist. "We have reason to believe they can count as high as ten." "Yes, indeed," added the Common Person, "and I have often heard of the spelling-bee."—*Baltimore American.*

# Pears'

Pears' soap does nothing but cleanse, it has no medical properties; but it brings the color of health and health itself. Give it time.

All sorts of people use it, all sorts of stores sell it, especially druggists.

## MORE OR LESS PUNGENT.

**Obliging.**—The following letter was forwarded to a board-school teacher by the parent of one of his pupils: "Please excus Frank staying home. He had the meesles to oblige his father."—*Tit-Bits.*

**The Difference.** BOY: "Is this instrument called a fiddle or a violin?"

PROFESSOR: "Ven I blay it it is a violin. Ven you blay it it's a fiddle."—*Tit-Bits.*

**He Wants News.**—HEWITT: "No news is good news.

JEWETT: "That may be; but if you are a reporter you can't make your city editor believe it."—*Brooklyn Life.*

**At Their Mercy.** SUBBUBS (in great glee): "Shout with joy, Mary! Celebrate!"

MRS. SUBBUBS: "I guess you're going crazy, aren't you? We've had new cooks before, you know."

SUBBUBS: "Yes, I know, but this one had her pocket picked on the train, coming out, and lost both her purse and return ticket."—*Brooklyn Life.*

**Limitations.**—"Why can't a man's nose be longer than eleven inches?" "Oh, if it were over twelve it would be a foot."—*Yale Record.*

**Triumph.**—ALGY: "Congwatulate me! The ambition of me life is wealized!"

MAMIE: "Is it possible?"

ALGY: "Yes; I'm to lead a cotillon!"—*Puck.*

**A Dangerous Animal.**—FIRST TRAMP: "Gee but dat dog is savage!"

SECOND TRAMP: "You bet! If he got hold of us dere wouldn't be enough of us left to ketch de hydrophoby."—*Puck.*

**New Tricks.**—WIMBLETON: "Hello, old man, have you taught your dog any new tricks lately?"

QUIMBLETON: "Yes; I've been teaching him to eat out of my hand. He ate a big piece out of it yesterday."—*Harvard Lampoon.*

**Twentieth-Century Episode!**—FREDDIE (who has been brought up with a pianola, rushing frantically upstairs from the drawing-room): "Oh! Mamma, mamma! There's a man downstairs playing the piano with his *hands!*"—*Life.*

**Eternal Vigilance.**—BROWN: "That's a handsome umbrella you've got there, Robinson."

ROBINSON: "Yes."

BROWN: "About what does it cost to carry an umbrella like that?"

ROBINSON: "Eternal vigilance."—*Tit-Bits.*

**A Thankful Spirit.**—TEACHER: "Johnny, can you tell me anything you have to be thankful for in the past year?"

JOHNNY (without hesitation): "Yessur."

TEACHER: "Well, Johnny, what is it?"

JOHNNY: "Why, when you broke your arm you couldn't lick us for two months."—*Harlem Life.*

**Where He Finished His Love Letter.**—Herr Schneider, a well-known and energetic, but unfortunately short-sighted, pedagog in Berlin, wrote a long letter to his adored Helen one evening a short while ago in the Café Bauer, and on arriving home wished to inclose his photograph with the same before sending it off. There, to his astonishment, he preceived that a considerable part of the letter was missing, which was by no means a little odd, as Herr S—— could only recollect having used one sheet and having put the same forthwith in his pocket. Muse as much as he might he could in no way solve this mystery,

EVERY SUBJECT OF HUMAN INTEREST covering the year 1900 is adequately treated by competent authorities in "The International Year Book," offered to LITERARY DIGEST readers on the first advertising page of this paper. No matter what encyclopædia you have be sure to send for this splendid volume, which will bring your encyclopædia up to date. Your money will be refunded if you do not care to keep the book.

# OUR STELLA MUSIC BOX OFFER

A $70 Music Box Sent on Approval

$10 on Delivery Balance $10 A Month

**This Illustration Shows the "STELLA CONCERT" Ready to Play on Moving the Starting Lever**

You have no doubt often desired to own a good music box, perhaps have several times almost made up your mind to purchase, but for some reason have not yet done so. Now is the time. Read our special offer which will enable every reader of the LITERARY DIGEST to own the best music box made.

There is no musical instrument which affords so much pleasure as the Stella Music Box. It is a resevoir of harmony ready at all times to furnish entertainment, grave or gay, waltz or two-step, hymn or cake-walk, the latest popular music and gems from the latest comic operas, all are yours if you own a Stella. It is never out of tune, always ready to play and will play any number of tunes with the perfection of execution and accuracy of an artist, while the richness of the music compares with that of an orchestra.

The Stella Concert is a new style and ranges next to the Stella Grand in popularity, having the genuine Stella tone. It is self-acting, being operated by a powerful spring and the mechanism is of the best possible construction. It has two duplex steel combs or keyboards, which means that for every note in the tune sheet two steel keys are struck. The music is represented by means of perforations (no pins or projections which may break off) in a smooth steel tune sheet 15½ inches in diameter, each sheet representing one tune, and any number of which can be had for 55 cents each. The dimensions of the cabinet are, length 27 inches, width 21 inches, height 12½ inches, and the instrument and 12 tunes weigh packed 130 lbs. They can be had in solid mahogany or in quartered oak of very fine finish and attractive design, making it an ornament in any parlor.

Thousands of our Stella Music Boxes are giving enjoyment to their happy possessors, and many have testified to their excellence. Here are a few extracts taken from numerous complimentary letters we have received.

## COMMENDED BY PREVIOUS PURCHASERS

I am grateful to you for so fine an instrument. I think the box is the finest I ever heard.—E. S. STERLING, Eagle Harbor, N. Y.

We regard the Stella Grand as a very superior music box, both in power, sweetness and expression, and very closely resembling the piano.—WILLIAM W. WENDOVER, Maverick, N. Y.

The quality of tone of the Stella exceeds everything I ever heard in a music box, and my judgment coincides with the judgment of everyone I know who has heard it.—F. C. AUSTEN, Bankers' Life Assn., Des Moines, Iowa.

We are well pleased with the Stella; several of the neighbors have been in to hear it play, and all think it the finest music they ever heard.—Mrs. W. H. THORNBERRY, Seneca, Kansas.

I can simply say that I am greatly pleased. Yes, more than delighted with the Stella. It is far beyond my expectation, and I much prefer it to the other kind of music boxes. I have entertained a number of my friends already with the sweet melodies that it rendered. They all pronounce the Stella very fine. I will recommend it highly to any who think of purchasing the music box.—Miss S. I. ROGERS, Mt. Holly, N. J.

. . . As regards the favor with which the music box is held I can say that there has never been anything like it in this place, a great many of our friends declaring that they can, since listening to the music, appreciate and understand more fully, and remember so much better some concerts that they have traveled 100 to 150 miles to hear.—JOHN DOUGHERTY, The Haydenville Mining & Manufacturing Co., Haydenville, O.

**OUR OFFER:** We will send every subscriber of the LITERARY DIGEST our $70 Stella Concert Music Box and twelve tunes on approval for three days on the following terms: $10 cash with the order, and if the music box is not satisfactory or as represented, it can be returned at our expense, and we will refund the amount paid. If retained the balance is to be paid in monthly payments of $10 each.

For further information, catalogue, and list of tunes, sign and enclose the annexed coupon.

**JACOT MUSIC BOX CO.,**
**39 UNION SQUARE, NEW YORK.**

**COUPON.**

Gentlemen: Please send me catalogues of Stella Music Boxes and tunes, and also further information referring to your offer in the "Literary Digest" of April 27th.

WM. V. WILLIS & CO., 134 South 11th Street, Philadelphia

and after an assiduous search he finally made his way back to the cafe and asked the waiter if a piece of paper had been found on the table at which he had been seated, and which was then occupied by several jolly young students.

The waiter answered in the negative, and they both began searching for the missing letter.

"I say, what are you looking for?" asked one of the young students, looking up from something he had just been reading.

"My letter! My letter!" answered Herr S——.

"Are you the Herr Ambrosius Schneider with the 'everlasting love' and the 'overflowing heart'——?"

"How do you know——?"

"Oh, its all right. Why, here's the rest of your letter; you've finished it off on the marble top of the table."—*Tit-Bits.*

# Current Events.

## Foreign.

CHINA

April 15.—It is announced in Berlin that the United States has proposed to the powers to limit the Chinese indemity to $200.000,000, coupled with the condition that payment be immediate; a Shanghai despatch says that the court is preparing to remove to Siang-Yang, in the Yang-tse province.

April 16.—The palace of the Empress in Peking, headquarters of Count von Waldersee, is burned, and General Schwartzkopf perishes in the flames.

April 20.—The funeral of General Schwartzkopf takes place at Peking; General Chaffee and his staff are present.

April 21.—A Chinese force of Boxers and robbers attacks a company of Punjab infantry near Ning-fu, killing a British major.

SOUTH AFRICA.

April 17.—A Blue Book on the South African war, containing despatches and correspondence from Sir Alfred Milner, is issued in London; the report is a most gloomy one.

April 18.—General Kitchener reports some minor successes in the Transvaal and Orange River "Colony."

April 19.—Boers ambush a party of British lancers in South Africa, killing a lieutenant and three men.

April 21.—Lord Kitchener reports the capture of about one hundred Boers, and much live stock and ammunition.

April 22.—General De Wet is reported to be near Kronstadt, with demoralized forces; a Boer force captures and wrecks a train near Molteno.

OTHER FOREIGN NEWS.

April 15.—The return of Sir Henry Irving and Miss Ellen Terry to the Lyceum stage in "Coriolanus" draws an enthusiastic welcome from a London audience.

An Italian punitive expedition bombards the palace of the Sultan of Mijertain, Somaliland, and captures his son.

A number of Russian cities are in a practical state of siege during the Easter holidays, Cossacks patrolling the streets and public assemblages being forbidden.

April 17.—At the confirmation of Bishop Ingram in St. Mary le Bow Church, London, a scene is created by John Kensit, the anti-ritualist agitator.

April 18.—Sir Michael Hicks-Beach's budget, presented to the British Parliament, reveals a deficit of $53,000,000; the Chancellor asks permission to borrow $60,000,000 and proposes a system of taxation and of duties on various articles.

# Diet for Rheumatism.

**The Way to Get the Quickest and Surest Relief and Cure.**

For eighteen years we have been studying causes and effects in the human system, and will be glad to give, *without cost*, the result of our experiments.

Food has a direct bearing upon the system, and upon medicine taken to cure disease. Proper food is absolutely essential to accomplish a cure. "What to eat, and what not to eat," should be considered by every one where there is uric acid in the system. Medicine will absolutely fail in its effect unless certain foods are refrained from. We can tell you the diet best suited to your case if you will tell us your symptoms and the disease from which you suffer. This is absolutely without cost if you will send a two-cent stamp for reply.
